1 Pleas in the circuit court of the United States for the northern district of Illinois, before the judges thereof sitting in chancery, at the United States court-rooms in the city of Chicago, in the district aforesaid, on Monday, the twenty-second day of December, in the year of our Lord one thousand eight hundred and seventy-three, and of our Independence the ninety-eighth year.

WILLIAM H. BRADLEY, *Clerk.*

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company. } In chancery.

NORTHERN DISTRICT OF ILLINOIS, *ss:*

Be it remembered that on the seventeenth day of March, A. D. 1873, came said complainant, by his solicitor, and filed in the office of the clerk of the circuit court of the United States for said district his bond for costs, and at the same time filed his petition to restore the record in said entitled cause, which said bond and petition are respectively in the words and figures following, to wit:

Bond for costs.

UNITED STATES OF AMERICA,
Northern District of Illinois, ss:

Circuit court, March term, A. D. 1873.

2 THOMAS SAYLES
vs.
CHICAGO AND NORTHWESTERN RAILROAD Company. } In equity.

We enter ourselves security for costs in this cause, and promise to pay all costs which may accrue to the opposite party in this action or to any of the officers of this court; and in default of payment by the plaintiff of any costs ordered or adjudged to be paid by him, hereby agree and stipulate that execution may issue against our property for any costs taxed against him.

Dated this seventeenth day of March, 1873.

ALBERT H. WALKER.
JNO. E. SAYLES.

(Endorsed:) Filed March 17th, A. D. 1873. W'm H. Bradley, clerk.

Petition to restore record.

In the circuit court of the United States in and for the northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company. } In equity.

To the honorable judges of circuit court of the United States for the northern district of Illinois:

Your petitioner, Thomas Sayles, respectfully shows unto your honors

that on or about the twenty-eighth day of December, in the year
3 one thousand eight hundred and sixty-one, he filed in this court
his bill of complaint against the Chicago and Northwestern
Railroad Company; that thereupon a subpœna ad respondendum was
duly issued out of said court against said defendant and in the usual
form; that said subpœna was duly served by the proper officer upon
the said defendant; that afterwards, and on the first Monday of February,
eighteen hundred and sixty-two, the said defendant, by its solicitors,
Mess's Blodgett and Winston, entered an appearance in said
cause; that afterwards, and on the fourth day of March, eighteen hundred
and sixty-two, the said defendant filed in said court its answer to
the said bill of complaint; that afterwards the said complainant, on or
before the first Monday of April, eighteen hundred and sixty-two, filed
in said court his replication to said bill in the usual form; that afterwards
testimony was taken in said cause by both parties, and the cause
was brought to a final hearing before his honor Judge Drummond, who
on the thirteenth day of February, 1865, decided the case in favor of
the complainant, and an interlocutory decree was duly entered in said
cause referring the same to a master to take testimony and report upon
the question of damages; that the parties thereupon proceeded to take
testimony on such question of damages, and entered into a written
stipulation to be used as evidence; that subsequently, and before the
master's report was made, upon motion of the defendant, said
4 decree was opened and set aside some time in the month of May,
A. D. 1867, and defendant had leave to introduce newly-discovered
evidence as to certain car-brakes said to have been in use on a certain
car known as the "John Tyler" and upon the Camden and Amboy
Railroad prior to the alleged invention of Batchelder and Thompson;
that thereafter new proofs were taken by the defendant and rebutting
evidence was taken by the complainant; that afterwards said cause was
again brought to a hearing, and afterwards, and on or about the sixth
day of July, 1871, the court decided said cause in favor of the complainant,
and a decree was entered accordingly, and the cause was again referred
to a master to take proofs and report on the question of damages;
that while the cause was in this condition and before the report
of the master was made, and during the night of the eighth and ninth
days of October, one thousand eight hundred and seventy-one, all of the
papers and records in this cause were destroyed by fire.

Your petitioner further represents that he herewith files a pamphlet, marked "Exhibit A," which contains:

A. 1st. A true copy of the original bill of complaint in said cause.

2d. A copy of the answer filed by the defendant to said bill.

3d. A copy of the testimony taken on behalf of the defendant prior to the first hearing above mentioned.

5 B. Also another pamphlet, which is a copy of the testimony (except documentary) taken by the complainant prior to said first hearing, and is marked "Exhibit B."

C. Also another printed volume, in pamphlet form, which contains and is a copy of the complainant's new proofs, taken after the opening of said first-mentioned decree, and is marked "Exhibit C."

Also a copy of the first above-mentioned decree, which was entered on the sixth of March, 1865, and is marked "Exhibit D."

Also a copy of the second decree, which was entered July 18th, 1871, and is marked "Exhibit E."

Also two other pamphlets, or two volumes in pamphlet form, which are marked respectively "Exhibit F," "Exhibit G," which two last-mentioned exhibits—F and G—contain and are a copy of the defendant's new proofs, taken after the opening of said first-mentioned decree.

Your petitioner therefore prays that this petition and the accompanying exhibits herein mentioned may be taken as and stand for and in place of the record in said cause destroyed as aforesaid, and the original papers therein filed, except that complainant may, upon application to the court hereafter, have leave to file his said documentary evidence.

THO'S SAYLES.

WEST AND BOND,
Solicitors.

I consent that the papers referred to as exhibits in the foregoing petition may be filed and treated as the originals of those of which
6 they purport to be copies.

Chicago, March 15th, 1873.

JNO. N. JEWETT,
Sol'r for Def'ts.

(Endorsed:) Filed March 17, 1873. W'm H. Bradley, cl'k.

Exhibit A, being a true copy of the original bill of complaint and the answer thereto referred to in said petition, is in the words and figures following, to wit:

7 EXHIBIT A.

Circuit court of the United States for the northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company.
} In equity.

To the judges of the circuit court of the United States for the northern district of Illinois:

Thomas Sayles, of Lansinburgh, in the county of Rensselaer, in the State of New York, and a citizen of said State and of the United States, brings this his bill of complaint against the Chicago and Northwestern Railroad Company, a corporation created and existing under the laws of the State of Illinois, and owning and operating, under authority from the said legislature, and within the States of Illinois and Wisconsin and the northern district of Illinois, a railroad running from the city of Chicago, in the State of Illinois, to the town of Appleton, distant from Chicago two hundred and thirteen miles, in said State of Wisconsin. And thereupon your orator complains and
8 says, as he is informed and believes, that heretofore and before the 6th day of July, 1852, Lafayette F. Thompson, of Charlestown, Massachusetts, and Asahel G. Bacholder, of Lowell, Massachusetts, who were then, and have been ever since and are now, citizens of the United States, were the original and first inventors of a certain new and useful improvement in railroad-car brakes; that being such inventors, the said Thompson and Bacholder, prior to the granting of the letters patent hereinafter mentioned, assigned to one Henry Tanner, of Buffalo, New York, who was then, and has been ever since and is now, a citizen of the United States, all their right, title, and interest in

said improvement, by an assignment in writing, which was entered of record in the United States Patent Office, and duly made application in writing to the Commissioner of Patents of the United States for the granting of letters patent for said improvement, and duly swore to the specification for that purpose; that the said improvement was not, at the time of the said application, in public use or on sale with the consent or allowance of the said Thompson and Bachelder, as the inventors of the same, contrary to the provisions of the statutes of the United States in such case made and provided, and was not known or used by others before the invention thereof by the said Thompson and Bachelder; that the said Thompson and Bachelder and the said Tanner duly complied, in all respects, with all the necessary conditions and requisitions of the statutes of the United States in such case made and provided, prior to the granting of the letters patent hereinafter mentioned; that on the 6th day of July, 1852, letters patent of the United States, dated the day and year last aforesaid, were granted to the said Henry Tanner, according to law, whereby there were granted to him, his heirs, administrators, or assigns, for the term of fourteen years from the 6th day of July, 1852, the full and exclusive
9 right and liberty of making, constructing, using, and vending to
others to be used, the said improvement, a description whereof was given in the words of the said Thompson and Bachelder, in a schedule which was annexed to the said letters patent, and was made a part of the same; that the said letters patent were issued in the name of the United States of America, and were sealed with the seal of the Patent Office of the United States, and were signed by the Secretary of the Interior and countersigned by the Commissioner of Patents, and were duly issued and delivered to the said Henry Tanner, and that the same, and the schedule and drawings annexed to and making part thereof, are now in the possession of your orator, ready to be produced as this honorable court shall direct; that before the said Henry Tanner obtained the said letters patent he delivered to the said Commissioner of Patents a written description of the said invention, and of the manner and process of making, constructing, and using the same, in such full, clear, and exact terms as to enable any person skilled in the art to which it appertains, or with which it is most nearly connected, to make, construct, and use the same, and that such description fully explained the principle and the several modes in which the said inventors contemplated the application of that principle or character by which the said improvement may be distinguished from other inventions, and also particularly specified and pointed out the part, improvement, and combination which the said inventors claimed as their invention; that the said description was accompanied with duplicate drawings and written references (one of which drawings was deposited in the said Patent Office and the other of which was annexed to the said letters patent), and also with a model of said invention, of a convenient size to exhibit advantageously its several parts; that the said description and
10 drawings were signed by the said Thompson and by the said
Bachelder, and were attested by two witnesses, and were filed in the said Patent Office; and that, in connection with the said application, the said Thompson and the said Bachelder also made oath before a person authorized by law to administer oaths that they were citizens of the United States, that they did verily believe that they were the original and first inventors or discoverers of the said improvement, and that they did not know or believe that the same was ever before known

or used; and paid into the Treasury of the United States the sum of thirty dollars.

And your orator further shows that a copy of the said letters patent, and of the schedule thereto annexed, is (without the drawings forming a part of the same) hereto annexed, marked "A," and he prays that the same may be taken as part of this bill.

And your orator further shows unto your honors that on the 27th day of January, 1853, the said Henry Tanner commenced an action on the case in the circuit court of the United States for the northern district of New York against the New York and Erie Railroad Company, a corporation created by an act of the legislature of the State of New York, and owning and operating, under authority from the said legislature and partly within the State of New York and the northern district of New York, a railroad running from the city of New York to Dunkirk in said State of New York, and running in part through a portion of said northern district of New York, to recover damages for the infringement and violation by them of the said letters patent; that they appeared in the said suit by attorney, and put in a plea of the general issue, and also gave the four several notices of special matter of defense, which are set forth in the record of judgment of which a copy is 11 hereto annexed, marked "B"; that the issue in said action was tried before the said circuit court of the United States for the northern district of New York, and by a jury, at a stated term of said court held at the city of Albany in said northern district of New York, on the third Tuesday of October, in the year 1854; that upon said trial said Henry Tanner proved that the improvement covered by said letters patent was useful, and that a person skilled in the art of constructing railroad-car brakes could construct the said improvement from the written description of the same, and of the manner of constructing the same, contained in the said schedule, and that its predominant utility consists in the ability of one brakeman to bring down all the brakes simultaneously upon the eight wheels of a platform-car, by operating or turning the windlass at either end of such car, and that it was further useful in being capable of accommodating very nearly equally the application of the brakes to a change from a straight line to a curved line and from a curved line to a straight line of railroad, and also proved that after the granting of said letters patent and before the commencement of said action the said The New York and Erie Railroad Company used the said brake upon the cars running upon its railroad in the northern district of New York, without the leave and license of the said Henry Tanner; that upon said trial the said New York and Erie Railroad Company gave evidence tending to prove that in the year 1843, at Springfield, in the State of Massachusetts, an eight-wheeled platform-car was constructed, having two trucks of four wheels each, with a brake to each wheel, and a windlass at each end of the car, that the windlass at either end could operate all the brakes of both trucks, not by means of a centre vibrating lever, or any equivalent therefor, but by means of two chains winding around the barrel of each 12 windlass, one chain leading to and operating the brakes of one truck and the other chain leading to and operating the brakes of the other truck, there being such an arrangement for each windlass, and each windlass having its own set of chains, connecting rods, and levers throughout, independent of those of the other windlass, the brakes of the two trucks not being combined with the windlasses at both ends of the car by any centre vibrating lever, or in any other way, or connected with such windlasses except as first described, and the

brakes being connected with one windlass by one set of chains, connecting rods and levers, and with the other windlass by an entirely different set of chains, connecting rods, and levers, and there being two chains on the barrel of each windlass, so that if one chain gave way the other chain still remained operative, and that such arrangement of brakes was used on two platform crate-cars on the Western Railroad, in Massachusetts, during parts of the years 1843 and 1844; that in reply to such evidence the said Henry Tanner proved on said trial that in such arrangement of brakes the two chains on the windlass would overlap each other in being wound upon the barrel, and that in consequence thereof, and in the passage of the truck from a straight line to a curved part of a railroad, and vice versa, the action of the brakes would be unequal in consequence of the different lengths of the two chains on each windlass, accompanied by a tendency either to break the short chain, or throw the wheels from the rails, or destroy the free swiveling action of the trucks, and that the combination in such arrangement was different from that described and claimed in said letters patent, in that the brake-levers in the two trucks were not connected together except at the windlasses, instead of being combined together by means of the centre vibrating lever; that upon said trial the said The New York and Erie Railroad Company also gave evidence tending to prove that Willard J. Nichols invented
13 the same combination of the car-brakes of an eight-wheeled car
by means of a centre lever, which is claimed in said letters patent, and insisted that the effect of such evidence was that said Nichols made such invention in the fall of 1846, at Hartford, Connecticut, and that a drawing of the same was made, and that in that fall said Nichols instructed Ferdinand Le Pennes how to construct such combination and apply it to the brakes of an eight-wheeled car, and that in the winter of 1846–1847 it was constructed under such instruction and applied to a new car upon the New Haven, Hartford and Springfield Railroad, and continued in use upon said car until the time of said trial, and that the same was thereafter put upon new cars upon that road as fast as they were manufactured; that upon said trial the said Henry Tanner claimed that the effect of the said evidence so given on the part of the said The New York and Erie Railroad Company, in regard to the said invention by the said Nichols, was that the same was not made by said Nichols until March or April, 1847; that upon said trial the said The New York and Erie Railroad Company also gave evidence tending to show, that substantially and in principle, what is claimed in said letters patent was invented by one Nehemiah Hodge in 1848, that letters patent for the same were granted to said Hodge by the United States on the 2nd of October, 1849, and that the said invention of said Hodge went into use about that time; that upon said trial the said The New York and Erie Railroad Company also gave evidence tending to prove that a certain brake for an eight-wheeled car was unsuccessfully tried upon the railroad of the New Jersey Railroad and Transportation Company, in 1842, by one Isaac Newton Stanley, and that a certain other brake for an eight-wheeled car was unsuccessfully tried upon the same railroad in 1842, by one Joseph F. Talson, and the said The New York and
14 Erie Railroad Company insisted that each of said two brakes
embodied the invention claimed in said letters patent to said Tanner; that upon said trial the said Tanner proved that the said Thompson and the said Bachelder invented, in the fall of the year of 1846, the improvement claimed in the said letters patent to said Tanner, that they made drawings embodying said improvement in October, 1846, and made a model containing the said improvement in January, 1847, which

model was produced and put in evidence on said trial, and that they made application for letters patent for said improvement in June, 1847; that upon said trial the said Tanner proved that the said The New York and Erie Railroad Company had so used the said improvement claimed in said letters patent to said Tanner, not only in the form and arrangement described in said letters patent to said Tanner, but also in the form and arrangement described in said letters patent to said Hodge, and also in the form and arrangement described in letters patent of the United States granted to Francis A. Stevens, November 25th, 1851; that upon said trial the said The New York and Erie Railroad Company set up in defense to said action not only that the said improvement covered by said letters patent to said Tanner was known and in public use prior to the time when it was invented by said Thompson and said Bachelder, but that said Thompson and said Bachelder had abandoned their invention to the public, and that the said letters patent to said Tanner were illegally and improperly and fraudulently issued, and that the brakes constructed in accordance with the description in the said letters patent to said Hodge, and the brakes constructed in accordance with the description in the said letters patent to said Stevens, were not infringements of the said letters patent to said Tanner; and that after a full and thorough trial the jury found a verdict for the said Tanner in said action for seventy-
15 five dollars damages, that having been the amount agreed upon
by the counsel for the respective parties as the amount in which the jury should find for the plaintiff, if they should be of opinion that he was entitled to recover; and the said jury also found specially that the Stevens brake and the Hodge brake, before named, were both of them infringements of the said letters patent to said Tanner; and your orator annexes hereto a copy of a certified copy of said verdict, which is marked "C," and which he prays may be taken as a part of this bill.

And your orator further shows that a judgment upon said verdict, in favor of the said Henry Tanner, against the said The New York and Erie Railroad Company, for four hundred and thirty-nine dollars and forty-four cents, damages and costs, was duly entered and docketed in the said circuit court of the United States for the northern district of New York, in the office of the clerk thereof, on the 2nd day of February, 1855, a copy of a certified copy of the record of which judgment is hereto annexed, marked "B."

And your orator further shows that the said The New York and Erie Railroad Company took a bill of exceptions on said trial, for alleged errors in the charge of the court to the jury, and upon said bill a motion on the part of the said The New York and Erie Railroad Company for a new trial in said action, came on to be heard at a special term of the circuit court of the United States for the northern district of New York, held at Buffalo on the 7th day of August, 1855, before his honor M'r Justice Nelson, one of the associate justices of the Supreme Court of the United States, and his honor Judge Hall, district judge of said district, and that thereupon the said bill of exceptions was abandoned by consent of the counsel of the said The New York and Erie Railroad Company, the said motion for a new trial was denied, and an
16 order was then and there duly entered denying the same, a copy
of a certified copy of which order is hereto annexed, marked "D."

And your orator further shows that after the entering and docketing of the judgment aforesaid, and while the said motion for a new trial was pending, your orator commenced a suit in equity, by bill filed in the circuit court of the United States for the northern district of New York,

against the said The New York and Erie Railroad Company, to restrain them from violating the rights secured to your orator by the said letters patent to the said Tanner, and by the two instruments in writing hereinafter specifically set forth and described, executed, and delivered by the said Tanner to your orator, in which said bill your orator prayed that the said The New York and Erie Railroad Company might be perpetually restrained and enjoined from violating the rights of your orator as aforesaid, either by using the said Tanner brake or the said Hodge brake, or the said Stevens brake and that they might account for and pay over to your orator all such gains and profits as had or might have accrued or arisen to or been earned or received by them from the use by them of the said invention and improvement claimed in said letters patent to said Tanner, and that a provisional or preliminary injunction might issue against them to the same purport, tenor, and effect as was prayed for in regard to said perpetual injunction; and your orator caused to be served upon the said The New York and Erie Railroad Company a subpœna to appear and answer in said suit in equity, and a copy of said bill and a notice of the making of a motion before the judges of said last named court at said special term at Buffalo, on the 7th day of August, 1855, that a preliminary injunction against the said defendants issue out of and under the seal of the said court, according to the prayer of the said bill in that behalf, in which said suit in
17 equity the said The New York and Erie Railroad Company duly appeared by solicitor. And your orator further shows, that while said motion for a new trial and said motion for a preliminary injunction were pending, the said The New York and Erie Railroad Company made overtures to the said Tanner and to your orator for a settlement of the said judgment and of the said suit in equity, which resulted in said abandonment of said bill of exceptions, and in said denial of said motion for a new trial, and in the said company's acknowledging the validity of the said letters patent to the said Tanner, and the infringement of the same as aforesaid, and in their paying to the said Tanner the amount of the said judgment, and in their paying to your orator, for the right to use the said improvement claimed in and covered by the said letters patent to said Tanner, and for past infringements not covered by said verdict, and for a discontinuance of said suit in equity, the sum of two thousand three hundred dollars, and the costs of said suit in equity, and in the signature by their attorneys of a certificate, of which a copy is hereto annexed, marked "E." And your orator, upon information and belief, avers that the amount of the said judgment was paid to the said Tanner by the said The New York and Erie Railroad Company; and your orator avers, that the said twenty-three hundred dollars, and the costs of the said suit in equity, were paid to your orator by the said company, and that a license was given by your orator to and received by them under said letters patent to said Tanner, and that said suit in equity was discontinued, and that double-acting brakes, on the plan of the invention covered by said letters patent to said Tanner, have ever since continued to be and are still used upon cars running on the railroad of the said The New York and Erie Railroad Company.

18 And your orator further shows that the said Tanner also brought an action on the case in the said circuit court of the United States for the northern district of New York, against the Hudson River Railroad Company, for an infringement of said letters patent to said Tanner by the use of the said Tanner brake, and of the said Hodge brake, and of the said Stevens brake, which action was brought about the same time with the said action at law against the The New

York and Erie Railroad Company; that the said The Hudson River Railroad Company appeared in such action and pleaded in the same, and also gave special notice of substantially the same matters of defense of which the said The New York and Erie Railroad Company so gave notice in said action at law against them; that the said action against the said The Hudson River Railroad Company was upon the calendar of the said circuit court, at the October term thereof, in 1853, and was ready for trial on the part of the plaintiff, but was put over the term, upon affidavit, on motion of the defendant's counsel, on payment of the costs of the term, and against the opposition of the plaintiff's counsel; that immediately thereafter, in October, 1853, the said The Hudson River Railroad Company made overtures to said Tanner for a settlement of said action, which resulted in their acknowledging the validity of the said letters patent to said Tanner, and the infringement of the same by the use by them of the said Tanner brake, and of the said Hodge brake, and of the said Stevens brake, and in their paying to the said Tanner, for the right to use the said brakes, and the said improvement claimed in and covered by the said letters patent to said Tanner, and for a discontinuance of said action, the sum of one thousand dollars and the costs of said action, and in the signature by their secretary and attorney of a certificate, of which a copy is hereto annexed, marked "F"; and your orator avers that the said one thousand dollars
19 and the costs of said action were paid to said Tanner by the said The Hudson River Railroad Company, and that a license was given by said Tanner to them and received by them under said letters patent to said Tanner, and that said action was discontinued, and that the said Tanner brake, and the said Hodge brake, and the said Stevens brake, have ever since continued to be and are still used upon cars running on the railroad of the said The Hudson River Railroad Company.

And your orator further shows that rights to use the said improvement claimed in and covered by the said letters patent to said Tanner have been purchased and taken from and paid for to said Tanner, by a large number of the leading railroad companies in the United States, and, among others, by the New York Central, the New York and New Haven, the New York and Harlem, the Housatonic, the Baltimore and Ohio, the Baltimore and Susquehanna, the Fitchburg, the Boston and Worcester, the Eastern, the Boston and Maine, the Boston and Providence, the Old Colony, the Rensselaer and Saratoga, the Saratoga and Washington, the Long Island, the Elmira and Canandaigua, the Canandaigua and Niagara Falls, the Buffalo and State Line, the Western Vermont, the Cheshire, the Concord, the Troy and Boston, the Canal, the South Shore. the Richmond and Petersburg, the Vermont Valley, the Portland, Saco and Portsmouth, the Providence and Worcester, the New London, Willimantic and Palmer, the Stonington and Providence, the Worcester and Nashua, the Buffalo and New York City, the Buffalo, Corning and New York, the Erie and Northeast, and by other railroad companies in the United States; and that the said Tanner brake, or the said Hodge brake, or the said Stevens brake, is and has for some time past been used upon cars running upon the railroads of all the said-named railroad companies.

20 And your orator further shows that rights to use the said improvement claimed in and covered by the said letters patent t said Tanner have been purchased and taken from and paid for to you orator, since he acquired his said interest in said letters patent, by th following railroad companies in the United States, namely: the Illinoi

Central, the Vermont and Massachusetts, the Albany Northern, the Rutland and Washington, the Rutland and Burlington, the Sullivan, the Connecticut and Passumpsic River, the Naugatuck, the Portland and Kennebec, the Atlantic and S't Lawrence, the Danbury and Norwalk, and by over twenty-five other railroad companies in the United States; and that the said Tanner brake, or the said Hodge brake, or the said Stevens brake, is and has for some time past been used upon cars running upon the railroads of all the said-named railroad companies.

And your orator avers and claims that by the said verdict and judgment, and by the settlements and licenses and acquiescences and uses hereinbefore set forth, the validity of the said letters patent to said Tanner, and the novelty and utility of the invention claimed in the same, and the fact that the use, without license under the same, of the said Hodge brake and of the said Stevens brake is in violation and infringement of the same, are fully established and settled.

And your orator further shows that on the thirteenth day of July, 1854, the said Henry Tanner, by an instrument in writing duly executed by him, under his hand and seal, and bearing date on that day, and then duly delivered to your orator, sold, assigned, transferred, and set over to your orator, in consideration of the sum of twenty-five thousand dollars, all his, the said Tanner's, right, title, interest, and claim whatsoever, which he had or might have, in and to the said letters patent to said Tanner, and the invention covered by the same, and any extension thereof that might 21 thereafter be granted by reason of said letters patent, or otherwise, excepting the following reserved territory and railroad corporations, to wit: all of the States of Ohio, Indiana, and Illinois (excepting the Illinois Central Railroad, which was thereby sold to your orator), and reserving unsold further, the Michigan Central Railroad, and the Michigan Southern and Northern Indiana Railroad, and the Ohio and Mississippi Railroad, and the Louisville and Nashville Railroad, and a horse railroad around the Ohio Falls, from Louisville to Portland, about three miles, more or less, and the Louisville and Frankfort Railroad, also the Hudson River Railroad, also the New York Central Railroad, also the Rensselaer and Saratoga Railroad, also the Saratoga and Washington Railroad, also the New York and New Haven Railroad, also the New York and Harlem Railroad, also the Housatonic Railroad, also the Baltimore and Ohio Railroad, also the Baltimore and Susquehanna Railroad, also the Elmira and Canandaigua Railroad, also the Canandaigua and Niagara Falls Railroad, also the Buffalo and State-Line Railroad, also the Fitchburg Railroad, also the Boston and Worcester Railroad, also the Western Vermont Railroad, also the Cheshire Railroad, also the Concord Railroad, also the Troy and Boston Railroad, also the Worcester and Nashua Railroad, also the Eastern Railroad, also the Boston and Maine Railroad, also the Canal Railroad, also the South Shore Railroad, also the Richmond and Petersburg Railroad, also the Vermont Valley Railroad, also the Portland, Saco and Portsmouth Railroad, also the Boston and Lowell Railroad, also the Boston and Providence Railroad, also the Old Colony Railroad, also the Providence and Worcester Railroad, also the New London, Willimantic and Palmer Railroad, also the Stonington and Providence Railroad, also the New Haven, Hartford and Springfield Railroad, also the Buffalo 22 and New York City Railroad, also the Buffalo, Corning and New York Railroad, and also the Erie and Northeast Railroad; and gave and granted to your orator and to his legal representatives, by said instrument, the full power to make, use, and vend, and to sell to others to make, use, and vend the said invention, in all cases, as fully and freely as he, the said Tanner, might or could have done, had such bargain and sale not been made, and thereby covenanted to and with your orator that he, the said Tanner, was the lawful owner and holder of the said letters patent, and that he had not sold to any person or persons whomsoever, or to any corporations, any interest in said letters patent, or any right to use or vend the improvement claimed therein, except as in said instrument theretofore mentioned.

And your orator avers that the said last-named instrument in writing was duly recorded in the United States Patent Office, on the 17th day of July, 1854, in Liber 13, page 1, of Transfers of Patent-Rights; and that the same is now in his possession, ready to be produced and proved as this court shall direct.

And your orator further shows that on the 23d day of January, 1855, the said Henry Tanner, by an instrument in writing, duly executed by him under his hand and seal, and bearing date on that day, and then duly delivered to your orator, sold, assigned, transferred, and set over to your orator, in consideration of the sum of five thousand dollars, all the right, title, interest, and claim which he, the said Tanner, had or might have, in and to any and all damages and profits and right of action for the same, either at law or in equity, growing out of the unlawful use or manufacture, or vending, by any person or persons, or company or companies, whether incorporated or otherwise, of the invention covered by the said letters patent to said Tanner so far as said damages and profits had not been settled for; and the said Tanner
23 did, in and by said last-named instrument, authorize your orator to bring and prosecute all actions and suits, whether at law or in equity, which he might deem proper, and, either in the name of said Tanner or otherwise, to recover such damages and profits, but at your orator's costs and charges, and for your orator's own benefit and profit.

And your orator avers that the said last-named instrument in writing was duly recorded in the United States Patent Office on the 24th day of January, 1855, in Liber M 3, page 511, of Transfers of Patent-Rights; and that the same is now in his possession, ready to be produced and proved as this court shall direct.

And your orator further shows unto your honors that afterwards, and on the fourth day of April, A. D. 1859, the said Henry Tanner, by a further instrument in writing, duly executed by him on that day and then duly delivered to your orator, sold, assigned, and set over unto your orator all the right, title, and interest and claim of him, said Tanner, before remaining in and for the States of Illinois and Kentucky in said letters patent and invention. and to all the damages due said Tanner; which said assignment was, on the 5th day of July, 1859, recorded in the Patent Office at Washington, in Liber G 5, page 263, of Transfers of Patents, and is now in the possession of your orator, ready to be produced and proved as the court shall direct.

And your orator avers that by virtue of the said letters patent to said Tanner, and of the said three instruments in writing, executed and delivered to your orator by said Tanner, your orator has been, ever since the 13th day of July, 1854, and is now entitled to and possessed of the exclusive right to make, construct, use, and vend to others to be used, the improvement claimed in and covered by the said letters patent to said Tanner, within and throughout the States of Illinois and
24 Wisconsin, and is also entitled to sue for and recover in this suit, and to receive to his own use, all the damages and profits for which the defendants are liable, for the unlawful use or manufacture or

vending by them of the invention covered by the said letters patent to said Tanner.

And your orator avers that the railroad of said defendants has, ever since the first day of June, 1859, run through and been operated in the States of Illinois and Wisconsin as aforesaid.

And your orator further shows that ever since the first day of June, 1859, the defendants, well knowing the premises, and the rights and privileges secured to the said Tanner by the said letters patent to the said Tanner, and to your orator by the said letters patent to the said Tanner, and by the aforesaid three instruments in writing, but contriving to injure the said Tanner and your orator, and to deprive them of the profits, benefits, and advantages which might and otherwise would have accrued to the said Tanner and to your orator respectively, upon their railroad and within the States of Illinois and Wisconsin, and without the license or permission either of the said Tanner or of your orator, and against the will of both of them, have unlawfully and wrongfully used and operated, and caused to be used and operated, and kept in use and operation, and are now using and operating, and causing to be used and operated, and keeping in use and operation, upon cars running upon their said railroad, and also upon their cars run with their license and consent, and under some mutual running arrangement, upon the Milwaukee and Mississippi or Milwaukee and Prairie du Chien Railroads, within said States of Illinois and Wisconsin, brakes constructed in accordance with the description contained in said letters patent to said Tanner, and known as Tanner brakes, or as Hodge or Stevens brakes, all of which brakes did and do embody and contain the
25 invention and improvement described and claimed in the said letters patent to said Tanner, namely, the combination of the brakes of the two trucks with the operative windlasses, or their equivalents, at both ends of the car, by means of a centre vibrating lever, or its equivalent, or mechanism essentially as specified in said letters patent, so as to enable the brakeman, by operating either of the windlasses, to simultaneously apply the brakes of both trucks, or bring or force them against their respective wheels, and whether he be at the forward or rear end of the car; but upon how many cars the defendants have so used and operated, or caused to be used and operated, or are now so using and operating, or so causing to be used and operated, the said brakes, your orator is ignorant and cannot set forth, but your orator avers that they have so used the same upon a large number of cars, and that they are now so using the same upon a large number of cars, and that they have derived and received, and are still deriving and receiving, from such use of said brakes, great gains and profits, but to what amount your orator is ignorant and cannot set forth, though he believes the same to be of the full sum of thirteen thousand dollars, and so charges the fact to be, and prays that the defendants may be required to make a disclosure of all such gains and profits.

And your orator avers that the defendants continue to use said brakes, and refuse, though warned and requested to desist from such use, or to pay to your orator the said gains and profits, by means whereof the defendants have greatly injured and are still greatly injuring your orator, and have deprived and still are depriving your orator of, and have prevented and still are preventing your orator from obtaining and receiving the gains and profits from the use of the said invention and improvement claimed in the said letters patent to said Tanner,
26 which your orator otherwise, and but for the said wrongful acts of the defendants, would have obtained and received.

And your orator prays that the defendants may be compelled, by a decree of this court, to account for and pay over to your orator all such gains and profits as have accrued or arisen to or been earned or received by the defendants, and all such gains and profits as they have been or may be entitled to by reason of such use by them of said invention and improvement claimed in said letters patent to said Tanner, and all such gains and profits as the said Tanner and your orator would respectively have received but for the said unlawful acts and doings of the defendants,and that the defendants and their attorneys, solicitors, servants, agents, and workmen may be perpetually enjoined and restrained by the decree and injunction of this court *form* directly or indirectly constructing or causing to be constructed, using or causing to be used, or vending to others to be used in any manner, any brake for a railroad-car embodying or containing the invention and improvement described and claimed in the said letters patent to said Tanner, or any brake constructed in accordance with the description contained in said letters patent to said Tanner, and known as the Tanner brake, or as Hodge or Stevens brakes, and particularly from any further using, or causing or permitting to be used, and from vending to others to be used in any manner and from putting out of their possession or otherwise disposing of any brakes in their possession or under their control, known as Tanner brakes, or as Hodge or Stevens brakes, and from in any wise counterfeiting or imitating the said invention and improvement claimed in said letters patent to said Tanner, or any brakes made in accordance therewith, and from infringing upon or violating in any way whatsoever the said letters patent to said Tanner; and that all such infring-
27 ing brakes in the possession or under the control of the defendants may be forthwith destroyed or delivered up to your orator; and that the defendants may be decreed to pay the costs of this suit; and that your orator may have such further relief, or that your orator may have such other relief, as the equity of the case may require and as to your honors may seem meet.

To the end, therefore, that the defendants may, if they can, show why your orator should not have the relief hereby prayed, and may, under their corporate seal, full, true, direct, and perfect answer make to the several matters hereinbefore stated and charged, and especially that they may set forth whether, since the first day of June, 1860, they have not used or caused to be used upon cars running upon their railroad and within the States of Illinois and Wisconsin, one or more, and how many, brakes hereinbefore mentioned, known as Tanner brakes, or as Hodge or Stevens brakes, or brakes constructed on the principle of the said Tanner specifications, and when and for how long a time the same, or any of them, were so used.

May it please your honors to grant to your orator a writ of subpœna ad respondendum, issuing out of and under the seal of this honorable court, directed to the defendants, the Chicago and Northwestern Railroad Company, commanding them to appear and make answer to this bill of complaint, and to perform and abide by such order and decree herein as to this court may seem required by the principles of equity and good conscience.

May it also please your honors to grant to your orator a provisional or preliminary injunction issuing out of and under the seal of this honorable court, enjoining and restraining the defendants, their attorneys, 28 solicitors, servants, agents, and workmen, to the same purport, tenor, and effect hereinbefore prayed for in regard to said perpetual injunction. And your orator will ever pray, etc.

GOODWIN, LARNED & GOODWIN,
Solicitors for Plaintiff, Tho's Sayles, and of Counsel.

UNITED STATES OF AMERICA,
Northern District of Illinois:

On the 28th day of December, 1861, before me came Thomas Sayles, the plaintiff in the foregoing bill of complaint, and who has signed the same; and he being by me duly sworn did depose and say that he had heard the said bill read and knew the contents thereof, and that the same was true of his own knowledge, except as to the matters which are therein stated on information and belief, and that as to those matters he believes it to be true.

And he did further depose and say that he did verily believe that Lafayette F. Thompson and Asahel G. Bachelder, in said bill named, were the original and first inventors of the invention and improvement described and claimed in the letters patent to Henry Tanner mentioned in said bill.

FRED. W. COLE,
U. S. Com'r Nor. Dist. Ill.

29 No. 9100.

The United States of America to all to whom these letters patent shall come:

Whereas Lafayette F. Thompson, of Charlestown, Mass., and Asahel G. Bachelder, of Lowell, Mass., have alleged that they have invented a new and useful improvement in railroad-car brakes (they having assigned their title and interest in said improvement to Henry Tanner, of Buffalo, N. Y.), which they state has not been known or used before their application; have made oath that they are citizens of the United States, that they do verily believe that they are the original and first inventors or discoverers of the said improvement, and that the same hath not, to the best of their knowledge and belief, been previously known or used; have paid into the Treasury of the United States the sum of thirty dollars, and presented a petition to the Commissioner of Patents, signifying a desire of obtaining an exclusive property in the said improvement, and praying that a patent may be granted for that purpose:

These are therefore to grant, according to law, to the said Henry Tanner, his heirs, administrators, or assigns, for the term of fourteen years from the sixth day of July, one thousand eight hundred and fifty-two, the full and exclusive right and liberty of making, constructing, using, and vending to others to be used, the said improvement, a description whereof is given in the words of the said Thompson and Bachelder in the schedule hereunto annexed, and is made a part of these presents.

In testimony whereof I have caused these letters to be made patent, and the seal of the Patent Office has been hereunto affixed.

30 Given under my hand at the city of Washington, this sixth day of July, in the year of our Lord one thousand eight hundred and fifty-two, and of the Independence of the United States of America the seventy-seventh.

ALEX. H. H. STUART,
Secretary of the Interior.

Countersigned and sealed with the seal of the Patent Office.
[L. S.] THO'S. EWBANK,
Commissioner of Patents.

The schedule referred to in these letters patent and making part of the same:

To all persons to whom these presents shall come:

Be it known that we, Lafayette F. Thompson, now or late of Charlestown, and Asahel G. Bachelder, of Lowell, in the county of Middlesex and State of Massachusetts, have invented a new and useful mode of operating the brakes of railway-cars; and we do hereby declare that the same is fully described and represented in the following specification and the accompanying drawings, letters, figures, and references thereof.

Of the said drawings, Figure 1 denotes a top view of the platform-frame of a long car, resting on two truck-frames, the same also exhibiting our invention as applied to the brakes of the wheels of its two truck-frames. Figure 2 is a side elevation, and Figure 3 a vertical, central, and longitudinal section of the same. In the said drawings A denotes the platform of an eight-wheeled car resting on two truck-frames, B C.
31 D D^1, E E^1, are the wheels of one truck-frame, while F F^1,
G G^1, are those of the other truck-frame. H I K L, are the axles, while M N O P are the four sets of brakes applied to the wheels. Each set of brakes is connected to a vibrating-lever, Q R S, or T, which enables the set of brakes to swing either towards or away from their respective sets of wheels. In the above-mentioned drawings, the fulcra of these levers are at their upper ends, as seen at *a a*, etc. Under the middle of the car-platform I arrange a lever, A^1, that turns horizontally on a centre-pin, B^1.

A rod, C^2 or D^2, or its equivalent, is jointed to each end of the lever, A^1, and is extended from thence towards the end of the car, one rod being extended towards one end, while the other is carried towards the opposite end. Each rod is attached to a cord or chain, b^1, at its end, that is wound on the barrel of a windlass, E^2 or F^2, fixed on the adjacent end of the platform, there being one windlass at each end of the platform.

Between the fulcrum of the lever, A^1, and each rod, C^2, D^2, there is another rod or chain as seen at G^2, H^2, which is jointed at one end to the lever A^1, and has its other end jointed to the upper arm of one of two secondary levers, I^1, K^1,. The lower end of the lever, I^1, is jointed to the set of brakes, N, while the lower end of the lever K^1, is similarly jointed to the set of brakes O. Rods M^1 N^1, are respectively jointed to the secondary levers between their lower and upper ends, and extend therefrom and are jointed at their opposite ends to the set of brakes M, P. Under such circumstances, if a person rotates either windlass E^1 or F^1, so as to wind up its chain, he will produce a draft on the lever A^1, that will cause all the brakes to simultaneously close down upon their respective sets of wheels.

From the above it will be seen that a brakeman at either end
32 of the car, by simply turning the windlass at such end, can
simultaneously operate, or make bear against their wheels, all the sets of brakes. Our improvement can readily be applied to sets of brakes arranged between the wheels, as well as to those where the brakes clasp each wheel on its two opposite ends.

The principle of arresting or retarding the progress of two or more

cars, while in motion on a railway, by the momentum of one or more of them being made to act on the friction-brakes of said cars, through the intervention of any suitable mechanism combined with the bumpers and the brakes, or the combination of the brakes and bumpers, and a mechanism that will enable the momentum of one or more of the cars, acting against the bumpers, to force the brakes against the wheels, is not herein claimed; nor is it herein claimed to apply such momentum for such purpose, by a mode wherein the brake apparatus is so combined with the axle of one of the wheels by means of a fast pulley on such axle, an endless belt passing around such pulley, and a loose pulley on another axle or shaft, a clutch applied to such loose pulley and the second axle or shaft, whereby it may be made to rotate by the rotation of the axle of the wheels, and finally a mechanism or apparatus connecting the second shaft with the brakes of one or both trucks of a car, and made to so operate when the loose pulley is clutched to its shaft as to cause the brakes to be forced or drawn against the wheels, for such mode (it being that invented by George S. Griggs, and patented December 31st, 1839) of causing the momentum to operate to arrest the velocity of a car or train of cars, differs essentially from the invention hereinbefore set forth, and represented in the accompanying drawings; for the friction of the wheels on the rails, and the momentum of the moving carriage, is employed to put in motion machinery that is brought into action on the brakes, or caused to act on
33 them when connected with the rotating pulley, put in motion by
the pulley of the axle of the wheels, the attendant or brakeman only performing the office of moving the sliding part of the clutch. But what was claimed by us, is to so combine the brakes of the two trucks with the operative windlasses, or their equivalents, at both ends of the cars, by means of the vibrating lever A^1, or its equivalent, or mechanism essentially as specified, as to enable the brakeman, by operating either of the windlasses, to simultaneously apply the brakes of both trucks, or bring or force them against their respective wheels, and whether he be at the forward or rear end of the car.

In testimony whereof we have hereto set our signatures this eighth day of April, A. D. 1852.

A. G. BACHELDER.
LAFAYETTE F. THOMPSON.

Witnesses:

Daniel S. Richardson.
Nahum Leonard, J'r. (To A. G. Bachelder.)

P. C. Truman.
Milow C. McClure. (To Lafayette F. Thompson.)

34 In the circuit court of the United States for the northern district of New York.

Pleas before the judges of the circuit court of the United States for the northern district of New York, at the city of Albany, at the adjourned term of said court, held at said city, on the fourth Tuesday of January, 1853.

Witness the honorable Samuel Nelson, one of the judges of said court.

AUGUSTUS A. BOYCE, *Clerk.*

NORTHERN DISTRICT OF NEW YORK, *ss:*

Be it remembered, that heretofore, to wit, at an adjourned term of the circuit court of the United States for the northern district of New York, held at Albany, in the said district, before the judges of the said court, on the fourth Tuesday of January, 1853, the New York and Erie Railroad Company, a corporation created by the legislature of the State of New York, were summoned to answer unto Henry Tanner, of a plea of trespass on the case, for the infringement of letters patent issued to said Tanner by the United States, and bearing date July 6, 1852, for a new and useful improvement in railroad-car brakes, to his damage of ten thousand dollars, by summons personally served upon Benjamin Loder, president of said corporation, at Dunkirk, in said northern district of New York; and thereupon the said Henry Tanner, plaintiff, declared against the said The New York and Erie Railroad Company, defendants, as follows, to wit:

NORTHERN DISTRICT OF NEW YORK, *ss:*

The New York and Erie Railroad Company, defendant, was
35 summoned to answer Henry Tanner, of the city of Buffalo, in
the county of Erie and State of New York, in the northern district of said State, of a plea of trespass on the case, etc.; and thereupon the said Henry Tanner, plaintiff, by W'm F. Miller, his attorney, complains, for that whereas Lafayette F. Thompson, of Charlestown, in the State of Massachusetts, and Asahel G. Bachelder, of Lowell, in the said State of Massachusetts, were the original and first inventors of a certain new and useful improvement in railroad-car brakes, in the letters patent hereinafter mentioned and fully described, which was not known or used before the said invention, and which was not, at the time of the application for a patent, as hereinafter mentioned, in public use or on sale, with the consent or allowance of said plaintiff, or the said Thompson or Bachelder, or either of them; and the said Thompson and Bachelder, being, as aforesaid, the inventors thereof, and being also citizens of the United States, did, in due form of law, and before granting the letters patent hereinafter mentioned, assign to the said plaintiff, who is also a citizen of the United States, all their right, title, and interest to the said improvement, and thereupon, to wit, on the sixth day of July, A. D. 1852, at the city of Washington, upon due application therefor, letters patent therefor, in due form of law, under the seal of the Patent Office of the United States, signed by the Secretary of the Interior, and countersigned by the Commissioner of Patents of the United States, bearing date the day and year last aforesaid, were issued to the said plaintiff, and which said letters patent the said plaintiff now brings here into court, the date whereof is the day and year aforesaid, whereby there was granted and secured to the said plaintiff, according to law, for the term of fourteen years after the date of the
date of the said letters-patent, the full and exclusive right and
36 liberty of making, constructing, using, and vending to others to
be used, the said invention, as by the said letters-patent will fully appear.

And the said plaintiff further says, that from the time of the granting to him of said letters patent, hitherto, he has made and vended to others to be used, the said improvement, to his great advantage and profit, and that said exclusive right was of great value to him, to wit, of the value of one hundred thousand dollars; yet the said defendant, well knowing the premises, but contriving to injure the said plaintiff in his aforesaid rights and profits, after the making of the said letters patent, and within the said term of fourteen years in the aforesaid letters patent mentioned, to wit, on the first day of August, A. D. 1852, in the northern district of New York, and at divers other times, before and afterwards, within the aforesaid term of years mentioned in said letters patent, and before the commencement of this suit, unlawfully and wrongfully, and without the consent or allowance, and against the will of the said plaintiff, did make and use the said improvement, in violation and infringement of the exclusive rights so secured and granted to the said plaintiff by said letters patent as aforesaid, and contrary to the statutes of the United States in such case made and provided, whereby the said plaintiff has been greatly injured, and deprived of great profits and advantages, which he might and otherwise would have derived from said invention, and has sustained damage to the amount of ten thousand dollars.

And whereas also, the said plaintiff, having obtained letters patent as aforesaid, and having made and vended to others to be used the said improvement as aforesaid, the said defendant, knowing the premises, but contriving and intending as aforesaid, after the making of the said letters patent and within the said term of years in the said letters patent mentioned, to wit, on the first day of August, A. D. 1852,
37 aforesaid, and on divers other days and times between that day
and the day of the commencement of this suit, to wit, in the northern district of New York aforesaid, unlawfully and unjustly, and without the leave, license, or allowance, and against the will of the said plaintiff, made and used divers, to wit, five hundred car-brakes, on the said improved plan, and in imitation of the said invention, so as aforesaid granted and secured to the said plaintiff by the said letters patent, in breach of the said letters patent, and against the privilege so granted to the said plaintiff as aforesaid, and contrary to the statutes of the United States, whereby the said plaintiff has been greatly injured, and has been deprived of great gains and profits he might and otherwise would have derived from the said invention.

Wherefore the said plaintiff says that he has sustained damage to the amount of ten thousand dollars, and by force of the statutes aforesaid, an action hath accru*de* to him to recover said damages, and such additional amount, not exceeding in the whole three times the amount of such actual damages as the court may see fit to order and adjudge.

Yet the said defendant, although often requested, has not paid the same, or any part thereof, to the said plaintiff, but refuses so to do, and the said plaintiff brings suit, etc.

And it is suggested to the court now here, that the said plaintiff gave oyer in the words and figures following, to wit, of the letters patent mentioned in the said declaration, and of the schedule referred to in the said letters patent, and annexed thereto.

(Patent omitted; see patent on page 23.)

38 *Plea.*

And the said defendant, the said The New York and Erie Railroad Company, by Charles Daniels, its attorney, comes and defends the wrong and injury, when, etc., and says that it is not guilty of the said supposed grievances above laid to its charge, or any, or either, or any part thereof, in manner and form as the said plaintiff hath above thereof complained against it, and of this the said defendant puts itself upon the country, and the said plaintiff doth the like, etc.

And it is suggested to the court now here, that the defendants gave the following notice, in writing of special matter, to the plaintiff, thirty days before trial, under section 15 of the act of Congress, passed July 4th, 1836, entitled "An act to promote the Progress of the Useful Arts, and to repeal all acts and parts of acts heretofore made for that purpose."

First notice of special matter.

Take notice that the above-named defendant will prove upon the trial of this cause, in bar of the said plaintiff's action, that the said Lafayette F. Thompson and Asahel G. Bachelder, the said assignors of said plaintiff, were not the original or first inventors of so combining the brakes of the two trucks (of a car) with the operative windlasses (thereof) or their equivalents, at both ends of the car, by means of the vibrating lever designated "A¹" in the specifications and drawings attached to the said letters patent, or its equivalent, or mechanism essentially, as specified (in said specifications), as to enable the brakemen, by operat-
ing either of the windlasses, to simultaneously apply the brakes of
39 both trucks, or bring or force them against their respective
wheels, and whether he be at the forward or rear end of the car.

And the said defendant will further prove, upon such trial as aforesaid, that the same principle was known to, and had been previously combined by, and was invented by, Nehemiah Hodge, who resides at North Adams, in the State of Massachusetts, and that the same was known to and combined by the said Nehemiah Hodge as early as November, 1848, and patented to him by letters patent dated October 2d, 1849.

And the said defendant will further prove, upon such trial as aforesaid, that what is claimed in said declaration and in said letters patent therein mentioned, and the specifications and drawings thereto attached as the invention of said assignors of said plaintiff, named in said declaration, was substantially and in principle, known to Henry Gray, E. Harris, and Calvin Stebbins, and Thomas Faas, and M'r Eddy, who each reside at Springfield, in the State of Massachusetts, and Thomas Allen, a resident of Greenbush, New York, and was publicly used by the Western Railroad Company, on its railroad in the State of Massachusetts, long prior to the time when it is alleged the said assignors of said plaintiff invented the same.

And the said defendant will further prove as aforesaid, upon said trial, that substantially what is claimed as the invention of said assignors of said plaintiff as aforesaid, was publicly used upon the cars of the Connecticut River Railroad Company, upon its railroad in said State of Massachusetts, long prior to the time when it is claimed in this action the said assignors of said plaintiff acquired a knowledge thereof, and long prior to the patenting thereof to said plaintiff, and the same was known, and said use was known as aforesaid, at all times referred to,
to Miles G. Morse, Josiah Hunt, and M'r Briggs, the master of
40 transportation upon said road, each of whom resides at Northamp-
ton, in the State of Massachusetts.

And the said defendant will further prove as aforesaid, upon said trial, that substantially and in principle, what said assignors of said plaintiff, and what said plaintiff claims in this action to be the invention of said assignors, was, long prior to the time when it is claimed the said assignors invented the same, used publicly upon the cars of the Springfield, Hartford, and New Haven Railroad Company, upon its railroad in the States of Massachusetts and Connecticut. And the said defendant will prove that the same was known to, and that said use thereof was known to M'r Le Pennes, now master mechanic in the shop of said company, at Hartford, and who resides at Hartford, in the State of Connecticut, and Nehemiah Hodge, who resides at North Adams, in the State of Massachusetts.

And the said defendant will further prove as aforesaid, upon said trial, that substantially, and in principle, what is claimed in this action to be the invention and discovery of said Bachelder and Thompson, was, on and prior to the fourteenth day of November, 1848, known to Charles B. Turner, who resides at Brooklyn, in the State of New York, and was patented to him by letters patent dated on the day last aforesaid.

And the said defendant will further prove, upon said trial as aforesaid, that the thing patented in and by the letters patent mentioned in said declaration, was not first invented by or known to said Lafayette F. Thompson and Asahel G. Bachelder, or either of them, but the same was publicly known and used prior to the time when it is alleged in this action the same was invented by them, or either of them. And the said defendant will prove that Charles B. Turner, who resides at Brooklyn, in the State of New York; Francis A. Stevens, who resides
41 at Burlington, in the State of Vermont; M'r Burton, who is agent of the Pittsfield and North Adams Railroad Company, and resides at North Adams, in the State of Massachusetts; Charles Minot, who resides at New York City; Nehemiah Hodge, who resides at North Adams, in the State of Massachusetts; Henry Gray, E. Harris, Calvin Stebbins, Thomas Faas, and M'r Eddy, each of whom resides at Springfield, Massachusetts; Thomas Allen, a resident of Greenbush, New York; M'r Briggs, Miles G. Morse, Israel R. Dickinson, Jared C. Strong, and Josiah Hunt, each of whom resides at Northampton, in the State of Massachusetts; M'r Le Pennes, who resides at Hartford, in the State of Connecticut, and John Farnsworth, who resides at Rochester, New York, possessed such prior knowledge of the said thing, mentioned as aforesaid, in said declaration.

And that the said thing was in public use and on sale anterior to the said supposed discovery or invention thereof by the said Thompson and Bachelder, and the same was in such public use upon the Western Railroad, on the cars of the Western Railroad Company, in the State of Massachusetts; and upon the Connecticut River Railroad, on the cars of the Connecticut River Railroad Company, in the State of Massachusetts; and upon the Springfield, Hartford and New Haven Railroad, on the cars of the Springfield, Hartford and New Haven Railroad Company, in the States of Massachusetts and Connecticut; and the said defendant will prove such public uses of said thing as aforesaid by the persons herein lastly above named.

And the said defendant will further prove, upon said trial as aforesaid, that the said Lafayette F. Thompson and Asahel G. Bachelder were not the original or first inventors of a substantial or material part of the thing alleged in said declaration, and claimed as new; but,
42 on the contrary thereof, the combination of the brakes of the two trucks with the operative windlasses, or their equivalents, at both ends of the car, so as to enable the brakeman, by operating either of the windlasses, or their equivalents, to simultaneously apply the brakes of both trucks, or bring or force them against their respective wheels, and whether he be at the forward or rear end of the car, by means of machinery equivalent to the vibrating lever, was publicly used prior to the time of the said alleged invention thereof by them, upon the cars

of the said railroad companies above named, and upon the railroads above mentioned, and the same was known, prior to the time of the said alleged invention thereof, to each of the persons whose names and residences are hereinbefore set forth.

And the said defendant will further prove as aforesaid, upon said trial, that the combination of the brakes of the two trucks with the operative windlasses, or their equivalent, at both ends of the car, so as to enable the brakeman, by operating either of said windlasses, or their equivalents, to simultaneously apply the brakes of both trucks, or bring or force them against their respective wheels, and whether he be at the forward or rear end of the car, was known and in public use before the alleged invention of the said Thompson and Bachelder; and the same and the previous invention, knowledge, and use thereof was known to Charles B. Turner, Francis A. Stevens, M'r Burton, Charles Minot, Nehemiah Hodge, Henry Gray, E. Harris, M'r Eddy, M'r Briggs, Miles G. Morse, Joseph Hunt, Israel R. Dickinson, Jared C. Strong, M'r Le Pennes, Calvin Stebbins, Thomas Faas, Thomas Allen, and John Farnsworth, whose respective places of residence are hereinbefore set forth; and the same was in prior public use, as aforesaid, upon the cars of the Western Railroad Company, upon its railroad, in the State of Massachusetts; upon the cars of the Connecticut River Railroad Company; upon its railroad in the State of Massachusetts; and upon 43 the cars of the Springfield, Hartford and New Haven Railroad Company, upon its railroad, in the States of Massachusetts and Connecticut; and such prior public use thereof was known to the persons last above named.

Second notice of such special matter.

Take notice, that John Farnsworth, named in the notice served upon you in this cause, with the plea of the general issue, resides at or near Dayton, in the State of Ohio, and not at Rochester, as stated in said notice.

Third notice of special matter.

Please take notice, that on the trial of this cause, in *in* addition to the notices already served upon you, the defendant will prove by Joseph F. Falson, residing in New York City; Isaac Newton Stanley, now or late of New York City; Nicholas Neafie, residing in New York City; Burnett Hughes, residing in Jersey City; Edward Beattie, residing in Jersey City; Timothy L. Smith, residing in Dunkirk; Frederick Boyce, residing in Jersey City; Moses Parsells, residing in Jersey City; M'r Anderson, sup't car-shop, residing in Providence, R. I.; Osgood Bradley, residing in Worcester, Mass.; Orsamus Eaton, residing in Troy, N. Y.; Uri Gilbert, residing in Troy, N. Y.; Ed. O. Eaton, residing in Troy, N. Y.; John Howell, residing in Norwich, Conn.; George S. Griggs, residing in Roxbury, near Boston; Francis A. Stevens, residing in Brooklyn, N. Y.; Charles Minot, residing in New York City; Nehemiah Hodge, residing in North Adams, Mass.; M'r Burton, residing in North Adams, Mass., and others, that they knew of the use of the brakes the same, or substantially the same, as the said alleged invention of the plaintiff, and that the same, or substantially the same, was used on the rail- 44 road of the New Jersey Railroad and Transportation Company prior to the alleged invention thereof by the plaintiff, or the said Thompson and Bachelder; also, the same was used on the line, or a portion of the line, of railroad between Albany and Buffalo, Troy and Schenectady, and on roads generally in the States of New York and Massachusetts, and on the roads mentioned and stated in the notice heretofore served on plaintiff's attorney, and so known as aforesaid to the persons named and others more particularly at present unknown to this defendant, prior to the alleged invention by said Thompson and Bachelder, or the said patentee; also, that the brakes claimed by said plaintiff as his patented invention were in use on the road of the defendant, and known to the persons aforesaid, and to its officers and agents generally, prior to the alleged invention by said Thompson and Bachelder, or said patentee, and that the right to use the same was purchased by this defendant of Francis A. Stevens and Nehemiah Hodge, under and by virtue of their letters patent, dated and issued prior to the patent and alleged invention on which this suit is brought, and so known as aforesaid by said plaintiff and his assignors.

That the same, or substantially the same, was previously invented, and patented August 12th, 1846, by Edward Thayer.

And that the same, or substantially the same, was previously invented, and patented July 12th, 1843, by Henry C. Sydes.

That the same, or substantially the same, was previously invented and patented by Charles B. Turner, of Buffalo, November 14th, 1848.

That the same, or substantially the same, was previously invented by Ross Winans, of Baltimore, and used on the Baltimore and Ohio Railroad, and known to the officers and agents thereof.

45 Also the same, or substantially the same, brake or alleged invention, as claimed by the plaintiff, was previously known to Miles G. Morse and Miles G. Marses, residing at Falls Village, Conn., Josiah Hunt, M'r Briggs, and M'r Dickinson, of Northampton, Mass., and used on the Connecticut River Railroad; also to Henry Gray, M'r Harris, and M'r Eddy, of Springfield, Mass., and used on the Western Railroad, and to M'r Hodge, of North Adams, Mass., and used both on said Connecticut River and Western Railroads; also to M'r Le Pennes, of Hartford, Conn., and used on the Springfield, Hartford and New Haven Railroad.

Fourth notice of special matter.

Take notice, that the defendant in this cause will prove upon the trial of this cause, under the plea of the general issue pleaded therein, that what is claimed in this action as the invention or discovery of said Lafayette F. Thompson and Asahel G. Bachelder, previous to the time when it is claimed they made such invention or discovery, was known to other persons, and that they, nor either of them, were the original or first inventors or discoverers thereof.

And the same was, previously to the time when it is claimed they invented or discovered the same, in public use, with their consent and allowance, and upon sale with their consent and allowance, and subsequent to the time when it is claimed they invented or discovered the same, and before application was made for said letters patent, the same was in public use or on sale with the consent and allowance of the said Lafayette F. Thompson and Asahel G. Bachelder, and the consent and allowance of said plaintiff; and such public use existed more than two years before the application for the letters patent mentioned and referred to in the declaration in this cause.

46 And the same was publicly used as aforesaid upon the following railroads, to wit: upon the cars used on the Western Rail-

road, in the State of Massachusetts; upon the cars used on the Connecticut River Railroad, in the State of Massachusetts; upon the cars of the Springfield, Hartford and New Haven Railroad, in the States of Massachusetts and Connecticut; upon the cars of the Pittsfield and North Adams Railroad, in the State of Massachusetts; and upon the cars of the New Jersey Railroad and Transportation Company, in the State of New Jersey; and upon the cars of the Albany and Buffalo Railroad, in the State of New York; and upon the cars of the Troy and Schenectady Railroad, in the State of New York.

And the following-named persons are the persons the defendant expects to prove, upon said trial, possessed said prior knowledge of what is claimed in this action as the invention of said Lafayette F. Thompson and Asahel G. Bachelder, to wit: Jos. F. Talson, residing in New York; Isaac Newton Stanley, residing in the same place; Nicholas Shaffer, residing in the same place; Barnard Hughes, residing in Jersey City, New Jersey; Edward Beattie, residing in Jersey City, New Jersey; Timothy L. Smith, formerly residing at Dunkirk, in the State of New York, but now residing at Jersey City, in the State of New Jersey; Frederick Boyce, residing at Jersey City, in the State of New Jersey; Moses Parsells, residing at Jersey City, in the State of New Jersey; M'r Anderson, residing at Providence, in the State of Rhode Island; Osgood Bradley, residing at Worcester, in the State of Massachusetts; Orsamus Eaton, Uri Gilbert, and Ed. O. Eaton, each residing at Troy, in the State of New York; John Shewell, residing at Norwich, Connecticut; George S. Griggs, residing at Roxbury, near Boston, in the State of Massachusetts; Francis A. Stevens, residing at Brooklyn, in the State of
47 New York; Charles Minot, residing at the city of New York;
Nehemiah Hodge and M'r Burton, residing at North Adams, in the State of Massachusetts; Henry Gray, E. Harris, Calvin Stebbins, Thomas Fass, and M'r Eddy, Hilson Eddy, Henry H. Snow, residing each at Springfield, in the State of Massachusetts; Thomas Allen, residing at Greenbush, in the State of New York; Miles G. Morse, Josiah Hunt, and M'r Briggs, residing each at Northampton, in the State of Massachusetts; M'r Le Pennes, residing at Hartford, in the State of Connecticut; Charles B. Turner, residing at Brooklyn, in the State of New York; Francis A. Stevens, residing at Burlington, in the State of Vermont; Israel R. Dickinson, Jared C. Strong, and Josiah Hunt, residing each at Northampton, in the State of Massachusetts; and Samuel Dennis of New Haven, Connecticut; John Farnsworth, who formerly resided at Rochester, in the State of New York, but more recently at or near Dayton, in the State of Ohio.

And the defendant will further prove, as aforesaid, that a substantial and material part of what is claimed in this action as the invention of said Lafayette F. Thompson and Asahel G. Bachelder, was known to said persons prior to the time when it was claimed the same was invented and discovered by them, and they were not the first or original inventors thereof, to wit, the combination of the brakes of the two trucks, with the operative windlasses, or their equivalents, at both ends of the car, so as to enable the brakeman by operating either of the windlasses, or their equivalents, to simultaneously apply the brakes of both trucks, or bring or force them against their respective wheels, and whether he be at the forward or rear end of the car; and also, that part of such combination as combines the brakes of each truck of a car by
rods, or their equivalents, to the operative windlasses at each
48 end of the car, so as to enable the brakeman to bring all the
brakes upon the wheels from either windlass.

And hereupon the process thereof is continued between the parties aforesaid, of the plea aforesaid, in this same court, before the judges thereof, and the issue above joined is ordered by the said court to be tried at the term of this court appointed to be held at the city of Albany on the third Tuesday of October, in the year 1854, at which day and place last aforesaid came the parties aforesaid, by their attorneys aforesaid, before the judges of the said court; and the jurors of the jury summoned to try said issue, being called, also came; who, to speak the truth of the matters aforesaid, being chosen, tried, and sworn, say, upon their oaths, that the said defendants are guilty of the premises above laid to their charge, in manner and form as the said plaintiff hath above complained against them; and they assess the damages of the said plaintiff by reason of the premises, over and above his costs and charges, by him about his suit in this behalf expended, to seventy-five dollars, and for those costs and charges, to six cents.

Therefore, it is considered that the said plaintiff do recover against the said defendants his said damages, costs, and charges, by the jurors aforesaid, in form aforesaid assessed, and also three hundred and sixty-four dollars and thirty-eight cents for his costs and charges by the court now here adjudged of increase to the said plaintiff, with his assent, which said damages, costs, and charges, in the whole, amount to four hundred and thirty-nine dollars and forty-four cents.

And the said defendants in mercy, etc.

Judgment signed this second day of February, 1855.

AUG'S A. BOYCE, *Clerk.*

49 (Endorsed:) Circuit court for the United States for the northern district of New York. Henry Tanner vs. The New York and Erie Railroad Company. Judgment record for $439.44. Samuel Blatchford, attorney for plaintiff. Filed February 2, 1855, 10 a. m.

Circuit court of the United States of America in and for the northern district of New York.

I, Augustus A. Boyce, clerk of the circuit court of the United States in and for the northern district of New York, do hereby certify that the foregoing is a true and correct transcript from an original judgment record filed and remaining of record on the file of my office, and of the whole of such original.

In testimony whereof I hereunto subscribe my name and affix the seal of the said circuit court at my said office in the city of Utica, within said district, the fourteenth day of June, A. D. 1855.

[L. S.] A. A. BOYCE, *Clerk.*

50 At a stated term of the circuit court of the United States of America for the northern district of New York, in the second circuit, held at the city hall in Albany, in said district, on Thursday, the 26th day of October, in the year of our Lord one thousand eight hundred and fifty-four.

Present, the honorable Nathan K. Hall, judge.

HENRY TANNER
vs.
THE NEW YORK AND ERIE RAILROAD COMPANY.

Patent trial for infringement of brakes used on railroad-cars, and question whether the Hodge brake and Stevens brake, so called, were infringements of the plaintiff's patent. Amount of damages stipulated at $75.

"The jury came into court, and being called, answer and say, that they find for the plaintiff a verdict for seventy-five dollars damages; and that the Stevens brake and Hodge brake, used by the defendants, are infringements of the plaintiff's patent."

A copy from the minutes, as witness my hand and official seal, at Utica, this 15th day of June, A. D. 1855.

[L. S.] AUG. A. BOYCE, *Clerk.*

51 At a special term of the circuit court of the United States of America for the northern district of New York in the second circuit, held in the city of Buffalo in said district, on the 7th day of August, in the year of our Lord one thousand eight hundred and fifty-five.

Present, the honorables Samuel Nelson and Nathan K. Hall, judges.

HENRY TANNER
vs.
THE NEW YORK AND ERIE RAILROAD COMPANY.

Ordered, on motion of M'r S. Blatchford, of counsel for plaintiff, M'r C. Daniels, of counsel for defendants, consenting thereto, that the motion for a new trial on the bill of exceptions be denied.

A copy, as witness my hand and official seal.

[L. S.] A. A. BOYCE, *Clerk.*

Circuit court of the United States for the northern district of New York.

HENRY TANNER
vs.
THE NEW YORK AND ERIE RAILROAD COMPANY.

This was an action on the case brought by Henry Tanner against the New York and Erie Railroad Company to recover damages for the infringement of letters patent granted to said Tanner on the 6th day of July, 1852, for an "improvement in railroad-car brakes."

The case was tried at the term of this court held at Albany in October, 1854, before his honor, Judge Hall, and a jury. It was defended on the ground of want of novelty, but the jury found a verdict, on the facts presented, for the plaintiff.

The defendants took a bill of exceptions on said trial for alleged errors in the charge of the court to the jury, and the motion for a new trial on such bill of exceptions came on to be heard before a special term of this court held at Buffalo on the 7th of August, 1855, before his honor Judge Nelson, one of the associate justices of the Supreme Court of the United States, and his honor Judge Hall, district judge; whereupon the said bill of exceptions was abandoned by the defendants, and, by consent of their counsel, the motion for a new trial was denied. The defendants thereupon paid in full the judgment which was entered on said verdict for damages and costs, and also paid for and took a
53 license under said patent for the residue of its term, and paid for past infringements not covered by said verdict.

We understand from the attorney and counsel who had charge of the suit that the above facts are correct.

August 14, 1855.

EATON & DAVIS,
Attorneys for New York and Erie Railroad Co.

Circuit court of the United States for the northern district of New York.

HENRY TANNER
vs.
THE HUDSON RIVER RAILROAD COMPANY.

This was a suit brought by the plaintiff for an alleged infringement of letters patent granted to him as assignee of the inventors, L. F. Thompson and A. G. Bachelder, for an improved railroad-brake, by the use on said road of brakes made on plans alleged to have been invented by Nehemiah Hodge, and also by F. A. Stevens, and purchased by the defendants from the said Hodge and Stevens, and also for the use of the plan as patented to the said Tanner.

The suit was noticed for trial at the October term of 1853, and put over the term by motion of defendant's counsel, by paying the costs of the term.

And thereafter the defendant's counsel made overtures for a settlement, which resulted in the defendant's acknowledging the validity of plaintiff's patent, the infringement of the said patent by 54 the use of double-acting brakes on the plans of the said patents, and the company paying to the said plaintiff for the right to use the said invention, and for the withdrawal of the said suit, the sum of one thousand dollars and costs.

Having read the above, I do certify to the correctness of the statements therein contained.

October 25, 1853.

THOMAS M. NORTH,
Secretary and Attorney of the Hudson River Railroad.

(Endorsed:) Filed Dec. 28, 1861. W'm H. Bradley, clerk.

Circuit court of the United States, northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO & NORTHWESTERN RAILWAY Company. } In chancery.

The answer of said defendant, the Chicago & Northwestern Railway Company, to the bill of complaint of said complainant, Thomas Sayles.

This defendant, now and at all times hereafter saving and reserving to itself all manner of benefit and advantage of exception to the manifold errors and insufficiencies in the complainant's bill of com- 55 plaint contained, for answer thereto, or to so much and such parts thereof as this defendant is advised are material for it to make answer unto, answering, saith:

That this defendant admits itself to be a corporation for railroad purposes, created and existing under the laws of the States of Illinois and Wisconsin, and owning and operating a railroad from said city of Chicago, in the northern district of Illinois, to Appleton, in the State of Wisconsin, being a distance of two hundred and thirteen miles.

And this defendant, further answering, saith that it is not informed, save by said bill of complaint, and cannot therefore either admit or deny, whether said Thompson and Bachelder were, at the time mentioned in said bill, or at any other time, the original and first inventors of the pretended new and useful improvement in railroad car-brakes in said bill of complaint mentioned and referred to; nor whether the said Thompson and Bachelder assigned and transferred to said Henry Tanner all their rights, title, and interest to said improvement prior to the granting of letters patent therefor as in said bill set forth; nor whether letters patent securing to said Tanner, his heirs, administrators, and assigns, the full and exclusive right of making, constructing, using, and vending the said pretended improvement, were issued under the seal of the Patent Office of the United States to said Tanner, at the time and in the manner mentioned in said bill of complaint; nor whether, in obtaining the issue of said letters patent, said Tanner and said Thompson & Bachelder complied with the laws of the United States relative to the granting of patents, and with the rules and regulations of the Patent Office of the United States; but as to all matters pertaining to obtaining of said letters patent, and the assignment thereof from said Bachelder & Thompson to said Tanner, this defendant insists upon full proof.

56 And this defendant, further answering, saith that it is not informed, save by said bill, and cannot either admit or deny, whether the said Exhibit A, annexed to said bill of complaint, and made a part thereof, is a true copy of said letters patent and the schedules thereto annexed; but this defendant insists upon due production and proof of said pretended original letters patent on the hearing of this case.

And this defendant, further answering, saith that it is not informed, save by said bill of complaint, and cannot either admit or deny, whether said Tanner, at the time mentioned in said bill, or at any other time, commenced an action on the case in the circuit court of the United States for the northern district of New York against the New York and Erie Railroad Company, nor whether the defenses and proofs were set up and made in said case, and trial and judgment had therein, as set forth in said bill; nor is this defendant informed whether the said New York and Erie Railroad Company took a bill of exceptions and made a motion for a new trial in said action on the case, and subsequently abandoned the same, and suffered said motion for a new trial to be overruled; nor is this defendant informed, save by said bill, and therefore it cannot either admit or deny, whether said complainant filed his bill in equity in said circuit court for the northern district of New York, against said New York and Erie Railroad Company, to restrain said company from violating the rights secured to said Tanner, his heirs, executors, administrators, and assigns, by said pretended "letters patent," nor whether such proceedings were had in said cause as are in said bill alleged; nor whether, by reason of said proceedings, said New York and Erie Railroad Company were frightened into a compromise with said complainant, as is by said bill alleged and pretended.

57 And this defendant, further answering, saith that it is not informed, save by said bill, and cannot therefore either admit or deny, whether said Tanner brought an action on the case in the circuit court of the United States for the northern district of New York, against the Hudson River Railroad Company, for an infringement of

said letters patent, nor whether, by reason of said suit, a compromise was effected between said Tanner and said Hudson River Railroad Company, as in said bill is pretended and alleged.

And this defendant, further answering, saith that it is not informed, save by said bill, and cannot therefore either admit or deny, whether the various railroad companies in said bill mentioned, or any of them, have purchased from said Tanner and said complainant the right to use said pretended patented invention, and now use the same; but this defendant insists upon full proof of said matters and allegations.

And this defendant, further answering, denies that by the said pretended verdict in the said action on the case, brought by said Tanner against said New York and Erie Railroad, and by the said alleged settlements and licenses and purchases and uses of said pretended improvement the validity of said letters patent, and the novelty and utility of said pretended improvement, and the fact that the use of the said Hodge and Stevens brake is a violation of said letters patent, is fully established and settled; but, on the contrary, this defendant insists and charges the fact to be, upon information and belief, that said judicial proceedings, if any such were had, were had by collusion between said Tanner, or parties acting in his behalf, and the said New York and Erie Railroad Company, or some one acting in its behalf, and the said Hudson River Railroad Company, or some one acting in its behalf; that said trial was not had in good faith, and with the intent of vigorously contesting and defeating the validity of said pretended patent
58 of said Tanner; and that the said pretended sales of the right
to use said pretended invention, and the purchase thereof by the various railroad companies mentioned in said bill, were not made in good faith, with the intention, on the part of the purchasers, to use said pretended improvement, but that said sales and purchases, if made at all, were made upon and for a nominal consideration, and to avoid litigation, or the threat and danger thereof, and to be rid of the annoying and vexatious importunities of said Tanner and said complainant; and this defendant denies that the said judicial proceedings, or the said pretended settlements or licenses, in said bill alleged, are or should be taken or deemed as any evidence, admission, or determination as to the validity of said letters patent, or the novelty or usefulness of said pretended invention, or that the use of the Hodge or Stevens brake is a violation and infringement of said letters patent.

And this defendant, further answering, saith that it is not informed, save by said bill, and cannot therefore either admit or deny, whether the said interest in said pretended patented invention, which is by said bill claimed by said complainant, has been duly assigned and transferred to him; but this defendant insists upon the proof of said matters, and of all facts necessary to show that said complainant has the right and title to said pretended invention which is claimed by said bill.

And this defendant, further answering, denies that it is now or has at any time since the first day of June, 1859, been using and operating, or causing to be used or operated, upon cars running upon its railroad, within the States of Illinois and Wisconsin, or upon any other railroad, brakes constructed in accordance with the description contained in said letters patent to said Tanner.

And this defendant, further answering, denies that the brakes
59 known as "Hodge's Brake" and "Stevens' Brake" embody and
contain the invention and improvement claimed in the said letters patent to the said Tanner.

And this defendant, further answering, insists and charges the fact to be, that car-brakes combining the substantial principle, mode of operation, and result of the said pretended improvement of said Tanner, were publicly known and in use long prior to that of the pretended invention by said Thompson and Bachelder. That the essential principles contained in the said pretended invention of said Bachelder and Thompson were known and publicly used by one James Millholland, in 1842, upon the Baltimore and Susquehanna Railroad, in the State of Maryland; by one Willard J. Nichols, in 1846, upon the New Haven, Hartford & Springfield Railroad; by one Charles B. Turner. formerly of Brooklyn, but afterwards of Buffalo, in the State of New York, in 1846, long prior to the pretended invention of said Bachelder and Thompson; by Joseph H. Moore, upon the "Old Colony Railroad" in the State of Massachusetts, in 1846; and by divers other persons and railroad companies in the United States, and elsewhere.

And this defendant, further answering, denies that said complainant has, by the use of any car-brakes upon the cars of this defendant, been damaged or injured to the extent alleged in said bill of complaint, or to any extent.

And this defendant, further answering, saith that it is not now, and has not been since the first day of June, 1859, using upon its cars in said States of Illinois and Wisconsin, or elsewhere, any car-brakes known as Tanner brakes, nor any car-brakes known as Hodge or Stevens brakes, constructed upon the principle of the said Tanner specification. That said defendant is using upon its cars the brake known as the single brake, and a brake constructed upon the principles embodied in the specifications of a patent granted to one Charles B. Turner, long
60 prior to the patent of said complainant, and essentially different therefrom.

And this defendant, further answering, says that it is informed and believes, and charges it to be true, that before the issue of said letters patent, said Thompson and Bachelder had abandoned their said pretended invention to the public. That said letters patent were obtained wrongfully and fraudulently by the said Tanner; and this defendant denies, that the use of car-brakes constructed and operated in the manner substantially as set forth in the specifications and according to the directions of said letters patent, and the schedule accompanying the same, so as aforesaid claimed to have been issued to said Tanner and assigned to said complainant, without the license and consent of said complainant, is a violation or infringement of any rights secured by said letters patent, because of the said abandonment thereof by said Thompson and Bachelder, and the fraud in obtaining the issue of said letters patent to said Tanner; and also for want of novelty in said pretended invention.

And this defendant denies all unlawful combination and confederation in said complainant's bill charged, without this, that any other matter or thing material or necessary for this defendant to make answer unto, and not herein or hereby well or sufficiently answered unto, confessed or avoided, traversed or denied, is true, to the best knowledge or belief of this defendant.

All which matters and things this defendant is ready to aver, maintain, and prove, as this honorable court shall direct; and humbly prays to be herein dismissed with its reasonable costs in this behalf most wrongfully sustained.

In testimony of all which said defendant hath hereto affixed its corporate seal, and caused the same to be attested by J. B. Redfield, its assistant secretary.

Attest.

[L. S.] **J. B. REDFIELD,**
Assistant Secretary.

BLODGETT & WINSTON,
Sol'rs for Defendant and of Counsel.

(Endorsed:) Filed March 4, 1862. W'm H. Bradley, clerk.

61 And on the same day, to wit, the 17th day of March, A. D. 1873, in the record of proceedings of said court in said entitled cause, before the Hon. Thomas Drummond, judge, is the following entry, to wit:

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILroad Company. } **Chancery.**

Now comes the complainant, by his solicitor, and moves the court, upon petition filed, for leave to restore the pleadings and proofs heretofore filed herein and destroyed by fire on the ninth of October, eighteen hundred and seventy-one; and thereupon, by agreement of the parties, by their solicitors, as per stipulation filed, it is ordered by the court that Exhibit A, being a copy of the original bill, answer, and defendant's testimony, taken before the first hearing; Exhibit B, being a copy of the complainant's testimony (except documentary) taken before first hearing; Exhibit C, being a copy of the complainant's new proofs taken after decree was opened; Exhibit D, being a copy of the first decree; Exhibit E, being a copy of the second decree; and Exhibits F and G, being a copy of defendant's new proofs, taken before opening of the decree, be filed and substituted for and have the same effect as the originals so destroyed.

62 Afterwards, to wit, on the 18th day of March, A. D. 1873, in the record of the proceedings of said court in said entitled cause, before the Hon. Thomas Drummond, judge, is the following entry, to wit:

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILroad Company. } **Chancery.**

Now come the parties, by their attorneys, and on motion of the complainant, by his solicitor, and as per stipulation filed, it is ordered that the defendant close its proofs herein by the twenty-third day of April next.

63 Amended answer of the defendants in said entitled cause, filed March 17, A. D. 1873, by leave of court.

64 *Amended answer.*

United States circuit court, northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO & NORTHWESTERN RAILWAY Company. } In chancery.

The amended answer of the Chicago & Northwestern Railway Company, defendant, to the bill of complaint of Thomas Sayles, complainant.

This defendant, by way of amendment to its original answer heretofore filed in said cause, by leave of court firsthad and obtained, further answering, says, on information and belief, that said Batchelder & Thompson were not the first and original inventors of the invention or improvement described in the said letters patent in said bill mentioned, but that said invention and improvement, and substantial and material parts thereof claimed as new, were, long prior to said pretended invention thereof by said Batchelder & Thompson, in use on the following railroads in the United States, and known to be so used by the persons hereinafter named, to wit: On the Camden & Amboy Railroad, in the State of New Jersey, and known to be so used by George W. Thompson, Nicholl F. Smith, Edwin Lockwood, & William Venable, residing in Bordentown, in New Jersey, and by many others who were employed on or connected with said road; and in such use also on 65 the cars of the New Jersey Railroad & Transportation Company, in said State of New Jersey, and known to be so used by Joseph F. Tallson, of Hudson City, New Jersey, and John H. Jobes, of Jersey City, and James T. Gamble, of Newark, all in said State, and by many others who were employed on or connected with said railroad. And this defendant therefore says that said letters patent are and were null and void.

THE CHICAGO & NORTHWESTERN RAILWAY COMPANY,
By H. W. BLODGETT, *its Solicitor.*
H. W. BLODGETT,
Def't's Solicitor and of Counsel.

Replication to amended answer.

THOMAS SAYLES
v.
THE CHICAGO & NORTHWESTERN RAILWAY Company. }

The replication of Thomas Sayles, complainant, to the amended answer of the Chicago & Northwestern Railway Company, defendant.

This repliant, saving and reserving to himself all and all manner of advantage of exception to the manifold insufficiencies of said amended answer, for replication hereto saith that he will aver and prove his said bill to be true, certain, and sufficient in the law to be answered unto, and that said amended answer is uncertain, untrue, and insufficient 66 to be replied unto by this affiant; without this, that any other matter or thing whatsoever, in said answer contained, material or effectual in the law to be replied unto, confessed or avoided, traversed or denied is true. All which matters and things this repliant is & will be ready to aver & prove as this honorable court shall direct, & humbly prays as in and by his said bill he has already prayed.

It is hereby stipulated that the within amended answer and replication be filed as of the first day of March, 1867, nunc pro tunc.

GEORGE PAYSON,
Solicitor for Def't.
WEST & BOND,
Sol'rs for Comp't.

(Endorsed:) Filed March 17, 1873, as of the 1st day of March, '67, nunc pro tunc, by leave of court. W'm H. Bradley, cl'k.

67 Exhibit D, referred to in the petition to restore record, and marked "Filed March 17, A. D. 1873."

68 EXHIBIT D.

In the circuit court of the United States for the northern district of Illinois.

MONDAY, *March* 6, 1865.

The Hon. Thomas Drummond, district judge.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company. } Chancery.

This cause having been heretofore brought to a hearing upon the pleadings and proofs, and counsel for the parties respectively having been heard thereupon, and the same having been duly considered by the court, it is found—

First. That the patent granted to Henry Tanner, dated the sixth day of July, one thousand eight hundred and fifty-two, in the bill set forth, is valid, and that the said Henry Tanner thereby became vested with the exclusive right thereby granted; as in said bill alleged and claimed.

Second. That the said complainant, by virtue of lawful assignments bearing date the twenty-third day of January, in the year one thousand eight hundred and fifty-five, and April fourth, eighteen hundred and fifty-nine, made and executed by the said Henry Tanner to the said complainant, became and is vested with all the right, title, interest, 69 and claim of the said Tanner in and to the said patent, and to all damages and profits and rights of action for the same, either in law or equity, growing out of the use, or unlawful use, manufacture, or vending of the said patent and invention, which occurred between the issuing of said letters patent and the date of said assignment, together with the unexpired term of the said invention covered by said letters patent, so far as relates to the territory covered by the claims in said bill.

Third. That the defendant, The Chicago and Northwestern Railroad Company, a corporation created and existing by and under the laws of the State of Illinois, and domiciled within the northern district of Illinois, both disturbed, violated, and infringed upon the said complainant in his exclusive rights under said patent and assignment as aforesaid, as in said bill set forth.

Fourth. That the complainant is entitled to a discovery and account from the defendants, The Chicago and Northwestern Railroad Company, of the profits and gains had and received by said defendants, constituting the damages sustained by the said complainant in consequence of the infringement and violation of the exclusive rights of the complainant which it is adjudged have been so committed by the defendants.

Fifth. That it be, and is hereby, referred to Henry W. Bishop, j'r,
esq., one of the masters of this court, to compute and ascertain
70 and state an account of the profits and gains so had and received
by the defendants, constituting the damages sustained by the
complainant by reason of the infringement aforesaid to the date of said report; and the said master is directed to take the proofs, and report the same to this court with all convenient speed; and he is hereby authorized to require the production of the books of account, and other books of the said defendants on such reference, and to examine the officers and agents of the said defendants on oath touching the matters hereby referred to him. And the proofs already taken in said cause, or agreed to be used by stipulation therein, may also be used in said reference, and also other testimony to be taken under the amendment to the sixty-seventh rule in equity; and all further directions are reserved until the coming in of said report.

71 Exhibit E, referred to in the petition to restore record, and marked "Filed March 17, A. D. 1873."

72 EXHIBIT E.

In the circuit court of the United States for the northern district of Illinois.

TUESDAY, *July* 18, 1871.

Present, the honorable Thomas Drummond, circuit judge.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company. } Chancery.

This cause having heretofore been brought to a hearing upon pleadings and proofs before the Hon. Thomas Drummond, one of the judges of said court, and an opinion rendered therein deciding that the letters patent on which this suit is brought, granted on the sixth day of July, eighteen hundred and fifty-two, to Henry Tanner, as the assignee of Asahel G. Batchelder and Lafayette F. Thompson, for an improvement in railroad-car brakes, were good and valid; and that the defendants, The Chicago and Northwestern Railroad Company, had infringed the said letters patent by the use upon their cars of the car-brake known as the "Stevens" brake; and an interlocutory decree having, on the sixth day of March, eighteen hundred and sixty-five, been duly entered in said cause in accordance with the said opinion, and decreeing that the
said letters patent were good and valid as aforesaid, and that the
73 said defendants had, as aforesaid, infringed the same, and referring
the cause to Henry W. Bishop, junior, esq., one of the masters of
said court, to, among other things, compute and ascertain and state an account of the profits and gains received by the said defendants by reason of their infringement aforesaid of the said letters patent; and the

said interlocutory decree having, on the petition of the said defendants, been opened and set aside on the twenty-seventh day of May, eighteen hundred and sixty-seven, to enable the defendants to take and submit to the court certain evidence which they claimed in said petition to be newly discovered, and which they further claimed would prove the said letters patent to be invalid for want of novelty in the said invention of the aforesaid Batchelder and Thompson; and the said cause having heretofore again been brought to a hearing before the aforesaid Thomas Drummond, circuit judge, on additional proofs, the same constituting the aforesaid newly discovered evidence on the part of the said defendants, and at the same time the aforesaid issue of infringement having, upon the express application of the said defendants, been again brought before the said court for determination, and the Hon. B. R. Curtis and the Hon. H. W. Blodgett having been heard upon the said issues on the part of the said defendants, and Samuel D. Cozzens, esquire, having been
74 heard thereon on the part of the above-named complainant, and the said additional proofs and the said issue of infringement having been duly and fully considered by the said court:

Now, therefore, it is hereby ordered, adjudged, and decreed herein, as follows:

First. That the aforesaid letters patent, on which this suit is brought, granted on the sixth day of July, eighteen hundred and fifty-two, to Henry Tanner, as the assignee of Asahel G. Batchelder and Lafayette F. Thompson, for an improvement in railroad car-brakes, are good and valid.

Second. That the said Asahel G. Batchelder and Lafayette F. Thompson were jointly the original and first inventors of the combination of the brakes of a railroad car with the operative windlasses, so that the brakeman, by operating either windlass, can apply all the brakes of the car simultaneously to the wheels of the car.

Third. That the said Batchelder and Thompson never neglected or abandoned the said invention, and that the said Henry Tanner, by the said grant of the said letters patent, became and was vested with the sole and exclusive right and liberty of making, using, and selling to others to be used, the said invention throughout the United States for the whole of the first term of said letters patent.

Fourth. That under and by virtue of the several assignments set forth in the bill in this cause, made and executed by the aforesaid Henry
75 Tanner to the said complainant, Thomas Sayles, to wit, the assignment of the thirteenth day of July, eighteen hundred and fifty-four, and the assignment of the twenty-third day of January, eighteen hundred and fifty-five, and the assignment of the fourth day of April, eighteen hundred fifty-nine, the said complainant became and is vested with the entire right, title, and interest under the aforesaid letters patent for the first term thereof, and also in and to all damages, gains, profits, and savings, together with all rights of action for the same, both in law and equity, growing out of the infringement, or violation, or the unlawful making, using, and vending of the aforesaid invention within and throughout the territory included in the said assignments for the period between the aforesaid granting of the said letters patent and the dates of the said assignments, respectively, together with the residue, from and after the said dates, of the said assignments of the said first term of said letters patent.

Fifth. That the said letters patent properly and sufficiently describe and claim the aforesaid invention of the said Batchelder and Thompson, and that the thing patented and covered in and by the said letters patent

is the combination of all the brakes of a railroad car with the operative windlasses on the car, so that the brakeman, by operating either of
76 these windlasses, can apply simultaneously all the brakes of the car to the wheels of the car.

Sixth. That the car-brake known as the "Stevens" brake, used by the defendants in this cause, embodies and contains the aforesaid combination patented and covered in and by the said letters patent on which this suit is brought, granted to the aforesaid Henry Tanner, as assignee as aforesaid, on the sixth day of July, eighteen hundred and fifty-two.

Seventh. That the said defendants, the said The Chicago and Northwestern Railroad Company, by the use of the said "Stevens" car-brake, have violated and infringed upon the aforesaid rights of the said complainant under the said letters patent and under the aforesaid assignments.

Eighth. That the said complainant is entitled to a discovery and account from the said defendants of all the gains, profits, savings, benefits, and advantages accruing to and realized and received by the said defendants in consequence of their aforesaid violation and infringement of the said letters patent and their aforesaid unlawful use of the said invention, together with damages for the said infringement and unlawful use; and it is further hereby ordered that this cause be referred to Henry W. Bishop, esquire, one of the masters of this court, to compute and ascertain and to take and state an account of all the gains,
77 profits, savings, benefits, and advantages accruing to and realized and received by the said defendants, The Chicago and Northwestern Railroad Company, in consequence of their use in the aforesaid "Stevens" car-brake of the aforesaid invention of the said Batchelder and Thompson, patented in and by the said letters patent from the time of the commencement of such use by them subsequent to the grant of the said letters patent down to the date of such report, and in addition thereto to assess, under the direction of the court, the damages sustained by the complainant by reason of the said use and infringement by the said defendants for the period aforesaid.

And the said master is hereby directed to take proofs upon the abovementioned matters, and to report the same, together with the said account and damages to this court with all convenient speed.

And he is hereby authorized to require the production before him upon this reference of the books of account and the other books of the said defendants, and to examine the officers, agents, and employees of the said defendants on oath touching the said matters hereby referred to him; and it is further ordered that the stipulations heretofore made and executed by the said defendants upon the reference to the said master, ordered by the above-mentioned interlocutory decree of
78 the sixth day of March, eighteen hundred and sixty-five, together with all material and relevant testimony heretofore taken by the said defendants or by the said complainant before the said master upon said previous reference, or otherwise, in said cause, may be used in the reference hereby ordered, and also any other testimony to be taken before him under the amendment to the sixty-seventh rule in equity; and all further directions are reserved until the coming in of the said report.

(Endorsed:) Filed March 17, 1873. W'm H. Bradley, cl'k.

79 Report of Henry W. Bishop, master, to whom this cause was referred, and the exceptions filed thereto by said defendant.

80 *Master's report.*

Circuit court of the United States for the northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD COMPANY.
} In chancery.

To the honorable the judges of said court:

This cause having been by an interlocutory decree of the court referred to the undersigned, as master, to compute and ascertain, and to take and state an account of, all the gains, profits, savings, benefits, and advantages accruing to, realized and received by the said defendants, the Chicago and Northwestern Railroad Company, in consequence of their use, in the Stevens car-brake, of the invention of Batchelder and Thompson (in said decree described) patented in and by the letters patent described therein—from the time of the commencement of such use by them subsequent to the grant of said letters patent down to the date of such report—and in addition thereto to assess, under the direction 81 of the court, the damages sustained by the complainant by reason of the said use and infringement by the said defendants during the period aforesaid—

I hereby report that I have been attended by S. D. Cozzens, esq., solicitor for complainant, and Hon. John N. Jewett, solicitor for defendants, who have produced before me the testimony taken in said cause, together with the stipulations therein.

And upon the hearing of the arguments, and examination of the evidence in said cause together with the stipulations therein, I find that the complainant is entitled to have and receive from the said defendants for his damages herein—the same being the amount of value of the gains, profits, savings, benefits, and advantages which I find were realized by the defendants by reason of the use and infringement by them of the said patent of the complainant for the period of five years—beginning June 2d, 1859, and ending June 2d, 1864—the sum in gross of sixty-three thousand six hundred and thirty-eight dollars and forty cents ($63,638.40).

The elements that make up this account consist of two parts:

First. In the saving in the wages of brakemen, amounting to the sum of forty-one thousand two hundred and eighty dollars ($41,280).

Second. In the saving in wheels, amounting to twenty-two thousand three hundred and fifty-eight dollars and forty cents ($22,358.40).

The duration of the use of complainant's patent, the number of cars upon which it was used, the number of brakemen employed and their wages, the number of wheels upon each car, the cost of the wheels and the expense of putting on a set of wheels under each car, are all the subject of stipulation, leaving the other items in the account to be established by the testimony.

As to each one of these elements I have made out and attach hereto a detailed statement, marked "Exhibit A," which will show the processes by which the results herein stated are obtained.

82 In arriving at my conclusions I have computed the amount saved to the defendants by the use of the Batchelder and Thompson invention over the use of the "single brake," rejecting as a standard of comparison what is known in this cause as the "Springfield brake," it appearing to me from the testimony that said brake was an unsuccessful, abandoned experiment, and not a perfected practical invention.

The proofs in the case show that prior to Bachelder and Thompson's invention it was put upon two "crate-cars," used a short time, and then taken off and the "single brake," which had previously been used on the same cars, put back in its place. It also appears that after Batchelder and Thompson invented their brake the "Springfield brake" was twice again attempted to be used on passenger-cars and was each time abandoned. The last of these times—when used between New York and Boston—accidents were caused by it. In addition to this, the clear weight of the evidence, to my mind, is that it is a defective brake and not adapted to ordinary every-day practical use on passenger-trains.

It is insisted by complainant that in the use of the single brake a necessity arises for reversing the engines in order to stop the trains, and that this is injurious to the engines; and damages to engines arising from this cause are sought to be recovered in this proceeding. I am of the opinion that this should not be allowed, for the reason that the increase of brakemen covers (in my judgment) this item; for if the brakemen are increased so as to enable them to apply the brakes to all the trucks of a train without passing through the cars, the necessity for reversing the engines seems to me to be wholly obviated.

I have therefore rejected this item from the account.

Exhibit A.

First, brakemen saved:

For five years defendants ran constantly in passenger-trains
83 twenty-four (24) cars, and required therefor twelve (12) brakemen
and four (4) baggagemen, equaling in all sixteen (16) brakemen.

The use of the patent is shown to have saved an equal number—that is, sixteen (16).

It is shown that on mixed trains defendants ran two (2) cars, and required therefor one (1) baggageman, equaling one (1) brakeman.

The use of the patent saved here two (2) brakemen.

On freight-trains they ran two (2) "caboose-cars," requiring therefor two (2) brakemen (or conductors).

The patent saved here two (2) brakemen.

Making in all twenty (20) brakemen saved.

The average wages of a brakeman for the time the patent was used were thirty-four dollars and forty cents ($34.40) per month.

Wages of 20 brakemen would be $688 per month.

Wages of 20 brakemen would be $8,256 per year.

Wages of 20 brakemen for five years, $41,280.

I do not take into account the forward truck of the forward car of either of the defendants' passenger-trains, which were four in number.

If the forward trucks were counted, the brakemen saved would be twenty-four (24) instead of twenty (20).

Nor are the Harvard and Rockford mixed trains taken into account, which ran one year of the five, and on which two (2) brakemen were saved by the patent.

Second, wheels saved:

For five (5) years defendants ran constantly in passenger-trains
twenty-four (24) cars.
84 On mixed trains they ran two (2) cars.
On freight-trains they ran two (2) "caboose-cars."

On Harvard and Rockford trains they ran for one (1) year two (2) cars.

Equaling thirty (30) cars per year for one year, and twenty-eight (28) cars per year for four years; or,

Calling the wheels saved on the two caboose-cars per year as equaling the wheels saved on one of the other cars per year, it may be stated as:

Twenty-nine (29) cars for one year, and twenty-seven (27) cars for each of the other four years.

The patent saved two (2) setts of wheels per car per year. Equaling fifty-eight (58) setts saved for one year and two hundred and sixteen setts saved for the four (4) years, or in all two hundred and seventy four (274) setts saved in five years.

Cost of a sett of wheels was	$133 60
And of putting on a sett	8 00
Making cost of a sett put on	141 60
Or for the whole 274 setts	38,798 40
Value of old wheels, calling their average weight 500 lbs.	16,440 00
Deducting this amount, there is left for saving in wheels	22,358 40

In this estimate no account is made of any cars except those shown to have been constantly in use.

85 *Summary.*

1st. Saving in brakemen	$41,280 00
2d. Saving in wheels	22,358 40
Total amount due complainant	63,638 40

(Sixty-three thousand six hundred and thirty-eight dollars and forty cents.)

All of which is respectfully submitted.

HENRY W. BISHOP,
Master in Chancery, United States Circuit Court.

JULY 31, 1873.

(Endorsed:) Filed July 31, 1873. W. H. Bradley, clerk.

86 *Exceptions filed by defendant to said report.*

Circuit court of the United States for the northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO & NORTHWESTERN RAILWAY Company.

Exceptions taken by the defendant in the above-entitled cause to the report made therein by Henry W. Bishop, esq., one of the masters in chancery of said court, to whom said cause was referred by a decree made and entered therein on the 18th day of July, A. D. 1871, and which report bears date the 31st day of July, A. D. 1873.

FIRST EXCEPTION.—For that the said master decided, and in and by his said report stated, that the brake known as the "Springfield brake" was an unsuccessful and abandoned experiment and not a perfected practical invention—in disregard of the testimony of the witnesses William Jennings, Wilson Eddy, Henry W. Snow, John Mulligan, and John B. Adams, as to the successful working of said "Springfield brake," long prior to the alleged invention of Batchelder and Thompson, and which testimony was before said master on said reference.

Second exception.—For that the said master, as appears by his report aforesaid, "computed the amount saved to the defendant by the use of the Batchelder and Thompson invention over the use of the single brake, rejecting as a standard of comparison what is known in this cause as the 'Springfield brake'"—thereby wholly disregarding and refusing to consider the testimony of the witnesses before named in the first exception, and also the testimony of the witnesses Benjamin
87 W. Hobart, James A. Clark, Benjamin Ray, Edward Lang, Benjamin C. Read, Henry Waterman, William O'Brien, George H. Gardner, Alfred Berney, John A. Hearn, V. D. Perry, S. L. F. Deyo, Only L. Smith, Henry F. Sampson, William McCormick, Henry A. Wright, Robert Hitchcock, Alpheus Wing, John D. Emerson, John C. Blood, H. M. Rogers, G. F. Lincoln, John Lightner, James Lyon, Charles Haradon, Henry F. Taylor, John Bartlett, William W. Stevens, Charles W. Marsh, John B. Adams, R. C. Steele, Cornelius Teeling, Lewis A. Sherts, Luther D. Hodgkiss, John A. Smith, John W. Clark, F. D. Adams, and William H. Russell, introduced before said master on said reference by the said defendant, showing the successful working of said Springfield brake as a double brake.

Third exception.—For that the said master, as appears by his report, in estimating the gains, profits, savings, benefits, and advantages accruing to the defendant by the use of the Batchelder and Thompson invention, as set forth in the letters patent to Henry Tanner, wholly disregarded the advantages of the double-acting brake known as the "Springfield brake" over the single brake, as testified to by the defendant's witnesses above named in the first and second exceptions, and made comparison of the said Tanner brake directly with the single brake; whereas, under the testimony aforesaid, the comparison should have been made by him between the Tanner brake and the said "Springfield brake."

Fourth exception.—For that the said master has assumed, and in and by his said report decided, that with single brakes the defendant would have been compelled to employ double the number of brakemen and baggage-men in the management of its trains that it did employ with the double brakes.

Fifth exception.—For that the said master, in the making up of the account between the complainant and the defendant, assumed that by the use of the invention of Batchelder and Thompson, the defendant made a saving of the wages of one-half the number of brakemen upon its passenger-trains; when the fact is, as shown by said report, that the defendant, during all the time covered by said account, used the Stevens brake upon all its passenger-cars.

88 Sixth exception.—For that the said master, in the making and stating of the account between the said complainant and the said defendant, has allowed to the said complainant all the gains, savings, and benefits accruing to the defendant from the use of the best form of double-acting brake; and has not, in any manner, made allowance or deduction therefrom on account of the defects and want of adjustability of the Tanner brake.

Seventh exception.—For that the said master, in estimating the gains, profits, benefits, and advantages derived by the said defendant from the use of double brakes, has not allowed for any difference between that form of double brake known as the Stevens brake, which, as appears by said report, was exclusively used by the said defendant during the time covered by said report, and that form of double-brake claimed to have been invented by Batchelder and Thompson and described in the letters patent to Henry Tanner.

Eighth Exception.—For that the said master has found, and in and by his said report decided, that by the use of the alleged invention of Batchelder and Thompson in the Stevens brake there was a saving to the defendant of two setts of car wheels to each car per year.

Ninth Exception.—For that the said master has found, and in and by his said report decided, that the Batchelder and Thompson invention, embodied in the Stevens brake used by the said defendant, resulted in saving to the said defendant two setts of car-wheels per car per year during the entire time covered by said account—comparing said brake directly with the single brake in order to reach that result, and making no allowance for the imperfections of the said Batchelder and Thompson invention when tested by itself.

Tenth Exception.—For that the said master has assumed, contrary to the facts as shown by the complainant's own witnesses, and in and by his said report has in substance decided, that the use of the Batchelder and Thompson invention prevents the injury of car-wheels by "spotting," and that this cannot be prevented by the use of the single brake.

89 Eleventh Exception.—For that the said master in and by his said report has calculated as the gains, savings, advantages, and benefits accruing to the defendant from the use of the alleged invention of Batchelder and Thompson, not only the saving, in the wages of brakemen, but also the savings in car-wheels, the effect of which is a partial duplication of the actual gains and savings resulting from the use of a double-acting brake.

Twelfth Exception.—For that the said master, in the making and stating of the account between the said complainant and the said defendant, has not based the same upon the actual gains and savings resulting to the defendant from the use of the invention of Batchelder and Thompson, nor upon the testimony before said master as to the use of said invention by said defendant, but, instead thereof, has estimated said gains and savings according to vague and indefinite impressions of certain witnesses, who testified in respect to the supposed savings in car-wheels resulting to other railroad companies from the use of double-acting brakes on their cars.

Thirteenth Exception.—For that the said master, in the said report, wholly disregarded the brake called the "Tender brake," proved by the testimony of Wilson Eddy and others to have been in use continuously since 1843, and long prior to the alleged invention of the Tanner brake, and excluded the same in his comparison of the Tanner brake with prior devices, and made said comparison of said Tanner brake directly with the single brake.

In each and all of which particulars the said defendant excepts to the report of the said master and to his findings therein as erroneous, and appeals therefrom to the judgment of this honorable court.

JOHN N. JEWETT,
Solicitor for said Defendant.

(Indorsed): Filed Aug. 23, 1873. W'm H. Bradley, clerk.

90 NORTHERN DISTRICT OF ILLINOIS, *ss :*

I, William H. Bradley, clerk of the circuit court of the United States for said district, do hereby certify the above and foregoing to be a true, correct, and complete copy of the report of master, filed July 31st, A. D. 1873, and the exceptions to said report filed August 23d, A. D. 1873, in said-entitled cause in said court of Thomas Sayles against the Chicago and Northwestern Railway Company, as appears from their respective originals remaining in my custody.

In testimony whereof I have hereunto set my hand and affixed the seal of said circuit court, at my office in Chicago, in said district, this 26th day of August, A. D. 1873.

[SEAL.] W'M H. BRADLEY, *Clerk.*

91 *Exception filed by complainant to said report.*

U. S. circuit court, northern district of Illinois.

THOMAS SAYLES
v.
THE CHICAGO AND NORTHWESTERN RAILroad Company.
} In chancery.

Exception on the part of the complainant to the report of the master in this cause, filed July 31st, 1873.

The complainant hereby excepts to the report and decision of the master in this cause.

For that the said master in and by his said report refused to allow to the complainant the amount of savings shown by the proofs to have been realized by the defendants from the use of the Batchelder and Thompson invention in respect to injury due to reversing engines in order to stop trains, and that he found and reported that the increase in brakemen covered this item of savings, and that in so doing he disregarded the testimony of the witnesses on the part of the complainant, who were uncontradicted.

WEST & BOND,
Complainant's Solicitors.

(Indorsed :) Filed Aug. 23, 1873. W'm H. Bradley, clerk.

92 Afterwards, to wit, on the 29th day of October, A. D. 1873, in the record of the proceedings of said court in said-entitled cause, before the Hon. Thomas Drummond, judge, is the following entry, to wit:

THOMAS SAYLES
v.
THE CHICAGO AND NORTHWESTERN RAILroad Company.
} In chancery.

Now come the parties, by their solicitors, and now comes on to be heard the exceptions of the defendant to the report of the master filed herein, and, after hearing a part of the arguments of counsel, the hour of adjournment having arrived, the further hearing is postponed until Friday morning next.

93 Afterwards, to wit, on the 31st day of October, A. D. 1873, in the record of the proceedings of said court in said-entitled cause, before the Hon. Thomas Drummond, judge, is the following entry, to wit:

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company. } In chancery.

Now come again the parties, by their solicitors, and now comes on further to be heard the exceptions of the defendant to the report of the master filed herein, and after hearing additional arguments of counsel, without concluding the same, the further hearing is postponed until tomorrow morning.

94 Afterwards, to wit, on the 1st day of November, A. D. 1873, in the record of the proceedings of said court in said-entitled cause, before the Hon. Thomas Drummond, judge, is the following entry, to wit:

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company. } In chancery.

Now come again the parties, by their solicitors, and now comes on further to be heard the exceptions of the defendant to the report of the master filed herein, and after hearing additional arguments of counsel, without concluding the same, the further hearing is postponed until Monday next.

95 Afterwards, to wit, on the 3d day of November, A. D. 1873, in the record of the proceedings of said court in said-entitled cause, before the Hon. Thomas Drummond, judge, is the following entry, to wit:

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company. } In chancery.

Now come again the parties, by their solicitors, and now comes on further to be heard the exceptions of the defendant to the report of the master filed herein, and after hearing the concluding arguments of counsel the court, not being sufficiently advised in the premises, takes the same under advisement.

96 And afterwards, to wit, on the 22d day of December, A. D. 1873, in the record of the proceedings of said court in said-entitled cause, before the Hon. Thomas Drummond, judge, is the following entry, to wit:

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company. } In chancery.

This cause having, in December, A. D. eighteen hundred and sixty-three,

been brought to a hearing upon pleadings and proofs before the Hon. Thomas Drummond, one of the judges of said court, and having afterwards, in May, A. D. eighteen hundred and sixty-nine, been reheard upon further proofs before the said judge, and an interlocutory decree having been entered herein on the eighteenth day of July, A. D. one thousand eight hundred and seventy-one, whereby it was, among other things, ordered, adjudged, and decreed that the defendants, the said The Chicago and Northwestern Railroad Company, by the use of the Stevens car-brake, had violated and infringed upon the rights of the said complainant under the letters patent on which this suit is brought, granted on the sixth day of July, A. D. eighteen hundred and fifty-two,
to Henry Tanner, as the assignee of Asahel G. Batchelder and
97 Lafayette F. Thompson, for an "improvement in railroad car-
brakes, and under the assignments set forth in the bill of complaint herein," and that the said complainant was entitled to a discovery and account from the said defendants of all the gains, profits, savings, benefits, and advantages accruing to and realized and received by the said defendants in consequence of their aforesaid violation and infringement of the said letters patent and their aforesaid unlawful use of the said invention, together with damages for the said infringement and unlawful use, and that this cause be referred to Henry W. Bishop, esq., one of the masters of said court, to compute and ascertain, and to take and state an account of, all the gains, profits, savings, benefits, and advantages accruing to, and realized and received by, the said defendants in consequence of their use in the aforesaid Stevens car-brake of the aforesaid invention of the said Batchelder and Thompson, patented in and by the said letters patent, from the time of the commencement of such use by them down to the date of such report, and the said master, in pursuance of the said interlocutory decree, having, on the thirty-first day of July, eighteen hundred and seventy three, filed in said court his report in this cause; whereby he reported and found that the complainant is entitled to have and receive from the said defendants, for his
damages herein, the same being the amount or value of the gains,
98 profits, savings, benefits, and advantages which he found were
realized by the defendants by reason of the use and infringement by them of the said patent of the complainant, the sum in gross of sixty-three thousand six hundred and thirty-eight dollars and forty cents.

And the said defendants having duly filed exceptions to the said report, and the said exceptions having been brought to a hearing before the said court, and counsel having been heard thereon on behalf of the respective parties, and the said exceptions having been overruled by the court, and the court having decided that the said report ought to be confirmed:

Now, therefore, it is hereby ordered, adjudged, and decreed herein as follows:

First. That the aforesaid letters patent on which this suit was brought, granted on the sixth day of July, A. D. eighteen hundred and fifty-two, to Henry Tanner, as the assignee of Asahel G. Bachelder and Lafayette F. Thompson, for an improvement in railroad-car brakes, are good and valid.

Second. That the said Asahel G. Batchelder and Lafayette F. Thompson was jointly the original and first inventors of the combination of the brakes of a railroad-car with the operative windlasses, so that the brakeman by operating either windlass can apply all the brakes of the
car simultaneously to the wheels of the car.

99 Third. That the said Batchelder and Thompson never neglected

or abandoned the said invention, and that the said Henry Tanner, by the grant of the said letters patent, became and was vested with the sole and exclusive right and liberty of making, using, and selling to others to be used, the said invention throughout the United States for the term for which said letters patent were granted.

Fourth. That under and by virtue of the several assignments set forth in the bill in this cause, made and executed by the aforesaid Henry Tanner to the said complainant Thomas Sayles, to wit, the assignment of the thirteenth day of July, A. D. eighteen hundred and fifty-four, the assignment of the twenty-third day of January, A. D. eighteen hundred and fifty-five, and the assignment of the fourth day of April, A. D. eighteen hundred and fifty-nine, the said complainant became and is vested with the entire right, title, and interest under the aforesaid letters patent for the term for which said letters patent were granted, and also in and to all damages, gains, profits, and savings, together with all rights of action for the same, both in law and in equity, growing out of the infringement or violation or the unlawful making, using, and vending of the aforesaid invention, within and throughout the territory included in the said assignments for the period between the aforesaid granting of the said letters patent and the dates of the assign-
100 ments, respectively, together with the residue from and after the
said dates of the said assignments of the term for which said letters patent were granted.

Fifth. That the said letters patent properly and sufficiently describe and claim the aforesaid invention of the said Batchelder and Thompson, and that the thing patented and covered in and by the said letters patent is the combination of all the brakes of a railroad-car with the operative windlasses on the car so that the brakeman by operating either of these windlasses can apply simultaneously all the brakes of the car to the wheels of the car.

Sixth. That the car-brake known as the Stevens brake used by the defendants in this cause embodies and contains the aforesaid combination patented and covered in and by the said letters patent on which this suit is brought, granted to the aforesaid Henry Tanner, as assignee as aforesaid, on the sixth day of July, A. D. eighteen hundred and fifty-two.

Seventh. That the said defendants, the said The Chicago and Northwestern Railroad Company, by the use of the said Stevens car-brake have violated and infringed upon the aforesaid rights of the said complainant under the said letters patent and under the aforesaid assignments.

Eighth. That the said complainant do recover of the said defendants the amount so as aforesaid reported and found by the said master as being the amount of the gains, profits, savings, benefits, and advantages accruing to and realized and received by the said defendants in
101 consequence of the aforesaid violation and infringement of the
said letters patent, and their aforesaid unlawful use of the said invention, that is to say, the sum of sixty-three thousand six hundred and thirty-eight dollars and forty cents, together with   dollars and   cents for costs and disbursements herein, making in the whole the sum of   dollars and   cents, and that the said complainant have execution therefor.

And thereupon the defendant by its solicitors prayed an appeal to the Supreme Court of the United States, which is allowed by the court upon giving bond according to law.

102 Afterwards, to wit, on the 20th day of February, A. D. 1874,
in the record of the proceeding of said court in said-entitled cause

before the Hon. Thomas Drummond, judge, is the following entry, to wit:

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company. } In chancery.

On motion of George Payson, esq., solicitor for defendant, leave is granted by the court to said defendant to file its petition to set aside the decree herein, together with affidavits in support of the same.

103 Afterwards, to wit, on the 20th day of February, A. D. 1874, said defendant, by its solicitor, filed in said clerk's office its petition in said-entitled cause, which said petition, with the affidavits accompanying the same, are in the words and figures following, to wit:

In the United States circuit court, northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company. } In chancery.

To the honorable judges of the circuit court of the United States for said district.

And now comes the said defendant, the said Chicago and Northwestern Railway Company, by George Payson, its solicitor, and petitions this honorable court to set aside the decree heretofore, to wit, on the twenty-second day of December, 1873, entered in said cause against said defendant, and the several interlocutory decrees entered prior to thereto, and to grant a rehearing of said cause, and here assigns the following special matters or causes on which said hearing is applied for:

First. By said interlocutory decree entered in said cause on the 18th day of July, 1871, the master to whom said cause was referred was directed to compute and ascertain and to take and state an account of all the gains, profits, savings, benefits, and advantages accruing to and 104 realized and received by said defendants in consequence of their use of the said invention, &c., &c., and in addition thereto to assess, under the direction of the court, the damages sustained by the complainant by reason of said use and infringement by said defendants. Whereas, your petitioners say that said damages should not have been computed by said master nor allowed by the court, nor should they have been allowed in any way to enter into or control or influence said computation and account.

Second. Your petitioner further shows unto your honors that it was expressly stipulated in said cause that nearly all of the wheels that had become "spotted" or flattened on defendant's road during the time covered by said accounting and decree were put under freight-cars at the end where no brakes were applied; yet notwithstanding said stipulation, and in total disregard thereof, and to the manifest injury and wrong of your petitioner, all of such wheels are treated and considered in the said report of the said master as good for nothing but old iron, and are credited to your petitioner accordingly at 1¼ cents a pound, and said final decree follows the same rule.

Third. Your petitioners further show unto your honors that in the said report and said final decree your petitioners are charged with the sum of $450 and over as the amount saved by your petitioners on each car per year by the use, as it is claimed, of the said improvement
105 described in said patent to Batchelder and Thompson; that the
average number of passenger-cars running upon all the railroads in the United States during the fourteen years covered by said patent, as drawn from "Manual of Railroads of the United States for 1873–'4," prepared by H. V. Poor, was about 4,500; that $450 a year for one car would yield $2,000,000.00 and upwards for 4,500 cars, and for the whole 14 years of the patent over $28,000,000. That the seven years covered by the extension of said patent would, as appears from said manual, yield at least an equal amount, making a sum total of nearly $60,000,000.00 as the value of one only of the many patents used by the railroads of this country according to the rule of damages adopted in this case, leaving out of the account the far greater number of freight-cars running on said roads, on many of which the double-acting brake is also employed.

Fourth. And your petitioner further show unto your honors that heretofore, to wit, on the sixth day of December, A. D. 1855, the said Henry Tanner, who was then the owner of the said patent for the State of Illinois and elsewhere, for a valuable consideration to him paid by the Chicago, S't Paul and Fond du Lac R'road Co., conveyed to said company the exclusive right to use said improvement on its own cars on the seventy miles of road within said State of Illinois; that
106 afterwards your petitioners became possessed of said road and of
all the rights and franchises belonging to said Chicago, S't Paul and Fond du Lac Railroad Company, including, as your petitioners insist, the said exclusive right to use said improvement on its own cars on said 70 miles, and especially such and so many of said brakes as were made and used by said Chicago, S't Paul and Fond du Lac R. R. Co., and afterwards came into the possession of your petitioner under the mesne conveyances herewith produced, as shown in the affidavits filed herewith, all of which will appear more fully from the writings herewith offered for the inspection of the court, and none of which were produced on any of the former hearings of this cause or were ever made a part of the evidence herein.

Fifth. And your petitioners further show unto your honors that they have been charged in said report and final decree with twenty brakemen saved on the said 28 or 29 cars run by them during the said five years on the assumption that they used or would have used so many additional brakemen on said cars during that time; whereas your petitioners say and are prepared to prove that they never did use and never would have used that number, or if they had so used them said brakemen would have been employed a considerable part of the time in other duties on said road, and thus a very considerable part of the expense would have been saved to your petitioners.

107 Sixth. And your petitioners further show unto your honors
that the said Henry Tanner, so being owner of the said patent-right as above stated, made two other sales, licenses, or assignments of a similar character to that above named, one dated   , to the   , and one dated   , and that afterwards, to wit, on the   day of   , the said Thomas Sayles, to whom said patent has been conveyed, made a similar conveyance to the   , as by copies of said three several conveyances hereto annexed to the affidavit of Albert Keep will more fully and at large appear.

And your petitioner claims that by the making and giving of said several instruments the said Tanner and the said Sayles have fixed and established a license-fee as the value of said patent, and that that therefore should determine the amount to be awarded to complainant instead of the profits accrued to defendants, as is well settled by the rule of law laid down in such cases.

All of which matters appear from the affidavit filed herewith.

And your petitioners therefore pray that for the reasons above stated, or some of them, said decree may be opened, and that they may be allowed to introduce such new evidence into the cause as may be necessary to establish the facts above set forth, and such other facts 108 as may be pertinent thereto, and that the cause may be again heard by the court on all the evidence then in the case, and may be again referred to the master to take and state an account, if the court shall be of the opinion that the plaintiff is entitled thereto under the order and direction of the court, and that your petitioners may have leave to file a supplemental bill or a supplemental bill in the nature of a bill of review, if such shall be deemed necessary to the court in order to give them the relief herein prayed: And that your petitioners may have such further, or other, or different relief as the nature of this case may require and as to your honors shall seem meet.

THE CHICAGO & NORTHWESTERN R'Y CO.,
By ALBERT KEEP, *President.*

GEORGE PAYSON,
Solicitor of Petitioner & of Counsel.

109 *Affidavit of Albert Keep.*

STATE OF ILLINOIS,
Cook County, ss:

United States circuit court, northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.
} In chancery.

Albert Keep, being duly sworn, deposes and says that he is president of the said Chicago and Northwestern Railroad Company; that according to the best information on the subject he can obtain, viz, calculations drawn from "Manual of Railroads of the United States for 1873–'4," compiled by H. V. Poor, a printed publication well known to and 110 in general use by railroad companies, the average number of passenger-cars running on all the railroads in the United States during the fourteen years ending in July, 1866, was about 4,500, and that the average number for the seven years following was about 9,000, and that the average number of freight-cars running on said road during said period of 21 years was fully twenty times as great as the number of passenger-cars.

That according to the above estimate, $450 for each passenger-car per year would amount to over fifty-six millions of dollars for the said period of twenty-one years covered by the said Tanner patent, so called, and the extension thereof, and that, as this affiant is informed and believes, this is less than the amount arrived at by the said complainant, based on a somewhat similar calculation.

That the above sum does not include any of the freight-cars used on said railroads, though, as this affiant is informed and believes, double-acting brakes have also been used on a large number of said freight-cars, but just how many this affiant is unable to state.

And this affiant further states that the said double-acting brake is but one out of many hundreds or even thousands of devices used by the railroads of this country, a large number of which are patented; and that if said roads should be called upon to pay for all said patented
111 devices at the same rate that said defendant is by said final decree called upon to pay for said brake, or even half that rate, it would, in the opinion of this affiant, carefully and deliberately formed, bankrupt every railroad in the United States.

And this affiant further saith, that even admitting that said sum of $63,638.40 has been saved by the use of said brake during the period covered by said decree, which, however, this affiant expressly denies; still, no one having any skill, knowledge, or experience in the management of railroads could ever suppose that that amount, or half thereof, had been saved by defendant, or that defendant was so much richer, or had made that amount of profits by the use of said brake, or that all the railroads in the country have saved sixty millions thereby. But the fact is, as is well known to any one acquainted with the subject, that no railroad company ever has or ever can put into its own pocket the amount saved by any improvement, patented or not, but is obliged, and in fact driven and compelled, constantly to reduce its rates, and thus to share with the public the benefits and advantages of every such invention or improvement; and that whereas the value of money has diminished fully one-half during the past 20 years, and the price of nearly every other commodity has increased in the same proportion, the railroads of this country are carrying passengers and freight at about
112 the same rates in dollars and cents—that is, at about half the real rates received by them 20 years ago.

And this affiant further saith that said Chicago and Northwestern Railway Company now has in its possession, besides the license or conveyance to the Chicago, S't Paul & Fond du Lac Railroad Co., three other instruments of a similar character, two made by said Henry Tanner and one by said Thomas Sayles, copies of which are hereto annexed, and marked "Exhibits A B & C D."

And this affiant further saith that he has been informed and believes that still other instruments of the same or a similar character have been made by the said Tanner or the said Sayles to various other roads; and that said defendant would be able fully and conclusively to prove the same to the entire satisfaction of this court, if any opportunity should be offered so to do.

ALBERT KEEP.

Subscribed and sworn to before me this 20th day of February, 1874.

113 TANNER'S PATENT RAILROAD-BRAKE.

Whereas I, Henry Tanner, of the city of Buffalo, county of Erie, and State of New York, as the assignee of L. F. Thompson, of Charlestown,

and A. G. Bachelder, of Lowell, Mass., did obtain letters patent
114 of the United States for a new method of applying and using
railroad-brakes, which letters patent were applied for by said
Thompson & Bachelder in June, A. D. 1847, but issued to me July 6th, 1852, giving and granting to me, the said Henry Tanner, my heirs, administrators, and assigns, the full and exclusive liberty of making, using, and vending to others to use, the said improvement during the term of 14 years:

Now, therefore, know all men by these presents that I, the said Henry Tanner, for the consideration of twelve hundred and thirty-five dollars, by me received to my full satisfaction from the Galena and Chicago Union Railroad Company, have licensed and conveyed, and by these presents do license and convey unto the said Galena and Chicago Union Railroad Company the full and exclusive right and liberty of using the said improvement on any or all of their own cars, over any part or on all of their said railroads which is represented by their charter, or their branches, or upon roads having purchased like rights, and not elsewhere, to have and to hold and enjoy all and every privilege, benefit, and emolument which may in any wise arise from said improvement within the limits above mentioned during the term of these letters patent, or of any extension of the same.

This deed is for two hundred & forty-seven miles of road, and is in full for all past use of said brake.

In witness whereof I have hereunto set my hand and seal this
115 fourth day of December, A. D. 1855.

123 Afterwards, to wit, on the 18th day of September, A. D. 1875, in the record of the proceedings of said court in said entitled cause before the Hon. Thomas Drummond, judge, is the following entry, to wit:

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company. } In chancery.

A motion having been heretofore made in this case, and leave given on the twentieth of February, eighteen hundred seventy-four by the court to file a petition to set aside the decree of this court made on the twenty-second of December, eighteen hundred seventy-three, and for other purposes, and the same having been argued in court, and afterwards by printed arguments furnished by the counsel of the respective parties, and the court being now sufficiently advised, sustains said motion as to the amount of said decree only, and hereby opens the said decree for the purpose of modifying the same as to the amount of gains, profits, savings, benefits, and advantages accruing to the defendant in consequence of the infringement of the letters patent mentioned in said decree, and instead of the sum of sixty-three thousand six hundred and thirty-eight dollars and forty cents ($63,638.40), it is hereby adjudged and decreed that the complainant do recover of the defendant as of this date for the gains, profits, savings, benefits, and advantages accru-
124 ing to, and realized from the infringement of the said letters patent and the use of the said invention the sum of forty-seven thousand seven hundred and twenty-five dollars.

And it is further ordered that in all other respects the aforesaid decree stand in full force and effect.

And thereupon the defendant prays an appeal to the supreme court which is allowed by the court on bond being given according to law.

125 Afterwards, to wit, on the 25th day of October, A. D. 1875, said defendant by its solicitor filed in said clerk's office, its petition with affidavit in support thereof in said entitled cause, which said petition and affidavit are in the words and figures following, to wit:

UNITED STATES OF AMERICA,
Northern District of Illinois, ss:

United States circuit court.

THOMAS SAYLES *v.* THE CHICAGO & NORTHWESTERN RAILWAY COMPANY.	In chancery.

To the honorable Thomas Drummond, judge of said court in chancery, sitting:

The petition of the Chicago & Northwestern Railway Company, defendant in the above-entitled suit, shows unto your honor that heretofore, to wit, on or about the eighth day of October, A. D. 1871, the records of the above cause then pending in this court, including the evidence and pleadings in said cause were destroyed by the great fire, which occurred at that date, in the city of Chicago, in said district. That there was on file at that time, among the records pertaining to said cause, an amended answer theretofore filed by said defendant in said cause setting up certain new defences to said suit, viz, what is known as the
Stanley Tallson matter, and the Tyler car matter; that said loss
126 or destruction occurred without the fault or neglect of your petitioner in any way or shape; that a certified copy of said amended answer cannot be obtained by your petitioner; that the loss or destruction thereof, unless supplied, will or may result in damage to your petitioner by depriving your petitioner of one of the defences set up by your petitioner in said suit, either in whole or in part; that a substantial copy of said amended answer so destroyed is hereto annexed.

Your petitioner, therefore, prays that said copy may be ordered by this court to be entered of record in said cause, and that the same may be substituted in the said cause in place of said original amended answer, so lost or destroyed as aforesaid.

THE CHICAGO & NORTHWESTERN RAILWAY COMPANY,
By GEORGE PAYSON,
Its Solicitor.

GEORGE PAYSON,
Defendant's Solicitor & of Counsel.

UNITED STATES OF AMERICA,
Northern District of Illinois, ss:

In the United States circuit court for said district.

THOMAS SAYLES *v.* THE CHICAGO & NORTHWESTERN RAILWAY Company.	In chancery.

Henry W. Blodgett, being duly sworn, says that he was for-
127 merly the solicitor of the defendant in the above-entitled cause; that he has read the foregoing petition, and that the allegations therein contained are true; that he did, as such solicitor of said defendant, cause an amended answer to be prepared and filed in said cause, by leave of court first had and obtained, for the purpose of setting up the defence mentioned in the above petition; that he has heard read the annexed answer, and that the same is in substance a copy of the said amended answer so prepared and filed by him in the said cause as aforesaid.

And this affiant further saith, that on the argument of said cause the evidence of the witnesses named in said amended answer was very fully and minutely commented upon by the counsel for both parties and by the court, and without a word of objection being made by any one on account of the supposed want of such amended answer; nor has this affiant ever heard a doubt expressed as to the fact of filing said answer, until since the application made to the court for leave to restore it. That this affiant has no doubt whatever in regard to tne preparing and filing of said amended answer as aforesaid.

H. W. BLODGETT.

Sworn to & subscribed before me this 25th day of October, A. D. 1875.

E. A. DRUMMOND, *U. S. Com.*

128 (Endorsed:) Filed Oct. 25th, 1875. W'm H. Bradley, cl'k.

And on the same day, to wit, the 25th day of October, A. D. 1875, in the record of the proceedings of said court in said-entitled cause, before the Hon. Thomas Drummond, judge, is the following entry, to wit:

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company. } In chancery.

On application of the plaintiff the court allows the following papers to be supplied as having been in the pleadings and before the court at the hearing: the replication and the various assignments referred to in the evidence taken before Moulton, master, on March twelfth, 1862, and the letters patent. And on application of the defendant to file a copy of an amended answer, the court allows the same; inasmuch as if the same is not an exact copy of the original amended answer filed, the court certifies that the testimony of all the witnesses therein named was used and read on the hearing by the defendant without objection on the part of the plaintiff, and the same was treated as before the
court by the counsel on both sides, and was considered by the
129 court, all the above papers having been destroyed by the fire of
October ninth, A. D. 1871.

And on the same day, to wit, the 25th day of October, A. D. 1875, said defendant, by its solicitor, filed in said clerk's office its amended answer in said-entitled cause, which said answer is in the words and figures following, to wit:

Amended answer.

United States circuit court, northern district of Illinois.

THOMAS SAYLES
v.
THE CHICAGO & NORTHWESTERN RAILWAY Company. } In chancery.

The amended answer of the said Chicago & Northwestern Railway Company, defendant, to the bill of complaint of Thomas Sayles, complainant.

This defendant, by way of amended answer in this case, by leave of court first had and obtained, further answering, says:

That it denies that said Batchelder and Thompson were the first and

original inventors of the said pretended improvement described in the said letters patent issued to said Henry Tanner, but alleges, on information and belief, that the same had been, prior to the said pretended invention thereof by said Batchelder & Thompson, used on the Camden & Amboy Railroad, in the State of New Jersey, and that said use 130 was known to Edwin Lockwood, George W. Thompson, Nicholl F. Smith, William Venable, Benjamin L. Wolcott, George Stockham, Thomas W. Dunn, Joseph Reed, and Robert C. Buzby, residing at Bordentown; and to Letchworth Cox, residing at Jamesburgh; and Charles Gundt, William Crim, Thomas Hubert, Asher Pancoast, and Andrew Heath, residing at Camden; to Richard C. Wolcott, residing at Hoboken; to John H. Jobes and William Coulter, residing in Jersey City; to Jonas Hagar, residing at New Brunswick; to John H. Hillman, James Seeds, and James C. Hillman, residing at Trenton; to Joseph Cassner, Henry H. Disbrow, William Disbrow, and Patrick Bogg, residing at South Amboy; to James S. Gamble, residing at Newark; to Joseph F. Tallson, residing at Hudson City; all in the State of New Jersey; to John Conover, residing in Philadelphia, Penn.; and Joseph Head, of Bristol, Penn.; and to Isaac Dripps, residing at Fort Wayne, Indiana. And had been so used on the road of the New Jersey Railroad and Transportation Company, in New Jersey, and said use was known to said Joseph F. Tallson, John H. Jobes, and James T. Gamble; to Bernard Hughes, of Jersey City, Alfred Hurd, of New Brunswick, all in said State of New Jersey, and that said letters patent were, therefore, null and void, and prays to be hence dismissed, &c.

131 THE CHICAGO NORTHWESTERN RAILWAY COMPANY,
By H. W. BLODGETT,
Def't's Solicitor and of Counsel.

(Endorsed:) Filed Oct. 25th, 1875. W'm H. Bradley, cl'k.

132 And afterwards, to wit, on the 26th day of October, A. D. 1875, said complainant, by his solicitors, filed in said clerk's office his replication to said amended answer in said-entitled cause, which said replication is in the words and figures following, to wit:

Replication to amended answer.

United States circuit court, northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.

The replication of Thomas Sayles, complainant, to the amended answer of The Chicago and Northwestern Railway Company, defendant.

This replicant, saving and reserving unto himself now and at all times hereafter all and all manner of benefit and advantage of exception which may be had or taken to the manifold insufficiencies of the said answer, for replication thereunto says, that he will aver, maintain, and prove his said bill of complaint to be true, certain, and sufficient in law to be answered unto, and that the said answer of the said defendant is uncertain, untrue, and insufficient to be replied unto by this replicant; without this, that any other matter or thing whatsoever in said answer contained material or effectual in the law to be replied unto, and

133 not herein and hereby well and sufficiently replied unto, confessed and avoided, traversed or denied, is true; all which matters and things this repliant is and will be ready to aver, maintain, and prove, as this honorable court shall direct, and humbly prays as in and by his said bill he has already prayed.

WEST & BOND,
Complainant's Solicitors.

(Endorsed:) Filed Oct. 26, A. D. 1875. W'm H. Bradley, cl'k.

134 *Replication.*

Replication, filed by leave of court.

United States circuit court, northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.

The replication of Thomas Sayles, complainant, to the answer of the Chicago and Northwestern Railway Company, defendant.

This repliant, saving and reserving unto himself now and at all times hereafter all and all manner of benefit and advantage of exception which may be had or taken to the manifold insufficiencies of the said answer, for replication thereunto says that he will aver, maintain, and prove his said bill of complaint to be true, certain, and sufficient in law to be answered unto, and that the said answer of the said defendant is uncertain, untrue, and insufficient to be replied unto by this repliant, without this, that any other matter or thing whatsoever in said answer contained material or effectual in the law to be replied unto, and not herein and hereby well and sufficiently replied unto, confessed and avoided, traversed or denied, is true; all which matters and things this repliant is and will be ready to aver, maintain, and prove, as this honorable court shall direct; and humbly prays as in and by his said bill he has already prayed.

135 GOODWIN, LARNED & GOODWIN,
Complainant's Solicitors.

136 Afterwards, to wit, on the 7th day of October, A. D. 1874, said parties, by their solicitors, filed in said clerk's office their stipulation in said entitled cause; which said stipulation is in the words and figures following, to wit:

Stipulation as to record to Supreme Court.

United States circuit court, northern district of Illinois, seventh circuit.

THOMAS SAYLES
vs.
CHICAGO AND NORTHWESTERN RAILWAY Company.
} Chancery.

Stipulation as to record to Supreme Court.

It is hereby stipulated and agreed, by and between the parties to the above-entitled cause, that all letters patent, models, reports, and exhibits produced and used in the circuit court and before the master in this cause may be produced, referred to, and used on the hearing in the Supreme Court with the same privilege and effect as if each and all of them were made a part of the record in this case.

GEORGE PAYSON,
Of Counsel for Defendant.
WEST & BOND,
Sol'rs for Comp't.

Done at Chicago, Illinois, this seventh day of October, A. D. 1874.

(Endorsed:) Filed October 7, 1874. W'm H. Bradley, cl'k.

137 Afterwards, to wit, on the 21st day of October, A. D. 1873, said parties, by their solicitors, filed in said clerk's office their stipulation in said entitled cause; which said stipulation is in the words and figures following, to wit:

Stipulation as to proofs.

In the circuit court of the United States for the northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO & NORTHWESTERN RAILROAD Company.

It is hereby stipulated and agreed by and between the parties to the above-entitled cause, by their solicitors, respectively, that the printed book accompanying this stipulation and marked "Exhibit A" contains all the proofs taken on the part of said complainant upon the accounting before the master under the orders of reference heretofore entered in said cause, together with all the proofs taken on the part of said defendant upon said accounting prior to July 31st, 1872; and that the printed book also accompanying this stipulation and marked "Exhibit B" contains all the proofs taken on the part of said defendant upon said accounting on and subsequent to said July 31st, 1872, and that said proofs and the models and exhibits referred to therein were submitted to said master.

And it is further stipulated that said Exhibits A & B may be 138 filed in said cause as and for the proofs taken and submitted to said master upon said accounting, and when so filed shall be regarded in all respects as the original proofs taken before said master, and may be referred to and treated as though they were said original proofs returned into court by said master and referred to and identified in his report.

Chicago, August 22d, 1873.

WEST & BOND,
Sol'c't's for Comp't.
JOHN N. JEWETT,
Solct. for Def't.

(Endorsed:) Filed Oct. 21, 1873. W'm H. Bradley, cl'k.

139 *Certificate of evidence.*

140 United States circuit court, northern dist. of Illinois.

THOMAS SAYLES
vs.
CHICAGO & NORTHWESTERN RAILWAY COMPANY. } In chancery.

Certificate of evidence for record to supreme court.

1. The testimony of the following-named witnesses taken on the part of the complainant before the first hearing, viz: Lester L. Bond, Ephraim Harris, Albert J. Bellows, Albert Fisher, Asahel G. Batchelder, Samuel Cooper, James M. Stebard, John Stockbridge, s'r, T. Douglas, Samuel Blatchford, A. Emigh, Gorham P. Fields.

2. The testimony of the following-named witnesses, taken on the part of the defendant before the first hearing, viz: John Mulligan, Henry H. Snow, Emery Stubbins, Wilson Eddy, Ferdinand Leppens, Sarah A. Allen (with exhibits), James M. Hebard, James Milholland, John C. A. Smith, William Leahy, James Francis, John J. Elder, Isaac Denmead, George Woods, Robert S. Hollins, John Yakel.

3. Letters patent numbered 9109, granted 6th of July, 1852, to Henry Tanner, with the schedules accompanying the same.

4. The clerk's minutes and certificates in the cases of Henry
141 Tanner vs. The New York and Erie Railroad Company, tried in
October, 1854; of Nehemiah Hodge vs. The New York Central
Railroad Company, tried in 1859; and of Henry Tanner vs. The Hudson
River Railroad Company in 1853.

5. The testimony of the following-named witnesses entitled "Complainant's new proofs" for final hearing:

James E. Hutton.
Edgar Morris.
George Brown.
David H. Baker.
Silas H. Brown.
David T. Jeffries.
Erastus Reid.
Ambrose Ward.

12. The stipulation concerning letters patent, models, exhibits, and reports filed Oct. 7th, 1874. Stipulation concerning the proofs taken on the accounting taken before the master, filed Oct. 21st, 1873.

13. The Patent Office files in the application of Batchelder and Thompson, excepting the letters patent.

14. Letters patent to F. A. Stevens of Nov. 5th, 1851, with the specifications.

WEST & BOND,
Solr's for Comp't.
GEORGE PAYSON,
Solicitor for Def't.

Correct:

THOMAS DRUMMOND,
Cir't Judge.

147 (Endorsed:) Filed September 18, A. D. 1875. W'm H. Bradley, clerk.

148 Afterwards, to wit, on the 9th day of October, A. D. 1875, said defendant filed in said clerk's office its bond in appeal in said entitled cause; which said bond is in the words and figures following, to wit:

Appeal bond.

Circuit court of the United States, northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY COMPANY.
} In chancery.

Know all men by these presents that we, The Chicago and Northwestern Railway Company, as principal, and Henry H. Porter, Sam'l M. Nickerson, and William H. Ferry, as sureties, are held and firmly bound unto Thomas Sayles in the penal sum of sixty-five thousand dollars ($65,000.00) to be paid to the said Thomas Sayles, his executors or administrators; to which payment, well and truly to be made, the said railway company binds itself and its successors, and the said Henry H. Porter, Sam'l M. Nickerson, and William H. Ferry bind themselves, their heirs, executors, and administrators, jointly, severally, and firmly, by these presents.

In witness whereof the said Chicago and Northwestern Railway Company has caused these presents to be signed by its president and its corporate seal to be hereto affixed; and the said Henry H. Porter, 149 Sam'l M. Nickerson, and William H. Ferry have hereunto set their hands and seals this twentieth day of September, A. D. 1875.

The condition of this obligation is such, that whereas the abovebounden, The Chicago and Northwestern Railway Company, hath taken an appeal to the Supreme Court of the United States to reverse the decree rendered against it by the name and style of The Chicago and Northwestern Railway Company in the above-entitled cause by the circuit court of the United States for the northern district of Illinois on the eighteenth day of September, A. D. 1875:

Now, therefore, the condition of this obligation is such, that if the above-named, The Chicago and Northwestern Railway Company, shall prosecute its said appeal to effect and without delay, and answer all damages and costs if it shall fail to make its appeal good, then this obligation to be void; otherwise to remain in full force and virtue.

[SEAL.] THE CHICAGO AND NORTHWESTERN RAILWAY COMPANY,
By ALBERT KEEP,
Its President.
HENRY H. PORTER. [SEAL.]
WILLIAM H. FERRY. [SEAL.]
SAM'L M. NICKERSON. [SEAL.]

Attest:
J. B. REDFIELD,
Ass't Sec'y.

150 Approved.

THOMAS DRUMMOND.

(Endorsed:) Filed Oct. 9, 1875. W'm H. Bradley, cl'k.

151 *Opinions of the court.*

152 SAYLES
vs.
CHICAGO & NORTHWESTEN RAILWAY CO.

Circuit court, northern dist. of Illinois.

Opinions of the court.

First opinion, February, 1865.

DRUMMOND, J.:

The letters patent in this case were granted to Henry Tanner, on the 6th day of July, 1852, covering what is called the double-acting car-brake. It is well known that cars were originally run with four wheels, a single car-brake being usually applied to them to retard or arrest the progress of the train. It became very important, when the railroad companies began to run cars with eight wheels, to have the brakes applied in such a way as to save the employment of numerous brakemen, and operate simultaneously upon all the wheels of the car, and that this should be done by an application of force at either end of the car, so that one man could act as brakeman upon two cars, instead of having three or more. It is this object which, it is alleged, was accomplished in this instance by pressing the brakes on all the eight wheels of the car simultaneously by the application of a force at either end by means of a windlass there placed.

Although the patent was issued to Tanner, he was not himself the inventor, but this claim was set up by Bachelder & Thompson, Tanner being merely their assignee. The claim, as set forth in the specification, is this: "What is claimed by us is to so combine the brakes of the two trucks with the operative windlasses or their equivalents at both ends of the car by means of the vibrating lever A, or its equivalent, or mechanism essentially as specified, as to enable the brakeman, by operating either of the windlasses, to simultaneously apply the brakes of both trucks, or bring or force them against their respective wheels, and whether he be at the forward or rear end of the car."

The case has been argued on the part of the defendant chiefly, I may say solely, on the ground that these parties, Bachelder & Thompson,

were not the original inventors of this improvement upon car-brakes. It is also said that if the invention was ever made by them it was abandoned; that it was not prosecuted with that diligence which the patent laws required. For the purpose of showing want of
153 novelty on the part of Bachelder & Thompson, the defendant relies mainly on two, or I may say on one, improvement in car-brakes, called Millholland's improvement, which was, it is conceded, prior in point of time to that of Bachelder & Thompson. Some stress is also laid upon an improvement Mr. Nichols adopted in Connecticut, which it is alleged contained in several particulars the same principle as that of Bachelder & Thompson, and was used prior to the invention made by them.

It becomes necessary, therefore, to ascertain when this improvement was first made by Bachelder and Thompson, and whether or not they abandoned it. The evidence in the case shows this to be the state of facts in relation to that matter; that Bachelder & Thompson, in the fall of 1846, substantially invented this method of applying the force to the car-brakes, and that in June, 1847, they filed their application with their model, and what purported to be specifications, in the Patent Office. They were not at all familiar with the method of obtaining a patent or with the law upon the subject, and they applied to a third party to assist them. The specifications which were filed, or what purported to be such, in the office were drawn up in a loose and very imperfect manner. The office itself was then overwhelmed with business, and applications were not taken up until long after they were filed. They, from time to time, called upon the gentleman whom they had requested to assist them, and letters were written to the Patent Office upon the subject, and in 1851, the application being still pending, in reply to some letters that were written, the agent of Bachelder & Thompson was told that the drawings and specifications as set forth were insufficient, and the further prosecution of an application for a patent in the case discouraged. However, upon a renewed effort on the part of Bachelder & Thompson, the officers in the Patent Office reconsidered the subject, the specifications were rendered sufficient, as was supposed, and a patent was finally issued. It thus appears that for several years, from 1847 to 1852, this matter was thus suspended in the Patent Office.

The first question that occurs is, whether these parties had neglected or abandoned their improvement in such a way as to make it public property, and I think they had not. The whole testimony shows that they had not abandoned what they considered to be an improvement to which they had a right under the law. Certainly they cannot be held accountable for the delays in the Patent Office, and the law by its terms provides for the perfection of imperfect and insufficient specifications even after the patent issues. A question connected with this is whether, when the application was made in June, 1847, there was substantially the improvement, the right to which was sought to be given to them by the letters patent in 1852, and I think there was. It is true there
154 was a change in the specifications as perfected and as originally filed, more having been claimed in the original specifications. Still, I think it is clear that they claimed in their original specifications substantially the method of combining the brake in the manner in which they set the claim forth in the last specifications upon which the patent issued. Besides, the patent law looks with indulgence upon the delays which arise from the circumstances of parties who may make an invention, and it is only when the invention is intentionally abandoned

or neglected, or the parties show by their acts that they have not done all they can do, that the law declares that they shall not be protected in their invention. Therefore I find that this invention was made in the fall of 1846, claimed by application in the Patent Office in June, 1847, and protected in law by the issuing of letters patent in 1852. Then, were they the first inventors of this improvement in car-brakes? I leave out of view all that is said in the testimony of what is called the Springfield brake. No particular stress is laid upon it in the argument of the defendant. It is not claimed or set up, I believe, in the answer.

The first question is in relation to what is termed the Nichols brake. I do not propose to dwell at any great length upon the testimony as to the time when this brake was used. M'r's Nichols, the wife of M'r Nichols (M'r N. having died in 1850), states in her deposition that her husband made a drawing of it in the spring of 1846. If so, of course the invention would be prior to that of Bachelder & Thompson, theirs not having been made until the fall of that year. But I think that the weight of the evidence is that the Nichols brake was not invented until the spring of 1847, and was not applied until 1848. We have constantly to bear in mind, in weighing the testimony of witnesses who speak of circumstances occurring many years ago, the liability to mistake the particular year, unless they have some evidence of a documentary character or otherwise, or some leading fact, as to which there can be no error, upon which they may rely to show the particular time.

This brake was applied upon what is termed a long baggage-car. The witnesses, Stockbridge and Fields, state that this car was not finished until the spring of 1848. Various other witnesses differ as to the time from M'r's Nichols, and she differs now herself in giving her deposition from what she stated when she gave her testimony in the railroad case tried in New York some years ago. Besides, she took an account-book to Fields and inquired of him as to the time her husband put on the brake, which shows that she really had no memory as to the time. Taking all the testimony together in relation to this Nichols brake,
155 it is clear, the weight of it is, that this invention was not made
by him prior to that of Bachelder & Thompson, even conceding that the two brakes are identical, as to which I gave no opinion.

The principal difficulty I have had in the case is in relation to the Millholland brake. One of the defendant's counsel has presented an argument in which he insists, with much force and plausibility, that the Millholland brake contains substantially the same principle as the Bachelder & Thompson brake, and that it was carried into practical effect by its use upon the cars.

We have, if I might be permitted to go out of the proofs in this case, a striking illustration of the uncertainty of human memory as to the time when this Millholland brake was first applied. When this brake first came before the court, it was insisted, and apparently proved, I believe, that the Millholland brake was invented and used in 1842. M'r Millholland says now in his deposition that he made and used it in 1843. But when we come to apply documentary evidence to the facts which are before us, I think it appears satisfactory that the Millholland brake was not used until 1845. But still if it were then used, and if it was a practical improvement, and similar in principle to that of Bachelder & Thompson, of course it prevents the patent of Tanner from operating. There is no doubt of this, that Millholland did invent a brake which operated in certain circumstances upon the two trucks by means of what is called a drum under the car, so that by the application of force at either end of the car, the wheels—all the eight wheels—were retarded.

The main questions are, whether it was a practical and successful improvement, and whether it was abandoned as a mere experiment. There never was any patent applied for or issued. It is conceded and the proof clearly shows that it was never actually applied in any instance except upon one car, and I think it is clear that it was thrown aside and abandoned by Millholland himself in 1845. And if it was not introduced until 1845, then instead of being used for eighteen months it was only used for a few months. The car upon which it was applied was used very seldom. It is also certain that it did not operate satisfactorily, and the brakemen complained that when used on the car the windlass-chains would break, or the car was liable to be thrown off. The Millholland brake was, in some respects, different from the Tanner brake. In the first place it operated by means of a drum upon which turned the chains to which the levers upon the brakes were attached. The brake of Bachelder & Thompson operated by means of a horizontal vibrating lever. The brake-levers are also differently arranged. In the case of Millholland's brake the drum was rigid, the brake-levers being pivoted in such a way that they did not operate with any degree of elasticity or self-adjustability. In this respect it would seem as though the two
156 brakes were different, but perhaps the "horizontal lever" of Bachelder & Thompson's brake may be said to be eqpivalent to the drum of Millholland's brake.

But I think the doctrine of equivalents should be critically scanned where there may be a difference in relation to two machines which in some respects operate by equivalent devices, and in other respects do not, to ascertain whether the one has become a practical machine and the other not. For instance, in relation to the drum, the result shows that there were defects in the Millholland brake which prevented it from becoming a practical, useful brake. It was used and abandoned. The reason for that is given by a witness who says that it was in consequence of the rigidity of these various levers, or what might be called levers; that if there was any defect in the shoes in any way, so that on applying force to the windlass at either end the power would be applied to but one of the shoes, the strain would tend to break the windlass-chains, before there was sufficient pressure of the shoes upon the wheels. One of the great objects sought by Bachelder & Thompson in their improvement was this: whether the wheels were running upon straight or curved lines, the shoes would all press simultaneously upon the wheels whenever force was applied, and by the elasticity of these various levers a defect in one of the shoes would not prevent the contact of the others. Now, I think these circumstances have great weight when we come to determine the question whether there was here an actual practical improvement in the car-brake which would prevent any one else from adopting a principle that might be in that brake, and thereby perfecting the device.

I have come to the conclusion that there was not in this Millhollan brake that kind of practical operating brake which would prevent any one else from obtaining a patent for a brake which would accomplish the object, which, it is clear, Millholland had in his mind, but does not seem to have carried out into practical operation by the brake which he made and applied in 1845.

I admit fully the law, as contended for by the counsel for the defendant, that when an improvement or a machine has been once made and used, it is not necessary that it should be used up to the time that another person may make a similar improvement. If it has been once used, and is a practical improvement or machine, no one else can claim

to be the inventor. But in this case I think there was not that practical improvement of the brake discovered and used by Millholland which would prevent these parties from obtaining a patent for a brake such as that which was finally set forth in their specifications. I would refer particularly to the testimony of the only expert introduced. It seems to me that he is a very clear-headed man, and his testimony sets
forth with great distinctness the difference between the Mill-
157 holland and Springfield brakes, and the brake of Tanner. And
this difference which he refers to ought to have great weight when we come to consider whether, in point of fact, such a brake as Millholland used did really prevent any other person from obtaining a patent for a double-acting brake similar, in some respects, but which would successfully arrest the progress of railroad trains. The conclusion to which I have come is that Bachelder & Thompson were the inventors of this improvement, for which letters patent were issued to Tanner; that they never abandoned it from its discovery in the fall of 1846, and that there has been nothing shown in the evidence which, fairly considered, would deprive them or their assignee of the right to it.

No question has been made in relation to the infringement. It is denied in the answer, but it is not insisted on or pressed in the argument. Of course, in deciding this case I do not in any respect change the views which I announced on a former occasion, as to the distinction between the Stevens and the Tanner brake. The only claim which the plaintiff would have in this case would be for any damage which he may have sustained in consequence of defendant having used the invention of Bachelder & Thompson. But if the brake of Stevens, or any other person, shall include the invention of Bachelder & Thompson as a part of his brake, the plaintiff will not be prevented from claiming damages for the use of that part.

Second opinion, June, 1871.

Drummond, J.:

This case was before the court some years since, and an opinion given upon the points then submitted and argued.

The court then decided that Bachelder & Thompson were the inventors, in 1846, of the combination described in their specifications of the brakes of the two trucks with the operative windlasses by the means designated, so that the brakeman, by operating either windlass at the end of a railroad-car, could apply the brakes of both trucks simultaneously to the wheels to which the brakes were respectively attached; and that the patent which was issued to Henry Tanner, the assignee of Bachelder & Thompson, in 1852, was valid.

This decision was of course made on the case as then presented, and on the proofs then before the court. The question of infringement was not at that time seriously controverted, and an interlocutory order was made, referring the case to a master. Afterwards an application was made to open this decree because of new evidence discovered affecting the question of novelty of the claim of Bachelder & Thompson, and the
court permitted additional proofs to be taken.
158 The case has been again argued upon the new evidence, and
upon the last argument it has been insisted that the defendant does not infringe the Tanner patent, even if valid.

The new evidence relates mainly to two brakes, which, it is alleged, anticipated the discovery of Bachelder & Thompson. 1st. The brake upon the car John Tyler, used on the Camden & Amboy Railroad. 2d. The Stanley-Talson brake used on the same road.

In 1843, M'r Tyler, then President of the United States, made a visit to the Eastern States, and a car was fitted up with unusual effort and expense to carry the President over the Camden & Amboy Railroad, on his way east.

This car was so unique among the cars of the time that it thenceforth bore the name of the President. As a part of its appointments the defense claims that it had a double brake, combining the two trucks, and operating in the same way and producing the same effect as the Tanner brake. If that were so, then undoubtedly it anticipated the invention of Bachelder & Thompson, because it is certain that this special car was constructed, and conveyed the President over the Camden & Amboy Railroad, in 1843. The serious question, therefore, on this part of the case is, when was the double brake put on the John Tyler car.

The evidence is curious on this point. Several witnesses, many of them undoubtedly with full conviction, declare that the car had a double brake on when it started out in 1843, and when the President rode on it. Many others declare that the double-brake was not put on the car till 1851, and that it was the Hodge brake, an invention subsequent in time to that of Bachelder & Thompson, now covered by the Tanner patent, and hence generally called the Tanner brake.

It is necessary to determine in the midst of this great conflict of evidence where the truth is, in the judgment of the court; and looking at all the facts bearing on the point, I think that the witnesses who state that the double brake, combining the two trucks in the manner of the Tanner patent, was on the John Tyler car in 1843, are mistaken, or testify untruly.

It is said that the evidence for the defense in this particular is positive, and on the other side negative; that is so, and if it depended upon that circumstance alone, then it might be the positive testimony would outweigh the negative. But there are various well established facts inconsistent with this positive evidence. It is clear in the examinations which were made among the employés of the Camden & Amboy Railroad, growing out of the suits at Albany, brought by M'r Tanner
159 against the New York & Erie Railroad Company, and the Hudson River Railroad Company, which were numerous and thorough, that the double brake on the John Tyler car did not assume a tangible shape then, though application was made to some of the witnesses who now assert its existence in 1843. These examinations were made in 1853 and 1854, and seem to have been conducted in entire good faith to ascertain facts to enable the railroads to defend against the Tanner patent. The defense was unsuccessful.

The testimony tending to establish the attachment of a double brake to the John Tyler car in 1851, is of itself in the nature of positive evidence, and therefore is entitled in effect to the consideration of that kind of evidence.

There is one fact established which, unexplained, seems to be conclusive upon this part of the case. The counsel for the defense do not controvert the value or the utility of the Tanner brake. Now, if there was such a brake in substance or effect on the car referred to, then it was not attached to the other cars of the Camden & Amboy Railroad, because the proof appears ample that some years after 1843 the cars of the railroad company were run generally with the single brake alone; and if it were true that a double-acting brake of the kind included in the model of the John Tyler car produced at the hearing existed in 1843, it is scarcely possible to doubt that it would have gone into general use at once on the road.

In addition to this, many of the witnesses for the defense, who originally spoke with as much confidence as any others, afterwards retracted, and admitted that they were in error when they asserted the double-acting brake was on the Camden & Amboy Railroad in 1843.

The testimony shows that in 1842 a man by the name of Stanley made and applied a brake in some respects, at least, similar to that of the Tanner brake.

The materials of which it was composed were too slight, and it proved a failure. Afterwards one Talson strengthened them, and perhaps made some slight changes, and the brake was used on several occasions. It seems afterwards to have been thrown aside. For this different reasons have been given. The position taken that the John Tyler car-brake, as claimed, and the Stanley-Talson brake, also as claimed, were continued in use for several years after 1842 and 1843, I consider not sustained by the evidence. There was no successful practical double brake on the Camden & Amboy Railroad in operation prior to the invention of Bachelder & Thompson.

It is the history of inventions that when different persons are exploring or experimenting in the same field, many efforts, which ultimately turn out to be failures often come very near success; and when other efforts have proved successful, these last should not be deprived
160 of the results of success simply becausd others have come near to them. The fact that the Camden & Amboy Railroad was without a successful double-acting brake till the Hodge brake was introduced, is strong evidence against the claim set up now both for the brake of the John Tyler car and that of Stanley & Talson. It is asked how often shall a brake be used to antedate the invention of Bachelder & Thompson? The answer is, until that which is claimed as new in the patent is complete, although the thing may have been imperfect as an instrument or machine. If it were manifest that the thing claimed in the patent was accomplished, one use would be sufficient. If the construction of the thing of itself demonstrated that it was within the principle here stated, then perhaps no use need be established. It might then be said to prove itself. But in most cases sufficient use must be shown to prove that it will accomplish what is claimed; and while this is generally true of a patent, it is equally true of that by which a patent is sought to be defeated; otherwise it rests in the region of mere experiment.

The argument that there has been no infringement is this: Brakes have been applied to the trucks of railroad cars; they have been connected together, therefore Bachelder & Thompson could only claim some peculiar method of making the connection. All other methods were left open, and if the connection of the brakes was in a different way from that of Bachelder & Thompson, then there could be no infringement. The defendant's brake—that of Stevens—has a different mode of connecting the two systems of brakes, consequently there is no infringement.

We must bear in mind that the principle of the Tanner brake is the combination of the two series of brakes, counting the brakes at each end of the cars as a series, with each other and with the windlass at each end, so that all the brakes can be applied at once at either end by the brakeman. This combination is produced by means of what is termed a vibrating lever, essentially as specified, and the question is, whether the Stevens brake, that being used by the defendants, accomplishes the same result by analogous means or equivalent combinations within the terms prescribed by the Supreme Court in the case of

McCormick vs. Talcott (20 Howard R., 402). The view the court took of the Stevens brake on a former occasion was that it was distinct from the Tanner brake in this: that by some new and original devices Stevens obtained an equality of force upon the brakes, thus retarding the wheels uniformly, and therefore the Stevens patent was sustained. That case went to the Supreme Court of the United States. There was a difference of opinion in the court on some of the points decided in this court, and the case was never reported, the decree being affirmed 161 by a divided court; but it is understood that the court was unanimous in sustaining the validity of the Stevens patent. The only question, therefore, is whether the Stevens brake, as constructed and operated, embodies, in effect, the invention of Bachelder & Thompson by combining the brake series of the different trucks with the windlasses, so that they can be operated at once from either end of the car. The rule laid down upon the subject of infringement by the Supreme Court of the United States in the case of Seymour vs. Osborne (11 Wallace, 516), is that inventors of a combination are as much entitled to suppress every other combination of the same ingredients to produce the same result not substantially different from what they have invented and caused to be patented, as any other class of inventors, and they have a right to invoke the doctrine of equivalents to that extent to sustain their invention.

It must always be very much a matter of judgment to the eye in the examination of two machines and in observing their mode of operation, whether the one, in the whole or any of its parts, is a mere colorable or formal alteration of the other. If a patentee has invented a combination of two or more old things so as to produce a new and useful result, then he has a right to treat as infringers all who have used his invention in order to accomplish something more or better, when without the aid of such invention it could not be effected.

According to the view which the court takes of the evidence, Bachelder & Thompson first successfully combined the two systems of brakes with each other and with the windlasses, so that all the brakes could be applied at either end of the car. This was their invention, secured by letters patent to Tanner. No one else had the right to take what may be termed the inventive principle of this combination, use it, and evolve something different and better by additional devices for which last a patent could be sustained. This we think Stevens did. What he invented he has a right to retain under his patent, but he cannot use the invention of Bachelder & Thompson without the consent of the patentee or his assignee.

The court took this view of the case before, though the question of infringement was not specially pressed on the former argument, and the court, though it may be admitted it is a point of some nicety, has seen no reason to change its opinion.

It may be that the invention of Bachelder & Thompson, without the improvement of Stevens superadded, may not be of very great value, but that question is not now before us for decision. That will be considered when the proofs upon that point are taken up and reported to the court.

Decree accordingly and reference to a master.

162 NORTHERN DISTRICT OF ILLINOIS, *ss:*

I, William H. Bradley, clerk of the circuit court of the United States for said district, do hereby certify the above and foregoing transcript as contained and set forth in the several parts or volumes hereto attached, and marked respectively No. 1, No. 2, No. 3, No. 4, No. 5, No. 6, No. 7, No. 8, and No. 9, is a true and correct transcript of the record and the proceedings had in said court in the cause wherein Thomas Sayles is the complainant and the Chicago and Northwestern Railway Company is the defendant, as the same appears from the files and records of said court now remaining in my custody and control.

In testimony whereof I have hereunto set my hand and affixed the seal of said court at my office at Chicago, in said district, this 4th day of November, A. D. 1875, and of our Independence the 100th year.

[SEAL.] W'M H. BRADLEY, *Clerk.*

163 *Copy of certified copy of assignment from L. F. Thompson and A. G. Batchelder to Henry Tanner.—Dated April 1st, 1852.*

Whereas we, Lafayette F. Thompson, of Charlestown, and Asahel G. Bachelder, now or late of Lowell, in the State of Massachusetts, have invented an improved mode of operating the brakes of railway-cars, and have applied, or intend to apply, for letters patent of the United States of America therefor:

Now, therefore, this indenture witnesseth that for and in consideration of one hundred dollars in hand paid, the receipt whereof is hereby acknowledged, I have assigned and set over, and do hereby assign, sell, and set over, to Henry Tanner, of Buffalo, in the State of New York, all the right, title, and interest whatsoever which we now have, or by letters patent would be entitled to have and possess, in the aforesaid invention; the said indention being described in the specification as prepared and executed by us, or to be prepared and executed by us, for the obtaining of said letters patent, the whole to be held and enjoyed by the said Henry Tanner and his legal representatives to the full extent and manner in which the same would have been, or could be, held and enjoyed by us, had this assignment never been made.

And we do, by these presents, authorize the Commissioner of Patents to issue the said letters patent to the said Henry Tanner and his 164 legal representatives, as the assignee of our whole right and title to the same, and to the new invention aforesaid.

In witness whereof we have hereto set our signatures and seals this first day of April, A. D. 1852.

Exhibit D, referred to in the examination of A. Eringle in Sayles vs. C. & N. W. R. R.

J. T. MOULTON.

167 The U. S. Patent Office to all persons to whom these presents shall come, greeting:

This is to certify that the annexed is a true copy from the records of this office of an assignment from Henry Tanner to Thomas Sayles, under letters patent granted to Henry Tanner, dated July 6th, 1852, for "imp't in railroad-car brakes."

In testimony whereof I, Ellis Spear, Ccting Commissioner of Patents, have caused the seal of the Patent Office to be hereunto affixed this fourteenth day of December, in the year of our Lord one thousand eight hundred and seventy-four, and of the Independence of the United States the ninety-ninth.

[SEAL.] ELLIS SPEAR,
Acting Commissioner.

Whereas letters patent were granted to Henry Tanner, of Buffalo' county of Erie and State of New York, by the United States Government, bearing date July 6th, 1852, for an improvement in railroad-car brake, on an application made therefor by L. F. Thompson and A. G. Bachelder, of Massachusetts, and duly assigned to the said Tanner.

And whereas Thomas Sayles, of Lansingburgh, in the State of
168 New York, has this day purchased of the said Henry Tanner all his remaining right, title, and interest in and to said patent, for said improvement in railroad-car brake, for the unexpired term thereof, and of any extension that may be granted therefor, excepting the following reserved territory and railroad corporations, to-wit: All of the States of Ohio, Indiana, and Illinois (excepting the Illinois Central Railroad, which is hereby sold to said Sayles), and reserving unsold further the Michigan Central Railroad and the Michigan Southern and Northern Indiana Railroad, and the Ohio and Mississippi Railroad, and the Louisville and Nashville Railroad, and a horse-railroad round the Ohio Falls, from Louisville to Portland, about three miles more or less, and the Louisville and Frankfort Railroad; also the Hudson River Railroad; also the New York Central Railroad; also the Ranselear & Sara-

toga Railroad; also Saratoga and Washington Railroad; also the New York and New Haven Railroad; also New York and Harlem Railroad; also the Housitonic Railroad; also Long Island Railroad; also Baltimore and Ohio Railroad; also Baltimore and Susquehanna Railroad; also Elmira and Canandaigua Railroad; also Canandaigua and Niagara Falls Railroad; also Buffalo and State Line Railroad; also Fitchburg Railroad; also Boston and Worcester Railroad; also Western Vermont Railroad; also the Cheshire Railroad; also the Concord Railroad; also the Troy and Boston Railroad; also the Worcester and Nashua Railroad; also the Eastern Railroad; also the Boston and Maine Railroad; also the Canal Railroad; also the South Shore Railroad; also the Richmond and Petersburgh Railroad; also the Vermont Valley Railroad; also the Portland, Saco and Portsmouth Railroad; also Boston and Lowell Railroad; also Boston and Providence Railroad; also the Old Colony Railroad; also the Providence and Worcester Railroad; also the New London, Wiliamantic and Palmer Railroad; also the (Stonington and Providence); also the New Haven, Hartford and Springfield Railroad; also the Buffalo and New York City Railroad; also the Buffalo, Corning and New York Railroad; also the Erie and Northeast Railroad; and has paid me the just and full sum of twenty-five thousand dollars for the territory hereby sold, the receipt whereof is hereby acknowledged before the delivery of this deed: Now know, therefore, all men by these presents that I, the said Henry Tanner, have sold, and by these presents do hereby sell, assign, transfer, and set over to the said Thomas Sayles all my right, title, interest, and claim whatsoever which I have or may have in and to said invention and patent, and any extension thereof that may hereafter be granted (excepting the territory as above reserved) by reason of said letters patent or otherwise, giving and granting to the said Sayles and his legal representatives the full power to make, use, vend, and sell to others to make, use, and vend, the said invention in all cases as fully and freely as I might or could have done had this bargain and sale not have been made; and the said Henry Tanner doth hereby covenant to and with the said Thomas Sayles that he is now the lawful owner and holder of the said letters patent, and that he has not sold to any person or persons whomsoever, or to any corporations, any interest in said letters patent, or any use or vend the improvement aforesaid except as herein-above mentioned.

Witness my hand and seal at the city of Albany this thirteenth day of July, 1854.

HENRY TANNER.

In presence of—

A. ENRIGH.

Rec'd & recorded July 19th, 1854.

D. P.

171 Whereas letters patent were granted to me, the undersigned, Henry Tanner, of the city of Buffalo & State of New York, as the assignee of L. F. Thompson, of Charlestown, Mass., and A. G. Bachelder, of Lowell, Mass. (by the United States), for a new method of applying & using railroad-brakes, which letters patent bear date July 6, 1852, and are numbered 9109 C; and whereas Thomas Sayles, of Lansingburgh, New York, has this day purchased of me all my remaining right, title, & interest in and to the State of Illinois, & also the State of Kentucky, to wit, the Louisville & Nashville Railroad being heretofore excepted in a previous sale to said Sayles, and has paid me the just & full sum of two thousand dollars therefor, the receipt whereof is hereby

acknowledged; and this sale and transfer is intended to include, & does hereby assign all damages, or claims for damages, due me by reason of the use of said brake by any parties within said territories: Now, therefore, I do hereby sell, assign, & transfer to said Sayles all the right, title, claim, & interest whatsoever I may have by reason of said letters patent aforesaid, at this date, in the above-described territories, as fully and as perfectly as I might or could have used the same had this bargain & sale not have been made.

Witness my hand & seal this fourth day of April, A. D. 1859.

H. TANNER.

172 In presence of—

SAMUEL WILKINSON.

U. S. PATENT OFFICE.

Received & recorded July 5, 1859, in liber C^5, page 263, of Transfers of Patents. In testimony whereof I have caused the seal of the Patent Office to be hereunto affixed.

W'M D. BISHOP,
Com'r of Patents.

173 No. 9109.

The United States of America to all to whom these letters-patent shall come:

Whereas Lafayette F. Thompson, of Charlestown, Mass., & Asahel G. Bachelder, of Lowell, Mass., have alleged that they have invented a new and useful improvement in railroad-car brakes (they having assigned their right, title, & interest in said improvement to Henry Tanner, of Buffalo, N. Y.), which, they state, has not been known or used before their application, have oath that they are citizens of the United States; that they do verily believe that they are the original and first inventors or discoverers of the said improvement; and that the same hath not, to the best of their knowledge and belief, been previously known or used; have paid into the Treasury of the United States the sum of thirty dollars, and presented a petition to the Commissioner of Patents signifying a desire of obtaining an exclusive property in the said improvement, and praying that a patent may be granted for that purpose:

These are, therefore, to grant, according to law, to the said Henry Tanner, his heirs, administrators, or assigns, for the term of fourteen years from the sixth day of July, one thousand eight hundred and fifty-two, the full and exclusive right and liberty of making, constructing, using, and vending to others to be used, the said improvement, a description whereof is given in the words of the said Thompson & 174 Bachelder, in the schedule hereunto annexed, and is made part of these presents.

In testimony whereof I have caused these letters to be made patent, and the seal of the Patent Office has been hereunto affixed. Given under my hand at the city of Washington, this sixth day of July, in the year of our Lord one thousand eight hundred and fifty-two, and of the Independence of the United States of America the seventy-seventh.

[SEAL.] ALEX'R H. H. STUART,
Secretary of the Interior.

Countersigned and sealed with the seal of the Patent Office.

THO'S EWBANK,
Commissioner of Patents.

175 **The schedule referred to in these letters patent and making part of the same.**

To all persons to whom these presents shall come:

Be it known that we, Lafayette F. Thompson, now or late of Charlestown, and Asahel G. Batchelder, of Lowell, in the county of Middlesex and State of Massachusetts, have invented a new and useful mode of operating the brakes of railway cars; and we do hereby declare that the same is fully described and represented in the following specification and the accompanying drawings, letters, figures, and references thereof.

Of the said drawings, figure 1 denotes a top view of the platform-frame of a long car resting on two truck-frames, the same also exhibiting our invention as applied to the brakes of the wheels of its two truck-frames.

Figure 2 is a side elevation, and figure 3 a vertical central and longitudinal section of the same.

In the said drawings, A denotes the platform of an eight-wheel car, resting on two truck-frames B C.

D D′, E E′, are the wheels of one truck frame, while F F′, G G′, are those of the other truck-frame. H I K L are the axles, while M N O P are the four sets of brakes applied to the wheels.

Each set of the brakes is connected to a vibrating lever, Q, R, S, or T, which enables the sets of brakes to swing either towards or away from their respective sets of wheels. In the above-mentioned drawings, the fulcra of these levers are at their upper ends, as seen at *a a*, &c.

Under the middle of the car-platform, we arrange a lever A′ that turns horizontally on a centre-pin B′. A rod C^2 or D^2, or its equivalent, is jointed to each end of the lever A′, and is extended from thence towards the end of the car, one rod being extended towards one end while the other is carried towards the opposite end. Each rod is attached to a cord or chain *b′*, at its end, that is wound on the barrel of a windlass E^2 or F^2, fixed on the adjacent end of the platform, there being one windlass at each end of the platform.

Between the fulcrum of the lever A′ and each rod C^2, D^2, there is another rod or chain, as seen at G^2 H^2, which is jointed at one end to the lever A′, and has its other end jointed to the upper arm of one of two secondary levers I′ K′.

The lower end of the lever I′ is jointed to the set of brakes N, while the lower end of the lever K′ is similarly jointed to the set of brakes O. Rods M′ N′ are respectively jointed to the secondary levers between their lower and upper ends, and extend therefrom, and are jointed at their opposite ends to the set of brakes M P.

Under such circumstances, if a person rotates either windlass E′ or F′ so as to wind up its chain, he will produce a draft on the lever A′ that will cause all the brakes to simultaneously close down upon their respective sets of wheels.

From the above it will be seen that a brakeman at either end of the car, by simply turning the windlass at such end, can simultaneously operate or make bear against their wheels all the sets of brakes.

Our improvement can readily be applied to sets of brakes arranged between the wheels, as well as those where the brakes clasp each wheel on its two opposite sides.

The principle of arresting or retarding the progress of two or more cars while in motion on a railway, by the momentum of one or more of

them being made to act on the friction-brakes of the said cars through the intervention of any suitable mechanism combined with the bumpers and the brakes, or the combination of the brakes and bumpers and a mechanism that will enable the momentum of one or more of the cars acting against the bumpers to force the brakes against the wheels, is not herein claimed; nor is it herein claimed to apply such momentum for such purpose by a mode wherein the brake apparatus is so combined with the axle of one of the wheels by means of a fast pulley on such axle, an endless belt passing around such pulley and a loose pulley on another axle or shaft, a clutch applied to such loose pulley and the second axle or shaft, whereby it may be made to rotate by the rotation of the axle of the wheels; and finally a mechanism or apparatus connecting the second shaft with the brakes of one or both trucks of a car, and made to so operate, when the loose pulley is clutched to its shaft, as to cause the brakes to be forced or drawn against the wheels—for such mode (it being that invented by George S. Griggs and patented December 31st, 1839) of causing the momentum to operate to arrest the velocity of a car or train of cars differs essentially from the invention hereinbefore set forth and represented in the accompanying drawings; for the friction of the wheels on the rails and the momentum of the moving carriage are employed to put in motion machinery that is brought into action on the brakes, or caused to act on them, when connected with the rotating pulley put in motion by the pulley of the axle of the wheels, the attendant or brakeman only performing the office of moving the sliding part of the clutch: but,

What is claimed by us is, to so combine the brakes of the two trucks with the operative windlasses or their equivalents, at both ends of the car, by means of the vibrating lever A′, or its equivalent, or mechanism essentially as specified, as to enable the brakeman, by operating either of the windlasses, to simultaneously apply the brakes of both trucks, or bring or force them against their respective wheels, and whether he be at the forward or rear end of the car.

In testimony whereof we have hereto set our signatures this eighth day of April, 1852.

176 The U. S. Patent Office to all persons to whom these presents shall come, greeting:

This is to certify that the annexed is a true copy from the records of this office of the specification and drawing in the matter of the letters patent granted Francis A. Stevens, dated Nov. 25th, 1851, No. 8552, for "imp't in railroad-car brakes."

In testimony whereof I, Sam'l A. Duncan, Acting Commissioner of Patents, have caused the seal of the Patent Office to be hereunto affixed this 29th day of December, in the year of our Lord one thousand eight hundred and seventy-one, and of the Independence of the United States the ninety-sixth.

[SEAL.]

SAM'L A. DUNCAN,
Acting Commissioner.

177 Francis A. Stevens, of Burlington, V't. Letters patent No. 8552, dated Nov. 25th, 1851.

To all whom it may concern:

Be it known that I, Francis A. Stevens, of Burlington, in the county of Chittenden, and State of Vermont, have invented a new and useful improvement in railroad-car brakes, and I do hereby declare that the following is a full, clear, and exact description of my said invention, reference being had to the accompanying drawing, which forms part of this specification, and represents a longitudinal section of the running-gear of an eight-wheeled car with my compound compensating brake applied thereto.

My improved railroad-car brake is constructed in such manner that the friction-shoes of all the wheels of the car are brought into action simultaneously, and each shoe throughout the whole series is pressed against its respective wheel with the same amount of force.

In the accompanying drawing A is the frame of the car, and B B are the frames of the two four-wheeled trucks. Each wheel, C, of each truck is fitted with a friction-shoe, D, and the two friction-shoes of each pair of wheels are connected by a brake-beam, E, that extends across the truck. Each brake-beam is connected at its middle with the lower arm *g* of an upright brake-lever, H; and the fulcrums or turning-points of the two brake-levers of a truck are also connected by a link-rod, *f*. The
upper arm *i* of the brake-lever which is nearer the end of the car
178 is connected by a rod or chain with the brake-wheel, and the
upper arm *e* of the brake-lever nearer the middle of the car is
connected by a rod, *j*, with the upper arm of the corresponding brake-lever of the other truck.

It will now be seen that if a force be applied to draw the chain at one end of the car in the direction indicated by the arrow *k*, while the chain at the opposite end remains stationary, the whole series of levers and shoes will be moved, and the shoes will be pressed against their respective wheels with equal force; for the force exerted upon the first lever is propagated, by means of the link-rods, to the succeeding ones. Thus, for example, if the longer and shorter arms of the levers bear to each other the relation of 3 to 1, and the chain be drawn with a force of 100 pounds, the pair of shoes operated by the first brake-lever will be pressed against their wheels with a force of 300 pounds, while the fulcrum-rod *f* will be drawn in the direction indicated by the arrow *l* with a force of 300+100=400 pounds. The fulcrum of the next succeeding brake-lever having thus a force of 400 pounds applied to it will move, and as its arms bear to each other the above-stated relation of 3 to 1, its shorter arm will press forward its shoes with a force of 300 pounds, while the longer arm will act through the link-rod *j* upon the longer arm of the next succeeding brake-lever with a force of 100 pounds. This latter will act upon its respective shoes in the same man-
ner as the first lever in the series and with the same force. The
179 pressure upon its fulcrum will also be communicated to that of
the last brake-lever, which will thus act in the same manner as
the second one in the series. It is therefore evident that by connecting the brake-levers alternately by their arms and fulcrums, as herein set forth, the force exerted to move one will be propagated throughout a series of any number.

It is evident that this system of brakes is not confined in its application to a single car, but that the force applied to a single brake-wheel may be propagated throughout the whole train by merely connecting the brake-chain of each car with that of the succeeding one. In this case the upper arm of the last brake-lever in the train will become the fixed point in the whole series, and all the levers will be moved to press their respective friction-shoes against their wheels with the same force as the one which is moved directly by the brake-wheel chain.

The construction and arrangement of this system of car-brakes can be variously modified without affecting the principle upon which it acts. Thus, for example, the brake-levers may be levers of the second order, their fulcrum being at their lower extremities and the brake-beams being connected with the levers at points intermediate between their lower and upper extremities. In this case the lower extremities or fulcrum of the two levers of each truck will be connected by a rod, the 180 upper extremity of the brake-lever of each truck further from the adjacent brake-wheel will be connected therewith by a chain, and the upper extremities of the other two or outermost brake-levers will be connected by a rod.

What I claim as my invention, and desire to secure by letters patent, is the combination and arrangement of the levers, link-rods, and shoes, or rubbers, substantially as herein described, whereby each wheel of both trucks of a car is retarded with an uniform force when the brake is put into operation.

In testimony whereof I have hereunto subscribed my name.

F. A. STEVENS.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.
} In chancery.

(Indorsed:) Thomas Sayles vs. The Chicago & Northwestern Railway Company. Exhibit No. 3, Supreme Court Record. W'm H. Bradley, clerk.

181 In the circuit court of the United States of America, northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILROAD Company.
} In chancery.

Goodwin, Larned & Goodwin, for complainant.
Blodgett & Winston, for defendant.

Testimony for the complainant.

M'r Goodwin offers in evidence exemplification of letters patent granted to Henry Tanner, assignee of L. F. Thompson and A. G. Bachelder, for improvement on railroad-car brakes, dated July 6th, 1852, marked "Exhibit E."

Assignment—Henry Tanner to Thomas Sayles, dated July 13th, 1854, marked "Exhibit A."

Assignment—Thompson and Bachelder to Henry Tanner, dated April 1st, 1852, marked "Exhibit B."

182 Assignment.—Henry Tanner to Thomas Sayles, dated April 4th, 1859, marked "Exhibit C."

Assignment.—Henry Tanner to Thomas Sayles, dated January 23d, 1855, marked "Exhibit D."

A. Emigh was examined as a witness to prove signature of subscribing witnesses to Exhibits A and D.

E. M. Hall was examined as witness to prove signature of subscribing witnesses to Exhibit C.

LESTER L. BOND, being duly sworn, says:

My name is Lester L. Bond; I am thirty-two years of age; I reside in the city of Chicago; I am an attorney at law.

1st int. Please state what experience, if any, you have in mechanics and in the construction and principle of labor-saving machines.

A. I was an operative mechanic for nine years, and used a number of different kinds of machines; and since I have been at the bar I have devoted considerable time to the construction of machinery in soliciting patents.

2d int. Have you been called and examined as an expert in questions on patents?

A. I have.

3d int. Are you acquainted with the patent specifications and drawings issued to Henry Tanner, above, marked "Exhibit E?"

A. I am.

4th int. State whether or not you are acquainted with the car-brake called the Stevens brake?

A. I am. I have seen it in actual operation and in model, and have also examined a certified copy of Stevens' patent from the Patent Office.

(The witness is here shown a model marked "No. 1, J. T. M.," and is asked):

183 5th int. What brake is that a model of?

A. Of the Stevens brake.

6th int. Do you know what form of brake is in use by the defendants on their passenger or other cars upon their road? If so, please state in what form they are constructed.

A. I have seen the Stevens brake on the passenger and baggage cars of the defendants, and they are made in the form of the model, No. 1, here shown.

7th int. Please state whether, in your judgment, the brake, as you found the same constructed and in operation on the defendants' cars (and represented in said model No. 1), substantially embodies the invention contained in the mechanism described in said patent to Henry Tanner?

A. In my judgment, the said brake in use by the defendants does substantially contain the invention described in the Tanner patent

LESTER L. BOND.

Subscribed March 12, 1862.

The defendant's counsel, M'r Blodgett, waived cross-examination.

I. T. MOULTON,
Master in Chancery.

184 *Deposition of James Francis, taken at Baltimore, Md., 21st October*, 1862.

Present, Thomas Sayles, plaintiff; S. M. Whipple, for defendant.

My name is James Francis; I am forty-one years old; reside
185 in Baltimore County, Maryland, and my occupation a farmer. I
was employed on the Baltimore and Susquehanna Railroad in the year 1844. I was about nine months as a brakeman on the passenger-train, up to first of April, 1845. After that period I went on the freight-train. They were using whilst I was in the employ of said company, on all the passenger-cars and baggage-cars, the treadle-brake; I mean while I was employed on the passenger-train. I recollect a brake called the drum-brake, which was used after I left the passenger-train, on a passenger-car. At that time they had about four passenger and two baggage cars. The drum-brake could not, I think, be used on the passenger-car whilst I was brakeman without my knowing it.

Cross-examined:

Q. Was the treadle-brake a single-acting or a double-acting brake?

A. It was a single-acting brake; acted on four wheels.

Q. Was the drum-brake a double-acting brake, or a single-acting brake?

A. I don't know; I never used them.

Q. Did the drum-brake operate from either end of the car?

A. I don't know; I never used it.

Q. Did the drum-brake apply the power simultaneously upon all the wheels, and from either end of the car?

A. I don't know.

Q. Do you know if it was a double brake or a single brake?

A. I do not.

Q. Why do you call it a drum-brake?

A. Because it had a drum fixed under the car.

Q. What relation had this drum to the windlasses of the car and the brakes of the trucks?

186 A. I don't know.

Q. Then how are you prepared to state what brakes were and what brakes were not in use on any cars on the Baltimore and Susquehanna Railroad?

A. I can state what kind of a brake I worked with the passenger-cars; that was a treadle-brake, operated by the foot.

Q. You say you know of a drum-brake being used on a passenger-car after you left the passenger-train; what kind of a brake was it?

A. There was a drum underneath it, and it was called a drum-brake. I never used it. I judge it was operated by hand. I don't know if it was a single brake or a double brake. I was on the freight-train at that time, and had nothing to do with the passenger-train whatever.

JAMES FRANCIS.

Sworn to and subscribed October 21st, 1862.

J. HANAN,
U. S. Commissioner.

Deposition of John J. Elder.

My name is John J. Elder. I reside in the city of Baltimore, and am by trade a painter. I am about forty-four years old. I commenced working for the Baltimore and Susquehanna Railroad Company, I think in 1843. I worked at painting under William Benson, foreman of the paint-shop.

He remained foreman about between eighteen months and two years from the time I went there, when he left. I have been foreman since he left, and am now in the employ of said company.

187 I recollect painting a brake, which was called a drum-brake, shortly after Mr. Benson left. This brake was on a passenger-car called, I think, the "Maryland," and had just been put on the car. I painted it before it had been used on the road. I do not know how long this brake was used. I heard the teamsters (who drove the cars by horse-power from Bolten depot to North street) complain about the brakes not holding the car when going down the grade. The drum-brake had a drum under the centre of the car, and was operated by a crank from the end of the car.

Cross-examined:

Q. What brakes were in general use on the Baltimore and Susquehanna road at the time alluded to, that is, previous to your being foreman in the paint-shop?

A. They were called treadle-brakes, and applied by the feet.

Q. You speak of painting a drum-brake, so called; wherein does this brake differ from the treadle-brake? Please explain fully.

A. The drum under the car and the crank at the end of the car was the only difference I know of. I knew nothing about the workings of any of them. I never used them. This is all I know about it.

Q. Was the drum-brake a single-acting brake, that is, did it operate on one truck of the car or upon both trucks at one and the same time?

A. I don't know.

JOHN J. ELDER.

Sworn to and subscribed Oct. 21st, 1862.

J. HANNAN,
U. S. Commissioner.

188 *Deposition of Isaac Denmead.*

I reside in Alexandria, State of Virginia. I am 47 years old, and by profession master of machinery. I was foreman of the machinery department under Mr. Millholland ten years on the Baltimore and Susquehanna Railroad, now the Northern Central Railroad. After Mr. Millholland left I was master of machinery four years up to 1853. I recollect Millholland putting the drum-brake on a passenger-car in 1845. The drum-brake was in use only for a short time; was not used regularly. Albert Fisher was the engineer who ran the train on which the drum-brake was used. John Yakel was one of the brakesmen on that train. There were frequent complaints about this brake, such as the chains often breaking, and there was not sufficient power between the drum and the windlass. All the power there was was between the windlass and the drum. There was no leverage on the drum or the truck-levers, as near as I can recollect.

(The model now produced and shown to the witness, and marked "Millholland Model," I. H., and he says that it is about the thing. It is as near as he recollects like the original drum-brake.)

I recollect that the car on which this drum-brake was put on was repaired some short time afterwards, and the drum-brake was taken off and the single treadle-brake put on in its *in its* place. The drum-brake

was not put on the car after it was repaired. Mr. Millholland ordered the drum-brake to be taken off the car. The baggage-master, brakesman, and engineer who ran the train on which this drum-brake was used often made complaints of the chains breaking, and not sufficient power to hold it going down the grades, to myself, Mr. Millholland, and John C. A. Smith, foreman of the carpenter's shop. The trial
189 of this drum-brake proved a failure at that time and it was abandoned. The single treadle-brake was in use on the passenger-cars until I left the road in 1853. I recollect there was no leverage on the drum-brake, only what was gained on the windlasses. I recollect a long lever-brake with rock-shaft, that was attached to an engine-tender some time in the fall of 1846, and the paper marked B, now shown to me, is a correct representation of it. Figure 1 represents the wheels; figure 2 the brake-beams; figure 3 the rock-shaft; figure 4 the long side lever, and figure 5 the truck-levers. This brake was put on the tender Watson previous to the trial late in the fall of 1846. These truck-levers was put on vertical; afterwards changed to a horizontal position, as shown in paper marked B. There was another tender put on called the General Taylor, in 1847, with the same kind of brake. This could only be operated at one end at a time.

Q. Could this tender-brake, like Exhibit B, be operated from either end by lengthening out the rock-shaft and attaching another long lever at the other end, without having a man at each of the long levers?

A. I would have to say it could not be worked with the double levers without a man at the opposite end to unhook the lever.

Q. Would a brake like that shown in Exhibit B be a practical brake for passenger or baggage cars?

A. It would not, for the reason why, the end of this long lever would be thrown down on the platform so as to prevent passengers from getting on or getting off the cars, and the length of the lever would be objectionable.

Cross-examined:

190 Q. In your direct examination you speak of the treadle-brake and the drum-brake. Wherein do they differ one from the other? Please explain?

A. One is operated by the foot operating on a long lever, while the drum-brake is operated by the hand-windlass on both trucks. The treadle-brake is operated by the foot on the long lever on the single truck.

Q. Was the power applied by the drum-brakes to the brakes of both trucks from the windlass at either end of the car?

A. It was.

Q. Was this the first double brake within your knowledge?

A. Yes, sir.

Q. Was there any alteration made in this brake by M'r Millholland after it was first put on the car?

A. There was none to my recollection.

Q. Had Mr. Millholland wished to have increased the power of the brake upon the wheels of the car could he have done so; and if so, how?

A. He could have done so by reducing the size of the drum on which the chain rolled on between the drum and the brake-levers, and also increasing the fulcrum on the brake-lever. The one used had a fulcrum but no leverage.

Q. By whose direction was the brake, like Exhibit B, put upon the tender Watson in 1846?

A. By James Millholland.

Q. Was this brake susceptible of being operated from either end of the tender by applying another lever to the other end of the rock-shaft and lifting it instead of depressing, as was the case in operating said brake?

A. It was.

191 Q. Is the rock-shaft in Exhibit B the equivalent of the drum in Millholland's model; does it perform the same functions?

A. It does not practically; the rock-shaft has a lever attached and the drum has not.

Q. Is not half the diameter of any drum, cylinder, or circle the leverage of that circle?

A. It is.

Q. Then how do you say there is no lever in the drum?

A. Because the other half of the drum is not detached.

Q. Is not an arm extending from the centre of a rock-shaft equivalent to the half of the diameter of a drum whose diameter is double the length of that arm?

A. It is just the same; that is, working from the centre of each.

Q. Then is not the function of the arm upon a rock-shaft when revolved a quarter of a circle the same as that in revolving a drum a quarter of a circle?

A. It is the same, and they do form the same function.

Q. Was this tender-brake in use upon the tender of the Watson engine when you left the Baltimore and Susquehanna Railroad in 1853?

A. It was.

Q. You say, in your direct examination, in substance, that this tender-brake would not be a practical brake, when applied to a passenger-car, from the fact that the levers would be thrown down on the platform in the way of passengers, getting off or on the cars, and that the length of the levers would be objectionable. Could or could not these objections be obviated by attaching a windlass, chain, and rod from either end of the car to the arms upon rock-shaft, one opposite to the others?

192 A. It could.

Q. Did there, whilst you were master-mechanic of the Baltimore and Susquehanna Railroad, to wit, between the years 1848 and 1853, come to you a man who proposed to sell to said company a double-acting brake?

A. There was.

Q. Did you show to this man the double-acting brake on the tenders in use on said road?

A. I did.

Q. What reply did this man make to you?

A. I can't make use of his exact language, but the substance was that this brake on the tender was so near his own that he would not trouble me, that is the company.

Q. Did you know the name of that man?

A. I do not.

Q. Was his name Henry Tanner?

A. That is more than I am able to say. He showed a model that had a lever inside of each truck, and also outside of each truck. There was no lever under the centre of the car.

Q. About what year did this man call upon you?

A. About the year 1849.

Q. How do you fix the time that this man came to sell to the Baltimore and Susquehanna Railroad Company the said double brake already referred to?

A. I fix the time from the time M'r Millholland left the road. He left in the summer of 1848, and it was the following summer that this man offered to sell said double brake.

ISSAC DENMEAD.

Sworn to and subscribed Oct. 21st, 1862.

J. HANNAN,
U. S. Commissioner.

193 *Deposition of George Woods.*

My name is George Woods; I reside in the city of Baltimore; am forty-four years old; I am now clerk of the Richmond market; was formerly engineer on the Baltimore and Susquehanna Railroad, now the Northern Central Railroad. I commenced as fireman on the said railroad in 1839, and acted in that capacity to April the 1st, 1845. Then I took charge of the stationery engine in the shop, and remained in that capacity up to 1855.

During the time I was fireman they used on the passenger and baggage-cars the single treadle-brakes. I recollect there was a drum-brake put on the road in April, 1845. It was put on the passenger-car Maryland. The general complaint against this drum-brake was that it was inefficient; had not power enough to do its work; did not answer the purpose for which it was intended. These complaints were made by the engineer and brakesman who ran the train on which this brake was used. The car on which this brake was used was not used generally, from the fact that they had few passengers-cars and used this car when necessity compelled them.

I recollect seeing this car standing on the track in front of the shop a good share of the time. To the best of my recollection I saw it come out of the shop in April, 1845, with this drum-brake on. I recollect of seeing it in the shop when they were putting it on. The carpenters' shop was about 100 yards from the stationary engine which I was attending at the time. The drum-brake car was taken into the shop about the first of June, 1845, and the drum-brake taken off, and when I saw the car come out of the shop again it had on the old single treadle-brake.

The drum-brake was operated by a crank at each end of the car and operated on all eight wheels.

194 Cross-examined:

Q. Have you been examined about this drum-brake before this?

A. Yes, sir.

Q. How long since?

A. I believe in the neighborhood of two years; don't recollect distinctly, but think about that time.

Q. How old were you then?

A. I was forty-two years.

Q. Did you not state in that examination that you were forty years old?

A. I don't recollect distinctly what I stated.

Q. To the question how old are you, if you replied "I am forty years of age," did you answer truly?

A. I don't recollect distinctly what I answered.

Q. You say the drum-brake did not answer the purpose for which it was intended; for what purpose was it intended?

A. It was intended to check the speed of the train.

Q. Was it a double brake or a single brake?

A. It was a double-acting brake.

Q. Did it apply the brakes simultaneously on both trucks, and from either end of the car?

A. Yes.

GEO. WOODS.

Sworn to and subscribed Oct. 21st, 1862.

J. HANNAN,
U. S. Commissioner.

195 *Deposition of Robert S. Hollins.*

My name is Robert S. Hollins; I reside in the city of Baltimore, and am secretary of the Northern Central Railroad Company, and was the secretary of the Baltimore and Susquehanna Railroad Company since 1835; George Woods' name appears on the pay-roll of the company as working a stationary-engine during the month of April, 1845; he did not work that engine the previous month; he was fireman on the engine in the month of March, 1845; I find on the pay-roll that James Francis was second brakesman in the month of March, 1845; and in the month of April, same year, I find, under the head of "Remarks," "changed from passenger to burden train," and wages altered from $20 to 25 dollars per month; I find, from the same pay-roll, that John Yakel took James Francis' place as brakesman on the passenger-train on the 9th day of April, 1845; John Yakel's name is not on the pay-roll for March; William Benson's name is on the pay-roll as first painter during the month of March, and on the pay-roll of April up to the 11th, inclusive, and then under the head of "Remarks," "quit"; this was in 1845; John J. Elder is on the pay-roll for May, 1845, as first painter, and on the pay-roll for April as second painter; these pay-rolls are kept by myself, and I know them to be correct.

Cross-examination waived.

(Signed) ROB'T S. HOLLINS.

ROB'T S. HOLLINS, recalled by the plaintiff, says:

Our company has purchased the right to the "Tanner patent car-brake"; also the "Stevens' patent car-brake."

196 Cross-examined:

Q. In what year did your company purchase the said Tanner and Stevens' patent car-brakes?

A. I cannot say without having reference to the papers of the company.

Q. Will you produce said papers, and from them give the aforesaid date or year?

A. I will in the morning.

M'r Hollins reappeared this morning, Oct. 22d, and says:

On the 31st of July, 1853, the Baltimore and Susquehanna Railroad bought the patent-right of F. A. Stevens to his brake; and on February the 7th, 1854, bought Henry Tanner's patent-right for brake; those rights extended from Baltimore to Harrisburgh; we paid A. Emigh, agent for

Henry Tanner, for the use of his brake on the 20th of July, 1858. The Northern Central Railway Company bought the patent of Thomas Sayles, assignee of Tanner, the right extending from Harrisburgh to Sunbury.

Q. Who succeeded M'r Isaac Denmead as master of machinery on your road?

A. John C. Davis; it was while he was master of machinery that we bought the right to Stevens' and Tanner's brakes.

ROB'T S. HOLLINS.

Sworn to and subscribed Oct. 22d, 1862.

J. HANNAN,
U. S. Commissioner.

197 *Deposition of John Yakel.*

My name is John Yakel; I reside in the city of Baltimore, Maryland. I am about forty-two years old, and a conductor on the Northern Central Railroad; I have been engaged on said roads, that is the Baltimore and Susquehanna formerly, now the Northern Central Railroad, since some time in April, 1845; my first capacity was brakeman on the passenger-train, and I held that position for about two or three years; I was then appointed baggage-master, and held that situation some seven or eight years, and then was appointed conductor, which situation I now hold. When I first went there as brakeman they used the single treadle-brake on all the passenger and baggage cars.

A short time after I came there a brake was put on a car called the Maryland. The brake was called a drum-brake, or double-acting brake, or a brake acting on both trucks; I used the single treadle-brake on the passenger-car Maryland before the drum-brake was put on it; I never worked on any railroad till I went there in 1845.

I saw this car Maryland in the shop a short time after I came to work on the road, when they were putting this drum-brake on it. I used the brake after it was put on. The drum-brake worked very bad as compared to the single treadle-brake. Could not stop the train with the drum-brake; it seemed there was no power in it, and the engineer scolded me for letting the train pass the station, whereby the engineer had to reverse his engine and come back to the station; this occurred often while we were using that brake; several times I applied the brake so hard as to break the chains of the brake in trying to stop the
198 cars at the stations. The car Maryland was an old car, run behind on the train, and was left at Parkton station, about 30 miles from Baltimore, and then taken on again on our return-trip the same day and brought to Baltimore. At that time we ran the cars to Wrightsville, about 70 miles from Baltimore. I used always to brake on the hind car of the train to prevent the cars from running against each other.

The trains generally had two passenger-cars and one baggage-car between Baltimore and Parkton. I was the only brakeman employed on the train besides the baggage-master, who attended to his own brake. This car Maryland only ran once in a while, and that was when we were under the necessity of using it, and very often it was left at Bolton station on account of the brake being out of order, the chains being broke. The nearest, to my recollection, about two-thirds of the time this car Maryland was running. I mean two days out of three, and then it ran only thirty miles and back, while the train ran 70 miles and back. There was but one passenger-train a day at that time.

The engineer of this train was Albert Fisher. Albert Fisher and I made complaint to M'r Millholland and M'r Denmead, masters of machinery, that the brake worked bad; telling them about the chains breaking and so forth, and not being able to stop the train. The car Maryland was left in the shed awhile, and then taken to the carpenters' shop and rebuilt, and this drum-brake taken off, and the single treadle-brake put on in its place. I recollect distinctly that the drum-brake was not put on the car Maryland after she was rebuilt.

Cross-examined:

199 Q. Did this brake (the drum-brake) so combine the brakes of the two trucks with the drum and the windlasses of the car as to enable the brakesman to bring or force the brakes against their respective wheels, whether he was at the forward or rear end of the car?

A. Yes, sir.

Direct examination resumed:

I could not stop the train as well with the drum-brake as I could with the single treadle-brake. I could not near as well.

Cross-examination resumed:

Q. Could you slide the wheels with the drum-brake?

A. No, sir; I could with the single brake though.

JOHN YAKEL.

Sworn to and subscribed October 22d, 1852.

J. HANNAN,
U. S. Commissioner.

200 *Deposition of Ephraim Harris.*

I am forty-eight years and upwards; reside in the county of Montgomery, and State of Pennsylvania; I am a blacksmith by occupation.

Q. Were you ever engaged on the Western Railroad of Massachusetts? If so, when, and in what capacity?

A. I was engaged on said road from 1839 to 1852 as foreman of the blacksmith department.

(M'r Sayles offers in evidence model marked "Springfield brake, C. F. H.")

201 Q. Did you ever see a brake as represented by said model? If so, when and where?

A. I saw a brake as represented by said model in 1843 or 1844, at Springfield, Massachusetts.

Q. Was said brake in use on cars? If so, on what cars, for how long time, and how did it work? Explain fully.

A. Said brake was in use on cars for part of two years. It did not give full satisfaction in working. We had two long crate-cars running from Springfield to Albany. At Albany the road descended towards the river. This crate-car then had a single brake on it, and running down to the river to unload the cars the brakeman undertook to brake up the car, and the chain broke, and before he could get to the other end of the car to brake, the car ran into the river.

M'r Gray, then superintendent of the Western road, wanted I should put something on the car, an attachment put on the car, whereby the brakeman, if the chain broke, would have command of the other truck to brake it, and I arranged a car the same as this model, and on arranging it in this way we found considerable difficulty in winding the two chains on the windlass. They would override, and even so much as to destroy the power of the brake on the car entirely. The first lever from the windlass was something like fourteen (14) inches. Being that distance, if the chains were adjusted so as to brake both trucks at a time (I mean, to apply on a straight track), the short chain would prevent the car from turning on a curve. These chains had to be altered or lengthened to accommodate the curves of the road. The brakeman and conductor on the cars found considerable difficulty and fault in their operation.

202 The car had been thrown from the track in consequence of the short chain not allowing the truck to accommodate itself to the curves.

This brake, at the time it was put on, was not intended to brake both ends of the car at once. It was put on in case the short chain broke, that the brakeman might have the use of the other.

The crate-cars were switched from the main track, and were run down towards to river to unload their contents into the boat, and this attachment of the brake was put upon these cars to prevent them running into the river.

On the last car the brake was put on. The second car I put a swivel-joint on the long rods, for lengthening or shortening the same. That did not improve the brake at all.

These brakes were in use part of two summers. The cars were then thrown aside for a while, and then rebuilt.

The brakemen considered they could handle the car better with a single brake.

Cross-examined by S. M. Whipple:

Q. You say that the car had been thrown from the track in consequence of the short chain not accommodating itself to the curves. Which, in your judgment, would most likely take place under those circumstances, the breaking of the short chain connecting said lever to the windlass or the car leaving the track.

A. I should judge, in most cases, that the truck would be likely to leave the track rather than breaking the chain.

Q. Did it, under such circumstances, leave the track rather than break the chain?

A. It was so reported.

203 Q. You say the brakeman and conductor said they could handle the car better with the single brake. Did they not, on this brake, have all the advantages of a single brake? If not, why not?

A. They did not on this brake have all the advantages of a single brake. The windlass that takes the chain couldn't be but about a certain length from the platform down; consequently it gave a short distance for two chains, and this long chain being the upper chain and the lower chain having to be put so low on the windlass, many times the lower chain would toggle under the bottom of the windlass. Then, in other instances, the upper chain, having to have some considerable slack to accommodate the operation, at the first turn of the windlass the upper chain would ride down upon the lower chain—overlap on the lower chain.

Q. What is the diameter of the windlass-staff upon which the chain wound?

A. Inch and half round where the chains wound and an inch above.

Q. How many revolutions of the windlass were required for applying the brake?

A. That must depend upon the adjustment of the brakes to the wheels. You might calculate two or three or four, according to the adjustment of the brake.

Q. Was there any alterations or modifications of this brake after it was first put on.

A. The chains were altered in their length.

Q. Did it answer the purpose for which it was designed better than the single brake?

A. It never had a trial to prove.

Q. Did you not say it was used upon two crate-cars part of two seasons?

A. Yes; it was.

Q. Was not the single brake in use upon the cars before this brake was put on?

A. It was.

204 **Redirect:**

Q. When these cars were altered, what kind of brake was put upon them?

A. A single brake; this brake was abandoned, thrown out, and was never put on any other car while I was there.

Q. Did you put a brake on an engine-tender a short time before you put this brake on the crate-car that operated upon both trucks from one windlass?

A. I put on one, but I cannot say whether I put it on before or after I put it on the crate-car. It operated upon both truck'.

Q. Could that brake have been operated from either end?

A. It could not, as the arrangements then were.

Q. Would it have been a practical brake for a passenger-car?

A. Not any more so than this one.

Recross:

Q. You say that the brake which you put on the tender on the Western road operated on both trucks. How, then, do you say that it was not a better brake than the Springfield brake, which you say was only intended to operate *only* on one truck at a time?

A. It had the same disadvantages as the "Springfield brake," because both chains were wound on one windlass.

Q. Was not the brake afterward so altered as to dispense with one of the chains, by combining the lever nearest to the windlass with the rod connected to the lever in the other truck?

A. Not that I know of; not whilst I was there.

205 Q. Into what were the crate-cars altered after their disuse as crate-cars?

A. They were shortened, and made into house-cars—baggage-cars.

Q. What brakes were in general use on the Western road while you were in connection with it?

A. The common single brake.

EPHRAIM HARRIS.

Subscribed and sworn to Oct. 23d, 1862.

C. F. HEAZLITT,
U. S. Commissioner.

206 Depositions taken in Boston, Mass., Oct. 27th, 28th, 29th, and 30th, 1862, before E. Merwin, U. S. commissioner.

Present, Tho'as Sayles, plaintiff; S. M. Whipple, for defendant.

Deposition of Albert J. Bellows.

Int. 1. Please state your name, age, residence, and occupation.

A. My name is Albert J. Bellows; age, fifty-eight years; residence, Roxbury, Massachusetts; and I am a practicing physician.

Int. 2. Are you acquainted with Asahel G. Bachelder and Lafayette F. Thompson? If yea, where did you first become acquainted with them?

A. I am. I was first acquainted with them in the last of the year 1846 or the first of 1847. I then resided in Charlestown, Mass., and M'r Thompson also resided there then. M'r Bachelder, I think, resided in Lowell. My first acquaintance with them began by M'r Thompson showing me the model of a double-acting brake, I think they called it.

(The plaintiff here introduced a model, which is marked "Bachelder Model, E. Merwin, U. S. C.," and the same is exhibited to the deponent, who resumes:)

I saw this model, or a model representing the same double-acting brake like this. I think this is the same model shown me by Thompson in the latter part of 1846 or first part of 1847. Some time after this I engaged to assist Bachelder and Thompson in making a practical application of this principle to a car on the Fitchburg road. I became interested in the invention, and applied, with Bachelder and Thompson and Nathaniel Heath, for a patent. Nathaniel Heath did all the business in regard to obtaining a patent. 207 I was to furnish the means of introducing it and also the expense of procuring the patent, I believe. I was to have one-quarter of the patent-right, if granted. Bachelder and Thompson, at that time, said they had no means, and were apparently poor. This brake was put on to the Fitchburg car under my own observation in the fall of 1847.

The model marked "Fitchburg Model, E. Merwin, U. S. C.," is hereby produced by the plaintiff and exhibited to the witness, who resumes:

This model seems to represent the principle of the brake as applied to the Fitchburg car under my observation, as I have stated. For a long time the issuing of the patent was delayed, and on frequent inquiry of Heath I was never able to get a satisfactory explanation of the reason. I occasionally contrived to make inquiries of him. We had not obtained a patent up to the time when Tanner appeared to me and said that he had himself been endeavoring to get a patent, and he found that we had a model and application for the same thing, and we then finally assigned to him; ours being prior to his, he wished to purchase it, and he did purchase it.

I had continued to make inquiries of Heath as to the delay in receiving the patent, up to the time of the sale to Tanner. I think the process was, that I assigned back to Bachelder and Thompson, and they assigned to Tanner. I know the purpose of my assigning was that it should go to Tanner.

Cross-examined by M'r Whipple for respondent:

208 Int. 1. In what way or by what means do you fix the time of your acquaintance with said Thompson and Bachelder?

A. I fix it by reference to a letter, which is not now present, written by myself to some gentlemen, I think, in Bangor, which was found in the Patent Office.

Int. 2. What was the date of that letter?

A. It was in the fall of 1847; I cannot state the month; I have not seen the letter for a year; the letter related to the application of the brake just then made on the Fitchburg Road.

Int. 3. How, then, does the writing of that letter, as you say, in the fall of 1847, enable you to determine that your first acquaintance with these parties was the year previous?

A. I remember that it was in the winter before the application of the brake that I made their acquaintance.

Int. 4. What month, should you judge, in what winter?

A. I have no means of stating more definitely than I have stated before.

Int. 5. What is there about this "Bachelder Model" that enables you, at this late date, to identify it as the one shown you, as you say, by said Bachelder and Thompson on your first acquaintance, in the winter of 1847?

A. I identify this arrangement of levers, by which both set of wheels are acted upon by one windlass.

Int. 6. Was there any bumper arrangement connected with this model?

209 A. I think there was; at any rate there was with the application of it to the cars.

Int. 7. Is there any connected with model?

A. There is not now; there is an indentation in the wood at both ends, indicating that it was arranged for it.

Int. 8. You say that you assisted Bachelder and Thompson in making an application of this principle to a car on the Fitchburg Road; what do you mean by principle? Please explain fully.

A. I mean that to which I have referred, by which one brakeman can apply the brakes to both set of wheels.

Int. 9. What was the primary object in view in constructing and applying this brake; to make a train brake or hand brake?

A. I don't know.

Int. 10. Speaking of the "Fitchburg Model" you say it seems to represent the principle as applied to a car under your observation; does it only seem to be the principle, or are you positive that it is the principle?

A. I am positive that it is a representation of the principle.

Int. 11. Were the models like either of these now filed in the case, filed in the Patent Office when application was made for a patent?

A. I was told there was, but do not know.

Int. 12. "CHARLESTOWN, MASS., *December* 9, 1847.

"To the Commissioner of Patents:

210 "Pleace stay any further proceedings in the case of the application of us for the patent of Thompson and Bachelder's improvement in the car-brake, as we wish to make some further improvements. The application was made by M'r N. Heath, and the model deposited by him June 26th, 1847, with H. H. Sylvester, esq.

"Your obedient servants,

"THOMPSON & BACHELDER.
"Per NATHANIEL HEATH."

Were you aware of the writing of a letter of which the above is a copy?
(Objected to by plaintiff as incompetent.)

A. I am unable to say.

Int. 13. Were there any improvements on the brake as represented in the models, after the application of the brake to the car on the Fitchburg Road?

A. There was no change of the principle; there may have been improvements in the application of it, but I don't know that there was.

Int. 14. "PATENT OFFICE, *October* 17, 1851.

"GENTLEMEN: Specifications and drawings of your alleged improvements in railroad-brakes are herewith returned for entire insufficiency. The office, from what I can learn of the case, cannot encourage you, however, to press the application farther. 211

"Respectfully, yours,

"THOMAS EWBANK,
"*Commissioner of Patents.*

"THOMPSON & BACHELDER, R. H. EDDY,
"*Boston, Mass.*"

Were you knowing to the receipt of such a letter by Thompson and Bachelder, or their agents, as is above copied?
(Objected to by plaintiff as incompetent.)

A. I remember nothing about it.

Int. 15. What consideration did you receive from Bachelder and Thompson for the assignment of your interest to them in said application for a patent on the brake in question?

A. I have not yet received the first cent for that or anything else I have done; I did have one obligation from Tanner, that I should receive a portion of the profits which he should obtain from it.

(Signed) ALBERT J. BELLOWS.

212 *Deposition of Albert Fisher.*

Int. 1. Please state your name, age, residence, and occupation.

A. My name is Albert Fisher; age, fifty years; residence, Dedham, Mass., and I am a locomotive engineer.

Int. 2. Please state whether you were ever employed on the Baltimore and Susquehanna Railroad. If so, when, and in what capacity?

A. I was employed on that road from 1838 to 1848, as a locomotive engineer.

Int. 3. State whether or not, during the time you were so employed on that road, you knew of the trial of a brake called "drum-brake," about the year 1845. If so, state all you know in reference to the same.

A. I remember there was such a brake tried on the road. There was a drum under the centre of the car, rods leading from that to an upright shaft, and a crank on the upper end of it for a brakeman to work it by. It was tried on the road in the fore part of the summer or last part of the spring of 1845. It worked very badly. It was so constructed that there was very little power. There was no leverage or anything except the winding of the chain around the upright shaft. It was used on the train I run on as engineer. It was used occasionally, I should judge, for two months. I am not able to say positive about that. It was generally on the hind car of the train, and left at Parkton, about thirty miles from Baltimore, that being at the foot of the summit. It worked very badly when the brakes were set. The brakeman did not hold the train

213 up at the stations as good as a single treadle-brake. I often run by the stations and had to reverse my engine and run back to the station when this brake was applied. John Yakel was the brakeman when this brake was put on. I often used to find fault with him, and scold him for not holding me up at the stations. On examining the brake, I found it was not his fault. There was not the power in the brake to hold the train. I reported it to the master mechanic and his assistant. I complained to them, perhaps two or three times, about its not working well. I do not remember about the chain breaking. The brake was taken from the car and the old treadle-brake was put on.

The plaintiff here produces the model marked "Melholland Model," "J. H.," and exhibits it to the witness, who resumes:

That model represents the Melholland drum-brake, which was put on the car Maryland on the Baltimore and Susquehanna Road, about which I have already testified; the drum arrangement and the truck-levers, I recollect distinctly, were the same as are shown in this model; there was no leverage either to the drum or truck-levers; that was the reason it was taken off, because we couldn't use it to any advantage.

Cross-examined by Mr. Whipple for respondents:

Int. 1. Did the said Melholland drum-brake so combine the brakes of the two trucks with the drum and the windlasses of the car as to enable a brakeman to bring or force the brakes against their respective wheels whether he was at the forward or rear end of the car?

214 A. That was the intention of it when it was got up. I couldn't say that the brakes were applied to the wheels; I was not in a position where I could see.

Direct examination resumed:

1. Direct. Were you the only engineer on the passenger-train on said road?

A. I was the only regular passenger engineer. The treadle-brake was the one in general use all the time I was on that road; the single treadle-break, I should judge; as near as I can recollect, that the car Maryland was used about one-third of the time for the two months or so that the drum-brake was on that car; it was generally used when we wanted an extra car only; the reason why this car was left at Parkton was because we didn't consider this brake safe to go over the summit with; the grade there is eighty-four feet to the mile.

(Signed) ALBERT FISHER.

Deposition of Asahel G. Bachelder.

Int. 1. Please state your name, age, residence, and occupation.

A. My name is Asahel G. Bachelder; age, forty-two years; residence, Lowell, Mass.; and I am a carriage-maker.

Int. 2. Are you acquainted with Lafayette F. Thompson, formerly of Charlestown, Mass.; if so, when did you become acquainted with him?

215 I am acquainted with him; I became acquainted with him in the spring of 1846. I understand that he is now in Minnesota in the United States Army.

Int. 3. Did he ever live with you; and, if so, when, and where?

A. He lived with me in the fall of 1846, at Lowell; he came to live with me about the first days of October.

Int. 4. State whether or not Thompson and yourself were engaged together, at any time, in getting up a double-acting brake for railroad-cars; if yea, state the commencement and progress of the invention in regard to consultations, if any, between you and him, and drawings, models, applying for patent, trying the brake on railroads, and any other details that occur to you in connection with the progress of the invention, as nearly in order of time as you can give them.

A. We were engaged together in getting up a brake. My attention was first called to it by a small model he showed me; that was some time before he came to live with me; then we were engaged in making drawings of car-brakes different from the one he showed me; we were engaged evenings making drawings and drew out several plans. We made a plan, which we afterwards made a model of, about the time he came to live with me, soon after, a few days. I commenced on the model soon after that and finished it in the course of the winter; I can't state the exact time I finished it; it might be January, it might be the first of February; the model here present marked "Bacheider Model; E. Merwin, U. S. C.," is the original model made by me—that is, the framework, and the brake was arranged as it now is. All that is on it

216 now was on it when I first made it; but there was also a bumper arrangement put on it at the same time which was not now on the model; the model was made from the drawings made by Thompson and myself, in October, 1846.

I made another model for the Patent Office in March or April of 1847; I carried it to Boston and left it with M'r Nathaniel Heath; we employed him as our agent to take out the patent; he was to become interested in the patent. We applied for a patent somewhere about the middle of June, 1847; I don't remember the day; we tried the brake on one car on the Fitchburg road in the same fall, in October, 1847; after we got it arranged we made one trial trip with it; I went with it; it worked to our entire satisfaction. The next summer I put it on a car at Lowell, on the Lowell Road. I only put on the hand-braking on the Lowell road; on reflection I am satisfied I put it on the same as on the Fitchburg car.

The model marked "Fitchburg Model" is here exhibited to the witness, and he is asked by plaintiff what it represents, if anything, and resumes:

This model represents the precise arrangement as it was put on the Fitchburg car. We, that is, D'r Bellows and myself, were at the expense of making these experiments, except that the two railroads furnished the irons and forged them. I think the brake remained on the Fitchburg car from October to the next spring some time. Thompson wrote me that he had ordered it off, and I presume it was taken off.

The plaintiff here produces, and exhibits to the witness, the model marked "B. and T.'s P. O. Model, E. M.," and witness resumes:

217 This model is like the one we sent to the Patent Office; I mean like the one which I made in March or April, 1847, and carried to M'r Heath. We put on these large rods so as to brake up the rear end of the rear car on the train, while with the small rods, like those in the Fitchburg model, it would not break the rear end of the rear car from the bumper; the object was to break up both ends of the car from either end of the car by the bumpers or by the windlass.

Our idea was that when the cars were detached from the engine, by checking the forward car by the windlass, the pressure of the other cars against that one and against each other would brake themselves by means of the bumpers; that would be the operation whether the engine was detached or not, so long as the first car was checked. Soon after the experiment on the Fitchburg Road we wrote to M'r Heath to stay proceedings. We thought we ought to make some alterations in the model we sent to the Patent Office.

Finally, we concluded that the model which we had already sent to Washington covered all the ground which we wished to claim; that is, we wished to claim what is represented in the Fitchburg model. By that we did away with the long rod in the Patent-Office model. D'r Bellows and M'r Heath both understood that the Patent-Office model covered all that was in the Fitchburg model. We had no idea of making an improvement in the brake; we calculated it was all the same. What we wanted was to alter the model—why we stayed proceedings.

It might have been a month before we decided not to alter the model. When the Patent-Office model was made the back end of the notch or gaine in the draw-bar was rounded or slanted so as to let the brake-
lever play out easily when you applied the windlass. There was
218 no improvement made or attempted in the hand-braking arrange-
ment after the first drawings, in October, 1846.

M'r Thompson and myself had no experience at all in applying for patents at the time this one was applied for. This application for a patent was assigned, by M'r Thompson and myself, to Henry Tanner, of Buffalo, N. Y., in the spring of 1852.

I saw this double brake, like the one in the "Bachelder Model," on two roads, at least, I recollect now, in the year 1850. I think I saw it on the Nashua and Worcester Road and on the Northern New Hampshire Road. I happened to be at the depot and saw it, and told the brakeman and conductor that was my invention, and they had no right to use it, and that I had applied for a patent for it. This conversation was on the Northern Road. On the Nashua and Worcester Road I only saw it on the cars as I passed from Lowell up.

M'r Heath carried the model and the papers to the Patent Office at Washington, and told us, when he came back, that the patent would probably be out in six months. After the six months we frequently called on him in order to find out the cause of the delay. He always replied by saying that he had written to the office, and also said that he had been there himself after he had carried the model there. We continued to call upon him all the time until it was put into M'r Eddy's hands to manage.

After we found that there was no prospect of Heath doing anything we compelled him to put it into M'r Eddy's hands. He wouldn't consent to put it into M'r Eddy's hands no farther than M'r Eddy should write to the Patent Office to find out about how it stood. He said he
didn't like M'r Eddy, and wouldn't have any more to do with him
219 than he could help. M'r Heath consented to the employment of
M'r Eddy to write to the Patent Office, and M'r Eddy did write
about the 1st of October, 1850. Heath refused to employ M'r Eddy any farther. We always insisted that he should employ Eddy, but he wanted to employ some other patent agent here, whose name I do not recollect. M'r Heath and myself went and saw this other man, and I told M'r Heath that I had rather M'r Eddy should manage the affair. M'r Thompson and I had talked with M'r Eddy about it several times, and thought he understood the matter fully. We threatened M'r Heath pretty hard to take the whole business out of his hands, as he had agreed to take out the patent at his own expense for his share in it, which was one-third, and he finally consented to employ M'r Eddy. It was some time before he consented. I do not remember precisely how long. I couldn't say when M'r Eddy was finally employed to attend to the mat-

ter. It was a number of months after we employed him at first to write the letter to Washington—the letter of October, 1850.

M'r Heath told me, as one reason why he did not wish to employ him, was that he thought his charges were too high. That he charged him three dollars for writing one letter to Washington, and he wanted thirty dollars to do the business to take out the patent there, and M'r Heath objected to paying out anything further, as he had already been to the expense of applying for the patent. Thompson and I had not the money do it ourselves. Heath finally consented to employ Eddy, and employed him some. I do not know how much. D'r Bellows became interested in the brake. M'r Heath took him in by some arrangement between them two, that he was to be at some of the expense, I think,
of trying the brake on roads. After D'r Bellows was taken in,
220 Heath came and got our consent to admit D'r Bellows by his being
at the expense of trying it on the roads, and we four then were
to share equally in the proceeds of the patent, if granted.

Cross-examined by M'r Whipple, for respondents:

Int. 1. You being a carriage-maker, what circumstance or circumstances led you to get up a railroad-car brake?

A. It was by M'r Thompson showing me a little model of a car-brake that he had. It was a little small thing, about as big as your hand, the whole thing. It was arranged with elbow-joint levers, four of them, I think. He thought he could get a great power out of them by applying the brakes by a bumper arrangement. He wanted me to make a large model of it in order to see if it could not be applied to railroad cars, and I made one.

I found that it could not be applied to a railroad car. By my making that mdoel it set my mind on car-brakes. It was not in our mind to prevent collisions in making the brake in the first place, but we calculated that the brake, by means of the bumpers, would prevent collisions.

Int. 2. Which idea was first and foremost in your mind in getting up said brake; a bumper-brake or a hand-brake?

A. It was got up together, a bumper and the hand part. After making this model of M'r Thompson's, we went to work and made drawings of a brake with the bumper and hand-brake both together. It was our intention that they should operate separately. I placed most value on
the hand arrangement.

221 Int. 3. Does your specification and model, filed in the Patent
Office in June, 1847, convey the idea that you placed most value
on the hand-brake?

A. I could not say whether it did or did not; it is a good many years since I saw them.

Int. 4. Did you preserve the drawing from which you say the Batchelder model was made?

A. I can't say as to that; I do not know how long it was preserved. It might have been a few months; I recollect carrying it in my pocket some time.

Int. 5. Did these improvements or alterations for which you ordered proceedings stayed at the Patent Office, grow out of your experiments with brake on the Fitchburg Road?

A. As far as the bumper arrangement, it did.

Int. 6. Please explain what you mean by the bumper arrangement as connected with the other parts, and what became of it after your experiments on the Fitchburg Road.

A. I considered there were two parts to the break, a bumper arrangement and a hand arrangement, which operated independently of each other; there was nothing done with the bumper arrangement after the experiments on the Fitchburg Road, except that the same bumper arrangement was tried on the Lowell Road; there was no alteration in the arrangement after the trial on the Fitchburg Road.

Int. 7. Was a brake like the "B. and T's P. O. Model, E. M.," ever applied to a car?

A. There never was any application of it.

222 Int. 8. Did you, at the time of sending the said "B. and T. P. O. Model" to the Patent Office, have in your possession the Bachelder Model?

A. I could not say whether I had it or whether it was in Boston, but it was at my disposal.

Int. 9. You say, in your direct examination, that "Finally we concluded that the model which we had already sent to Washington covered all the ground which we wished to claim; that is, we wished to claim what is represented in the Fitchburg Model;" was it this particular kind of brake that you wished to claim; if so, what was your claim?

A. Of course it was; we claimed the brakeing by hand, and also by bumpers; we had it in both models.

Int. 10. Was there any such claim in your application for a patent?

A. I suppose there was; there should have been.

Int. 11. Did M'r Eddy obtain from the Patent Office the papers connected with your application after he took charge of the case?

A. I believe he did.

Int. 12. After reviewing the case did he return the papers to the office and request an examination?

A. I believe he did; what I knew about the papers was what was written to me at Lowell by Heath or Bellows, I could not say which.

Int. 13. The papers having been revised by M'r Eddy and returned to the office, and an examination of them had, did you receive the following official letter, to wit:

223 PATENT OFFICE, *October* 17, 1851.

GENTLEMEN:

Specifications and drawings of your alleged improvement in railroad brakes are herewith returned for entire insufficiency. The office, from what I can learn of the case, cannot encourage you, however, to press the application farther.

Respectfully, yours,

THOMAS EWBANK,
Commissioner of Patents.

THOMPSON & BACHELDER, R. H. EDDY,
Boston, Mass.

(The plaintiff objects to the question, because it assumes that M'r Eddy had revised the papers, and also generally.)

A. I never had any knowledge of their being received at that time. After the papers were sent to the office by M'r Eddy I did not receive the official letter.

Int. 14. Did you receive the knowledge of its contents?

A. I might, part of it—not just as stated there.

Int. 15. What part did you receive knowledge of?

A. M'r Heath or D'r Bellows wrote me that Eddy had received a letter from the Patent Office saying our claim was too broad; that it cov-

ered any kind of a car-brake—something to that amount; and
224 that they, the Patent Office, did not advise us to press the matter. I think that is the substance of the letter I received.

Int. 16. Did you conclude to conform to the advice in said Patent-Office letter?

A. I did not.

Int. 17. When Henry Tanner came to you to purchase said application, what were your feelings in the matter, and how did you express yourself to him?

A. My feelings were that if we had employed M'r Eddy in the first place, independently of Heath, we should have had the patent long before then. I cannot say how I expressed myself to M'r Tanner, unless it was by repeating these words to him. I always supposed we were entitled to a patent, and that it could have been obtained, and could then.

Int. 18. What consideration did M'r Tanner offer for your application, and what consideration did you accept?

A. He offered to pay us one-half he collected after deducting twenty-five per cent. from the whole sum collected for collecting, and we accepted that offer; for all expenses of lawsuits, also, he was to be reimbursed from the general fund.

Int. 19. Was that agreement carried out?

A. Tanner never paid a dollar on that agreement.

Int. 20. In applying your brake to a car on the Fitchburg Road how did you prevent the levers, in each truck, from dropping upon the track when not in use, as the model shows that they were not sustained by any connection with the truck except with the brake-bars of the truck?

225 A. I think the severel rods held them up.

Int. 21. Was that all that held them up—the connecting-rods?

A. The tops ran up through a slot cut in the elbow-lever to throw it out of gear. I think the hand-brake rod was applied above that slot through this lever.

Int. 22. Was the levers in the trucks of the car to which you applied your arrangement the same in their relation to the several parts as shown in the "Fitchburg Model?"

A. We used the old levers, as we found them on the car, without alteration.

Int. 23. Did you alter the connecting-rods?

A. I think we did.

Int. 24. Were the levers, as you found them, suspended in the centre of the truck, as seen in the model, or were they attached to the one or the other of the brake-bars either by the fulcrum or the short arm?

A. They were not suspended in the centre; they were hung near the brake beam.

Int. 25. What was the length of the slot in the draw-bar which encircled the king bolts?

A. I think it was eight inches.

Int. 26. What was the diameter of the king-bolt?

A. It was an inch and three-quarters, or two inches.

Int. 27. Could you apply the brakes effectually and efficiently on six inches of motion in the draw-bar?

A. We did.

226 Int. 28. To both trucks of the car?

A. To both trucks.

Int. 29. At the same time?

A. At the same time; not on both ends of the car; each bumper applied it to each end of the car; each bumper to its own end.

Int. 30. Did the Fitchburg and Lowell Railroad Companies, after a trial of your brake, think enough of it to desire its use upon their cars?

A. I think the Lowell Railroad would have adopted it if they had not bought Hodge's patent unbeknown to M'r King, their superintendent of machinery; it was running on the road at the time Hodge's was ordered to be put on.

Direct examination resumed:

1. Direct resumed. You stated that M'r Tanner had never paid you a dollar on his contract; what reason did he assign for not paying you anything, if any?

A. The reason that he gave me that he had not collected anything of any amount, not as much as he expended in law matters; that was a year, or about a year, after he bought it of us. M'r Thompson made a subsequent arrangement with him. I cannot say whether it was one or two years after Tanner purchased of us; this arrangement was made unknown to me. By the last arrangement M'r Tanner bought of M'r Thompson the whole right to the patent, and gave him a bond for two thousand dollars, I believe, and some stock in a car seat manufacturing company in New York.

227 Examination here is adjourned, by consent, to Tuesday, Oct. 28th.

Oct. 28th, examination resumed.

2. Direct. You stated in your answer to the first cross-interrogatory, "It was not in our minds to prevent collisions in making the brake in the first place, but we calculated that the brake, by means of the bumpers, would prevent collisions"; did you mean it would prevent collisions independent of the hand-brake? Please explain fully.

A. It might; but I always supposed, from the first, that the bumper part of the brake was not of much account independent of the hand-brake.

(Respondents here object to the witness reading from manuscript previously prepared.)

My idea was to patent the hand-brake together with the bumper arrangement, but I was always in favor of having the hand part fastened separate from the bumper arrangement, as shown in the old Bachelder model. M'r Thompson insisted on having both parts fastened together; so did M'r Heath, and I finally consented to that arrangement, and then made the model for the Patent Office. I supposed, when we employed M'r Heath to obtain the patent, that he would employ men that understood the business by describing our invention and fixing the claim as it should be; by that reason I had little to say. I trusted to him without paying much attention to it myself. I knew nothing about the mode of applying for patents, as I had never looked over patent papers before in my life.

228 We finally concluded to patent the bumper arrangement with the hand arrangement. We intended to patent the arrangement to operate the brakes by hand from either end of the car, together with the bumper arrangement, which operated independently of the hand-brake from either end of the car. I have not read any of the answer from manuscript since the objection to my doing so was entered.

Cross examination resumed:

Int. 31. Have not your answers to questions put by plaintiff been foreshadowed to you in the questions themselves?

A. Some of them might have been.

Int. 32. Was not your last answer nearly in the words of the question? I refer to the question embodied in the last sentence but one of your last direct answer?

A. I don't think it was.

Int. 33. How, then, did you arrive at a correct answer to the question, if it was not as you say?

A. By my knowledge of the affair of the brake from beginning to end.

Int. 34. Did you explain to M'r Heath, who had charge of your application for a patent, your brake in all its details, and what you claimed as your invention for which you desired letters patent?

A. We did.

Int. 35. Did he embody that explanation and claim in said specification?

A. I cannot say whether he did or did not.

229 Int. 36. Did he send said specification and model of June, 1847, to Washington without consulting you after such explanation?

A. I had to sign the application, of course; that is all that I had to do about it.

Int. 37. Did you sign said specification without having it read to you before signing it?

A. I did, because I read it myself.

Int. 38. Then were you not aware of all its contents, and that the hand arrangement, or the operation of it, was merely incidental—entirely subservient to the bumper arrangement, and that there was no claim in said specification?

A. I merely looked it over hurriedly; I had the papers in my possession only a few moments; they were sent to me from Boston, by express, for me to return them by the next express. I was not aware of all its contents. I never had any such idea from the application that the hand arrangement was merely incidental. I was not aware that there was no claim in the specification, and am not aware of it now.

Int. 39. Do you consider yourself capable of understanding an instrument in writing, the contents of which you are directly, personally, and pecuniarily interested in?

A. I should if I took time to investigate it.

Int. 40. Were you not sufficiently interested in this specification to investigate and understand its contents?

A. I was enough interested in it. I left that matter to others who understood it better than I did, or should have done.

230 Int. 41. When the matter came into M'r Eddy's hands, as the agent of M'r Heath, who (Eddy), you say, was, in your estimation, competent, and to whom the papers were sent from Washington, did he review these papers?

A. I can't say whether he reviewed them, or what he done with them.

Int. 42. Did you not receive the knowledge of the contents of a letter, sent to you from the Patent Office, or to your agent, M'r Eddy, after an examination of your application, stating that it was entirely insufficient, and from what the office knew of the case could not encourage you to press your claim further?

A. I received a letter from M'r Heath, as I stated yesterday, from M'r Heath or D'r Bellows.

Int. 43. Did you or M'r Thompson have any practical knowledge of railroad machinery, or the operation of the same, when you set yourselves at work to get up a railroad-car brake?

A. I believe not.

Int. 44. How, then, did you arrive at all the details of a car-brake, as you say you did, in the first drawings which you made in October, 1856?

A. We did it by examining an old car-brake, and by understanding machinery.

Int. 45. What machinery?

A. My business had led me to almost all kinds of machinery in my life-time.

Int. 46. Please specify.

A. I being a mechanic from boyhood I always worked on ma-
231 chinery more or less; that is, had to do with it in shops where I
worked; I could generally make any kind of machinery that I set
myself about.

Int. 47. Defendant's counsel now presents to the witness the "Bachelder Model" and the "B. and T. P. O." model, and asks: Please state the similarity of the frame-work of the one to the other, without any reference to the brake-machinery on either.

A. One appears to be made in a hurry; the other appears to be got up more nicely, and more time spent upon it.

Int. 48. Are they alike in all the essential particulars?

A. I do not see anything essentially different.

Int. 49. Which was made first in the order of time?

A. The big one—the "Bachelder Model."

Int. 50. Was the brake now on the Bachelder Model applied to it at the time of making the same?

A. It was.

Int. 51. Has it been continued on this model from that time to the present?

A. There were stiff rods put into it, as represented in the Patent-Office Model; they remained on awhile.

Int. 52. Was the long rod, which you call H in your specification, also put on in connection with the large rods?

A. It was.

232 Int. 53. When did you put such a brake upon the Bachelder
Model as is seen in the B. and T. P. O. Model?

A. The long rod was put on when the model was first made; then I put on those stiff rods, as represented in "B. and T. P. O. Model," after trying those small rods, as represented in the Bachelder Model—soon after, it might have been a few weeks, it might not have been so long—I worked at the model a few hours at a time.

Int. 54. When did you take off from the Bachelder Model the brake which is on the Patent-Office Model and restore the one which is now on the Bachelder Model?

A. In 1847, the fall—I think October.

Int. 55. Do you, as a mechanic, consider the brake, as seen in the Patent-Office Model, practical in its operation either as a bumper-brake or hand-brake?

A. In the hand-brake, I do.

Int. 56. What is the length of a passenger-car from bolster to bolster?

A. About forty feet, as near as I can recollect.

Int. 57. What, then, would be the length, and size also, of those large thrust-rods applied to such a car?

A. They would be twenty feet certain, and size probably one inch.

Int. 58. Would they not easily bend, if made of that size, when the whole force of the brakeman is applied to them through the windlass?

A. They would if they were not stayed in two or three places, or supported by something.

233 Int. 59. If the spring, made to fit into a yoke in the large rod H, of Patent Office Model, was made stiff enough to keep the levers in the trucks in the gains of the draw-bar so as to make it effectual as a bumper-brake, would it not be difficult to draw them, the levers, out of the gain when used as a hand-brake?

A. I don't think it would; it don't require a very stiff spring to hold up the upright lever in the spring.

Int. 60. How do you know, as you say you never applied the brake in the Patent-Office Model to a car, and that you have had no experience in the practical operation of railroad machinery?

A. I know by its principles and its operation in the model.

Int. 61. Why, then, did you substitute an entirely different brake arrangement in prosecuting your case, at the Patent Office, and cause the Patent-Office Model to be cancelled, if it was a practical operative brake?

A. We considered this brake much easier, cheaper, and could be easier applied to a car; I mean by "this brake" the Bachelder Model brake.

Int. 62. You said, in your direct examination yesterday, that in the year 1850 you saw a brake in use upon the Northern road of New Hampshire like the one on the Bachelder Model, and that you claimed it as your invention; are you aware of the fact that a brake with a centre lever connected with the brakes of the car and the windlasses of the same by four rods all tensil-strained when used, was invented and in use upon a car upon the New Haven, Hartford and Springfield Rail-
234 road months before you applied for a patent on a brake as represented in your Patent-Office Model, and that this was well known to Henry Tanner, your assignee, that this brake was invented and applied by one Willard I. Nichols, and that, in view of your pecuniary interest, and the interest of your assignee, and other parties connected with you, that it became obligatory upon you, in the furtherance of your interest, to antedate the Nichols brake, as then understood, a brief period; and to this end the Nichols brake was, through pretence, substituted for your brake already in the Patent Office, and that thereafter the Nichols brake, and not your brake, was, by Henry Tanner, filed in the Patent Office, and the model which you put in cancelled?

A. I am not aware of any such brake as inquired of, though I have heard something about some kind of a brake; I could not tell what it represented. I don't know what Tanner knows concerning the brake. I did not know anything about the Nichols brake. I did not know anything about substituting the Nichols brake for our model at that time, and I don't know the fact, and never understood it so, that the Nichols brake was filed by Tanner in the Patent Office, and ours was cancelled at that time.

Int. 63. Have you been made aware of the fact since?

A. I think you told me something about it the other day.

Int. 64. Were you made acquainted with the fact, at any time, by Henry Tanner, or his associates, that your and their interests depended upon your fixing a date of a certain drawing, complete in all its parts, of a brake unlike the one you sent to the Patent Office, and that date was October, 1846?

235 A. We fixed them dates as they actually took place, I think; I was not acquainted as inquired of in the question.

Int. 65. Do you pretend to say that there was any other brake, well defined in your mind, than the one represented in the Patent-Office Model, at the time of making the same and sending it to the Patent-Office?

A. I do say that the one represented in the Bachelder Model was.

Int. 66. Who was the master-mechanic of the Fitchburg road when you applied your brake to a car on that road?

A. I think his name was Turner.

Int. 67. Was he favorable to your brake and to the 'pllication of it to a car on said road?

A. He never expressed any objection to the brake, but he seemed to object or dislike to have his car meddled with; he acted in that way.

Int. 68. Did he give you any assistance or any sympathy in applying it to a car on that road?

A. Not himself; his men did that worked for him.

Int. 69. Did you show him a model of your brake before the application; and, if so, what model?

A. We did; we showed him the Bachelder Model, which was then arranged like the Patent-Office Model.

Int. 70. And was it applied to a car upon that road?

A. We applied a brake to a car as represented in the Fitchburg Model.

236 Int. 71. How does it happen that you should show one model as a sample of what you wished to apply to a car and go on and apply an entirely different one?

A. I considered the different one essentially the same in operation.

Int. 72. You stated, in your examination yesterday, that M'r Turner objected to your cutting the car when you wished to make some alteration to accom'odate a rod. In which part of the trucks or car did you wish to do this cutting, and for what purpose? Please explain.

A. I wanted to cut a little out of the centre beam in the truck-frame for the long rod, that being dropped lower than the frame.

Int. 73. You said, yesterday, that you put the brake upon the Fitchburg car precisely as seen in the Fitchburg Model; is there any rod H in that model?

A. In my former answer, in cutting for this long rod, or the rod H, I then was at work putting it on the Fitchburg car, but did not put it on. I abandoned that rod, and then went to work and put it on as in the Fitchburg Model, for the reason that M'r Turner objected to any cutting on the cars. I put it on as in the Fitchburg Model.

Int. 74. This objection, then, was the cause, was it, of an entire revolution in your mind as to how you would finally apply the brake?

A. It was the cause of my abandoning the rod H, and substituting the elbow levers in its place, which were for the purpose of throwing the bumper arrangement out of gear.

Int. 75. Was that all the change you made, merely dispensing with that rod H?

237 A. The change was like the Fitchburg model.

Int. 76. Please specify the changes.

A. We set the brake-lever back of the truck-beam so that the back end of the draw-bar struck the brake-lever when forced in or back instead of its playing in the gain, as in the Patent Office Model; we used those elbow-levers to throw it out of gear when we wished to back the train, which was done by hand by means of side-levers on each end of the car, and we substituted four small rods instead of two large rods.

Int. 77. And did this take place in the fall of 1847?

A. It took place about the 20th of October, 1847.

Int. 78. Do you know Godfrey B. King, formerly master mechanic of the Lowell road; and was it under him that you applied your brake to a car on the Lowell road?

A. I do know him, and it was under him that we applied our brake on the Lowell road.

Int. 79. Has his deposition been taken, to your knowledge, in relation to the application of said brake to a car on the Lowell road?

A. It has.

Int. 80. Where and in what case?

A. It was taken in Boston and in Philadelphia, I believe, in the case of M'r Sayles against the Philadelphia and Baltimore road, I believe.

Int. 81. Did he state, in that deposition, that your brake was applied to a car on the Lowell road; was put on with large rods, as seen in the Patent Office Model?

Objected to by plaintiff.

A. I believe he did.

238 Int. 82. Have you been examined before in any case involving
the brakes at issue; and, if so, when and where?

A. I have been, in Albany, N. Y., in 1854; the next time was in Albany in 1855, I think, but am not sure; next time was in New York, two years ago, and soon after in this office, in the case of M'r Sayles against the Philadelphia and Baltimore road; I don't recollect of any other times now.

Int. 83. In what year and in what case were you first examined?

A. In 1854 or 1855, in the case of Henry Tanner against the New York and Erie road, I think.

Int. 84. Were you pecuniarily interested in the issues of that suit?

A. I was somewhat interested in it.

Int. 85. To what extent?

A. I don't know as I can state without going into the history of the case. M'r Thompson had a bond from Tanner which M'r Tanner agreed to pay in case he made anything out of the brake.

Int. 86. Were you made to understand by Henry Tanner and his associates, in preparing the evidence to be used in the trial of the said New York and Erie case, that certain facts and dates were to be established and sworn to positively and decidedly, in order to secure a successful issue of that suit for plaintiff?

A. They gave us to understand that we must fix the date as early as we could.

Int. 87. Were you made to understand that the date of said drawing,
referred to by you as being made by you in October, 1846, must
239 not be a month or six weeks later in date, and that the brake
must be complete, in all its parts, as seen in the Bachelder Model,
or that your evidence would be of little use to the plaintiff?

A. I have no recollection of any such thing.

Int. 88. Has not much of the evidence that you have given, at various times and places, involving railroad-car brakes, been framed for you and you becoming the mere expression of what the plaintiffs wanted from time to time?

A. I think I am capable of acting and speaking and thinking for myself.

Int. 89. Did you not, in your examination yesterday, state that your brake was put upon the Lowell road without the bumper arrangement, and on being prompted by plaintiff, said that it was put on; and has not the plaintiff, during your examination in the case, stopped the examination and whispered into your ear what he wanted you to testify to; and was not this whispering going on between you, and interrupted by the counsel for the defendant, towards the close of yesterday's examination, whereupon the plaintiff called for an adjournment?

A. I did so state; I should have made the alteration without any prompting from the plaintiff, because I understood the whole thing better than he did; I don't think he has stopped the examination and whispered in my ear what he wanted me to testify; plaintiff did whisper to me about when I wanted to return to Lowell just as the examination concluded yesterday; the plaintiff did not call for an adjournment; the commissioner did, if I recollect right.

240 Int. 90. Did the plaintiff prompt your answer to the last member of the foregoing question, and was your answer in accordance with his statement?

A. He did, and the answer was according to his statement, and as I understood it at the time.

Int. 91. Was the mere circumstance of your returning to Lowell, in your judgment, of sufficient importance and of so secret a nature as to justify plaintiff in stopping the proceedings and whispering to you on that very important subject, having no other end in view?

A. My returning to Lowell was not of much importance; I don't recollect as he did stop the proceedings.

Int. 92. Could he have whispered to you and not have stopped the proceedings?

A. I could not say as to that; I presume he might.

Direct examination resumed:

3d direct int. resumed. You stated in your cross-examination that you were somewhat interested in the decision of the New York and Erie suit; you spoke of M'r Thompson having a bond from Tanner; had or had not that bond been paid or cancelled before that suit was decided and you and Thompson received your pay?

A. It was cancelled or paid; we had received our pay in notes and money before the decision in that suit.

4 direct resumed. Was you, then, pecuniarily interested in the decision?

A. I was not.

241 Cross-examination resumed:

Int. 93. Was the bond, just alluded to, outstanding and unpaid when the evidence in said Erie case was prepared and put in?

A. I believe it was.

A. G. BACHELDER.

Deposition of Samuel Cooper.

Int. 1. Please state your name, age, residence, and occupation.

A. My name is Samuel Cooper; age, forty-six years; residence, West Roxbury, Mass., and I am a civil engineer.

Int. 2. Please state what opportunities you have had for becoming acquainted with mechanical science, inventions, theoretical or practical, and to what extent have you been connected with patents for inventions, whether as an examiner in the Patent Office, or solicitor for patents, or an expert, and particularly with reference to inventions concerning railroad-cars.

A. From 1842 to 1848, I was in the employ of the Engineer Department of the United States Army; whilst so employed, I had charge of various public works, constructions of Fort Washington, on the Potomac, Fort Madison, at Annapolis, and several triangulations and surveys. In 1848 I went into the Patent Office as assistant examiner of patents; 242 whilst so employed I made the preliminary examination of all applications for patents connected with railroad-cars, brakes, and so forth.

After I became chief examiner these classes were also in my charge, and it was upon my report that applications for patents were passed or rejected; since the latter part of 1852 I have been engaged in Boston, preparing applications for patents. I am frequently called to testify in patent suits in the United States courts of this and other districts.

Int. 3. State whether, as such examiner in the Patent Office, you were familiar with the papers, drawings, and models put in on the application of Thompson and Bachelder for a patent for an improvement in railroad-car brakes in June, 1847, and with the other papers and proceedings on that application which resulted in the issuing of letters patent to Henry Tanner, as assignee of said Thompson and Bachelder, on the 6th day of July, 1852, and what, if anything, you had to do as such examiner with such application or patent.

A. I have no means of verifying the date which you give; my attention was first called to the Thompson and Bachelder application by an application for the reissue of C. B. Turner's patent for a car-brake. I then learned that there was a car-brake previously invented which, from the meagre description I had of it in a letter, appeared to be similar to the C. B. Turner brake; it afterwards appeared that there was an application for a patent for this same brake which was mentioned in the letter to which I refer. I subsequently found that this application was one upon which the draftsman of the Patent Office had some time before consulted me regarding one or more letters received from a man named Heath or Keith; subsequently the Thompson and Bachelder 243 application was prosecuted, and a patent was granted to Henry Tanner as assignee; as chief examiner I made all the examinations, conducted the correspondence, if there was any, and it was upon my report that the patent was granted.

It was the custom of the examiners, in any case out of the common way, to consult with the other examiners, and I remember consulting with my colleagues in this matter.

Int. 4. Are you familiar with such patent as issued?

A. I believe I am.

Int. 5. Please state what you understand to be the mode of operation, construction, and essence of the invention set forth in the said Tanner patent.

A. The invention consists in a mechanism by which all the brakes of each truck may be applied from either end of the car by connecting the brake apparatus of the two trucks together by means of a vibrating lever in the centre of the car; the other levers and connections being so hung and arranged that the apparatus in each truck should be self-adjusting, and the parts so proportioned that one man at either end of the car could exert the requisite force to apply all the brakes.

Int. 6. Please state whether or not the invention, set forth in the Tanner patent, is embodied in the specification, drawings, and model filed in the Patent Office in June, 1847, by Bachelder and Thompson, with

Int. 11. Please state whether, in your opinion, the brake shown on the Springfield model involves the same or a different principle from that shown in the Tanner parent; please explain fully.

A. By no means the same principle, for this reason: the power in the Tanner patent is first transmitted to a central lever, from which it is transmitted equally to the two trucks; in the Springfield model the power is transmitted directly from the windlass to the brakes of each truck, and there is only one possible position of the trucks which will enable the windlass to apply an equal force to the brakes of each truck; in all other positions in which the trucks may be all the power applied will be transmitted to one truck only, the position of the trucks, of course, being determined by the nature of the tracks, whether curved or straight.

Int. 12. Please answer the same question as to the said Springfield model and the original application of Bachelder and Thompson.

A. I make the same reply to this interrogatory, for I now see no difference of principle in the original application and the patent that was granted upon it.

Int. 13. If the brake shown in said Springfield model had been brought
to the knowledge of the Patent Office examiner at the time of his
249 examination of the Bachelder and Thompson took place, what
effect, if any, would that have had upon the issuing of letters
patent upon said latter application?

A. None whatever, if I had been the examiner; the two things, in my opinion, had nothing to do with each other; in the one case the brakes of each truck can be applied from either end of the car; in the other they cannot.

Int. 14. Please state whether or not you find the points of difficulty which you see in the Milholland model either in the Tanner brake as patented, or in the original application of Bachelder and Thompson made in 1847?

A. In neither case are there the same difficulties; the brake-levers in both the Tanner patent and the original application being suspended and without rigid fulcrums, thereby giving to the brakes of each truck a self-adjustability which is entirely wanting in the Milholland brake.

Cross-examined by M'r Whipple, for respondents:

Int. 1. Have you had any experience in the practical operation of railroad-machinery? If so, please state to what extent.

A. My experience has been this. I have been examined as an expert in the last ten years, upon a great variety of railroad subjects, and on such occasions I have ridden a great deal and been constantly with railroad-men, sometimes for a month and six weeks together; during that
ten years I have ridden nearly every day upon some railroad, and
250 as an engineer have naturally observed whatever came before me
in my profession.

Previous to that, as I have before stated, for between four and five years matters of this description came before me in the Patent Office, and I have procured a great many patents for railroad inventions, including car-brakes; I never made a car-brake, and I never worked one as a brakeman, but I have made it my business, so far as all the means within my reach would permit me to do, to understand their nature and their exigencies.

Int. 2. Have you had any practical experience in applying car-brake machinery to railroad-cars?

A. If by applying car-brake machinery to railroad-cars you mean operating the brakes as a brakeman or as a mechanic, I reply no; but I am constantly consulted, both by mechanics and inventors, as to the practicability of machinery connected with railroad-cars in general.

Int. 3. Should a mechanic or inventor call upon you with a model, in every respect, like the "B. and T. P. O. Model," with a brake applied therewith, in every respect like the one represented in said model, and should explain to you in detail, and ask your opinion as to whether said brake could be applied to a railroad-car and operated, would it be your opinion that it could be so applied and operated as to be an acceptable brake to railroad managers?

A. So far as concerns the hand operation of the brake I have no doubt that it could be so applied. I might suggest mere mechanical changes of arrangement, but there is a wide difference between such changes and the changes which involve invention, and the introduction of new principles of action.

251 I should see in this brake a method by which all the brakes of the car could be applied from either end of the car, and there is no mechanical fault of construction or difficulty in it whatever. I should prefer to operate the centre lever by pulling it instead of pushing it. But that is a mere mechanical change, which every mechanic understands.

Int. 4. Could you make the alterations referred to by which you would pull instead of push the centre lever without an entire reconstruction of the brake, substituting rods having a tensil' strain when operated for those as seen in the model which are operated by a pushing or thrust motion; and would you not have to make or apply additional parts to said reconstructed brake not found in the model in question?

A. It would be the simplest proposition that could be proposed to a mechanic. The substitution of parts having a tensil' strain for others having a thrust motion is not considered any problem at all. In the present instance he would simply have to elongate his connection between the windlass and the centre lever, so that instead of connecting with the brakes of the adjacent truck they should connect with those of the opposite truck after having been attached to the centre lever. That is one way in which it might be done, or the motion having once been communicated to the centre lever, and the question only being to communicate that motion to the brakes, he would use just such connections between the brakes and the lever as would answer his purpose. No invention would be required in all this, and any skillful mechanic would be able to accomplish it without the aid of his inventive faculties.

252 Int. 5. What, in your judgment, would be the length of a seventy-two seat passenger-car from king-bolt to king-bolt?

A. I have never made any measurement. I suppose it might be about forty feet.

Int. 6. What would be the length and size of the large rods, as seen in the "B. and T. P. O. Model," applied to such a car in the application of this brake to the same?

A. Not far from twenty-one or twenty-two feet in length. The size would depend altogether upon the material used and the construction employed.

Int. 7. What material would you recommend; wood or iron?

A. There would be no difficulty whatever in making it of wood. It is an entire mistake to suppose that a very strong bar would be required in the Tanner brake for this purpose; although the power applied by the windlass is multiplied before it reaches the brakes, only one-half of that power, before it is so multiplied, is at any time sustained by the rods shown in the original model and application of the Bachelder and Thompson brake. If a force of six hundred pounds be applied by either windlass, as it is in this model, only three hundred pounds can be at any time placed upon these bars, and for that purpose an exceedingly light wooden rod would be all sufficient, particularly if it were suspended by hangers from the car-body.

Int. 8. Referring to the model "B. and T. P. O. Model," if 600 pounds be applied at the windlass, what force would be exerted upon the centre pin of the pulley or shiff attached to the transom of the truck?

253 A. When the brakes were hard on twelve hundred pounds.

Int. 9. What force would be communicated to the top of the lever in the truck?

A. Six hundred pounds.

Int. 10. And what would be the thrusting force on the end of the centre lever?

A. Three hundred pounds.

Int. 11. Please explain how 600 pounds applied at one end of a [illegible] communicates only 300 pounds to the other end of the same rod?

A. I should be unwilling to attempt to explain that. The difficulty is that 600 pounds are not appiled to the end of the rod; the 600 pounds applied to the brake lever are divided between the two trucks, 300 of it being used up in applying the brakes of the adjacent truck, while only 300 of it is transmitted through the rod to the centre lever.

Int. 12. Dispensing with bumper arrangement, and rod "H" in said model, and also with the large rods, how would you prevent the levers in the trucks from falling upon the track in altering it over into a Tanner brake?

A. I do not understand what you mean by altering this brake into a Tanner brake; but if you will tell me exactly what alterations you propose, I will tell you what precautions I will propose to remedy any evils you may introduce.

Int. 13. I propose to inquire how you would fasten the levers in the trucks to prevent them from falling upon the track in the case supposed?

254 A. I would suspend them from any part of the truck that was nearest and handiest.

Int. 14. Then you are of the opinion that a brake, as set forth in the "B. and T. P. O. Model," with wooden rods connecting the centre lever and the other apparatus, as set forth in said model. would be an acceptable brake to railroad companies?

A. I am of the opinion that at the date of the application of Bachelder and Thompson it would be the best thing in existence, because, so far as my knowledge extends, it would be the only arrangement known by which all the brakes of a car could be applied from either end of the car. I am not prepared to say that the arrangement of the parts would be so perfect as that which we now have after ten or fifteen years' experience, but it would be of immense value, and consequently ought to be acceptable to railroad men, as it would be the introduction of a principle which has been adopted by them all over the country.

Int. 15. You speak of principle in the conclusion of the foregoing answer; please define, in brief, in what that principle consists.

A. That word "principle" cannot be defined,in brief, but I will define it in extenso, and then apply it to the model in question. The principle of a piece of mechanism is the mode of operation—that is to say, the mode of operation as distinguished from the mode of operation of previously existing mechanism of a similar class; so that when the word "principle" is used the words "distinguishing principle" are intended.

I will illustrate my meaning as follows: The principle of the
255 first gun invented is based upon the projection of a ball by the
generation of expansive gasses behind it and within a tube open at one end. In the attempt to cause the ball to rotate upon the axis of the gun, suppose a screw thread were cut on the interior of the barrel; suppose that on trial it was discovered that screw thread only stripped the lead from the ball and did mischief instead of causing the ball to rotate as desired. Manifestly no new principle would be introduced, no invention whatever would have been made, and the principle of the gun would remain exactly as though nothing had been attempted.

If another individual, seeking the same end, were to put a screw thread into the interior of his gun-barrel and were to make it so gradual that it would revolve the ball upon the axis of the gun, he would invent the rifle, introducing an entirely new and distinguishing principle with fire-arms.

Now, to apply this to the brake in question: In the "B. and T. P. O. Model" brake, so far as my knowledge extends, all the brakes may be applied from either end of the car, the levers and connecting-rods having, in themselves, sufficient elasticity and self-adjustability for the accomplishment of the end; this, I consider, introduces a new principle with car-brakes, notwithstanding the prior existence of the single brake, of the Milholland brake, and the Springfield brake, as the latter two were not carried out in a manner to insure success; consequently they were worthless. In my opinion, they stripped the lead off the ball, and the "B. and T. P. O. Model" did not.

Int. 16. You say the latter two, meaning the Milholland and Springfield brakes, "were not carried out in a manner to insure success—consequently they were worthless." Do you know such to be the fact?
256 A. I know nothing whatever about them, except so far as I
have testified my opinion in regard to their structure and operation as shown in the models.

Int. 17. Were 600 pounds applied to the end of the centre lever of the "B. and T. P. O. Model" what would be the force applied to the centre pin of the said lever?

A. Twelve hundred pounds.

Int. 18. You say, in your opinion, this brake would be acceptable to railroad companies at the time it was got up. Are you aware of the fact that the men who claim to be the inventors did attempt to apply said brake upon a car on a road entering this city; and that one of the parties, A. G. Bachelder, states that he abandoned the attempt, and that said brake, as shown in said model, never was applied to a railroad car?

A. I am not aware of that fact.

Int. 19. If the two chains attached to the windlasses, as seen in the model of the Springfield brake, were so adjusted as to operate the brakes of both tracks at one and the same time, and from either end of the car, would the brake be a double-acting brake?

A. Of course it would, if it operated them properly.

Int. 20. You speak of the operation of the Springfield brake upon curves. As a general thing, where does braking take place, upon curves or upon straight tracks,—at stations, or at points between stations?

A. The braking takes place wherever there is danger seen ahead, and may be called for on a curve as well as on a straight track. Yes,
danger is much more liable to be discovered suddenly, and to
257 require quick and powerful action upon the brakes, upon a curve

than upon a straight track; also, the braking takes place at the stations or stopping-places, and may be upon a curve or straight track. Take, as an example, the first eight stations out on the Boston and Worcester road; three of these eight require that the train be broken up on a curve; the other five are upon a straight track. This may be a large proportion. This example comes to my mind only on the instant, but it is clear that they must be provided for.

Int. 21. What does the curve of a railroad-track, as a general thing, amount to, the length of a passenger-car—say forty feet; that is, what is the distance between the centre of a circle of which the curve-track is a part and the cord of a circle forty feet in length? Would it be an inch?

A. That question is rather indefinite. Give me the radius of the curve of which you speak, and a table of logarithms and natural signs, and I will calculate for you exactly the versed sign of the arc of which the cord is forty feet, which is the distance you inquire of.

Int. 22. How is the operation of the centre lever brake upon curves affected by said curves when operated upon them, the centre lever connecting the brakes having an unyielding point?

A. If you examine the model of that brake carefully—the "Batchelder model," for instance—you will see that it cannot affect this brake to any appreciable, if to any, extent. In the first place, the centre lever is pivoted to the car-body—so are the windlasses by which the lever is operated—and you may turn the trucks round ninety degrees without in the least affecting thus much of the mechanism.

258 In the next place, the brake-levers are very near to the centre of the trucks, and are entirely free to swing—not having any rigid points—round so as to much more than accommodate themselves to any possible motion of the trucks when in use.

Int. 23. Do the same remarks apply to the centre lever brake, as seen in the Tanner brake, in the model marked "Patent Brake"?

A. Practically they do.

Int. 24. And, also, do they apply to the "B. and T. P. O. Model"?

A. Fully they do.

Int. 25. Do the same remarks apply to the Springfield model when adjusted, as set forth in a previous interrogatory, viz, the 19th cross-interrogatory?

A. The two chains attached to any one windlass in the Springfield brake cannot be so adjusted as to apply to the brakes of each truck simultaneously upon both straight and a curved track; therefore these remarks do not apply to that brake.

Int. 26. Can the Springfield brake be so adjusted as to apply the brakes of both trucks at one and the same time, when the car is running on a straight track, and from either end of the car?

A. I have not a doubt but that it can, and I have not a doubt but that if they were so applied, and were to run upon a curve while they were so applied—a thing which is done every day with car-brakes—the train would be exceedingly liable to jump the track, unless the chains were so light as to give way, and by their breaking save the other catastrophe.

259 Int. 27. Please explain how such a catastrophe could take place as that of throwing the train or the car from the track.

A. When the brakes were applied on the straight track, the short chain to the adjacent lever was strained tight, dragging the truck as far round to one side as the flanges of the wheels would permit.

Now, if we run upon a curve, which requires the truck to swivel in one direction, the brakes will be taken off by that motion, perhaps at the moment when they are most required; but if the curve turns in the other direction so as to swivel the trucks the other way, something must break or the car must go off the track, for the flanges are already hard up against the rail, and the truck, manifestly, can swivel no further so long as it remains on the rails.

Int. 28. Suppose you resolve the Springfield brake with two single brakes by removing the connecting-rods between the trucks and the chains connecting the rods and the windlasses, and then apply the brakes to one or both trucks of the car when upon a curve, will your foregoing remarks apply to that case?

A. If your levers are arranged exactly as they are in the Springfield brake, and placed in the same position, then they would be open to the same objection; but the trouble with the Springfield brake is that you are trying to put all the brakes of the car on from either end of the car, and that it cannot do both on a curved and straight track.

Int. 29. Do you not know that on many cars in this country, especially freight-cars, the brakes are applied to one truck by an ar-
260 rangement of a lever, chain, and connecting-rod, precisely like
the arrangement in either truck of the Springfield model, and that no such disasters as you contemplate happen from applying the brakes on a curve; and that even passenger-cars, ten years ago, in many parts of the country, had the brakes applied in the same way, to wit, the short arm of the lever being attached to the brake-bar, as seen in the model, just back of the windlass, and the fulcrum of this lever connected with the opposite brake-bar, and that no such disasters happened even to passenger-cars when the brake was applied upon curves, consequent upon such application?

A. I am aware that single-acting brakes were used some years ago, and I am also aware that the railroads got rid of them as soon as they got something better. I have no means of judging now how many of the accidents which have occurred to passenger-cars are traceable to the brakes.

But the freight-cars of now-a-days, which run on an average of perhaps not half the speed of passenger-cars, are much more liable to jump off the track; what they would do if the speed were increased to that of the passenger trains, I have no data from which to judge.

Int. 30. Assuming the statements in the foregoing interrogatory to be true, as any practical railroad man well knows, both as applied to passenger and freight cars, what do all your speculations and theories in relation to the application of brakes upon curves and the supposed disasters resulting therefrom amount to? Please sum it up.

A. They amount to just what I have stated. I believe that accidents of that nature are far less frequent upon cars furnished with double-acting
brakes than they are upon those furnished with single-acting
261 brakes; and my opinion is not in the slightest degree changed.
Your interrogatory has given but very few of the conditions necessary to be observed. You simply take the brake as it appears in the Springfield model, and unhook one of the chains; you do not give the position of the windlass, which, of course, is to be regarded as in the position which it occupies. The nearer that windlass is to the centre of the car, the less would be the liability spoken of.

Int. 31. Will your remark in a previous answer in relation to the operation of the centre-lever brake, as seen in the "Bachelder Model," the "Tanner Patent Brake Model," and the "B. and T. P. O. Model," upon curves, apply to the brake as seen in the Milholland model?

A. The Milholland model is not liable to these objections.

Int. 32. Is the drum or cylinder in the Milholland brake and the centre lever in the Tanner brake mechanical equivalents of each other when applied to the operation of railroad-car brakes; that is, do they perform the same office or function, to wit, apply the power exerted through the windlasses to the brakes of both trucks, and from either ends of the car?

A. In order that one device may be the mechanical equivalent of another, it is necessary not only that they perform the same duty, but that they perform it in the same manner. Now, as a general thing, so far as the transmission of force is concerned, a drum is the mechanical equivalent of a lever.

But there are certain cases where the elasticity of the lever may so aid in the performance of a duty that the drum shall not be the entire
equivalent of it. The great difference which I have pointed out
262 as existing between this brake and the Thompson and Bachelder
brake arises from the fact that the brake-levers in the former are
rigidly pivoted, while in the latter they are not.

Int. 33. In transmitting force, is the drum the mechanical equivalent of the centre lever?

A. It is, except so far as the action of the lever may be modified by its elasticity.

Int. 34. In applying 500 or 600 pounds to a centre lever, three inches, made of iron, by three fourths of an inch, which is the size of iron used in forging these levers, the length of which is from three and a half to four feet, how much elasticity or spring, under *under* such a force, would there be in the operation of this lever, if any?

A. There would not be much; but there would be some, unquestionably, and whatever it was it would help to qualify any bad result which might flow from the wearing of the brake-shoes. But this is a mere trifle compared with the other objection to the brake, which I have before mentioned.

Int. 35. Has the drum and the centre lever rigid fulcrums, one and both?

A. Both of them.

Int. 36. Should the size of the drum be reduced to one-half, to which the chains connecting the brakes are applied, the other part of the drum to which the chains connecting the windlasses are attached being unaltered, would there be a different result in the transmission of the power?

A. Yes; double the amount of force would thereby be transmitted to
the brake-shoes.
263 Int. 37. Does such a change involve invention or constitute in-
vention?

A. It does not, because as the drum is placed there that evidently could be done without any difficulty whatever.

Int. 38. Would the elongation of the levers in each truck of the Milholland brake (the attachments on either side of the centre-pin upon which the lever is suspended being the same) produce a greater power on either brake-bar when power is applied to the top of said lever so elongated?

A. If you could fix it in that way it would produce a greater power on each brake-bar.

Int. 39. Would this change involve invention?

A. It would not.

Int. 40. Were the levers so elongated connected with a swing attached to the transome timbers of the truck as they are frequently upon the brake-bar of a truck (which is but a swing), would that constitute invention ?

A. There are two different methods of hanging the levers proposed in this question; one of them is to attach the brake-lever directly to the brake bar. Now, I do not see how that is going to be done without a change in this brake which would constitute invention. The other is to suspend the lever.

Now, if either of these were done, or could be done, so as to get rid of the rigid fulcrum, then all the evil results flowing from the use of the rigid fulcrum would be avoided. In making an invention of this character a man has first to conceive and understand the difficulty, and
then originate the method of avoiding it.

264 Now, a great, and as I consider, a fatal objection exists in this
brake. There is no evidence in the brake itself that the man who got it up understood the difficulty. On the contrary, it would appear that he did not, and I am clearly of opinion that whoever made this change in the nature of those levers for the purpose of giving them new capabilities to the brake, did exercise invention.

Int. 41. Would a substitution of the brake levers and connections, as seen in the Springfield brake, and upon the ends of the trucks nearest the centre of the car, neither of which levers have a rigid fulcrum, for the levers in the two trucks of the Millholland brake and the connection of these levers with the drum, constitute invention ?

A. If you accomplish anything by so doing, it would; but the trouble is, you would make a worse than useless thing of it. It would not work at all. For, allowing the connection between the windlass and the drum to remain the same, the inside brake levers of all would swing about without any fulcrum. The interrogatory does not state how the outside levers are to be operated, and evidently the conditions of the change are not all given.

Int. 42. Does the Millholland brake so combine the brakes of the two trucks of the car with the drum and the windlass of the car as to enable the brakeman to bring or force the brakes against their respective wheels, whether he be at the forward or rear end of the car ?

A. It does not, for reasons which I have fully stated before.

Int. 43. Have you not stated, in answer to a previous interrogatory, that 600 pounds applied to the windlass of the Millholland brake would
transmit 160 pounds to the brake-bars of each truck ?

265 A. So it would as long as the parts are in exact adjustment
and the brake-shoes unworn. The difficulty of this brake is that that will not be the case if the shoes wear irregularly or the parts get out of adjustment.

Int. 44. Will not the same remarks apply, to a certain extent, to the Tanner brake; that is, so far as the centre lever and its unyielding fulcrum is concerned ?

A. The same objection applies to the Tanner centre lever, so far as it goes, but to a much greater degree to the Millholland. No machinery is perfect, but begins to be practically useful when the difficulties to its action are so far removed that it will do the duty required of it well.

Int. 45. Are the levers and their connections with the brake-bars of the trucks, as seen in the "B. and T. P. O. Model," the Bachelder Model, and the Tanner Patent Model, any part of the invention aimed to be set forth in these models ?

A. Unqestionably they are a most material part of every one of them. The Bachelder and Thompson invention is not any particular lever or rod, or device. It is the assemblage of all the parts necessary to make up their double-acting brake.

Int. 46. Removing the centre lever from these several models, is there anything in any arrangement of brakes in either truck belonging to the claimants of inventions as connected with these several brakes?

A. If you remove the centre lever you have nothing left but a parcel of sticks and rods of iron; certainly no double-acting car-brake, which is what I understand their invention to be; and the same may be said of any of the levers, bars, brake-shoes, or whatever they may be, which go to form their brake.

266 The difficulty seems to be the singling out of one particular element of a piece of mechanism and considering that as the invention. That can scarcely ever be done, for that one element is dependent upon the proper performance of the duty of several other elements, all of which have to combine and conspire to produce the desired result.

Int. 47. In what does the claim of invention by Bachelder and Thompson consist beyond the combination of the brakes of the trucks as they found them in use upon cars at the time of getting out their brake, beyond the connection of said brakes with the centre lever and windlasses of the car?

A. You have not given the claim in the words in the patent, which states, after describing the whole arrangement of the brake mechanism, that "what is claimed by us is so to combine the brakes of the two trucks with the operative windlasses or their equivalents at both ends of the car by means of the vibrating lever A, or mechanism essentially as specified, as to enable the brakeman, by operating either of the windlasses, to simultaneously apply the brakes of both trucks, or bring or force them against their respective wheels, and whether he be at the forward or rear end of the car."

Now, the vibrating lever A does not reach all the way from the windlasses to the brakes. If it did, it would be the only thing required to combine these two elements stated in the claim. There are certain other elements that conspire to effect this combination; in fact, it is the whole system, the centre lever being the controlling element.

Int. 48. Is there anything in the Tanner patent which speaks of the distribution of power upon the brakes—of the amount of power to be applied; in short, is there anything said in said patent upon 267 this point beyond the statement of the fact of so combining the brakes of the two trucks and the windlasses of the car as to enable the brakeman to apply the brakes to both trucks from either end of the car, and does not the Milholland brake do the same thing?

A. There is a great deal said in the patent upon the subject. The patent commences with the statement that Bachelder and Thompson "have invented a new and useful mode of operating the brakes of railway cars," and further on "that the same is fully described and represented in the following specification and accompanying drawings, letters, figures, and reference thereof."

Now, this mode of operation, which is stated to be the invention, is particularly described in the specification, and is plainly represented in the drawings. The drawings show exactly how the power is distributed upon the brakes, as well as the amount of power so applied, as compared with the power applied to the centre lever by the windlasses.

Int. 49. Then the mode of operation is the invention, is it?

A. I have stated several times my view of the invention, and can repeat it, if desired.

Int. 50. Do you base your opinion that the Stevens patent is embodied in the Tanner patent upon the fact that both are alike in their operation; that is to say, from either end of the car? Please explain the matter fully.

A. Not exactly. In the Tanner patent the power to operate the brakes is transmitted from either windlass to a device, which then communicates it to the brakes of each truck, the result, or the thing accomplished, being that all the brakes are applied when either one of the windlasses are operated.

268 The device which Tanner uses is a horizontal lever pivoted to the centre of the car-body, but he expressly states in his claim that not only such lever may be employed for the purpose, but any equivalent therefor. It must also be remembered that patents are not granted for things or levers or devices, or even for collections or combinations of things or devices, irrespective of the duties performed by such devices or combinations, or irrespective of the parts with which they necessarily act in concert.

It is the grand result, the duty performed by the things as a whole, which is the real groundwork of the patent. The real groundwork of the Tanner patent is the object gained in the applying of all the brakes by operating either one of the windlasses. This is not accomplished by the central lever alone, nor is this alone the means of connecting the windlasses with the brakes, but there are other intermediate parts required, and it is evidently to make this claim that the patent somewhere states the invention to be a "mode of operation," which it assuredly is, this "mode of operation" being the mode recapitulated in the claim, of applying all the brakes by operating the windlass at either end of the car.

On referring to the Stevens brake we find the power of the windlass applied to "something" from which it is communicated to all the brakes of the car, and this may be done by operating the windlass at either end of the car.

The "something" in this case is a lever, which, instead of lying in a horizontal position, as in the Tanner patent, stands in a vertical position; but this does not alter the case in the least; it serves to transmit the power communicated to it to all the brakes, and for this
269 purpose it is the entire equivalent of the horizontal lever of the Tanner system.

The case is not at all altered if the lever employed in the Stevens brake be one of the brake levers, so long as taken in connection with the parts that operate in immediate combination with it; it performs the duty performed by the Tanner device taken in connection with the parts operating in immediate connection with it, and so long as the duty is performed in the two cases in a manner substantially similar.

If the Stevens system contained any imperfection, anything which would materially prevent it from acting practically and usefully as a brake, or if it showed an entirely different mode of operation, then it would not be embodied in the Tanner patent; these are the reasons which lead me to the conclusion that the Stevens brake is embodied in the Tanner patent.

To make a little clearer this subject of equivalent devices, I will mention an instance where this same duty of applying all the brakes of the cars from either end of the car has been attempted to be performed, and which, if entirely successful, would not have been embodied in the Tanner patent. A great variety of car-brakes have been devised, in which the brakes were applied in the same way by steam; in one of these the steam was carried the whole length of the train in a pipe, and was let into small cylinders on each car, and the force thus generated by the motion of the pistons within the cylinders was made to apply the brakes.

Now, if the chain on each windlass were so connected with a cock on the steam-pipe as to let steam into the small cylinder, and the thing would operate, we would have a method of applying all the brakes of the car by operating the windlass at either end of the car, 270 but it would not act on the same principle as the system of levers in the Tanner brake; there would be no equivalent for the lever which receives the power applied by the windlasses and transmits it to the brakes; the mode of operation would be different, and therefore the principle would be different.

I give this simply as an illustration to show that the Stevens brake is not embodied in the Tanner patent simply because it is like it in operation, or simply because it accomplishes the same end, but because it accomplishes the same end by means substantially similar in operation, or by means of the devices which are the equivalents of those described in the Tanner patent; for it could not be said that a steam-cylinder was the equivalent of a lever; nor is the "mode of operation," when we let steam from a steam-pipe into a cylinder, the same as when we pull round a lever by means of a windlass and a chain.

Int. 51. Had James Milholland, at the time of getting out his brake—that is to say, about the year 1843 or 1844—filed a model of his brake in the Patent Office, with specifications to correspond, concluding with a claim in the precise language of that in the Tanner patent, as quoted by you in your answer to the 47th cross-interrogatory, but substituting the word "drum" instead of the expression "vibrating lever A," and then answer, could the office have consistently refused him a patent? And, further, would the office have been justified in anticipating the improvements which might be made in brakes for six or eight years thereafter upon this method of applying brakes, and in saying to M'r Milholland, "Your application for alleged improvement in car-brakes has been examined; the improvement is undoubtedly new, but not useful?" 271 And, again, can this fact be denied, that James Milholland did combine the brakes of both trucks of a car and operate them from either end; and does the claim of Henry Tanner call for anything more? In short, has rigidity of parts, the amount of force, or equality of force applied to the several brakes, anything to do with the matter at issue beyond the mere application of force to the brakes of both trucks from either end of the car?

A. If the Patent Office were of opinion that the Milholland brake would not operate successfully and prove practically useful, they undoubtedly would refuse him a patent; if there was a doubt upon the subject they might grant him the patent, and let him try his chance in the courts, as all patents have to do before they are really sustained.

The Patent Office would certainly not be justified in anticipating an uncertain yet to be made; the Patent Office certainly would be justified, in view of the words of the law, in refusing a patent for any application which was deemed not to be useful. It certainly cannot be denied—I mean, at least, that I cannot deny it—that Milholland attempted to combine the operating brakes of both trucks with the windlasses, so that all the brakes might be applied by either windlass; but the question now is whether he really did succeed in doing that. I think he did not, for reasons which I have already given in full. Tanner certainly does not claim more than that.

Rigidity of parts, amount of force applied, equality of force, or any other characteristics which go to make up the successful operation, in practice, of any of the brakes under consideration, have certainly everything to do with matter at issue.

272 Int. 52. Is there any allusion to the hand-brake, and the operation of the same, in the application of Bachelder and Thompson, other than that found on the drawings accompanying said application, namely, "I is a purchase attached to the connecting rods, by which the brake may be applied by hand at pleasure;" and is not the description of the operation in the specification proper, exclusively confined to the operation of the brake by the bumpers, making no allusion to their operation by hand; thus showing that, in the mind of the applicant, the hand-breaking quality was only incidental and subservient to the bumper arrangement; and is there anything said about a brake operated by hand from either end of the car; and is not this feature the prominent one in the specification and claim of Henry Tanner, assignee of said Bachelder and Thompson, in his application based upon said Bachelder and Thompson's application, the said Tanner making no mention of the brake as a bumper-brake, except in the way of disclaiming?

A. I see no propriety in speaking of any portion of the specification as the specification proper; in this, as in the great majority of cases, the specification is made up of the descriptive portion, the claim, and "the drawings." In the present instance the applicants state that "the drawings make this specification." The descriptive part of the specification states that the applicants "have invented an improvement upon the car-brake now in general use," and then refers directly to the drawing as "making the specification."

Upon the drawings I find all the parts by which the brakes are applied by hand designated by letters and described, while the bumper itself is not designated by letter, and is simply referred to in the descriptive part of the specification; but whatever was or was not shown in the very imperfect papers and drawings which accompanied the original application has nothing whatever to do with what was really the nature of the brake. 273

If this is clear, from either the model, the drawings, or the description, or from all combined, and compared with each other, that settles the question.

A patent will not be granted upon imperfect papers, or unartistic drawings, but every facility is allowed to inventors, particularly to those who have not the means to employ an agent, or who try to do their own business, to modify and correct and alter their papers before the examination of their applications. Three-fourths of all the applications for patents made by inventors themselves, without the assistance of an agent, are imperfect as regards the papers or drawings, but I never heard of a patent being invalidated on this account.

I do not think that there is anything in these imperfect papers tending to show "that in the mind of the applicant the hand-braking quality was only incidental to the bumper arrangement." The papers do show that the man who prepared them was totally and entirely ignorant of what he undertook to do. There is in the descriptive part of the original specification a distinct allusion to the application of all the brakes of the car by a single windlass, as follows: "When the engine is detached one brakeman is sufficient to do the work of any number of cars." This refers, evidently, to brakeing up a train, as is constantly done at stations after the engine is detached.

In such case, if the brakes of one car be applied, the brake of that car only will be detached from the bumpers, and the other cars crowding upon this versed car will have all their brakes applied by the bumpers which were not detached, and thus "one brakeman is sufficient to do the work for any number of cars."

274 On referring either to the drawing or the model to see what this brakeman must inevitably do, we find that he applies all the brakes of the car upon which he is operating; this is as clear as though it were told in other words, and this is the feature which is prominent in Tanner's specification, which was based upon the said prior application of Bachelder and Thompson. I believe no mention in Tanner's application of the bumper arrangement except to disclaim it.

Int. 53. Is it the privilege of an expert, under oath, to evade the obvious answer to a question?

A. It is not a privilege which I take.

Int. 54. Is it your privilege to turn lawyer and plead the cause of your client?

A. It is my privilege to answer the question put to me. If these questions are of a nature to require explanations, I give them. It is my privilege to testify to my opinion upon all the subjects inquired.

Int. 55. Are the parts represented in the specification of Bachelder and Thompson's application by the letters B, G, J, and C a part of the said Bachelder and Thompson's invention?

A. The parts inquired of are all necessary to the brake, and it is the brake, as a whole, operating as it does, which constitutes the invention. No particular parts singled out are the invention; no particular parts are part of the invention, except so far as they go to make up a mode of operation and the grand result.

Int. 56. Bachelder and Thompson say, in their specification, "the original uncertain we disclaim." What significance do you give to this clause?

275 A. I think they meant the old hand-brake.

Int. 57. Was the old hand-brake pointed out in the letters referred to and set forth in the 55th cross-interrogatory?

A. Those letters indicate a brake upon a single truck. I have no recollection of one arranged exactly in that manner, but there may have been.

Int. 58. Did Bachelder and Thompson do anything more than simply connect the levers of the old brake in each truck by a vibrating lever and two connecting-rods?

A. If that was all they did, they did enough to make themselves inventors; but they did a great deal more; they re-arranged the other parts for the purpose of accommodating them to the new elements introduced, and thus bring about the result.

Int. 59. Was not all this accomplished by other parties long prior to the application of Bachelder and Thompson at the Patent Office for a patent?

A. Not to my knowledge; it was not, so far as I am informed. The result was never obtained before which they accomplished. In my opinion all previous attempts were failures.

Int. 60. Are you acquainted with Henry Tanner, and where did your acquaintance first commence?

A. I am acquainted with him; my acquaintance commenced in the Patent Office, where he appeared as applicant for the reissue of C. B. Turner's patent car-brake.

Int. 61. When was that?

A. I do not remember the exact date.

276 Int. 62. Was it prior to his application for a patent as assignee of Bachelder and Thompson?

A. It was.

Int. 63. It is usual for examiners in the Patent Office to be familiarly acquainted with the applicants for patents when they have agents to attend to their business?

A. It is usual for the public officers in Washington, or anywhere else, I presume, to be acquainted with those having business before them; and it is usual for applicants for patents, whether they have agents or not, to come before the examiners, on certain days of the week, to explain their invention.

Int. 64. Did you conduct the official correspondence with said Tanner's agent in relation to his application as the assignee of Bachelder and Thompson?

A. I have not a doubt but that I conducted the whole of the correspondence, which was, of course, signed by the Commissioner of Patents.

Int. 65. Is the following letter a part of your correspondence to the agent of Bachelder and Thompson, and Henry Tanner, namely:

"PATENT OFFICE, *October* 17, 1851.

"GENTLEMEN: Specifications and drawings of your alleged improvements in railroad-car brakes are herewith returned for entire insufficiency. The office, from what it can learn of the case, cannot encourage you, however, to prosecute the application further."

Did this letter grow out of the pencilling in the margin or end of said application, which reads as follows:

277 "The specifications and drawings are very defective. The specification does not describe the nature, construction, or operation of the alleged improvement. The claim is the application to car-brakes to prevent collsions, and so forth. The claim must be clear and specific. The claim here set up would cover every kind of car-brake. The drawings do not illustrate the operations of the brake. There must be more carefully prepared specifications and drawings furnished before this case can be considered; but this must be returned to the office without erasing these pencil-notes. There is also an omission in the oath. There must be two witnesses to each signature. See inclosed circular."

A. I have no means of knowing, but I have no doubt that the letter was written by myself; the pencil-notes were not made by myself, so far as I can now remember; it was always the duty of the assistant examiner to make these preliminary examinations; I see no indication in the style, or otherwise, of the remarks that leads me to judge who made them; the letter was, of course, written in consequence of the imperfect state in which the papers were found.

Int. 66. Was there a letter received at the Patent Office, in the spring of 1852, from R. H. Eddy, of Boston, agent of Henry Tanner, in which this paragraph occurs, viz: "I also return to you, not amended, the specification for the reissue of the patent of Charles B. Turner, assignee, to Henry Tanner. To the said specification you will find appended (by wafer) a piece of paper on which is written the claim that, I understand from Mr. Tanner, the Patent Office was willing to allow him previous to the pending application of Thompson and Bachelder." Was this claim, so appended by wafer, the one, in all the essential parts or 278 phraseology, which was passed over into the application and specification of Henry Tanner as the assignee of Bachelder and Thompson?

A. I have no doubt that such a letter was received; of course I have no means of verifying the phraseology, but I have no doubt of it; I have no recollection whatever of the slip of paper referred to, or of the nature of the claim upon it.

Int. 67. Had the application of Bachelder and Thompson remained undiscovered, and which, you have said, was discovered by a certain letter, and the reissue of said C. B. Turner's patent had been granted by the office, claiming the centre lever and its connections, as in the Thompson and Bachelder application, would the Turner brake, as a whole, in your opinion, have been an acceptable one, practically speaking, to railroad companies?

(Plaintiff objects to this interrogatory.)

A. I have not examined the Turner patent for some time, and I should require to do so before I could answer the question; I have no recollection what was the nature of the claim which the Patent Office decided to allow him a reissue; the question seems to assume that it was similar to the one granted to Bachelder and Thompson; whether it was or not, I do not know.

Int. 68. Were you examined as an expert in this office one year ago this present month, at which time a model of the Turner brake was thoroughly examined by yourself; and, in view of that examination, can you not give an explicit answer to the last clause of the foregoing interrogatory?

279 A. I was examined upon car-brakes, as you state, last year; the exact date I have no means of fixing; the Turner brake being then before me, but its exact nature is not sufficiently in my mind at present to enable me to answer the question. Show me the patent, or the model, and I will give you my opinion; there may be peculiarities in it which I have never before discovered which would materially modify my reply.

Int. 69. "PATENT OFFICE, *April* 30, 1852.

"SIR: In accordance with the request contained in Mr. Eddy's letter of the 13th instant, the old patent in the case of application for the reissue of C. B. Turner's car-brake is herewith returned to you. There is an entire difference of arrangement in the details of the models and drawings belonging to the application of Thompson and Bachelder, which should be removed by the substitution of either new drawings or model. The case is, in consequence, postponed until further advices from you.

(Signed) "Respectfully, yours,

"THOMAS EWBANK,

"*Commissioner of Patents.*

"HENRY TANNER, care of R. H. Eddy, Boston, Mass."

Does the letter, of which the above is a copy, in speaking of drawings belonging to the application of Thompson and Bachelder, refer to those accompanying his letters patent now shown to the witness?

(Plaintiff objects to this interrogatory.)

A. I presume it does.

Int. 70. Did not this indication open the way for said Tanner to file a new model, of which the Tanner Patent Office model is a correct representation?

280 A. Of course it did; the model was demanded by the office.

Int. 71. Was that demand of the Patent Office embodied in yourself as chief examiner; that is, were you the person making this demand?

A. If the letter above be a copy of any letter written by the Patent Office, and I have no reason to doubt that it is, I wrote the letter. It seems that when Tanner's agent returned the case to the office for consideration, he saw fit to leave out of the case the method of applying the brakes by the bumpers. Now the Patent Office demand, or they did in those days, that the model, drawings, and specifications, in each case, shall correspond with each other.

When the new drawings came in they did not correspond with the old model in this respect: that the latter showed a method of applying the brakes by the bumpers, while the drawings did not; consequently, he was told that he must do one of two things; that he must either furnish new drawings to correspond with the old model, or a new model to correspond with the new drawings, and it seems he chose the latter.

Int. 72. Did you do anything, directly or indirectly, expressed or implied, in framing the claim set forth in the Tanner patent?

A. I have not the slightest recollection upon the subject; we often did when a man had no agent; very seldom when he had.

Int. 73. Did you, after vacating your position as chief examiner in the Patent Office—that is to say, about the year 1853 or 1854—pre-
281 pare a letter addressed to Henry Tanner, the substance of which may be stated as follows, namely:

"I was in the Patent Office when the patents of Turner, Hodge and Stevens, and Tanner, were granted, and *that* I was connected with the examination and granting of those patents; that upon the application of said Tanner for the reissue of C. B. Turner's patent on car-brakes and before said reissue was granted, the application of Bachelder and Thompson was accidentally discovered and the reissue of the said Turner patent was denied;" and concluding said letter by summing up your opinion as follows, viz: "Any car-brake which combines the brakes of both trucks, and operates them from either end of the car, is a clear violation of your patent;" and did you, about the same time, prepare another letter for one Nehemiah Hodge, vindicating the action of the Patent Office for granting a patent to Francis A. Stevens for an improvement in railroad-car brakes after rejecting his application upon the patent of Hodge; in that vindication did you analyze the Hodge patent and the Stevens patent, and conclude by saying that before granting the Stevens patent you consulted one or more of your colleagues, and that there was no doubt in your minds that the Stevens patent was an improvement of the Hodge patent; both of these letters have been published over your name. Did you prepare such letters?

A. I have no means of knowing, at the present time, whether you have correctly quoted from those letters; I have no doubt that I wrote letters of that character; I know I did the one to Hodge, and I never have had a doubt not only that Stevens' patent was properly granted but also that it was an improvement of the Hodge patent.

282 I also distinctly remember consulting with the older examiners in the office, because the matter seemed to be one requiring peculiar care, and because M'r Fitzgerald, one of them, had, for a great many years previous, had charge of this class of inventions, and had granted the original patent to C. B. Turner.

Int. 74. Is not this the summing up of the whole matter at issue in this case, namely: One Henry Tanner was allowed to file in the Patent Office new specifications and a new model, made to conform to and embrace all improvements in railroad-car brakes, patented and otherwise, which had been made up to the year 1852, basing his claim upon an impracticable and inoperative brake when applied as intended, a model of which was filed in the Patent Office in June, 1847, by one Bachelder and Thompson, men of no practical experience in railroad machinery, and who were allowed, through their assignee, the said Tanner, to frame a claim, if valid, that subjects every form of brake that combines the brakes of both trucks so as to operate them from either end of the car, thus lapping over patents and improvements in brakes of prior date, such as the Stevens brake, the Hodge brake, the Turner brake, the Nichols brake, the Milholland brake, and others that might be named; and were you not a party to this injustice, innocent or otherwise, put upon railroad companies through your agency as chief examiner in the Patent Office; and have you not, since that time, as expert and otherwise, availed yourself of the opportunity to perpetuate this injustice?

A. You have not stated my understanding of the case; and, with regard to my action in the matter, whether as a public officer or as an expert when called to testify, everything I have done is open to inspection.

283 Direct examination resumed:

1. Direct resumed. Were these new drawings furnished in the Bachelder and Thompson case before the patent was granted? If yea, why were they so furnished?

A. New drawings were furnished, because the Patent Office, in accordance with its custom, had demanded them in place of the ones first furnished, which were not sufficiently artistic to accompany the patent.

2. Direct resumed. How did it happen that Bachelder and Thompson's application for a patent was delayed in the Patent Office?

A. I have no knowledge with regard to the delay in this individual case, except that it was delayed. The business of the office was then more than a year behindhand, so that no new application for patent could be examined under at least a twelvemonth; this caused a great accumulation of unexamined cases, and applications were much more liable then to be overlooked than they are when the business of the office is up; at all times, however, applications for patents are liable to be overlooked and delayed until inquired for by the applicants or their agents.

3. Direct resumed. Please look at letter dated December 9, 1847, referred to by defendants' counsel, in A. J. Bellows' testimony in this case, and state whether or not any action was taken on said letter by the Patent Office at or about the time of its date?

A. On referring to the file wrapper in the case of Bachelder and Thompson's application, it appears that no action was had on the letter, and no notice was taken of it; every action that is had upon a case in the Patent Office is mentioned in the file of that case. 284

The first notice of action on the part of the examiner is under date of October, 1850—"Specification and drawing returned to agent;" if there had been any other action previous to that, it would have been mentioned upon the file.

4. Direct resumed. Please examine the pencillings referred to in the 65th cross interrogatory and state whose work that is, and for what purpose made?

A. The principal examiner decides all matters relating to the novelty and patentability of inventors; the assistant examiner decides whether the drawing and description are sufficient to give a clear and exact understanding of the invention; also, whether they correspond with the model; these pencillings were evidently made by the assistant examiner before he handed the case to the examiner, or else before he himself sent it back, for he very often himself attends to that duty, without bringing an imperfectly-prepared application to the notice of the examiner.

SAM. COOPER.

285 *Deposition of James M. Hebard.*

Q. 1. What is your name, age, residence, and occupation ?

A. James M. Hebard ; 47 years of age ; reside in New York, and am a railroad agent.

Q. 2. Were you examined as a witness in this case a few weeks ago on the part of defendants ?

A. Yes, I was.

Q. 3. Did you then testify that a certain long baggage-car was built by the Hartford and New Haven Railroad Company, and that said car was completed in the spring of 1847, and that Willard I. Nichols directed John Stockbridge to put a new brake on said car in that spring after said car was completed ; upon reflection are you able now to state whether that new baggage-car was completed and said brake put upon it in the spring of 1847, or the spring after ?

A. I testified that it was my impression that it was finished in the spring of 1847 ; my impression is the same now ; I know of nothing to vary it ; I have nothing to fix the date as to when the car was finished ; I can't fix the time when the car was finished any better than the time when M'r Stockbridge commenced ; to the best of my belief that car was built in the winter of 1846 and 1847.

Q. 4. Are you able to state positively that that car was completed before the spring of 1848 ?

A. I can't be positive, but think it was finished in the spring of 1847.

286 Cross-examined by M'r Whipple, counsel for defendants :

Cross-q. 5. Were the preliminary experiments made by you in the winter of 1846 and 1847, upon the direction of said Willard I. Nichols, of said brake in question, upon an old car, preparatory to its application upon said new car ?

A. To my best knowledge and belief all that work was done in the winter of 1846 and 1847.

Direct resumed by Mr. Sayles in person :

Q. 6. Are you able to state positively that those experiments on said brake were made in the winter of 1846 and 1847, and not at a later date ?

A. I can recall no circumstance to vary my previous answer; it is according to my best knowledge and belief ; I don't feel justified in swearing positive.

JAMES M. HEBARD.

Subscribed and sworn to before me, this 1st day of November, 1862.

R. E. STILWELL,
U. S. Commissioner.

287 *Deposition of John Stockbridge.*

Q. 1. What is your name, age, residence, and occupation ?

A. John Stockbridge ; 46 years of age ; reside in Weathersfield, Connecticut, and am a house-joiner.

Q. 2. Were you ever employed by the Hartford and New Haven Railroad Company? If yea, when did you commence work for them?

A. I was; I commenced work there on the first of April, 1848; I worked under Williard I. Nichols; the first work I done when I went there was to repair freight-cars, and after I had been there a short time he directed me to apply a double brake to a new long baggage-car; after I got through with that, as near as I can recollect, I went on the same work of repairing freight-cars.

Cross-examined by M'r Whipple on the part of defendants:

Cross-q. 3. Did you hear it stated by any party or parties at the time or after your entering into the employment of the New Haven and Hartford Railroad Company, that said double brake in question had been applied to a car previously?

A. I have a faint recollection that some of the men said it had been applied and taken off on account, I think, of its not working well.

Direct resumed by M'r Sayles:

288 Q. 4. What circumstance, or circumstances, is there by which you are able to fix the time when you commenced work for said company?

A. The company's books and the place where I lived; that fall after I commenced working for them I had an increase in my family; she would have been fourteen years old last month, if she had lived; this increase was a daughter.

Cross resumed:

Cross-q. 5. Do you recollect the circumstance that, in view of the part which James M. Hebard took in applying the brake in question and experimenting therewith, was called by the hands "professor of brakes"?

A. I do not recollect that.

JOHN STOCKBRIDGE.

Subscribed and sworn to before me this 1st November, 1862.

R. E. STILWELL,
U. S. Commissioner.

Deposition of H. T. Douglass.

Q. 1. What is your name, age, residence, and occupation?

A. Hebron T. Douglas; 45 years of age; reside at New Haven, Connecticut, and have charge of the cars on the New York and New Haven Railroad, as master mechanic of repairs, and have been so for about ten years, I think.

Q. 2. Does the New York and New Haven Railroad form a part of the line of railroad between New York and Boston, via Springfield, Massachusetts?

A. It does.

289 Q. 3. Was the brake that was used on the cars called the "line-cars," running between New York and Boston, removed some five or six years ago by the Western Railroad Company, and another brake put on in their place? If yea, what brake was put on in their place, and how did that brake answer the purpose? Please explain.

A. As near as I can recollect with regard to dates, I couldn't say positively whether it was 5, 6, or 7 years ago. The brake that was taken off was what we call the Hodge brake, and as regards the other I don't know that I ever heard any name for it till quite lately at least.

The brake that was put on by the Western Railroad Company, as I understand it, was something like the brake on model marked "Springfield brake, C. F. H." There is some difference about the arrangement of this brake from that put on the "line-cars," but perhaps wouldn't alter the working of it very materially, according to the best of my judgment. Personally I didn't know but very little about it, only from men who worked under me for the company. They reported to me that it did not work. The brakeman on the trains, and the conductor, reported this. When going into Canal street station, or turning short corners, it would sometimes apply the brakes of themselves, and then sometimes they would have to unscrew nuts to loosen them so that the horses or teams could start the car. The impression was general on the road that these brakes were not what they ought to be. They complained that they could not stop the trains.

They used to run one car behind the train of cars which had the Springfield brakes on, with a different brake on, for the reason that they did not consider it safe to run the cars alone with the Springfield
brake. The brake that they usually run on the car behind the
290 train was the Hodge brake. Sometimes they would run a Springfield or New Haven and Hartford car behind the train with a different brake from the Hodge brake.

(All the above testimony, as hearsay, objected to.)

I am not familiar with the name of the brake they run on the New Haven, Hartford and Springfield car, but, as near as I can recollect, it had a single lever in the centre of the car.

Q. 4. Were those cars that you speak of, that were run behind the train, often run empty and only for the purpose of stopping the train?

A. They were frequently, according to the wishes of the conductor.

Q. 5. Were you the proper person for those running the trains to report to in case there was any trouble with the machinery by which the trains were managed, such as brakes, or any other machinery; and is it one part of your business, as master mechanic of said road, to require those operating the trains on said road to report to you any inefficiency in the working of the machinery on said trains?

A. As far as cars are concerned, I think it is. The engine machine I have nothing to do with. They have orders, if there is anything wrong about the train, to report to me, and they do report to me.

Q. 6. About how long were the Springfield break' continued on said cars, and what brake was put on in their place, if any?

A. I couldn't say, exactly, but should say in the neighborhood of six months or a year. They were then replaced by the Hodge brake.

291 Cross-examined by M'r Whipple:

Cross-q. 7. Are the "line-cars," so called, the property of the New York and New Haven Railroad Company, or of the four companies that make up the line between New York and Boston?

A. The four companies, as I have always understood it.

Cross-q. 8. Do not those four companies employ a man whose special business it is to superintend the repairs of the cars of this line, viz, the New York Express line of cars, to which the brake in question was applied?

A. They have employed a man for the last two to four years, as near as I know. I did not know of one before that.

Cross-q. 9. Is it not, and was it not, the duty of brakemen and conductors to make their complaint of this man employed by the four companies, if they had any to make in relation to inoperativeness of any car-machinery connected with the line?

A. The men on the New York and New Haven road, if there was anything wrong about the train, usually notify me.

Cross-q. 10. Was there a car run behind the train having a Springfield brake thereon, said car having a different brake, as you have stated, from Boston to New York, and *a* vice versa, with passengers therein or otherwise?

A. When I spoke of that I spoke of the New York and New Haven Railroad. The other roads I do not know about.

292 Cross-q. 11. Were the curves you speak of in the city of New York those which pass from one street to another, running at right angles with each other, around which the railroad was made to pass?

A. I was speaking more in reference to where they went into the depot, or any very short curve, such as at the corner of streets.

Cross-q. 12. How long, to your knowledge, has the centre lever brake, spoken of by you in a previous answer, been in use on the Hartford and Springfield road which terminates in New Haven; since what year have they been so used?

A. To the best of my knowledge I should think from four to six years; may be longer. I haven't got the dates. It may have been from 1854 to 1856, to the best of my knowledge.

Corss-q. 13. And may they not have been in use at a much earlier date, so far as you know?

A. They may have been.

Cross-q. 14. Who did you understand, upon your first acquaintance with said brake, was the person applying it to the cars of the said Hartford and Springfield road?

A. I can't answer that question, for I don't know that I heard any name.

Cross-q. 15. Did you know Willard I. Nichols, deceased, when he was master mechanic of said Hartford and Springfield road?

A. I did not.

293 Cross-q. 16. Did the Springfield brake, alluded to in your direct examination, and as applied to the line-cars, combine the brakes of both trucks so as to enable the brakeman to operate them from either end of the cars?

A. I should say not very effectively on both trucks.

Cross-q. 17. Did it apply the brakes to both trucks from either end of the car, whether it did it effectually or not?

A. According to the best of my knowledge, it did.

Direct resumed by M'r Sayles:

Q. 18. Did you often complain of said Springfield brake to the officers or mechanics of the Western Railroad Company, and request them to have these brakes removed and the Hodge brake put in their place?

A. I did not personally to their mechanics; I complained of them to our superintendent.

Cross resumed:

Cross-q. 19. At this time at which you stated you made complaint to the superintendent, did the New York and New Haven Railroad Company own the right to use the Hodge patent car-brake on their road?

A. They did, to the best of my knowledge.

Cross-q. 20. Did the Western Railroad Company own the right to use said Hodge patent at that time upon the cars of their road?

A. They did not, as I understand it.

H. T. DOUGLASS.

Subscribed and sworn to before me this 1st November, 1862.

R. E. STILWELL,
U. S. Commissioner.

294 *Deposition of Samuel Blatchford.*

Q. 1. What is your name, age, residence, and profession or occupation?

A. Samuel Blatchford; age, 42 years; reside in the city of New York, and am an attorney and counsellor at law.

Q. 2. Were you ever employed as counsel for Henry Tanner in a patent suit against the New York and Erie Railroad Company? If yea, state when and in what case, and whether or not you wrote down the testimony in such case.

A. I was; in a suit brought by Tanner against that company for the infringement of a patent granted to him July 6th, 1852, as assignee of Bachelder and Thompson for an improvement in railroad-car brakes; that case was tried at Albany, in October, 1854, and I, as one of the counsel of Tanner in the trial, took down in writing minutes of all the oral testimony given on both sides at the trial.

Q. 3. Was Sarah A. Nichols examined as a witness in that case by the defendants on the part of the defence?

A. She was.

Q. 4. What did she testify to on that occasion in regard to her husband, Willard I. Nichols, making drawings for a car-brake in 1846?

A. I cannot from my recollections, unaided by the minutes of her testimony, which I then took down, state what she testified to on that subject; I took down accurately, as I believe, my minutes of what she did testify to; and having these minutes now before me, and reading from them, I state that she testified as follows in regard to 295 the point inquired of, the following being the whole of her testimony, both direct and cross, given on that trial, as taken down by me at the time:

"I resided in 1846 and 1847 in Hartford. My husband was Willard I. Nichols. His business was master mechanic on the Hartford and New Haven Railroad. I was acquainted with M'r Lepennse there, not with John Farnsworth. Lepennse was at work in the shop on patterns, under my husband. My husband died April 8th, 1850. I know of my husband drawing a plan, at home, of a brake for cars. I should think he drew that plan in the fall of 1846. That was a double brake, as he called it. I do not know of my husband's working on a brake. I know of his going off on a train of cars to try a brake after this. I can't tell the time; I think it was before March, 1847. The train went from Hartford to Springfield. I saw the drawing my husband made; he showed me how it operated.

"Cross-examined:

"I have not been told that if it should be established that my husband was the inventor I should derive some profit from the invention. My husband was sick in March, 1847. I think the brake was applied before that. He was sick most of the time till June, 1847. He left home in June, 1847. He had been sick some two months before. He was unwell at the time he invented it. I do not recollect any circumstance that would show the date more certainly. To the best of my recollection it was in 1846, late in the fall. It was quite cold weather. That drawing

was made at night. I was fearful of his injuring his health by
296 sitting up at night. He was more unwell after that till he was
confined to his house. I am not able to fix the time.

"Redirect:

"M'r Sayles told me I should have a handsome present in case plaintiff succeeded.

"Cross-examined:

"I think that conversation was the first time Sayles was at our house. I think it was a year this fall; I don't recollect. The suit was against the Hudson River Railroad Company. No such conversation took place when Tanner was present. He and Sayles were never there together but once; they inquired about the brake my husband got up. I think I told Tanner and Sayles that the brake was got up in the spring of 1847, and the drawing in 1846."

Q. 5. Did you ever draw the printed form of a bill in equity to be used by said Sayles in suits against railroad companies on said patent to said Tanner, and, if yea, do you know whether said printed form is the form used for the bill in this case?

A. I drew, at the request of M'r Sayles, and as his counsel, the form of a bill in equity to be used by him in suits against railroad companies on said patent, and I procured the said form to be printed; as printed, it covers eighteen printed pages, and has blanks left for the necessary written matter to enable it to be used for various suits. It refers to the patent to said Tanner, and the schedule thereto annexed as being annexed, and marked "A," and to a copy of a certified copy of the judgment-record of a judgment recovered by said Tanner against the New
York and Erie Railroad Company, in the circuit court of the
297 United States for the northern district of New York, Feb. 2nd,
1855, for $439.44, for the infringement of said patent, as being annexed and marked "D," and to a copy of a certified copy of the verdict of the jury on said trial, at Albany, in October, 1854, as being annexed and marked "C," and to a copy of a certified copy of an order made August 7, 1855, in said suit at law, denying a motion for a new trial therein, and to copies of two certificates signed severally by Eaton & Davis, and Thomas M. North, as being annexed and severally marked "E" and "F." I am informed that the said printed form is the one that was used for the bill of complaint in this suit.

Q. 6. Are the facts stated in said bill in question, prepared by you, true?

A. I believe everything stated in said printed form to be true; and I stated everything that is contained therein truly, I believe, so far as it was within my knowledge.

Cross-examined by M'r Whipple:

Cross-q. 7. Referring to your answer to the 2nd interrogatory, did you write down said testimony in full or only take notes or minutes of the same?

A. I did not write down any of the questions put to M'r's Nichols, and I suppose I did not write down every word that she said, and, therefore, what I did take down may, very properly, be called minutes or notes.

Cross-q. 8. Was it a matter of discussion and disagreement with the counsel in said New York and Erie case as to what M'r's Nichols did or did not testify to?

A. I do not recollect that it was.

Cross-q. 9. Have you not said that it was, since you have been
298 in this room? If not, please explain what you did say in relation
to this matter when looking over the minutes of her testimony, and thereupon deciding that in order to give a fair expression of her testimony it should be copied in full in your present testimony.

A. The discussion and disagreement of counsel was as to the effect of the testimony given as to the invention of Nichols, which, on the trial, included (if my recollection serves me) not only the testimony of M'r's Nichols, but the testimony of a man by the name of Lepennse; the counsel disagreed as to the date that ought to be fixed for Nichols' invention from the evidence in regard to it, taking it altogether; but I do not recollect any discussion or disagreement as to what, in fact, M'r's Nichols testified to.

Cross-q. 10. Were you, in December, 1860, examined as a witness in the case of Thomas Sayles vs. The Philadelphia, Wilmington and Baltimore Railroad Company, and have you consulted your testimony given in said examination in your deposition taken in this case?

A. I was so examined at that time in that case, and I have consulted such testimony in giving portions of my deposition in this case.

Cross-q. 11. "Upon said trial the said company gave evidence tending to prove that in the year 1843, at Springfield, in the State of Massachusetts, an eight-wheel platform-car was constructed, having two trucks of four wheels each, with a brake to each wheel, and a windlass to each end of the car; that the windlass at either end could operate all the brakes of both trucks, not by means of a centre vibrating lever, or any equivalent therefor, but by means of two chains winding around the
barrel of each windlass, one chain leading to and operating the
299 brakes of one truck, and the other leading to and operating the
brakes of the other truck, there being such an arrangement for each windlass, and each windlass having its own set of chains, connecting-rods, and levers throughout, independent of those of the other windlass; the brakes of the two trucks not being combined with the windlasses at both ends of the car by a centre vibrating lever, or in any other way, or connected with such windlasses, except as just described, and the brakes being connected by one windlass by one set of chains, connecting-rods, and levers, and with the other windlass by an entire different set of chains, connecting-rods, and levers, and there being two chains on the barrel of each windlass, so that if one chain gave way the other chain still remained operative, and that such arrangement of brakes was used on two platform crate-cars on the Western Railroad, in Massachusetts, during parts of the year' 1843 and 1844." Is this a part of your testimony in the case referred to?

A. It is.

Cross-q. 12. And did the plaintiffs respond as follows: "In reply to that evidence the said Tanner introduced evidence tending to prove that in such arrangement of brakes the two chains on the windlass would overlap on each other on being wound upon the barrel, and that, in consequence thereof, and in the passage of the truck from a straight line to a curved part of a railroad, and vice versa, the action of the brakes would be unequal in consequence of the different lengths of the two chains on each windlass, accompanied by a tendency either to break the short chain or throw the wheels from the rails, or destroy the free swiveling action of the trucks, and that the combination in such ar-
rangement was different from that described and claimed in said
300 letters patent in the brake-levers in the two trucks was not con-
nected together, except at the windlasses, except by being combined together by means of the centre vibrating lever?"

A. He did.

Cross q. 13. What disposal, if any, has been made of the case in question?

(Objected to.)

A. I only know from hearsay; I have been told by M'r Sayles (the plaintiff in it) that it has been discontinued by him.

Direct resumed:

Ques. 14. Was or was not James M. Hebard and John Stockbridge examined as witnesses in the New York and Erie case in October, 1854?

A. I have no recollection that either of such persons were examined as a witness on that trial; and on consulting my minutes of the trial I do not find it stated that either of such persons was examined either orally or by deposition; if either of them had been examined my minutes would show the fact.

Cross resumed:

Cross-q. 15. Did you, in the deposition already referred to, testify as follows: "The result of the trial was, that the jury found a verdict for said Tanner for seventy-five dollars damages; that amount was agreed upon by the counsel for the respective parties, as the amount in which the jury should find for the plaintiff if they should be of opinion that they should be entitled to recover"?

A. I did.

301 Cross-q. 16. What means have you of knowing that the facts in the bill referred to by you are true?

A. My connection with the litigation upon the patent, and its progress, as counsel for M'r Tanner and M'r Sayles, and as inspector of the written documents referred to in the bill.

SAMUEL BLATCHFORD.

Subscribed and sworn to before me this 1st November, 1862.

R. E. STILWELL,
U. S. Commissioner.

Deposition of A. Emigh.

Q. 1. What is your name, age, residence, and occupation?

A. Asahel Emigh; 38 years of age; reside in the city of New York, and am engaged in patents.

Q. 2. Are you familiar with the patent for car-brakes as granted to Henry Tanner, July 6, 1852? If yea, please state what railroads, if any, you have known the same to be in general use and what roads in partial use upon?

A. I am familiar with said patent. I have known it in general use upon the Providence, Hartford, and Fishkill, Providence and Stonington, the Camden and Amboy, New Jersey, Jamestown, the Belvidere, the Lehigh Valley, the Augusta and Savannah Railroad, the Georgia Central, Montgomery and Florida, Mobile and Grand, the New Haven, Hartford and Springfield Railroads; in partial use on the Providence and Worcester, Boston and Providence, Staten Island, the North Pennsylvania, Pennsylvania Central, the Richmond and Fredericks-
302 burgh, the Wilmington and Manchester, the Selma and Alabama
River Railroads, the Reading Railroad, the Hudson River, New York and Erie, Buffalo and New York City, Elmira, Canandaigua and Niagara Falls Railroads.

Cross-examined by M'r Whipple:

Cross-q. 3. What fact or circumstance has led you to be familiar with the use of railroad car-brakes?

A. I was formerly employed as agent for Henry Tanner, in the year 1854 or 1855, for the sale of the Tanner patent car-brake; from 1855 to the present time I have been employed partially as agent and partially as owner of what is known as the Stevens patent car-brake. Under such agencies and ownership I have visited most of the railroads in the United States for the purpose of learning what plans of brakes were in use on the various roads, and to introduce and sell the rights under the aforesaid patents.

Cross-q. 4. Have the railroad companies upon whose roads you state the centre lever-brake, or Tanner brake, so called, is in general use, a license to use said brake under said patent?

A. I have been informed by the officers of a number of the roads that they had a license to use the Tanner brake.

Cross-q. 5. Have such roads a license to use the Stevens brake?

A. Not to my knowledge, from the best of my recollection.

Cross-q. 6. Would they be likely to have a license and you not know it?

A. Not likely; but such, however, might be the case.

303 Cross-q. 7. You speak of the centre lever being in general use on the New Haven, Hartford, and Springfield Railroad. At how early a date are you knowing to its use on that road? Please state from what year.

A. According to my recollection it is about 1856 or 1857 that I first saw it in use on that road.

A. EMIGH.

Subscribed and sworn to before me this 1st day of November, 1862.

R. E. STILWELL,
U. S. Commissioner.

Deposition of Gorham P. Fields.

Q. 1. What is your name, age, residence, and occupation?

A. Gorham P. Fields; reside on Green Island, Albany County; am 39 years of age; work in car factory of Uri Gilbert, as foreman in the car-shop; have been there since 1851.

Q. 2. Were you ever in the employ of the New Haven, Hartford, and Springfield Railroad Company; if yea, when, and for how long time?

A. I was. Commenced work in 1845, and left in May, 1848, between the first and fifth of May. I worked on the repair of cars in that time. Commenced under W'm Clayton as foreman, and finished under Willard I. Nichols as foreman.

Q. 3. How long did you work under Willard I. Nichols as foreman?

A. From the fall of 1845 to May, 1848.

304 Q. 4. While you were at work there did said Nichols have a long baggage-car built for that company; if yea, when was said car completed?

A. He had a car built, but I couldn't tell when it was finished. I mean a long baggage-car. I should think it was finished in the spring of 1848, to the best of my judgment; I cannot tell positively. I worked on the car considerable. Think I worked on it in 1847 and 1848. Think some of work was done during the last year I worked there.

Q. 5. What kind of brake was put on said car?

A. It was a double-acting brake, with a central lever, in the centre of the car. I never saw one of the kind before.

Q. 6. Did M'r Nichols superintend the putting of that brake on that car?

A. He did. They had some trouble in the first place. The lever was too long or too short, I don't know which. I remember we had to take it off and have it altered. The connections were not right. We had to alter them several times. I recollect taking them off once myself.

Q. 7. Was that the first time Nichols put that brake on a car?

A. It was the first time I ever saw him put one on. Should think, from his actions, it was the first he ever put on. It was the first one that was on, on that road.

Q. 8. Do you recollect whether that car was completed about the time you left the road or not?

305 A. I am not positive, but should think it was; that is the best of my recollection. I recollect John Stockbridge was there when I left.

Q. 9. Did you know the widow of said Nichols?

A. I did.

Q. 10. Did you ever call at her house, or store, at Cohoes, N. Y., to get an account-book formerly kept by her husband at Hartford, C't, when you were there?

A. I did not. I have seen the book and looked it over; she brought the book to me at Eaton & Gilbert's shop, and wanted me to look it over and see if I could tell when her husband put the brake in question on the car. This was the day-book her husband kept at Hartford when I was there; she brought it to me about eight years ago.

Q. 11. Was the baggage-car you speak of the only car of that class built by said company while you were there?

A. It was.

Cross-examined:

Cross-q. 1. Do you know anything about the application of said brake to an old car in the old paint-shop of James M. Hebard, under the directions of said Willard I. Nichols, in the winter of 1846 and 1847?

A. I do not.

Cross-q. 2. Are you certain as to facts and dates to which you have testified in your direct examination?

306 A. I am, except so far as qualified therein.

Cross-q. 3. Who claimed the invention of said brake?

A. Willard I. Nichols.

Cross-q. 4. Was James H. Hebard at work on car-repairs in winter of 1846 and 1847?

A. He was. I cannot say that he was all the time; but he was a part of the time.

GORHAM P. FIELDS.

Subscribed and sworn to this 3rd day of Nov., 1862.

M. BEACH,
U. S. Commissioner.

307 APPLICATION OF BATCHELDER AND THOMPSON.

THE UNITED STATES PATENT OFFICE.

To all persons to whom these presents shall come, greeting:

This is to certify that the annexed are true copies, from the files and records of this office, of all the papers and correspondence, except of the patent as granted in the matter of the application of L. F. Thompson and A. G. Batchelder for a patent for an "Improvement in railroad-car brakes," filed on the 29th day of June, 1847; in accordance with which application letters patent were issued to Henry Tanner, assignee of the said Thompson and Batchelder, on the 6th day of July, 1852.

In testimony whereof I, Charles Mason, Commissioner of Patents, have caused the seal of the Patent Office to be hereunto affixed, this 16th day of January, in the year of our Lord one thousand eight hundred and fifty-four, and of the Independence of the United States the seventy-eight'.

[SEAL.] C. MASON.

To the Commissioner of Patents:

The petition of L. F. Thompson, of Charlestown, mechanic, and A. G. Batchelder, of Lowell, carriage-maker, both of the county of Middlesex, State of Massachusetts, respectfully represents that they have made an improvement upon the car-brake now in general use, which they verily believe has not been known or used prior to the invention thereof by your petitioners. They therefore pray that letters patent of the United States may be granted to them thereof, vesting in them and their legal representatives the exclusive right to the same upon the terms and conditions expressed in the act of Congress in that case made and "provided," they having paid thirty dollars into the Treasury, and complied with other provisions of the said act.

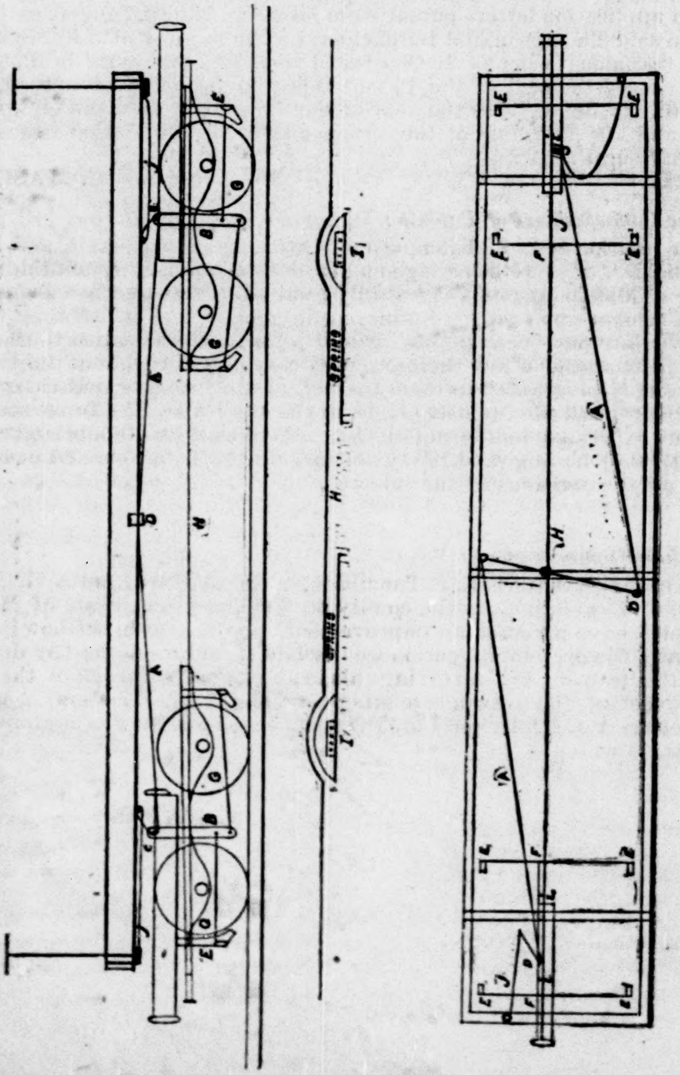
To whom it may concern:

Be it known that we, L. F. Thompson, of Charlestown, and A. G. Batchelder, of Lowell, both in the county of Middlesex and State of Massachusetts, have invented an improvement upon the car-brake now in general use (the original invention we disclaim); and we do hereby declare that the drawing accompanying this is an exact description of the said improvement, the drawings making part of this specification, in which the letters A, C, D, H, and I are the parts which we claim as our improvements, in which—

308 **[THE DRAWING.]**

A represents the connecting-rods of the brakes; these rods are attached to the top of lever B, one end, and the other to the end of lever D.

THOMPSON AND BATCHELDER.



[N. B. The above represents the original drawing and the writing upon it.]

B represents the levers attached to the brakes; they are attached to the connecting-rods at the top and to the rods G at the bottom, which are attached to the bars that connect the brakes.

C, the point where the connecting-rods are attached to the brake-levers, and where the brake-levers unite with the butters by means of a gain.

D represents the lever, which is attached to a cross-bar in the centre by a pivot, and the connecting-rods at the end.

E represents the brakes, which "bear" upon the outer edge of the wheels when pressed by the lever B; they are connected by the bar F.

F represents the bar that connect the brakes.

G, short rods, connecting the bars F with the lever B.

H represents a rod running the length of the carriage under the butters, to throw off the brakes (by means of an arm attached to the tender) at pleasure. This is done by means of gains or "bends" fitted to knobs which are attached to lever B. By "forcing" the rod either way it crowds the lever out of the gain and disconnects it with the butter.

I represents the knobs fitted to the bends in the rods H; they are attached to springs which keep them in the bends of the rod, unless forced out by moving the rod either way.

J is a purchase attached to the connecting-rods, by which the brake may be applied by hand at pleasure, without reversing the engines.

Cancelled.

309 The operation is thus: while the engine is attached to the cars the engineer can operate on the brakes throughout the whole train, by slacking the speed of his engine and bringing it back against the butter, and so applying the power to the levers B. To reverse the motion of the cars, an arm (which is attached to the tender) is thrown out so as to meet the rod H, and thus throwing the bar B out of the gain in the butter, throughout the whole train. When the engine is detached, one brakeman is sufficient to do the work of any number of cars.

What we claim as our improvement, and desire to secure by letters patent, is the application to car-brakes to prevent collisions, &c., &c.

LA FAYETTE F. THOMPSON.
ASAHEL G. BATCHELDER.

Witness:
IONA MARSTON, J'r, to L. F. Thompson.
Witness:
NATH'L HEATH, for A. G. B.

COMMONWEALTH OF MASSACHUSETTS,
Middlesex, ss:

LOWELL, *June 22d*, 1847.

On this twenty-second day of June, 1847, before the subscriber, a justice of the peace in and for the said county of Middlesex, personally appeared the within-named Asahel G. Batchelder and made solemn oath that he verily believes himself and the within-named La Fayette F. Thompson to be the original and first inventors of an improvement upon the car-brake now in general use, as within described, and that he does not know or believe the same was ever before known or used, and that he is a citizen of the United States.

WILLIAM A. RICHARDSON,
Justice of the Peace in and for said County.

COMMONWEALTH OF MASSACHUSETTS,
Middlesex, ss:

CHARLESTOWN, *June* 22, 1847.

On this twenty-second day of June, A. D. 1847, before the subscriber, a justice of the peace in and for said county of Middlesex, personally the within-named La Fayette F. Thompson, and made solemn oath that he verily believes himself and the within-named Asahel G. Batchelder to be the original and first inventors of an improvement upon the car-brake now in general use, as within described, and that he does not know or believe the same was ever before known or used, and that he is a citizen of the United States.

GEO. FARRAT,
Justice of the Peace.

Pencil-notes made at the Patent Office.

The specification and drawings are very defective. The specification does not describe the nature, construction, or operation of the 310 alleged improvement. The claim "is the application to car-brakes to prevent collisions, &c., &c." The claim must be clear and specific. The claim here set up would cover every kind of car-brake. The drawings do not illustrate the operation of the brake. There must be more carefully prepared specifications and drawings furnished before this case can be considered, but this must be returned to the office without erasing these pencil-notes. There is also an omission in the oath. There must be two witnesses to each signature. See enclosed circular.

CHARLESTOWN, MASS., *Dec.* 9, 1847.

To the Commissioner of Patents:

Please stay any further proceedings in the case of the application of us for the patent of Thompson and Batchelder's improvement on the car-brake, as we wish to make some further improvement. The application was made by Att'y N. Heath, and the model deposited by him, June 26th last past, with H. H. Sylvester, esq.

Your ob't serv'ts,
THOMPSON AND BATCHELDER,
Per NATH'L HEATH.

BOSTON, *Oct.* 4, 1850.

SIR: Herewith I send you for record the assignment of L. F. Thompson and A. G. Batchelder to Nath'l Heath. Please charge the same to me.

Yours, respectfully,
R. H. EDDY.

THO'S EWBANK,
Com'r of Pat's, Washington, D. C.

To the Commissioner of Patents:

SIR: About June 26, 1847, the papers of the application of L. F. Thompson and A. G. Batchelder were filed in the Patent Office. Please return them by mail to M'r R. H. Eddy, who is my attorney in the case, the application having been assigned to me.

NATH'L HEATH.

Ans'd Oct. 9th, 1850.

PATENT OFFICE, *Oct.* 9, 1850.

SIR: Specification and drawings of Thompson and Batchelder's car-brake, assigned to N. Heath, are herewith forwarded to you, in accordance with the request of the latter contained in your letter of the 4th inst.

Yours, respectfully,

THO'S EWBANK,
Com'r of Patents.

R. H. EDDY, *Boston, Mass.*

311 BOSTON, *July* 10, 1851.

SIR: The accompanying specification and drawing of Thompson and Batchelder's application was sent me by you some time ago. They are herewith returned, and may be again placed on file.

Yours, respectfully,

R. H. EDDY.

R. C. WEIGHTMAN, Esq.,
Acting Com'r of Patents, Washington, D. C.

BOSTON, *Sept.* 10, 1851.

SIR: Mess'rs Thompson and Batchelder, by their attorney (then) N. Heath, filed, in 1847, an application for a patent for a car-brake.

They inform me that in the fall of the same year they requested proceedings stayed. That subsequently they wrote to the office several times in relation to the examination, but never received any reply.

They now respectfully request that their application may be examined and the result reported to me.

Yours, respectfully,

R. H. EDDY.

P. S.—I believe there is a letter from them on file making me their agent in the case.

THO'S EWBANK, Esq.,
Com'r of Patents, Washington, D. C.

Ans'd Oct. 17, 1851.

PATENT OFFICE, *October* 17, 1851.

GENTS: Specification and drawings of your alleged improvement in railroad-brakes are herewith returned for entire insufficiency. The office, from what it can learn of the case, cannot encourage you, however, to press the application further.

Yours, respectfully,

THO'S EWBANK,
Com'r of Patents.

THOMPSON and BATCHELDER,
Care of R. H. Eddy, Boston, Mass.

To the Commissioner of Patents, Washington City, D. C.:

Please allow W. P. N. Fitzgerald, esq., to withdraw one of my original drawings from the Patent Office, which were deposited by us in our application for patent for a R. R. brake in 1847, and which we 312 subsequently assigned to H. Tanner, of Buffalo, or do all and everything in the premises which we could do if present.

LA FAYETTE F. THOMPSON.
ASAHEL G. BATCHELDER.

To the Commissioner of Patents, Washington City, D. C.:

SIR: Please allow W. P. N. Fitzgerald, esq., to withdraw any drawings from the Patent Office which may be there as first drawings in the application of Thompson and Batchelder for letters patent for R. R. brake, which was subsequently assigned to me, as fully as I could do in any case, if present.

H. TANNER.

BOSTON, *April* 13*th*, 1852.

SIR: Herewith I send you the original specification and drawings of the case of Thompson and Batchelder.

I also send you an amended specification and drawings in accordance with the pencillings on the original.

I also send you Nath'l Heath's assignment to Thompson and Batchelder, A. J. Bellows' assignment to Thompson and Batchelder, and Thompson and Batchelder's assignment of the invention to Henry Tanner.

You will thus see that the whole now stands in the name and possession of Henry Tanner, I being his attorney in the case. Please put the assignments on record at my expense.

I also return to you, not amended, the specification for the reissue of the patent of Charles B. Turner, assigned to Henry Tanner. To the said specification you will find appended (by wafer) a piece of paper, on which is written the claim that, I understand from M'r Tanner, the Patent Office was willing to allow him previous to the discovery of the pending application of Thompson and Batchelder.

There will be no necessity for a declaration of interference, as both applications are now in the name of M'r Tanner. The claim in the Thompson and Batchelder application has been made to correspond with that suggested on the paper appended to the Turner specification.

The inquiries made by M'r Tanner have led him to believe that the invention of Thompson and Batchelder was made prior to that of Charles B. Turner.

He, therefore, is willing to withdraw his application for a reissue of the Turner patent, provided you decide to grant the patent of Thompson and Batchelder.

In case you order the latter to issue, you may return the original patent of C. B. Turner.

Yours, respectfully,

R. H. EDDY.

THO'S EWBANK, Esq.,
Com'r of Patents, Washington, D. C.

313 The oaths of Batchelder and Thompson to their amended specification.

STATE OF MASSACHUSETTS,
County of Middlesex, ss:

On this 8th day of April, A. D. 1852, personally appeared before me the above-named Asahel G. Batchelder and made oath that he does verily believe himself and La Fayette F. Thompson above-named to be the original and first inventors of the improvements above specified; that he does not know or believe the same to have ever been known or used before their invention thereof, and that they are citizens of the United States of America. The words "LaFayette F. Thompson" and "themselves" and "they" were erased by me; and the words "himself" and "La Fayette F. Thompson above-named" and "he" were all altered and interlined by me before administering said oath.

DANIEL T. RICHARDSON,
Justice of the Peace.

STATE OF NEW HAMPSHIRE,
County of Sullivan:

On this 10th day of April, A. D. 1852, personally appeared before me the above-named La Fayette F. Thompson and made oath that he does verily believe that he and the above-named Asahel G. Batchelder are the original inventors of the improvements above specified; that he does not know or believe the same to have been ever known or used before the invention thereof, and that they are citizens of the United States of America.

P. C. FREEMAN,
Justice of the Peace.

PATENT OFFICE, *April* 30, 1852.

SIR: In accordance with the request contained in M'r Eddy's letter of 13th instant, the old patent in the case of application for reissue of C. B. Turner's car-brake is herewith returned to you. There is an entire difference of arrangement in the details of the model and drawings belonging to the application of Thompson and Batchelder, which should be removed by the substitution of either new drawings or model. The case is, in consequence, postponed until further advices from you.

Yours, respectfully,

THO'S EWBANK,
Com'r of Patents.

HENRY TANNER,
Care of R. H. Eddy, Boston, Mass.

314 To the Com'r of Patents:

SIR: Please forward the patent of Batchelder and Thompson, for R. R. brake, assigned to me (when issued), to R. H. Eddy, esq., of Boston, Mass.

H. TANNER,
Buffalo, N. Y.

WASHINGTON, *18th June*, 1852.

No. 9009. L. F. Thompson and A. G. Batchelder, assignors to Henry Tanner, of Buffalo, N. Y.

Town of Charlestown and Lowell. County of Middlesex, State of Mass.

Imp'd car-brake (brake).
Rec'd June 26, 1847.
Petition, "
Affidavit, "
Specification, "
Drawing, "
Model, "
Treasurer's certificate.
Cash $30, June 26, '47.
Examined, Cooper, June 18, 1852.
Issue, R. C. W., June 19, 1852.
Patented July 6, 1852.
Recorded vol. 49, page 48.

(Objected to by plaintiff.)

Ans. I never did, that I know of.

319 Cross-examination by M'r Thomas Sayles, the plaintiff:

I can't swear that the model entire is correct in all its proportions, but the principle of the thing is there.

Direct examination resumed:

By the "principle of the thing," I mean the brakes as they are connected and operated in the model A.

Cross-examination resumed:

I mean in the last answer the general arrangements of the brake without reference to the proportions of the brake.

HENRY H. SNOW.

The deposition of EMERY STEBBINS, taken before the said Elias Merwin, on behalf of the defendant, on the 19th day of September, A. D. 1862.

My name is Emery Stebbins; age, thirty-six years; residence, Springfield, Mass.; and I am car inspector on the Western Railroad, at Springfield. I have been in the employ of the road twelve years, part of the time in the wood-shop, on repairs.

I know of the use of a brake on the cars of the Western Railroad similar to that represented in the model now before the commissioner, marked "Model A, E. Merwin, U. S. C." We first used it on number 2 car of the Western Railroad—that was the number of the car. It was a passenger-car. I should think it was about six years ago that we first put it on this passenger-car, about the year 1855 or 1856, and it was used about two years, I think, on that car at that time. It was 320 put on to what line of cars we had soon after that, on all the cars on the express line between New York and Boston. It was put on to twenty-two or twenty-four cars, passenger and baggage, at that time. They were on about sixteen months; it was over a year, I know.

All the difference between the brake exhibited, the model, and the brake which was applied to those twenty-two or twenty-four cars, was, that in the brakes of these cars but one chain wound round the windlass, and that chain was attached to the upper end of the lever in the first truck, and a rod attached to the same point connected it with the upper end of the lever with the second truck, and the same may be said of the attachment at the other end of the car. The reason why we put it on in this way, getting rid of the second chain, was, it saved us the trouble of altering the windlasses; but it didn't make it any better.

This brake applied the brakes simultaneously to both trucks and from either end of the car. I operated these brakes while switching the cars. I call it a good brake when it was in order. It was no more liable to get out of order than other brakes.

I am acquainted with the centre lever or Tanner brake. I think you can apply the power to the trucks as well with the brake shown in this model as with the centre lever or Tanner brake, and at either end of the car.

Cross-examination by M'r Thomas Sayles, the plaintiff:

I never operated the Tanner brake or the Springfield brake out on the road, no other way than switching in the yard

I know why these Springfield brakes were put on the express-line cars. When the express-cars were built, the Hodge brakes were put on

321 to the cars and on to the road, and the Western Railroad did not own the right to use them; and that is the reason why the Hodge brake was ordered off and these were ordered on and were put on. I don't know whether Hodge commenced a suit or not. I don't know why this brake was not continued on the cars, but I think some compromise was made by which the right to run Hodge's brake over this road was obtained. The Hodge brake was put back after this brake had been running sixteen months. This was abandoned after running some sixteen months, and the Hodge brake was put back again on these twenty-two or twenty-four cars.

The levers in the express-line cars were arranged the same as in the model, except that in the express-cars the short arm of the first truck lever set on the connecting rods of the brake, operating from the other end of the car. The operation was just the same, and the result was just the same.

The bottom end of the truck-lever set in a slot on the connecting rod, with a pin through it so as to hold it permanently in that place, instead of being attached to the break' bar. The result would be just the same in either case.

The break' we had on the Western car was precisely like the one in the model. That has been removed, and the single break' put on in its place. The Springfield break' was on this car two or three years. I should think it was put on the last of 1855, or the first of 1856—about that time; I think it was the last of 1855.

Direct examination resumed:

The general brake now in use on the Western Railroad is the single break', and always has been since the opening of the road, so far as I know.

EMERY STEBBINS.

322 The deposition of WILSON EDDY, taken before the said Elias Merwin, on behalf of the defendant, on the 19th day of September, A. D. 1862.

My name is Wilson Eddy; age, forty-nine years; residence, Springfield, Mass., and I am master mechanic of the Western Railroad, and have been connected with that road, as foreman of the shop and master mechanic, for the last twenty-two years.

In December, 1840, we had a severe accident here in Springfield, owing to the deficiency of brakes, by an engine and train coming down this grade. The engine and train were badly smashed up, and four men lost their lives. When this engine and tender was repaired, and before it was put upon the road again, there were brakes put on both trucks of the tender. They are operated both from one windlass by a connecting rod running from the top of the lever on the first truck to the top of the lever on the rear truck. The lever of the first truck was operated by a windlass the same as the single break' and the same as if the rear truck hadn't been connected with it. This tender went out of the shop in the spring of 1841, I think in April. M'r Ephraim Harris got up this brake, made it and applied it to the tender. This brake has been used from that time constantly on the tenders on this road, and is the one now in general use on our tenders.

The break' shown in the model now before the commissioner, marked "Model A, E. Merwin, U. S. C.," was got up and applied to two crate-cars by M'r Harris, in 1842 or 1843, according to the best of my recollec-

tion. It was in use on those cars as long as the cars were in use,
323 which was some two or three years; I can't recollect the time exactly.
When the cars went out of use, the necessity for the double brake went out with them.

I understand that this brake applies the power of the brakeman simultaneously to the brakes of both trucks and at either end of the car.

Cross-examination by M'r Thomas Sayles, the plaintiff:

I should think that this brake, shown in the model A, did not apply the brakes equally when on a curve and on a straight line; but it will do so as nearly as a single brake.

I mean to say that this model is the same in all its essential parts as the one applied to the crate-cars. I would not say positively that some of these levers were not in a little different position, and I am inclined to think that the truck-lever was between the windlass and the outer or front end of the truck-frame. I should not think the crate-cars were used when the river at Albany was frozen over. I can't say that I ever worked these brakes myself.

Direct examination resumed:

I know that the Springfield brake, as shown in model A, was essentially the same as the one which was put on the express-line cars running from Boston to New York. I recollect that there was but one chain went around the windlass, and the lever of the truck at the other end of the car was connected the same as I have described in the tenders. The car was broke by the same apparatus from either end of the car.

Cross-examination:

This brake was some time after taken off the express-line cars
324 and the Hodge brake was put back. I can't tell how long this
brake was on. I do not know why this change was made.

Direct examination:

I was acquainted with M'r Willard J. Nichols when he was in the employ of the Western Railroad, and I know that he was acquainted with the existence and use of the Springfield brake. I know that the subject of brakes was frequently up and discussed, and that M'r Nichols had the repairing of this brake.

WILSON EDDY.

The deposition of FERDINAND LEPPENS, taken before the said Elias Merwin, on behalf of the defendant, on the 19th day of September, A. D. 1862.

My name is Ferdinand Leppens; age, forty-six years; residence, Hartford, Conn.; and I am now master mechanic of the Hartford and New Haven Railroad, in the car department.

I was acquainted with Willard J. Nichols, who is now deceased. I became acquainted with him in March, 1846. He then occupied the same position that I now occupy. In the fall of that year we had occasion to build what was then called an extraordinary length baggage and second class car. (I was then connected with the Hartford and New Haven road as pattern-maker.) To that car we attached the Nichols brake, which is represented in the model now before the commissioner, marked "Model B, E. Merwin, U. S. C., Nichols Brake." I suppose M'r Nichols invented this brake. He introduced it to me as his brake, and it was the first knowledge I ever had of any double-acting brake.

325 I remember about the time when the car was running with this Nichols brake attached from this circumstance: the brakeman observed to me that he thought that they did not hold as well as when he used the single brake, for this reason, that the snow got in between the brake-clog or block and the wheel. It was early in March, I think, that this was running.

I think it was early as March or April, 1847, that this long car was running with the Nichols brake attached. I think it must have been as early as March.

Int. Are you positive that it may not have been as early as January or February that the car came out?

(Interrogatory objected to by the plaintiff.)

No; I am not positive.

M'r Nichols came into the shop early one morning and brought with him a stick about six inches long, with four strings attached to it, to each end of the stick. He laid this stick on my bench, and showed me the application of this stick and strings to the truck-levers with chalk. That he marked out on the bench, and asked me if I thought it would work. I told him certainly it would. This stick and the strings attached represented the centre lever, and the rods attached to the windlasses and brake-levers, the same as seen in the model B already referred to.

I cannot tell whether this was one, two, or three months before the car was run out. It might have been one month and it might have been three months. I will not say positively that it was not more than three months before the brake was applied to the car; I should think it wasn't more than three months. I didn't apply it myself; I was there when it was applied.

326 I do not remember of M'r Nichols presenting the brake to me in any other way than by the stick and strings, as already described.

The brake-lever in the trucks of the Nichols brake was first applied to the outside of the end timber of the truck, as seen in Figure 6, in the cut of Tanner brake hereto annexed, marked "Exhibit E, E. Merwin, U. S. C."

It was afterwards applied on the inside of the brake-bar, as seen at D, in Figure 15, Hodge brake, in "Exhibit E, E. Merwin, U. S. C.," and finally as seen in the model aforesaid now before the commissioner, already referred to, and marked "Model B, E. Merwin, U. S. C., Nichols Brake."

The lower cut in Exhibit E is a correct representation of the Hodge brake in all its essential points. The Hodge brake was first applied to a car on the Hartford and New Haven road in June, 1849. I can't say positively, but I should think it run a year on that car, and perhaps more. We then took it off and put the Nichols brake in its place.

I am slightly acquainted with Henry Tanner. I can't say positively, but I think my acquaintance with him began as early as 1849. My impression is that he was around about the same time that M'r Hodge was there attempting to introduce his brake. I knew he was there at different times. I know he was there in 1851. In 1851 he knew of this Nicholas brake. He knew it then as well as I knew it. I have seen a bond which M'r Tanner executed to John Durand in trust for the widow of the said Nichols in 1851. I saw the bond recently. I saw it in the office of the secretary of the Hartford and New Haven road day before yesterday. M'r Tanner told me that if he substantiated his claim to the Turner brake, he would pay M'r's Nichols a handsome sum.

327 He never told me that he had executed a bond for her benefit. I knew of the execution of such a bond through M'r Durand, and I understood it was on account of the Nichols brake. I supposed that Tanner didn't want anything more said about the Nichols brake than he could help until he established his claims to the Turner brake.

Cross examination by M'r Thomas Sayles, the plaintiff:

When M'r Nichols first showed me the stick and strings, as illustrating the brake, he showed it to me as a novel invention of his own—one that he had just got up. He didn't show me any drawings. He never said anything to me about any drawings.

I know nothing of my own knowledge about M'r Tanner having given a bond to M'r Durand for the benefit of M'r's Nichols, except as I have already stated. I have seen a bond with the name of Henry Tanner attached to it, but I cannot swear that it was his signature.

Direct examination resumed:

M'r Nichols represented to me, when he showed me the stick and strings, that it was something recent—that he had conceived it the night before.

[It was not M'r Nichols' habit, as a general thing, of communicating his ideas as to what he wanted to have done by sticks and strings, instead of a regular drawing. A regular drawing was the usual course.]

The clause in brackets objected to by the plaintiff.

FERDINAND LEPPENS.

328 The deposition of SARAH A. ALLEN taken before the said Elias Merwin, on behalf of the defendant, on the 19th day of September, A. D. 1862.

My name is Sarah A. Allen; age, forty-six years; residence, Waterford, New York. My name was formerly Sarah A. Nichols, and I was the wife and widow of William J. Nichols, now deceased.

I formerly resided with my husband, M'r Nichols, in Springfield, Mass., until my fourth child was born, which was in the year 1845. I had always resided in Springfield up to that time.

My child was born the 12th April, 1845, and about a fortnight afterwards my husband went into the employment of the New Haven and Hartford Railroad Company. Their shop was then at New Haven, and he went there as master mechanic.

He took the place of M'r William Clayton, I think his name was. We removed to Hartford the first of December of the same year. I do not think the Hartford shop was then finished. My husband for a month was obliged to be at New Haven before the shop was finished at Hartford. We moved to Hartford on a Saturday. M'r Nichols went down to New Haven on Monday, and came back sick on Tuesday. He was sick several days. After he recovered a little he used to get his paper out and draw to divert himself, as I supposed. Then he didn't do anything at the drawing again that I recollect of until the shops were moved up to Hartford. He then used to draw often, afternoons when he had a little leisure, but oftener Sundays. He mentioned to me that it was a brake that he was a-drawing, but I didn't inquire into it and didn't understand what he was drawing.

329 The first I ever saw M'r's Leppens, although I think I had seen M'r Leppens, they called at our house. They had been out walking. I think the weather must have been quite settled. I cannot tell the month, but think it must have been in the spring. This was on Sunday that they called. After sitting awhile M'r Nichols asked M'r

Leppens to look at the drawing which lay on the table in the room where we were sitting, and asked him what he thought of it. M'r Nichols showed him this drawing. I supposed it was of a brake. M'r Leppens pointed to some part of the under part of it. I didn't hear the answer, but M'r Nichols explained something about it which I didn't understand. They stood and talked together about it some time. I recollect the circumstance particularly, from feeling mortified at the time that he should tell strangers that he worked on Sunday, and I said to M'r's Leppens, this is good work for Sunday.

This was in the spring of 1846, the first spring after we went to Hartford.

My husband had frequently shown me the drawing before this. I presume I had seen it every day. It lay on the table. What I recollect about it is, there were some straight lines, and some machinery I think under them. There was another drawing on the same paper, which represented, as I understood, the brake in a different way. On the paper, whether connected with this or not, I don't know, there was drawn what he called a scale. It was drawn on this same paper, at the left-hand corner. This paper was on a drafting-board—a board he made himself and called his drafting-board—and was tacked down with what he called drafting-tacks or nails. This was the drawing which he showed to M'r Leppens on the occasion above stated. M'r Nichols often explained it to me as a brake, and said that it would dispense with one-half the brakemen. I didn't understand then how it would, and I don't now.

330 This drawing was in the house some months before he carried it out. I should think it was in the house at least six months from the time he began on it before he carried it out. He said he was going to carry it to the shop when he carried it out, and I have no reason to doubt his word. He showed it to me as he carried it out, and I said to him I thought it would be much use to him. I had often laughed at him for spending so much of his time on it nights and Sundays. I supposed he was taking it over to the shop to show it to the men. When I said to him I hoped it would be of much use to him, he said, use or no use, if I had the means, I wouldn't do another day's work for a living. When he came home, I asked him what the men thought of his drawing, and he said they thought it was a good thing. I often asked him when he was going to put that brake on a car, and he said when we get time. When the car came out with it on, he asked me to come out on to the piazza and see it. He said he was going to Springfield with that car. I made the remark to him, that I guessed the car would run if I didn't come out and see it. The car to which this brake was applied was a baggage car. I did go out and see it, but I didn't know where the brake was, nor where to look for it. I knew the wheels on top they called the brakes, but how they applied them I didn't understand; of course I knew that the brake was somewhere down near the wheel. When he returned, he asked me if I see it. I asked him how I could see it when I was standing higher than the car. I told him I saw him and I thought he was a very careless man. He was standing on the bottom step of the car, holding on by the rod, and looking under the car. He had an overcoat on. He was in the habit of wearing an overcoat very much, whenever it was damp or chilly weather, even in the summer a good deal. His health was very poor.

331 I remember it was warmish weather when he carried the drawing out of the house to the shop, as already stated, although I cannot tell the month. I know the windows and doors were open when

he brought it down and carried it out, and that he didn't have any overcoat on. I cannot tell when the car with this brake on came out, whether it was in the fall of 1846, or in the spring of 1847. I think it was between that time; I think it was previous to first of April, 1847, and I know it was previous to the first of May, 1847. I know from the state of my own health from delicacy, that it could not have been as late as May when I went out on the piazza and saw the car, as I have before mentioned. My little girl was born in June, 1847.

I suppose the drawing was in a finished state, or nearly so, when he showed it to M'r Leppens, in the spring of 1846, soon after our acquaintance with M'r Leppens. He worked on the drawing some afterwards. It was some days or weeks before he took it to the shop that he didn't draw on it, to my knowledge. He may have done it and I not know it.

I supposed, until yesterday, that this drawing was in existence, and that M'r Leppens had it. After M'r Nichols died, in the year 1850, I asked M'r Leppens to take charge of M'r Nichols' tools and things which he had over to the shop and dispose of them for me, and he did so. They were disposed of, and I always supposed that this drawing was among the things till yesterday, and that M'r Leppens took it.

I am not much acquainted with Henry Tanner. He called at our house with M'r Sayles, the plaintiff, at Cohoes, New York. They then had some suit with some railroad company. M'r Tanner said to me,
that if the company beat I should probably not get anything, but
332 if they gained the suit they should make me a present or a hand-
some present, I don't remember which were the words. M'r Tanner and Sayles were together, and represented themselves as being together. I didn't know whether M'r Sayles was agent or what he was. M'r Tanner, I think it was, spoke of an interest I had in the brake. I do not think M'r Sayles mentioned it. After this, I was subpœnaed as a witness by the Erie Railroad Company, as I suppose, and went to Albany and testified on a trial there between M'r Tanner and the Erie Company, I suppose. I suppose it was M'r Tanner's lawyer asked me, when I was testifying, if I hadn't been bribed. I said, No, sir. Then he asked me if some one hadn't promised me something. I told him yes, that M'r Sayles and Tanner had. Then he asked me two or three other questions; I don't remember what they were; they didn't concern that at all. Another gentleman then got up, who I suppose was the lawyer on the other side, and asked me what they promised me. I told him they promised me a present or a handsome present—alluding to what had been said to me in my house by them, as already stated. I connected M'r Tanner and Sayles together, because I supposed they were together.

[I become informed, I think in 1855, that M'r Tanner had executed a bond for my benefit to M'r John Durand; that it was left in the office of the Hartford and New Haven Railroad Company, and I obtained a copy of it. I can't tell the date of the bond. After looking at a copy of the bond shown me by M'r Whipple, I see the date is 1851. M'r Tanner made this bond unbeknown to me. I suppose it was given in part to recompense me for my husband's labor on this brake. This was communicated to me from different friends.]

(The plaintiff objects to the testimony included in brackets as incompetent.)

333 I have had some correspondence with M'r Tanner. I wrote to
M'r Tanner some years ago and he wrote a reply, which he asked

me to show to M'r Sayles. I have his reply and will produce it before the commissioner, to be annexed to my deposition.

I took this reply and went to Lansingburgh, and saw M'r Sayles in a store. I showed him the letter, and he read it. He denied taking any of these claims to pay. I think he said he had bought out M'r Tanner, but denied obligating himself to pay what claims there were against M'r Tanner. He said it wouldn't have been wise for him to do that. I couldn't get M'r Salyes to promise that he would pay me anything until I was about leaving. He then said he was soon going South, and if he should succeed well (I suppose in selling this brake, I didn't know) he might give me something himself. He said this bond wasn't given for this brake that they were then using. I should think that there were two or three brakes connected, or parts of two or three brakes, by the way he explained it. M'r Sayles has been at our house several times. I can't say that M'r Tanner was ever there but once. M'r Sayles has taken up considerable of my time in looking at the books and talking about the brake. I kept a hat shop in Cohoes, and he came there. He never made me any compensation for my time and never offered to. M'r Tanner never paid me anything on the bond, nor in any way, directly or indirectly.

Cross-examination by M'r Thomas Sayles, the plaintiff:

I don't remember M'r Nichols drawing any drafts at home while we lived in Hartford, except this one, and one afterwards. He would sometimes, if his tools happened to be at home, draw something for some one to work after, but he generally did that drawing in the shop. 334 I have not talked with M'r Whipple much about this matter. I saw him yesterday, and again to-day for a while. He was out at my place a week ago to-day, I think it was, for a few minutes. I told him he could take my letters and papers and look them over at his leisure. That was the first I knew of this being called up again. I had not thought much about it since my former testimony, except that I was informed by my friends, some weeks after that trial, of M'r Leppen's testimony in court, and I was sorry I hadn't called for that draft, and did think of calling upon him for it, but I did not, and dropped it entirely, and have not thought much about it since until last Saturday.

I should think it was later than October, 1854, but it might have been then that I testified on the Erie Railroad Company. It was my impression it was in 1855. I have never testified before this but on that occasion. It was before that suit in Albany that I saw M'r Sayles several times and talked this matter over and that I saw M'r Tanner. My interview with M'r Sayles at Lansingburgh, when I took M'r Tanner's letter, was since that suit. That conversation was in reference to M'r Tanner's obligations to me, and not in reference to any testimony in any lawsuit in reference to the brakes. The conversation with M'r Sayles at the different times previous to my testifying before was respecting when the brake was put on the car and the car came out of the shop. I supposed the question was then when the car came out with the brake. That was the time of the invention as I then supposed. It did not occur to me that the invention dated from the time of the drawing.

I do remember telling M'r Sayles that my husband, M'r Nichols, while he was drawing this after, and some weeks after, he had commenced it, jumped out of bed one night, slapped his hands and said, "By 335 G—d, I have got it." I was then nearly asleep, and this frightened me, as he had turns of being irrational when he was very unwell. I jumped out of bed, and asked him what in the world ailed him—if he was crazy. He told me to go right back to bed, and he wouldn't be up but a few minutes, or a short time. He said if I didn't he would be obliged to be up till morning. He sat up and was drawing on the draft. I recollect the circumstance very well. The weather that night was quite cold. He took more cold that night. He was quite unwell at the time.

M'r Sayles talked the matter over with me several times previous to my former testimony, and I was pretty familiar with this brake matter, and testified then to the best of my judgment. I was of course a good deal excited at the time.

I testified to all the facts about the brake when I testified in court as I understood them, except that I did not testify anything about the drawing that I think of. I think nothing was asked me about the drawing. If I testified about the drawings, I stated as I understood them then. What I did state about the drawings would be as likely to be as correct then as now, except that I might have brought up some things to memory since, and I have brought several things to my mind what he said about them, and mere particularly about the drawing being so long in the house before he carried it to the shop. I think I did not state in my former testimony that I knew of my husband drawing a plan for a car brake late in the fall of 1846. I don't think the question was asked me; if it was, I don't know how I answered it.

[My husband called the brake he was drawing the double brake, and said it would dispense with one-half the brakemen.]

336 (The plaintiff objects to the clause in brackets as not responsive, the question being whether, if you did testify to a drawing in the former suit, it was not the same drawing which you have testified about now?)

A. If I did testify about a drawing, it was the same drawing as this.

Int. Did you not testify on the former trial that your husband got up the drawing for this brake, in the fall of 1846, in cold weather?

A. I might; I presume that I did; but I don't remember it.

I am sure that M'r Tanner and M'r Sayles were at my house together at the time M'r Tanner told me about making the present. I think M'r Tanner spoke of it, and said "we," and that led me to think that they were together. That is the only time that I think of, when anything has been promised me, except what I have testified to, as to M'r Sayles promised in the interview at Lansingburgh already stated. I never told any one that M'r Tanner had never made me any such offer as that. Of course I did not. I don't recollect that I ever stated that M'r Tanner was not present when the promise was made me that I should have something handsome, if the plaintiffs succeeded. I think that is the only time I ever had such an offer. It is possible that M'r Sayles may have come in and offered something, which I took in that light. I have a faint recollection of M'r Sayles bringing something of that kind up afterwards, but it is nothing that I can rely upon, about M'r Tanner's promise. I think M'r Sayles spoke of it, and spoke of it in the same manner as M'r Tanner had done before, as "we," and I supposed they were interested together.

337 I think I testified on the former trial the same as I have now, in regard to the present that Tanner and Sayles were in, and that they, or he, Tanner, I think it was, made me the offer. I can't tell how long before the former trial it was that this offer was made. I don't know as I could tell within six months. I remember it was to-

wards evening, for it was quite dark in my sitting-room while they were in there.

I don't know that I testified then that it was a year before that the offer was made me. I presume I recollected then nearer the time. I should think I did not say that it was the first time that Sayles called at my house. I should think he had called there before then, but am not positive. I should think the time this offer was made was the only time I saw M'r Tanner at my house, and I am sure that M'r Tanner was there when the offer was made. I should think I did not testify on the former trial that M'r Tanner was not present when that offer was made me. I have no recollection of testifying that no such conversation took place when Tanner was present. I do not recollect of ever having stated to any one that I was frightened by M'r Nichols jumping out of bed and clapping his hands owing to the situation in which I was, but I might have stated so. I was frightened. I might have thought I was in that condition. I was frightened because I thought that he was crazy. I have not told any one that I was then in that condition, and that my child was born four months afterwards. I ought to know when my child was born, day and date. I do not know positively that M'r Nichols had completed this drawing when he took it to the shop, but I supposed he had. He might have completed it at the shop, but I supposed, of course, if he took it off the board it was completed. He took it off the board some days before taking it to the shop. I recollect his
cutting the edges off so that he could get it into his drawer. I
338 don't remember whether he took it off four days or a fortnight
before he took it to the shop. I can't state the time he took it
to the shop. It was some time before I saw it on the car. I cannot state positively how long it was after he took the drawing to the shop before the car came out with the brake on. I think I can swear positively that it was more than four weeks. I cannot swear positively that it was more than six weeks, but I think it was more than that. My husband was quite intimate with M'r Leppens, and I think he would have shown his drawing to Mr. Leppens, when he took it to the shop, before any one else. M'r Leppens used to have charge of the work when he was out. He gave his orders to M'r Leppens. I have often heard him say that M'r Leppens was not a great mechanic. M'r Leppens was foreman under him.

M'r Nichols worked on the drawing at different times up to near the time when he took it to the shop. It may have been two weeks before, but I could not swear that it was two days. As to that I don't remember. I understood from him that the drawing was for the brake. I cannot swear that the brake which was put on the car was not altered or different from the drawing which he took out of the house. He told me that it was the same brake. He didn't tell me that he hadn't altered it.

I cannot give a description of this brake. I can describe it as I have done already, nothing further. M'r Sayles was at my house twice besides the time when M'r Tanner was there with him. I am not positive that it was M'r Tanner. He was introduced to me as M'r Tanner, and I have no doubt it was M'r Tanner. I recollect those two visits distinctly from some circumstances, but I should think he was also there at other times. M'r Sayles was at my house once previous to the
time the Hudson River Railroad was to be tried for this brake. I
339 can't say whether he was there more than once previous to that
time.

When M'r Whipple called a week ago to-day he was there but a short time. We didn't talk over the brake matter much. I handed him the account-book that M'r Nichols kept during those years in Hartford—the same book that I showed M'r Sayles before the Erie suit, and also my papers and letters. I should not think it would not exceed two hours that I have talked with M'r Whipple or any one else since last Saturday in reference to this brake matter.

I can't state how much time was occupied by me in talking with M'r Sayles and others previous to my testifying in the Erie case. I spent a good deal of time in looking at the book and trying to think and recollect, and give M'r Sayles all the information I could in reference to it. I don't know of any one sitting down in the house to converse with me about it, except M'r Sayles and M'r Tanner. It strikes me M'r Fields came and got the book one Sunday evening and carried it away. I should think I spent as much as six or eight hours in all, at different times, with M'r Sayles and Tanner in reference to this brake. M'r Sayles was looking over the book and I was looking over the papers. I supposed he was trying to get at when the car came out onto the road.

Int. Did you not testify, on the Erie trial, as follows: "I knew of my husband's drawing a plan at home of a brake for cars. I should think he drew that plan in the fall of 1846; that was a double brake, as he called it"? and if you so testified, was it true?

A. I don't know but what I did, and if I did, it was the best of my recollection at that time. I do not recollect that I did so testify. I do
not recollect of testifying that "I did not recollect any circum-
340 stance that would show the date any more clearly, but that, to
the best of my recollection, it was in 1846 late in the fall; it was quite cold weather that drawing was made," but I might have said so, not considering or thinking it over.

Int. Did you testify in the case of the New York and Erie road, in 1854, that M'r Sayles told you you should have a handsome present, in case the plaintiffs succeeded in their case; and, further, that that conversation was the first time Sayles was at your house, a year ago that fall, and that no such conversation took place when Tanner was present?

A. I think not. I have no recollection of testifying in that way.

Int. If you did so testify on that occasion, was it true?

A. I don't think it was true, because I think M'r Sayles was there first alone, and afterwards came with the gentleman he introduced as M'r Tanner.

Int. Was that part of it true, that no such conversation took place when Tanner was present, if you so testified?

A. I don't know whether it was or not. I know I testified what I thought was the truth, and perhaps I recollected more distinctly then than I do now.

I do not think that my memory is very good. I do not remember near as well as I used to do. I don't know but what I can remember as well as I could years ago. I never had a very long memory.

Direct examination resumed.

I now produce the letter of M'r Tanner, referred to in my direct examination to be annexed. It is marked "Exhibit F. E. Merwin, U. S. C."

341 My testimony in the Erie case, at Albany, was in the open
court. I think I was on the stand two hours or more. I was very much excited.

Int. Were you confused and bewildered, so that you did not know at times what you said?

(Objected to as leading.)

A. I was very much so.

Int. Do you wish to have it distinctly understood that the facts and dates, as set forth in your direct examination are correct, to the best of your knowledge and belief, notwithstanding the statements in the Erie case?

A. I do, to the best of my knowledge—the best that I can remember, after having considered the whole matter and thought it over. I think it is correct. I supposed, by coming here and talking with M'r Leppens, I could make statements to him so that I would remember positively, so that I could state it as it was. I expected he would produce the drawing, and thought likely the date was on it. I did see Leppens, and talked with him.

Cross-examination resumed:

I learned from M'r Leppens that he hadn't the drawings or that he said he hadn't it. He represented that my husband worked by sticks and strings. I told him that he certainly saw the drawing, and saw it at our house, and I was positive that he had it. We talked it over. I tried to have him acknowledge that he saw the drawing at our house, but he would not. He said he didn't recollect ever having seen the drawing, but that M'r Nichols explained it to him by sticks and strings.

I don't know that he mentioned the time when he saw the sticks
342 and strings. I think he did not. I presume I did try to convince
M'r Leppens that my husband invented it in the spring of 1846, or, rather, I tried to have him convince me. He would not acknowledge that he was convinced. I do not know, I do not recollect, that he mentioned when he thought it was invented. I had this conversation with M'r Leppens yesterday.

SARAH A. ALLEN.

EXHIBIT F.—*E. Merwin, U. S. C.*

BUFFALO, *Nov.* 11*th*, 1856.

MRS. SARAH A. NICHOLS:

I rec'd a letter from you to-day which in some things greatly Surprises me. You speak of a letter from a Mr. Foster having ben before written me, of this I can only say none was ever received by me or it would have ben ansured, but the Language usurd by Mr. Sayles as reported by you is to me beyond all things else suppirising for in the first place, Mr. Sayles is & has Long ben the sole owner of the brake & is collecting money from it I suppose daily & if it was for me to do he knew it was for him to do and not me as in the traid to him was his agreement to me to assined all Claims upon the brake from Every scource *this* honesty on his part should have told you while at the same time he should have explained to you your further position. The writing from me in your behalf was given in view of the brake of Charles B. Turner which was then supposed to be the first invention Except your husbands which had ben made subsequently it was assertained that a Mr.
Bachelder & Mr. Thompson had invented the same thing prior to
343 both Turner and your husband which Cut off both of them and
from Bachelder & Thompson I purchased the rights which I subsequently forfeited & sold to Sayles & it is this brake and not Turners patent that is & has ben sold, this Cut off all Legal Claim which you had from Procedes of any sale made as the one for which the bond was given was not sold but is Dead by reason of the other, this Mr. S. knows

& should have explained. It was my intention however still to have done something for you & I told Mr. S. so and Called his attention to your Case he agreed with me & was of the mind to do, but by the fact of your Testimony in against him on trial of the Suit, I supposed took the other course if indeed he has taken it at all. Now this is the whole of this as I am connected with it. I advise you to take this letter to Sayles and see what if anything he will do & lay the whole matter before him.

Respectfully yours,

H. TANNER.

344 THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.

The deposition of JAMES M. HEBARD, a witness produced and sworn on the part of the defendant, before R. E. Stilwell, commissioner, at the city of New York, on the 24th day of September, A. D. 1862.

(M'r Sayles, the plaintiff, objects to the examination of this witness for the reason that the defendant's time has expired for taking testimony in this case.)

I reside in the city of New York. I am by occupation a railroad agent. I commenced to work for the Hartford and New Haven Rail Company in August, 1845, at New Haven. I commenced work there as a carpenter, and was in New Haven about four months, and removed from there to Hartford, and was employed there at first on a new engine-house. I worked as a carpenter on this new building and a bridge. This was in the winter of 1845 and 1846. When these were completed, I agreed with Willard J. Nichols, who was foreman of the car repairs of said company; that was in April or May, 1846. I worked through the summer of 1846, principally upon trucks for cars; during the winter of 1846 and 1847, most of the time I worked in the old paint-shop, at the same kind of work, trucks, putting in bunters. I left that kind of work late in the winter or early in the spring, it was cold weather, and went into this new engine house and assisted in putting up the shafting.

I helped put up stationary engine. Then I commenced working
345 on engine and locomotive houses, and that was my business principally till I left the road. I was all the time to work under M'r Nichols. I can't tell the time when we commenced talking about the arranging a brake, but it was during the winter of 1846 and 1847.

The first work I done in that old paint-shop—the first I recollect was in arranging rods upon a pair of trucks for a car. These rods we placed at the top of the trucks and made two lines through to connect them with the lever. I made a centre lever of wood of about four feet long. This lever I placed on a box to hold it up between two trucks, as directed by M'r Nichols. Then we placed these wooden rods in line from the brake-levers on trucks over the top of them. Then M'r Nichols said those trucks must be turned round, or alter the levers. This was the first thing laid out to get the length of the lever on the car. I mean the centre lever. Then we had the centre lever made of iron to connect with iron rods, and the rods I oversee the making of. M'r Nichols gave me the direction, and I had the lever and rods made the length, etc. We then put this lever on the centre of the car. I think it was an old baggage-car. It might have been a passenger car. When these trucks were repaired we put them under the car, and changed the levers, took them out, and changed them from the outside to the inside end of the truck. We put on this lever that I got made, and connected by the rods with the levers on the trucks. I had to get new chains to connect the windlasses with the lever.

(M'r Sayles objects to the model being shown at this stage of the case.)

The chain was to connect the windlass with the rods I had
346 made attached to the centre lever, After I got it arranged with the chains and long hooks or rods, there was a number of days while fixing it that it did not work. After making such alterations as M'r Nichols ordered, we tried the brakes. M'r Nichols applied the brakes himself. That is all I remember at this time of the work then done. In applying the brakes and letting them off, time and again we found that the reaction would unhook the hooks from the levers. M'r Nichols found, during the time of these experiments, the centre lever was too short. He then gave directions to have the hooks made from 6 to 8 inches longer. Then we found the centre lever to be too short; it wouldn't give play enough. The strain would come upon the centre lever instead of upon the brakes. So far as that car and the work upon it was concerned the work stopped, and the brake was taken off and laid aside. That was all the work I ever done upon the new brakes. This experiment was done in the winter of 1846 and 1847.

During all that winter we were at work upon a new baggage-car.

These new brakes which M'r Nichols ordered made were put upon this new car. There had to be a new centre lever made. This new brake was perfected on this new car. M'r Nichols directed John Stockbridge to put it on this new car. The idea was to have it put on to this new car. It was the first car he ever built for this company.

(The defendant's counsel now present a model, marked "Model B, E. Merwin, U.S. C.," Nichols' brake, to the witness to be identified as representing the brake as applied to said old baggage-car, pointing out such difference as he may discover, if any.)

347 (Witness continues: This model is not as I put it up. This centre lever was attached to the truck-levers on the inside of the truck nearest the centre of the car, instead of the end, as seen in the model. The short arm of the lever was placed in a jaw of the brake-bar, and the connection of the other bar was made with the fulcrum of the lever, and the same may be said of the other truck, instead of the fulcrum being placed on the bar, as seen in the model. From the circumstance of my working when it is too cold to work outdoors, I worked in the paint-shop when these experiments were made, and I worked at them at different times in the winter of 1846 and 1847. That work was done in some of the months of November, December, January, and February, 1846 and 1847.

Int. Are you sure that none of this work was done in November and December, 1846?

(Objected to.)

A. I am not sure. My impression is it was midwinter. All the draft I ever saw of this brake was a chalk on a board giving the shape of the hooks and lever, how to have them made, and that is the way M'r Nichols described it to me.

These experiments were not carried on in the same shop where M'r Leppens worked as pattern-maker, which was in part of the new engine-house where he worked.

Cross-examination by M'r Sayles, in person, on part of plaintiff:

M'r Nichols, if he had had a draft, would not have been likely to have showed it to me. I did not work from drafts at that time. I never saw a proper draft of anything from M'r Nichols on paper. I
348 cannot swear positive that Nichols made any of those experiments before January, 1847.

Int. Can you swear positive that M'r Nichols perfected the invention of this brake before April, 1847?

A. It is difficult to understand the question. He perfected the plan of it in the winter months of 1846 and 1847. Why I know this is, he had got it all right for the new car. I cannot say that he perfected it before February, 1847.

Direct resumed by M'r Whipple:

Int. Was this brake, after its completion, applied to other cars of the New Haven, Hartford and Springfield road; and, if so, to what extent?

A. I remember very few at this time. It was on two passenger cars and this new car, and was put on baggage cars as they were repaired. I left there late in the fall of 1848. It might have been on more cars when I left, but I don't know. I remember perfectly the appearance of M'r Nichols the first time he tried the brake in bringing up a train. It was early in the spring of 1847, or the spring after I done the work. My impression is it was pleasant weather, but cold; he had an overcoat on, buttoned up. It was his triumphant look that impresses it upon my mind; that is, looked satisfied that he had accomplished what he wanted, as he brought up the train with his brake without assistance from others. I done no work on this brake after I went to work putting up shafting, before alluded to.

JAMES M. HEBARD.

Subscribed and sworn to before me this 24th September, 1862.

R. E. STILWELL,
U. S. Com'r.

349 THOMAS SAYLES
vs.
THE CHICAGO & NORTHWESTERN RAILWAY COMPANY.

The deposition of JAMES MILLHOLLAND, a witness produced and sworn on the part of the defendant before Charles F. Heazlitt, commissioner at Philadelphia, Pennsylvania, on the twenty-sixth day of September, A. D. 1862.

(M'r Sayles objects to the examination of the witness upon the ground that the time for taking defendant's testimony has expired.)

Int. What is your age, residence, and occupation, and what is your profession?

A. I shall be 50 years old the 6th day of next month. I reside in Reading, Pennsylvania. I am a master machinist on the Philadelphia and Reading Railroad, and have been so employed for 14 years on the 1st of August last. Previous to my becoming attached to the Reading Railroad, I was 10 years engaged on the Baltimore and Susquehanna Railroad as superintendent of machinery; now called the Northern Central Railroad.

During this ten years I put a brake on a passenger-car (that is to say, about the year 1843 I put a brake on a passenger-car), which I will describe as follows: It broke upon all the eight wheels from either end of the car; the brakes were operated by means of a drum placed under the car, about the centre; there were connections running from 350 this drum to the levers on each truck, and also from the drum to the windlasses of the car. Under the centre-pin of each truck was suspended a vertical lever with a fixed fulcrum; from the lower end of the lever the connection ran to the brake farthest from the end of the car. From the upper end of this lever, equidistant from the centre of the lever, the connection run to the brake-bar at the end of the car. From the upper end of these levers a connection was made with the drum or barrel under the car between the two trucks, about the centre of the car. From this drum connections run to the windlasses at each end of the car, and by winding up either windlass the brakes were applied to all the wheels at one and the same time.

(Defendant's counsel presents a model, marked "Model C., C. F. H.," to the witness.)

Int. Mr. Millholland, is this model a correct representation of the one which you put upon a car on the Baltimore and Susquehanna road about the year 1843?

A. I think it is, with the exception that the lever under the bolster in the trunk is too near the track. I can't state positively the time it was in use. It was used, however, a considerable time. It was a new thing upon the car, and was not in favor with the brakemen in consequence of it having to be operated by the hand instead of with the foot, as was customary to operate brakes at that time on that road. I can't speak positively as to the time of discontinuance of the use of that brake. I built eight-wheel tenders some time after constructing the brake on the car, about the year 1845 or 1846, I believe. The tenders were built for the locomotives W'm H. Watson and Gen. Taylor. The manner in which these brakes were constructed was to place a lever on each centre-pin in the trucks below the bolster, with rods connect- 351 ing the levers equidistant from the centre of the lever to the crossbars on the brake-blocks, one rod connecting the two levers together at the one end of each lever. Another rod from the end of the lever in the front truck running to a cross-shaft, and connected to an arm on the shaft. On the outer end of this cross-shaft, outside of the tender-frame, the shaft being placed about the middle of the frame lengthwise of the tender, was a long lever attached, which extended to the foot-board of the tender, and by the fireman pressing on the end of the lever operated the brakes upon all the eight wheels equally upon each pair of wheels.

Int. Wherein does the application of this brake to the trucks differ from that seen in Model C, C. F. H., and wherein does the cross-shaft differ from the drum of said model?

A. The levers in the trucks of the tenders were the same, but placed horizontal, and the levers placed in the passenger-car trucks placed vertical. The only difference between the cross-shaft and the drum is that the connection is to an arm on the shaft, which might represent half a drum performing the same duties as a drum itself.

Int. Could this rock-shaft with arms be operated by a windlass, as well as by a long lever at the side of the tender?

A. It could, by fixing an arm on it directly opposite to that to which the brakes are connected, and by connecting said arm to a windlass.

Int. Why did you substitute the long lever for the windlass, as seen in Model C, C. F. H.?

A. Because it was not necessary to operate the brakes but from
352 one end of the tender, and it was the customary method of operating brakes on tenders at that time, and that method is used now to a very great extent.

Int. Could the brakes upon these tenders have been operated from either end, if it had been necessary?

A. They could by substituting a windlass at either end, and attaching them to an arm, placed on the shaft directly opposite to the arm to which the brakes are connected.

(M'r Millholland requests that his last answer be again read to him, and it is so read to him.)

WITNESS. I desire to correct that answer. What I mean to say is, that one of the windlasses should be connected with this arm, placed on the shaft opposite to the one to which brakes are connected, and the other windlass connected with the arm to which the brakes are connected.

Int. Was the use of windlasses to operate the brakes objected to and opposed by the brakemen as a substitute for a lever and treddle for operating the same; and was this a reason for discontinuing the use of the drum-brake, Model C, C. F. H., and its application to the tenders of engines?

(Objected to as leading.)

A. They objected to it on that account, and they thought it was harder to operate than the treddle.

(Defendant's counsel withdraws the last member of the question.)

Int. To what extent were the brakes applied to the tenders of engines when you were upon the Baltimore and Susquehanna Railroad, and since that time?

A. I don't understand the question.

353 Int. To what extent was this brake applied to tenders?

A. I am under the impression it was applied to several tenders on that road. I am not positive.

Int. Up to what date were they in use upon the tenders of that road?

A. I saw one on a tender on that road about six months ago.

Int. Did you, while on that road, connect the rock-shaft brakes in each truck with each other and with the windlass of the car?

A. I did on some of the freight-cars, and connected it with the treddle-brake on one end of the car only, about the time that I put on the passenger-car the drum-brakes operating on the eight wheels of the car at either end.

Int. Will the witness please describe the brake which he put upon a car of the Reading road when he took charge of the machinery of that road?

A. The first, what is called the double-acting brake, operating upon all eight wheels from either end of the car, is what is known as the centre-lever brake, the same as what is called the Tanner patent brake. This brake I applied, to the best of my knowledge, in the latter part of 1848 or in 1849.

Int. In applying this brake, did you consider the centre-lever an equivalent of the drum, as seen in Model C, C. F. H.?

A. I do so consider it.

Int. Is this brake a continuation of the experiments commenced by yourself in 1843 and terminated in 1848 or 1849?

354 A. I consider the brake I put on the passenger-car of the Philadelphia and Reading Railroad in 1848 or 1849 a continua-

tion of the experiments I made on the Baltimore and Susquehanna Railroad.

Int. Is this brake still in use upon the Reading road?

A. It is.

Int. Wherein has it been modified from the first application in 1848? (Objected to by plaintiff.)

A. The centre lever has been used to work in combination with the levers of John Lahay's patent self-acting brakes, for the purpose of operating Lahay's brake by hand. In some cases, in the application of the centre lever, the lever in the truck to which the centre lever is connected is placed next the ends of the car, instead of on the cross-bar, at the two inner ends of the truck.

Int. Defendant's counsel now presents drawings and specifications of a brake, marked "Exhibit D, C. F. H.", and asks the witness if these drawings and specifications correctly represent the brake in question, and says: Will you file this certified copy from the Patent Office and make it a part of your deposition?

A. I think they do represent the brake in question—I mean the brake I put on the Philadelphia and Reading road in 1848 or 1849; to the last member of the question I answer, I will.

Int. What object had you in view in constructing a double brake about the year 1843?

A. My object in applying a double brake to all eight wheels was that I might have the same retarding force on the eight wheels, that if applied to four wheels only would stop the wheels from turning and make them slide on the track, to do which injures the wheels, as it wears flat places in them, and having grades of eighty-five feet to the 355 mile, the brakes were pretty severely used on that portion of the road.

Int. Did you attain the object you had in view in the construction and arrangement of the brakes, of which C, C. F. H. is a model?

A. I did.

Int. Had you desired more power upon the brakes how could you have obtained it in the brake already alluded to?

A. By increasing the size of the drum that the chain is on, connecting with the windlasses; and it could also be increased by diminishing the drum that the chain winds on that leads to the levers under the bolsters in the trucks. The power could also be increased by lengthening the upper ends of the levers under the bolsters in the trucks. The lengthening of the upper ends of the levers under the bolsters in the trucks can be accomplished by bringing the points of connection of the levers nearer the centre upon which the lever works.

Int. Was it regarded as a requisite quality in a brake, in times referred to (1843), to be of sufficient power or leverage to slide or check the wheels when the brakes were applied?

A. It was thought so by some, and left to the judgment of brakemen to operate.

Int. Did M'r W'm Leahy, working under you on the Boston and Susquehanna Railroad about the year 1847, arrange and combine the brakes of both trucks of a car with the levers in the trucks and the windlasses of the car, and operate the same from either end?

A. He did; but I do not remember whether he used a treddle or windlasses at the ends of the car.

356 Int. Is the centre lever in the trucks of Model C, C. F. H., the same as the centre lever applied to the body of the cars on the

Reading road in 1848 and 1849; and, if so, does it perform the same office, to wit, equalize the power between two opposite points.

A. It is not exactly the same as the lever under the body of the car applied to the cars on the Reading road in 1848–'49; that was equal lengths from the centre, and the connections were made between the ends and the centre which ran to the lever in each truck, and the connection from each end of the lever connected with the lever at each end of the car, whereas in the model there is but one arm to the lever where the connections from the drum are attached; and it does equalize the power between two opposite points, that is to say, its performs in one truck what the lever in the centre of the car does between the two trucks.

Int. Did you ever know or hear of the use of a centre lever under the body of the car, as seen in Exhibit D, before you applied it to a car on the Reading road in 1848 or 1849?

A. I have no recollection of ever seeing one in that position before.

Cross-examination by M'r SAYLES:

I do not recollect ever having put the drum-brake like Model C on to but one car. I can't be positive that it was put on in 1843; I think it was about that time; it was several years before I left the road. What was called the rock-shaft brake in between the wheels was the brake usually used at that time upon the passenger and freight-cars on that road. It was worked with a treddle. These brakes acted only upon one truck. I don't recollect what brake was put on the passenger-car when the drum-brake C (C. F. H.) was taken off. I don't recollect whether a single or double brake was put on.

357 I never heard of any complaint of the brake itself (the drum-brake C) not working well.

Albert Fisher was an engineer upon the road at that time. I mean at the time the brake was used on the road. I can't say; I can't recollect if John Yakel was a brakeman on the road at that time. M'r Denmead was employed as foreman in the machine-shop at that time. M'r Isaac Denmead.

I don't recollect who ordered this brake to be taken off the car. I can't recollect at this time whether I did or not; I think it is possible I did; I won't be certain. I can't say exactly what time in 1846 I put the brake on the tender. I am satisfied it was in 1846. I built two engines at the same time, and the engines were commenced in 1845, to the best of my knowledge.

M'r Leahey put on his brake subsequently to my putting on this brake C; but how long after I can't say. I can say positively it was put on as early as 1847, because I left the road in 1848. I left the road the latter part of July, 1848, and commenced on the Reading Railroad on the first of August, 1848. I can't say if it was put on in 1847, but I am satisfied it was not put on later than 1847. I can't say if it was put on prior to July, 1847. I have nothing to govern me as to date or time. I can't say if it was put on prior to October, 1847. I can't speak as to dates.

I cannot testify accurately as to the proportions of the drum-brake, as it was put on about 1843, nor can I say that the proportions are accurately represented in the Model C.

I think the brake I attached to the Reading car on the Reading road in 1848 or 1849 was a great improvement on the single treddle-brake, as used on the Baltimore and Susquehanna road. I can't say positively how many double brakes like the Tanner brake I put on the Read

358 ing road; perhaps eight or ten. I put them on soon after I put the first one on, as I have testified.

I told Leahey he might put his brake on the car, on the Baltimore and Susquehanna Railroad. He asked my permission to try it, and I allowed him to do so. I don't know how long its use was continued. I lost sight of it. I have not seen it, to my knowledge, but I have no recollection of its being taken off. I did not consider it an improvement on the drum-brake I put on; there were too many parts in it.

Int. Could the brakes, as they were attached to those tenders to which you have testified in your direct examination, be operated from either end of the car or tender without some additions being made to the brake apparatus?

No, sir.

I can't say positively how long these tenders were. I should think from eighteen to twenty feet. The lever attached to the rock-shaft must have been seven or eight feet long, and extending along the side of the tender, and must have been three and a half inches wide where it was attached to the rock-shaft and about one and a half at the end; and I should think about three-quarters of an inch thick.

JAMES MILLHOLLAND.

Examination taken, reduced to writing, and by the witness subscribed and sworn to this twenty-sixth day of September, A. D. 1862, at Philadelphia.

CHA'S F. HEAZLITT,
U. S. C.

(Patent omitted; see patent on page 23.)

359 THOMAS SAYLES
vs.
THE CHICAGO & NORTHWESTERN RAILWAY
Company.

The deposition of John C. A. Smith, a witness produced and sworn on the part of the defendant, before John Hanan, commissioner, at Baltimore, Maryland, on the 27th day of September, A. D. 1862.

My name is John C. A. Smith. I reside in the city of Baltimore, State of Maryland. I am fifty-three years old, and my occupation, foreman of the car establishment of the Northern Central Railroad, formerly known as the Baltimore and Susquehanna Railroad. I have been in the employ of said railroad since the year 1861.

I knew James Millholland. He was master of machinery on the said road up to the year 1848. There was a double-acting brake on the said road, put on by M'r Millholland with his direction. It was put on, to the best of my recollection, in the year 1843.

The witness is now shown a model marked "C," James Millholland, September 26, 1862, and is asked if it is a model correctly representing the brake applied by the said Millholland to a passenger-car of the Baltimore and Susquehanna Railroad, as already testified by the witness, and says,

It is.

Int. Please state what you know of the application of a double brake to the tenders of engines on the Baltimore and Susquehanna
360 Railroad, and state the names of the engines to which said brake was applied and the date of application; and who applied said brakes, or caused them to be applied.

(This question objected to, as leading, by the plaintiff.)

Ans. There was a double acting brake applied to engine Watson's tender, and also applied to engine Gen. Taylor's tender, in the year 1846-'7. The Watson's was put on in 1846. The Gen. Taylor's, I am not positive, was put on in 1846, but am positive it was put on early in 1847. They were put on by the direction of James Millholland.

Int. Did this brake apply to all the wheels of the tender at one and the same time, and was it a double-truck tender?

Ans. It did apply to all the wheels at the same time, and was a double-truck tender.

Int. Are you knowing to the fact that one William Leahy constructed and applied a brake to a baggage-car on said Baltimore and Susquehanna Railroad that operated on all the wheels from either end of the car?

Ans. There was a double-acting brake put upon a baggage-car and applied to all the eight wheels put upon by M'r William Leahy, under the direction of James Millholland, which acted from either end of the car. This brake was put on in the latter part of 1847 or the early part of 1848.

Cross-examined:

Int. Was the drum-brake like "Model C," to which you have testified, continued on the road; and, if so, how long?

361 A. I don't know how long, but to the best of my recollection from one year to eighteen months.

Int. Was its use discontinued; and, if so, when?

A. It was discontinued; I don't know the precise time when. The car was taken into the shop in June, 1845, to be rebuilt.

Int. Was this brake removed from said car when it was rebuilt in June, 1845?

A. My impression is it was.

Int. What kind of a brake was put on the car after it was rebuilt?

A. I don't recollect, but am under the impression that the drum-brake was put on, and subsequently a treadle-brake or single brake.

Int. Have you been examined as a witness in regard to this drum-brake previous to this time, and which has been shown to you and is marked "Model C," and have you stated in former depositions that the single treadle-brake was put on to the said car after it was rebuilt in June, 1845?

A. I have been examined in regard to the brake on model marked "C," but don't recollect now that I did state about the treadle-brake being put on, as I have not the evidence given by me at a former time in my possession.

Int. Do you mean to swear that the drum-brake was put on said car after it was rebuilt in June, 1845?

A. I mean to state that is my impression.

Int. Can you swear positive that the drum-brake was put on said car after it was rebuilt?

362 A. I cannot; I only speak from recollection.

Int. What do you mean in your last answer, when you say, "I only speak from recollection"?

A. I am not positive; my memory teaches me so.

Int. Are you positive as to the year the said drum-brake, like "Model C," was first attached to the passenger-car on the Baltimore and Susquehanna Railroad?

A. I am not positive, but speak from memory and circumstances.

James Millholland took a tour to the New England States, and when he returned he applied this brake to the car. I think it was about the year 1843. I have no dates, I speak from memory.

Int. Can you swear that Model C is correct in all of its proportions?

A. It is a correct representation.

Int. In your last answer do you speak from memory alone?

A. I do; from memory and impression.

Int. Can you swear that Model C is correct in all of its detailed proportions?

A. I cannot, in all its details; but so far as I can see and judge, it is a correct representation.

Int. Did the brakes on the tenders to which you have testified, operate from either end?

A. They did not; they only operated at one end.

Int. Please describe the brake, as put on said tenders.

A. They operated by means of levers and connecting-rods.

363 Int. Will you describe the different parts of said brake on said tenders, minutely?

A. It was constructed with vertical levers, to the centre of the track-bolster, similar to Model C. Instead of a drum, there was a horizontal rock-shaft attached to the centre of the tender-frame, with a lever attached to the centre of the rock-shaft, at right-angles. The connecting-rods were attached to the lever on the rock-shaft—to the levers at the centre of the trucks of the outer end of the rock-shaft. At the side of the tender-frame was attached to lever running to the front of the tender, by which means the fireman worked the brake; subsequently, those levers at the centre of the trucks were changed from vertical to horizontal. The levers attached to the rock-shaft were from six to eight inches in length.

Int. Would a brake like that you have stated was put on the tenders be a practical brake for a long passenger-car, and could it be operated by a windlass from either end of the car?

A. It would not be for long passenger-cars; it could be operated by a windlass or lever from either end of the car.

Int. How could it be operated from either end of the car? Describe how it could be operated fully.

A. By extending the rock-shaft to the other side of the frames, attaching a lever to the other side of the rock-shaft running to the other end of the car or tender.

Int. What is the length of the passenger-cars on the Northern and Central Railroad?

A. About forty feet.

Int. How long would that lever require to be in that passenger-car?

364 A. About twenty-odd feet, but on the tender it would require from eight to ten feet, and on our passenger-cars of that day it would require from fifteen to eighteen feet. Our tenders were only eighteen feet long, but a passenger-car at that length, it would be more practicable with a windlass at each end. The witness means to say that with a long lever it would require a longer fulcrum to the short lever on the rock-shaft.

Int. How many passenger and baggage cars were on the Baltimore and Susquehanna Railroad in the year 1845, and how many in 1848-'9, and in 1852?

A. I have no account of how many; there were six passenger-cars, and I think two baggage-cars, in 1845. In the years 1848-'9 there was about eleven or twelve passenger-cars and three baggage-cars. In 1852, about thirteen passenger-cars and from three to four baggage-cars.

Int. What kind of brakes were in general use on the passenger-trains on said road from 1845 to 1853?

A. Foot-treadle brakes, with the exception of this drum-brake, and the Leahy brake. The drum-brake was never attached but to one car, and the Leahy brake to one car. We never had any brakes with rock-shafts attached to passenger or baggage cars on the Baltimore and Susquehanna road.

Int. Can you swear that the brake shown in Model C correctly represents, in all its detail proportions, the drum-brake put on a passenger-car by James Millholland, about the year 1843, as you have stated?

A. To the best of my knowledge it is a correct representation.

365 Int. Did you have drawings or models of the original brake as it was put on said car by said Millholland, or have you seen any model or drawing of the original brakes since that brake was taken off the car?

A. Don't recollect of having seen any drawings or models at the time it was put on, but have seen a model since it was taken off.

Int. What model, and when?

A. I saw a model at one time on a former examination, shown by Mr. Randall and M'r Hubball, in 1859 and 1860.

Int. Was John Yakel a brakeman on the Baltimore and Susquehanna Railroad when the drum-brake was on the car?

A. He was probably when the drum-brake was on the car.

Re examined:

Int. Are brakes like those put upon the tenders of the Wafson and Taylor still in use upon your road?

A. I think there is one, and it has been in general use since 1846, with the exception of change of lever in the truck from a vertical to a horizontal position.

Int. Can you give any particular reason for the discontinuance of the drum or Millholland brake?

A. I cannot, except some of the brakeman were prejudiced against the double brake and preferred the double brake which was easier to operate on by the foot.

J. C. A. SMITH.

366 THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.

The deposition of WILLIAM LEAHY, a witness produced on the part of the defendant, before John Hanan, commissioner, at Baltimore, Maryland, on the 27th day of September, A. D. 1862.

My name, William Leahy. I reside in the city of Baltimore, State of Maryland. I am between forty-seven and forty-eight years old, and my occupation a carpenter, and am now employed by the Northern Central Railroad Company in repairing cars, and have been so employed since 1839, till last April was a year. I know James Millholland. I first became acquainted with him 1839, at the Bolton depot; he was then master-machinist of the Baltimore and Susquehanna Railroad, now the Northern Central Railroad. I know of his getting up a double-acting brake while he was on said road. The brake went by the name of the organ or drum brake. The model now shown to me, marked

"C, James Millholland," is, I think, a correct representation of the drum-brake, and the relation of one part to the other, as far as I can see, is correct.

As far as I can recollect, and it is the impression on my mind, that it was put up in the year 1843. I did design the connecting between two single-acting brakes, so as to form a double-acting brake, and the drawing now shown me, marked "Exhibit G," and thereto annexed, is a correct representation, as far as I can judge, from this rough
367 drawing, and the description of the same on the drawing Exhibit G, is correct.

This brake was applied about the year 1847; it was applied to a baggage-car by permission of M'r Millholland. I think it was in operation pretty nearly a year, and was in operation when M'r Millholland left the road. I think he left in August, 1848. I heard of no opposition to the double brake from the men on the road except one, and he complained that it hurt his breast. The majority of the brakes on that road were at that time single-treadle brakes, worked by the feet instead of the arms. I heard no one say that they preferred the treadle-brake to the double brake, except the one man above alluded to who said it hurt his breast.

Cross-examined:

I think I put the brake described in Exhibit G on the cars in the fall of 1847. I never put it on any other car. I think when that brake was taken off the cars, a single-acting treadle-brake was put on in its place. The reason I heard why it was taken off was that it hurt that brakeman's breast; the reason this was put on was that the single-brake was too powerful, it slid the wheels. M'r Millholland told me to keep the car in till he could devise a means to connect the brakes of the two trucks so as to form a double-acting brake. I called upon him twice to devise the means; he told me he was too busy then and to wait. I then went down to the car and thought of those two connections, that is, of connecting the two single brakes together, and then informing M'r Millholland of my plan, which he approved, and told me to put it on. I did not consider it an improvement on the drum-brake. I don't know why the drum-brake was not put on if they wanted a double-brake. I
368 cannot swear that Model C is correct in all its detailed proportions. I cannot swear positively what year it was put on the car. I cannot swear that the brake on Model C is correct in all its proportions. I don't know that the brake in Model C was ever put on more than one car. I think the single-treadle brakes were in general use on the Baltimore and Susquehanna Railroad up to about the year 1853. I think they had but five or six passenger and baggage cars running in 1843, and may be six or seven in 1845.

I cannot swear positively that they were not running more than ten passenger-cars when they abandoned the Millholland brake. My impression is that the same drum-brake was put on the car after it was rebuilt. I don't think it was kept long on after the car was rebuilt.

I have been examined as a witness before this in regard to this drum-brake.

I do not recollect having said that the single-treadle brake was put on the car when it was rebuilt. It was my impression that the drum-brake was put on when the car was rebuilt, but I am not positive.

I think John Yakel was not a brakeman when this drum brake was first put on, but it was before it was taken away. I can't swear positively that he was not there when the drum-brake was first put on.

WILLIAM LEAHY.

368½ THOMAS SAYLES
vs.
THE CHICAGO & NORTHWESTERN RAILWAY Company.

Exhibit No. 5. Supreme Court record.

W'M H. BRADLEY,
Clerk.

369 EXHIBIT E.

Circuit court of the United States for the northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO & NORTHWESTERN RAILWAY Company.
} In equity.

Defendant's new proofs.

371 Circuit court of the United States, northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.
} In equity.

Testimony taken on the part of the defendant for final hearing, by R. E. Stilwell, examiner, &c., under the 67th rule of the Supreme Court of the United States.

WEDNESDAY, *July* 31*st*, 1867.

Present, S. M. Whipple, esq., counsel for defendant; Thomas Sayles, esq., counsel for complainant in person.

EDWIN LOCKWOOD, called and sworn as a witness on the part of defendant, deposes and says:

(The plaintiff in person objects to the taking of testimony, on the ground that it is illegal, as the testimony is not set out in the defendant's answer.)

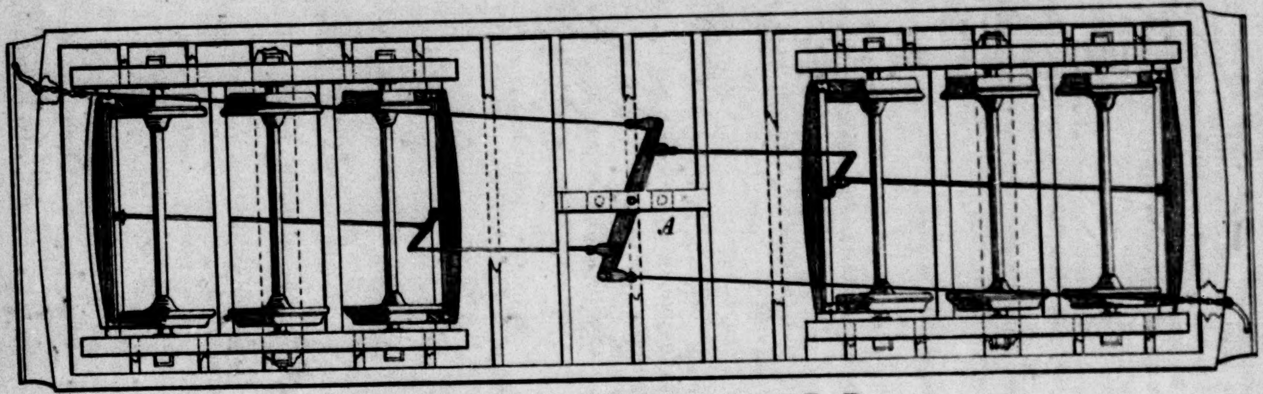
372 Q. 1. What is your name, age, residence, and occupation?

A. Edwin Lockwood; 56 years of age; I reside at Bordentown, New Jersey; and am the master car-builder of the Camden and Amboy Railroad Company, and have been employed in that capacity thirty years.

Q. 2. During that time have you made any experiments in railroad car-brakes? And if so, state the result of those experiments; and what kind of a brake you finally adopted; and when did you put such brake in use upon a car on the Camden and Amboy Railroad; and what are the circumstances connected with the putting into use said brake; and is the model here presented, marked "Car John Tyler, Camden and Amboy Railroad, Exhibit A," a correct representation of said brake?

A. I have made a great many experiments in car-brakes in various forms; I tried brakes by clamping the wheels on both sides on four-wheel, eight-wheel, and twelve-wheel cars; I have also tried experi-

EXHIBIT A.



Car "JOHN TYLER," Camden & Amboy R. R.,

R. E. STILWELL, Examiner, &c.,
July 31, 1867.

ments with brakes by applying a block on the rail between the wheels, the object being twofold—both to save the wheel from getting flat, and to stop the speed of the train. We finally adopted a cross-lever brake attached to the body of the car, and the trucks attached to that in the form shown in model, "Exhibit Car John Tyler, Camden and Amboy Railroad, marked A." We put the brake on the car from the first of May to the tenth of June, 1843, and the car was put on the road at that time, and conveyed John Tyler, then President of the United States, on his tour east to the celebration of the Bunker Hill Monument. The car was ever after that called John Tyler, by lettering it on both ends inside the car.

Q. 3. How do you determine the date referred to in your answer, to wit, the 10th of June, 1843?

A. From the engineer's time-book of that year, dated Saturday, June 10th, 1843, I find this entry: "Charles Yundt, engineer; John Holland, fireman; special train, with the President, Bordentown to Camden and back, and to Princeton, and then back to Camden." I also find in the car-book in the shop this entry: "(Tyler) car 19, twelve wheels,
373 P. & T. R. R. Co., 1843 (rebuilt January, 1849). It was an old car when brought there from the P. & T. R. R. Co.; it was brought there in 1842, and rebuilt and put on the road in 1843, as represented in Model Exhibit A. I mean the running-gear and brakes were the same as in Model Exhibit A.

(Books objected to without they are put in as exhibits.)

Q. 4. How long were said brakes in use upon said Tyler car?

A. From the time they were put on, in 1843, until the car was destroyed, some two years ago last fall, as unfit for use.

Q. 5. Was the brake referred to applied to other cars on the Camden and Amboy Railroad; if so, to what extent?

A. They were applied to other cars. We also applied it to a crate-car for carrying baggage, which was put on directly after that. We continued then putting it on all our cars for passenger and baggage use as we could spare them off the road. Our cars at that time were very limited, and when we took any of them in for repairs we applied the brake.

Q. 6. Are the cars of the Camden and Amboy Railroad at the present time equipped with such a brake as is represented in Exhibit A, and has such brake been in use continually on said road from the year 1843 to the present time?

A. They are so equipped, and have been in use on said road from 1843 to the present time.

Cross examined by M'r Sayles:

Cross 7. How soon after this brake was put on the Tyler car was it put on other cars?

A. As I said before, I cannot give exact dates, but we put it on in succession as fast as the cars came in for repairs.

Cross 8. State, as near as you can, when it was put on other cars.

374 A. I cannot fix any dates at all.

Cross 9. Was it a month after or six months after?

A. You have my answer before; I cannot fix dates other than I have stated before. They were put on in succession as they came in.

Cross 10. Was it put on any other cars during the year 1843?

A. Yes, I should judge so, on a number, but am not positive. I judge so from the fact of its being an effective brake.

Cross 11. About how many were put on during the year 1843?

A. I cannot answer nearer than I have done. I have answered to the best of my knowledge.

Cross 12. Will you swear that said brake was put on any other car during the year 1843?

A. I will swear, to the best of my knowledge and belief, there was.

Cross 13. About how often did passenger and baggags cars come into the shop for repairs at that time?

A. That depended upon circumstances. If a car had a broken wheel or shaft, or a hot box, or any small casualty, a car would come in and go out again in an hour.

Cross 14. Did you continue to put on brakes like Exhibit A on all your passenger-cars from 1843 to the present time, when you put double brakes on the cars?

A. Yes; we have continued to put the same brakes on. I have not put on any other brakes. Other parties have put on brakes under my protest.

Cross 15. Who put on any other brakes, and what brakes, and when were they put on?

A. Stevens put his brake on and Hodge put his brake on. I think they were put on after 1850; I can't tell the date. They were put on on the plea that we were infringing their patents, and they claimed that they had a right to the brake we were using, and I was directed to put them on by the superintendent, and if we were infringing, we would compensate them for it.

375 Cross 16. Please tell, as near as you can, how many of the Stevens brakes and how many of the Hodge brakes were put on.

A. I think there were two of the Stevens. How many of the Hodge I cannot say; there were two or more of the Hodge.

Cross 17. Can you tell whether the Stevens or Hodge brakes were put on in 1850 or 1851?

A. I told you as near as could. I cannot give dates; I have no data.

Cross 18. Do you not keep a record of the dates of putting on improvements on cars of any kind?

A. No, sir.

Cross 19. Are you acquainted with the construction of what is known as the Hodge and Stevens brakes?

A. Well, I think I understand the Stevens brakes as having four upright levers—two on each truck—and a connecting bar running from one pair of wheels to the other in each truck, and a connecting rod running from truck to truck, and then a rod running from end to end of the car for the appliance of the brake. The Hodge brake has two cross-levers hung on swinging or moving fulcrums. There is one upright lever to each truck, and a connecting rod running from the block on one pair of wheels to the block on the other; and also a connecting rod running from the cross-lever to the brake-shaft on each platform of the car.

Cross 20. How long were the Stevens and Hodge brake kept in use on the road?

A. I think there are some of them in use yet, the company having purchased the right to use them.

Cross 21. Which of the three brakes—the Hodge, the Stevens, or the one like Exhibit A—did you consider the best brake?

A. The one on the model A I consider the best.

Cross 22. Why do you consider it the best?

A. Because it is the cheapest and most effective.

Cross 23. After the trial of all three of them, did you consider one like Exhibit A applied the power as equal, or more so, to the wheels than either of the other two brakes?

376 (Objected to as irrelevant and as not in the direct examination.)

A. I consider that as the most effective brake.

Cross 24. Which of the three brakes in question do you consider applies the power most equal to the wheels of the car?

(Objected to, as the witness is not introduced as an expert.)

A. I think the brake in the model Exhibit A is the most effective brake.

Cross 25. Do you think the wheels of a car will last as long, or longer, when brake like Exhibit A is used or when either the Hodge or Stevens brakes are used, from the experience you have had with all of them?

A. Yes.

Cross 26. When did your company purchase the right to the Hodge and Stevens brake?

A. I cannot tell. I have no knowledge about it.

Cross 27. Did you ever learn from the officers of your company that they had purchased the right to use the Hodge and Stevens brake?

A. I heard M'r Van Ransaeller (the superintendent) say that he thought we had purchased the right to use the Hodge and Stevens brake.

Cross 28. About what time did he tell you this?

A. About two months ago we were talking about the brakes, and M'r Van Rensselaer told me that he thought that they had purchased the right to use the Hodge and Stevens brake.

Cross 29. Do you know whether that company ever bought the right to use what is known as the Tanner brake?

A. I do not. I don't know anything about it.

Cross 30. Did you ever learn from any of the officers that they had?

A. No. I heard you say they had.

377 Cross 31. When did you hear me say they had?

A. From four to six weeks ago.

Cross 32. Did you never hear so before?

A. Yes, sir; I heard so at one time when M'r Whipple was there, they had bought all the brakes.

Cross 33. When was that?

A. It was previous to M'r Sayles being there.

Cross 34. How long previous to my being there?

(Counsel for defendant objects to this cross-examination as being no way involved in the direct examination.)

A. Perhaps a month, perhaps more; I can't say.

Cross 35. Did you not hear that your company had bought the right to use the Tanner brake before M'r Whipple was there, a few months ago?

A. I heard M'r Van Rensselaer say that he believed he had bought all the brakes, but he did not know whose they were; this, I should think, was about a year ago.

Cross 36. Do you recollect M'r Sayles, complainant, calling at your shop, in Bordentown, the latter part of July, or the first of August, 1852, and showing you a copy of the said Tanner patent for car-brakes?

A. No, sir; I don't think there was anything of the kind ever transpired?

Cross 37. Do you mean to say that nothing of the kind did transpire about that time?

A. He never showed me a model at that time, or a drawing, that is what I mean to say, nor any other time to my certain knowledge and belief.

Cross 38. Did M'r Sayles call on you at your shop in Bordentown in the winter of 1853 and 1854, and show you a copy of the said Tanner patent, and make enquiries of you about a certain double-acting brake being put up on a car in Jersey City (having a central lever, similar to the Tanner patent) by Joseph F. Talsom, called the Isaac New-Stanley brake, in 1841?

A. I have no recollection of anything of the kind, and don't
378 think it transpired, or I should have recollected about it.

Cross 39. Did you not tell said Sayles at that time that you knew nothing about such brakes being put on at Jersey City at that time?

A. I have no knowledge of anything of the kind.

Cross 40. Did you tell said Sayles at that time that you did not think it could have been used long on a car running from Jersey City to Philadelphia or Camden, or you would have known it?

A. No, sir; I did not tell him so then nor at any other time.

Cross 41. Did you not tell Sayles at that time that your company had purchased the right to use the Hodge brake?

A. I did not tell him so then nor at any other time, and never saw him to my knowledge until from four to six weeks ago, and then I told him that I had no recollection of him; he then undertook to tell me about things which had transpired years ago; I told him that I had no recollection of any such transaction; I told him that I did not know him; I asked him who he was, and he said his name was Sayles, and that he was the man who owned the patent brake; and then he asked me if I didn't recollect his coming to Bordentown at the shop with a brake, and through my recommendation M'r Van Rensselaer had it put on the car, and through my recommendation, he said, it was put on; I told him that nothing of the kind had transpired; then he said I must be mistaken, and he wished to know if he couldn't do something for me to say that I was mistaken as to date; he said if I could that would leave a doubt as to the date of putting the brake on the car; he said it was worth hundreds of thousands of dollars to him, and he had a suit pending at Chicago for $40,000, and had it not been for the model called the John Tyler, Exhibit A, it would have been decided in his favor; in response to him, I said I was open to conviction, and if he could show me I was wrong I would own it, but I was sure I was right.

(All the answer objected to after the words "no recollection of him.")

379 Cross 42. Did not M'r Sayles call on you at your shop in Bordentown in the fall of 1855, to get a settlement with your company for the use of the said Tanner patent, and did he not claim to you that the brakes you were using on your cars infringed the said Tanner patent?

A. Have no recollection of any such transaction.

Cross 43. About how many cars, as near as you can tell, did you have the Hodge brake on in 1855?

A. I can't tell; I think I answered that question once before as near as I could tell.

Cross 44. About how many passenger and baggage cars did your company have in 1855?

A. There were 77 all told in 1856, and 106 cars in 1864.

Cross 45. How many were there in 1843, and in each year after to 1856?

A. Nineteen, and the John Tyler car was the nineteenth car; we made three in 1845, two in 1846, seven in 1847, four in 1848, two in 1849, four in 1850, four in 1851, five in 1852; can't tell from 1852 to 1856.

Cross 46. What kind of brakes did you use on your cars previous to putting on brake like model Exhibit A?

A. A number of different kinds; I could not specify them; as I said before, we have been experimenting with different kinds of brakes, both on wheels and on the rail.

Cross 47. Did you use the single treddle brake on some of your passenger trains?

A. Yes; we used the treddle, the lever, and the crank.

Cross 48. On what proportion of the cars did you use the treddle brake?

A. I can't tell anything about it.

Cross 49. Did you put brakes like model A on all new cars for passenger-trains you built after June, 1843?

A. I think we did; I can't say positively.

Cross 50. About how many cars did you have said brake on, as near as you can tell, in 1850?

A. I can't say; I know we had it on two; how many more I can't say.

Cross 51. Did the cars that had these brakes on like Exhibit 380 A, run on the regular trains from Philadelphia to Jersey City?

A. Yes, sir, and on the trains to Amboy also.

Cross 52. Did you see a brake similar to model A, that was put on to a car in Jersey City on the New Jersey Railroad & Transportation Company, about 1851?

A. Not that I have any recollection of.

Cross 53. Did the cars of your company and the cars of the New Jersey Railroad & Transportation Company run on the same routes through trains from Jersey City to Philadelphia?

A. No, sir, on separate trains; each company made up their own train, but run on the same road.

Cross 54. If your cars needed repairs when at Jersey City, were they repaired there by the New Jersey Railroad & Transportation Company from 1842 to the present time?

A. I think not; at the first part of their running there they did no repairs at Jersey City; for the last fifteen years they done all slight repairs; when there was any work upon them of any account we done it at our shop at Bordentown.

Cross 55. Have they not done more or less repairs on your cars in Jersey City for twenty years or more?

A. I think not; but cannot say positively, nor don't pretend to.

Cross 56. Did the car John Taylor run on the route from Philadelphia to Jersey City from June 10, 1843, to 1852?

A. I can't tell that; we had several lines running; she may have run from Jersey City to Bristol, or from Camden to Amboy, or from Camden to New Brunswick. They changed passengers from New Brunswick at that time, and the cars did not run through to Jersey City.

Cross 57. Where did the crate-car you spoke of run?

A. I can't tell; it run through from Jersey City for some time, but can't tell when.

Cross 58. Which was the principal passenger-route from New York to Philadelphia in 1843 and thereafter?

A. I don't know.

Cross 59. Was there more passenger-trains and cars run through to Jersey City than to Amboy in 1843 and 1844?

381 A. I don't know; I had nothing to do with running trains.

Cross 60. How many times was the car John Tyler in your shop for repairs from June, 1843, to 1852?

A. I can't tell.

Cross 61. Was it in your shop for repairs several times during that period?

A. It was there once, I know; it was rebuilt in 1849.

Cross 62. You say you built three new passenger-cars in 1845; now, are you quite sure that a brake like Exhibit A was put on those cars when built?

A. I can't say positively.

Cross 63. Have you any distinct recollection when said brake was put on any car after June, 1843, to 1850?

A. Yes, sir; I think it was put on several; I am sure it was put on a baggage or crate car.

Cross 64. What circumstance is there to make you sure of putting it on a crate-car at any particular time?

A. I can't point out any particular circumstance; the crate-car at that time was the main car in the train for applying the brakes; the man rode on that altogether.

Cross 65. Then that is the reason you have for thinking the brake was on that crate-car before 1847, is it?

A. I couple with it that, as it was necessary to have the brake on the forward end of the train, where the man sits to overlook the train.

Cross 66. Why should that lead you to believe that the double brake was on that crate-car, while other crate-cars had then the single brake, and had had them on ever since the road commenced running?

A. At the commencement of the road we commenced with four-wheel cars, and that was the first eight-wheel car that was put on the road. That car was brought, also, from the Philadelphia and Trenton Railroad to the Bordentown shops, and there fitted up when the company bought out that road.

Cross 67. Did that crate-car run through to Jersey City between 1843 and 1847?

A. I don't recollect.

382 Cross 68. You have no distinct recollection of any particular time when said double brake was put on that crate-car, have you?

A. I can't specify any time.

Cross 69. Can you specify any time when said double brake, like Exhibit A, was put on any other car on the road between June, 1843, and 1847?

A. I can't specify any time.

Cross 70. Can you specify any year when said brake was put on a car between June, 1843, and 1847?

A. They were put on more or less every year from that time to the present.

Cross 71. Do you mean to say, then, that you put said double brake on a car in 1843, after June of that year?

A. No, sir; I do not, because I don't know. That car was an experiment, and I don't know how long it run before we commenced putting them on other cars.

Cross 72. Will you swear, positively, that you put said brake on any car in 1844?

A. I cannot; but I am under the impression that we did.

Cross 73. Can you swear that you put any of said brakes on in 1845?

A. I have said, heretofore, that I could not specify any particular time.

Cross 74. Can you swear, positively, that you put any of said brakes on in 1846?

A. I answer as I did before, that I cannot specify any particular time.

Cross 75. Can you swear that you put any of said brakes on in 1847?

A. As I said before, I cannot specify any particular time; I believe that we put them on from 1843, to the present time.

Q. Do you mean to swear, positively, that you put said double brake on any car from June, 1843, to 1848?

A. You have had my answer before.

Cross 77. What do mean by your last answer?

A. I don't mean to swear positively, as I said before; I believe that we put them on every year from 1843 to the present time.

383 Cross 78. Did you mean to swear, positively, that said brake was put on that crate-car before 1847?

A. To the best of my knowledge and belief it was; I think that is as far as a man ought to go.

Cross 79. Is it possible for you to be mistaken in the time?

A. It is possible for us all to be mistaken.

Cross 80. Did you mean to swear, positively, that said brake, like Exhibit A, was put on the car John Tyler in 1843?

A. To the best of my knowledge and belief, according to the testimony given.

Cross 81. Is it possible for you to be mistaken about that brake being put on that car at that time, and not at some future time, when that car was repaired or rebuilt?

A. I think not.

Cross 82. Do you mean, then, to swear, positively, that said brake was put on that car, John Tyler, in 1843?

A. To the best of my knowledge and belief.

Cross 83. Will you swear, positively, that the car John Tyler had said double brake on when it left your shop the first time you rebuilt the car and before you run it on your road?

A. To the best of my knowledge and belief it was, as I have sworn, to the best of my knowledge and belief; and would not go beyond that in case of life and death.

Cross 84. Was there any other car on your road called the John Tyler car between 1842 and 1850?

A. Not that I know or ever heard of.

Cross 85. Did not this car, called the John Tyler car, run to Jersey City, after June, 1843, with the single brake on it?

A. Not that I ever had any knowledge of.

Cross 86. Will you swear, positively, that it did not?

A. No; I will not. The brake might have been uncoupled and then it becomes a single brake.

Cross 87. Will you swear, positively, that that car, John Tyler, did not run on your road after June, 1843, with what is generally known as a single brake on?

384 A. To the best of my knowledge and belief, it did not.

Adjourned to the 1st August, at 11 a. m.

THURSDAY, *August 1st*, 1867.

Present, counsel for the respective parties.

Cross 88. Is it not possible for you to be mistaken about putting said double brake on the John Tyler when you first rebuilt it in 1843?

A. I think not, coupling it with all the circumstances.

Cross 89. What were the circumstances?

A. I have repeated them in this evidence two or three times, I think.

Cross 90. You say, in answer to interrogatory 79, it is possible for us all to be mistaken; does that answer apply to question 88, the first question this morning?

A. I don't think it does, under the circumstances; I having data to be governed by.

Cross 91. What data have you to be governed by?

A. From the time the car went out of the shop, and taking the President over the road.

Cross 92. Could not the car carry the President over the road as well with the single brake on?

A. As far as the carrying part is concerned, it would not make much difference whether it had any brake on.

Cross 93. What, then, has the President to do with the circumstances of your putting that brake on at that time?

A. Nothing, further than to establish the date.

Cross 94. How could that establish the date?

A. You will find that in my evidence, given heretofore.

Cross 95. What part of your evidence given heretofore do you refer to?

A. At the time the car came out of the shop, and taking the President over the road.

385 Cross 96. Is that all the reason you have for thinking the brake was put on in 1843.

A. That is what I take my data from.

Cross 97. Had you seen or heard of a brake like Exhibit A, before you put that one on the Tyler?

A. I never had.

Cross 98. You, then, claim to be the inventor of it, do you?

A. I do not make any claim whatever.

Cross 99. Who did invent it, then?

A. I don't know as it was an invention; it was an experiment.

Cross 100. Was that brake put on the John Tyler just like the Model Exhibit A?

A. I can't say that it was just like it; the principle was the same; there may be some difference in the minute parts. The coupling and the brakes are the same.

Cross 101. How do you know it was the same?

A. From the fact of its being in use at the present time.

Cross 102. Do you now remember distinctly the particular construction of that brake as put on the car John Tyler, at first?

A. To the best of my knowledge and belief it is the same as we are still using. As I said before, there may be some little difference in the minutiæ.

Cross 103. You have said that you had experimented a great deal with brakes; is it not possible for you to have changed or modified that brake after it was first put on the John Tyler?

A. Not materially, since we tried the cross-lever for coupling the brakes.

Cross 104. How many years ago since you think you put said brake on the John Tyler?

A. You can easily count up from 1843 to the present date.

Counsel for the defendant objects to any further examination as to questions which have already been answered, and to the introduction of any matter not involved in the direct examination.

Cross 105. It is then 24 years or more, is it?

386 A. I don't say anything more about it; it is a matter of calculation. I date from 1843.

Cross 106. Is your memory remarkably good?

A. It is as good as the generality of men.

Cross 107. Are your passenger and baggage cars now made with the side sagging down like Exhibit A?

A. The cars that I am now building of the Camben and Amboy Railroad are not; they have straight sides.

Cross 108. How are the cars you are now using?

A. They are made of different shapes and different finish from the cars we formerly built.

Cross 109. How is the majority of your passenger-cars as regards the sagging of the sides?

A. I don't think that has anything to do with the brakes. The car-body you can construct in any form you like. We have built cars with deep sills to give them strength and to obviate any difficulty of putting a strengthening-piece inside the car, as we thought it would be attended with difficulty in the car rotting by the water getting behind it, and we find by actual experiment we can overcome that difficulty by putting a water-table back of the sub-sill, and between the pillars, and then putting them together with white and red lead to keep the water from penetrating, consequently we have no rot.

Cross 110. From 1842 to 1850 were your cars built with the sagging down, like the model Exhibit A?

A. The first car-body built in the form of Exhibit A was built in 1849.

Cross 111. Do you know where the model Exhibit A was made?

A. It was made at Bordentown, in the Camden and Amboy shops.

Cross 112. Under whose direction?

A. Under the direction of Robert Van Renssalaer.

Cross 113. Who made it?

A. Three or four different individuals worked on it.

Cross 114. Did you give them any directions as to how to make it?

A. I did according to instructions from Robert Van Raussalaer.

387 Cross 115. What instructions did M'r Van Rensalear give you?

A. He directed me to make it in conformity with the John Tyler as near as I could; I told him I could not do that, as the John Tyler had a narrow sill; there was not strength to hold the body up, as the sills would sag; he did not apprehend that it would make any difference what form the sills were, as the car-body had nothing to do with the brake.

Cross 116. Did you give the man who made the model instructions to arrange the brake as is shown on said model?

A. I told him to make the brake conform to the brake we have in use as far as the connections are concerned; the former brake-blocks were wood, being leathered, but latterly we use iron altogether.

Cross 117. What kind of a brake did the car John Tyler have on when it was first brought to your shop?

A. That I have no distinct recollection of; I can't say whether it had any on or no; I suppose it had some kind of a brake on.

Cross 118. What kind of brakes were generally used on the Philadelphia and Trenton cars before your company bought them; were they not the single-treddle brake generally?

A. I can't tell; I had no knowledge of the cars at all, as we had no connection with the road before then.

Cross 119. Did not their cars come to your shop for repairs after your company bought them?

A. They did after our company bought them, and we rebuilt them, but not before.

Cross 120. When did your company buy them?

A. That I have no knowledge of.

Cross 121. Was it before or after you first rebuilt the John Tyler?

A. I should judge it was before; if it had not been, the car would not have come to the shop.

Cross 122. Then, sir, have you no recollection as to what kind of brakes were on those cars when they come to your shop to be rebuilt or repaired?

388 A. I have no data or reference to the cars, until we put the Tyler on the road.

Cross 123. Do you think any of these cars had on the treddle-brake when they came to your shop first?

A. I think I have answered that question once before.

Cross 124. Why do you recollect more distinctly the John Tyler car than of any others?

A. I think I have answered that question before.

Cross 125. Question repeated.

A. Coupling the circumstance of putting the car on the road and taking the President in it on the 10th of June.

Cross 126. How long did you use the brake like Exhibit A, before you became satisfied that it was a great improvement on the brakes you had previously used?

A. I was satisfied from the moment of its first application.

Cross 127. Then, if you had used it a year or two before building other cars, you would, of course, have been likely to have put it on other cars when they were built, would you not?

A. No, sir, that does not hold good, for the reason that I have had the priviledge of trying experiments for the last thirty years, subject to the instructions of the superintendent whether he would adopt them or no; as we tried experiments of different things, and had them on the road in use to my satisfaction, but had not authority to adopt them only by instructions from the superintendent.

Cross 128. Did you have authority from the superintendent to adopt the brake like Exhibit A; if so, when?

A. If I had not I should not have put it on; I can't give any specified time when he authorized me to put them on.

Cross 129. Was it during the year 1843 or 1844?

A. You have my answer before; I can't specify any time particularly.

Cross 130. Do you think it was within three years after the brake was put on the John Tyler?

A. I think I have answered it before.

389 Cross 131. Have you now any distinct recollection of putting that brake like Model A on the car John Tyler in 1843 aside from the circumstance of the President's riding on that car about that time?

A. I say, as I said before, that to the best of my knowledge and belief that that brake was on said John Tyler in June, 1843.

Cross 132. Question repeated.

A. I tell you, I have no way of going beyond my knowledge and belief.

Cross 133. Do you mean to be understood that all of your answers to previous questions, both direct and cross, are from your knowledge and belief, and not positive?

A. To the best of my knowledge and belief, accompanied with the circumstances which transpired at the time, and of which I have data.

Cross 134. How do you know that the engineer's time-book you spoke of yesterday is correct?

A. I believe it to be correct from the deportment of the man; he has been the timekeeper of the company ever since 1840.

Cross 135. Do you know that those dates were written in the book at that time?

A. I don't know it to my certain knowledge, but you can satisfy yourself of that by calling the timekeeper.

Cross 136. You said yesterday that you had built thirty-one new cars for passenger-trains from 1844 to and including 1852; now, do you think, or is it your impression, that you put on brakes like Exhibit A on all those cars when you built them?

A. I think I stated yesterday that we put on all those years; that is my impression still; I don't think I put them on all the cars, for the reason that I did not have instructions so to do.

E. LOCKWOOD.

Subscribed and sworn to before me this 1st day of August, 1867.

R. E. STILWELL, *Examiner, &c.*

390 GEORGE W. THOMPSON, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. George W. Thompson, 47 years of age, reside at Bordentown, New Jersey, and am a tin, sheet-iron, copper, stove dealer, &c.

Q. 2. Have you occupied any position in the city government at Bordentown and in the State legislature of New Jersey; if so, when did you hold such position or positions?

A. I have been mayor of Bordentown for six different terms; I have been six years a member of the board of freeholders representing that county from our district, and have been a member of the legislature of the State for two successive terms, and am a member at the present time.

Q. 3. Have you had business relations with the Camden and Amboy Railroad Company; if so, state in what way, and to what extent, and how long?

A. I have had connection with them, in the way of business, since 1841 and 1842; I have done the principal part of the work on their cars, the tin trimmings, stoves, roofing, ventilators, lanterns, blowers, zincing, and water-tanks, waste-boxes, journal-boxes, &c., &c., up to the present time.

Q. 4. Do you know anything about a car called the John Tyler; if so, did you have anything to do in furnishing the trimmings for said car?

A. Yes, sir; I furnished all the trimmings for it and done the work myself.

Q. 5. While so engaged, did you notice what kind of a brake was applied to the said Tyler car at the time you did this work?

A. I did.

Q. 6. Is the brake, as seen in Exhibit A, a correct representation as applied to the said car called the John Tyler?

(Objected to as leading.)

391 A. It is, as near as I can remember.

Q. 7. Was said brake a double-acting brake?

A. It was.

Q. 8. Did it have a centre lever attached to the body of the car, equidistant from the trucks?

A. I think it had; I don't know how near the centre it was; it was similar to Exhibit A.

Q. 9. And did this centre lever so combine the brakes of the two trucks and the windlasses of the car as to enable the brakeman to operate both brakes of the trucks from either end?

(Objected to as leading.)

A. It did; and it was the first one I ever saw that done it.

Q. 10. In what year did you see this brake?

A. It was in June, 1843.

Q. 11. How do you determine the date? Please state the circumstances connected with the matter of your first knowledge of it.

A. We all had more or less fancy work to do on it. The President was to go over the road in it to the celebration of the Bunker Hill Monument, and it was supposed to be the greatest car in the United States, or ever would be, at that time; the date was the 10th of June, 1843, when the car was used for this purpose; the celebration was on the 17th of June, I think; I got the date of the 10th of June from the books of the company; I knew it was in June, but did not remember the date.

Q. 12. Was it a favorite car among the conductors of the Camden and Amboy road; and, if so, why?

A. Well, sir, they all wanted to run it, and it was considered at that time what we would call at the present time a silver-palace car; it was way above all other cars, and had all the improvements of the day; it had twelve wheels, spiral springs; it had the lever brake put on, and worked at either end of the car, similar to Exhibit A.

392 Cross-examined by Mr Sayles, the plaintiff, in person:

Cross 13. Did you notice this John Tyler car often after it commenced running in 1843?

A. Yes, sir; I used to often take notice which line it was on, and could always tell it when on any of the trains; it was very different from any other car in appearance.

Cross 14. Was the construction of it different from other cars; and, if so, in what respect?

A. Only in appearance, finish, &c.

Cross 15. Was it different from most of the other cars on the platform or entrance to the car?

A. I don't remember any particular difference there; whether they entered from the side door or the end I am unable to say.

Cross 16. How long since your attention was called to this car John Tyler?

A. About two months ago.

Cross 17. Who called your attention to it?

A. Mr. Lockwood, the witness in this case. He asked me if I remembered anything about the old Tyler car, and I said I thought I did. I told him I thought she came out in 1842 or 1843, as I could remember. He asked me then if I remembered about the brakes on the car, (I didn't know then that there was any trouble at all). I told him that I recollected distinctly that the brakes operated from either end of the car and hung in the centre, and I told him that it was the first I had ever seen. He told me then that I would have to be a witness in this case. That was about all the conversation we had about the matter at that time. Since then he has shown me the books of the exact date at which the Tyler went through.

Cross 18. You said you had had the trimming of all their cars from that time to this, did you?

A. Yes, sir; I have furnished and manufactured the trimmings and put them on the cars until within the last three or four years; since that time I have only manufactured and furnished the trimmings, and they have men to put them up themselves.

393 Cross 19. How many times have you furnished trimmings for the car John Tyler, and put them on?

A. I don't remember except twice. She got broke up once, and they rebuilt her, and I furnished trimmings and put them on at that time, and when she was first built, and may have done so several times afterwards, but don't remember positively. At that time I done all the work, and put it up myself.

Cross 20. When was it rebuilt a second time?

A. About 1849, I think.

Cross 21. How do you know about 1849?

A. I remember her being broken up by an accident, and rebuilt, I think, about 1849.

Cross 22. Where was that accident?

A. I think it was near Old Bridge, in New Jersey, near Amboy.

Cross 23. How do you know that it was in 1849?

A. I remember its being five or six years after she came out. I have no data to establish the exact time. It may be in the books and it may not. I did not look, as it was immaterial.

Cross 24. Did you hear M'r Lockwood say it was in 1849 when it was rebuilt?

A. He never told me what time it was, and I never inquired. It was never mentioned between us.

Cross 25. Did you hear him testify as to that time here yesterday?

A. I really don't know whether he testified to that when I was in or not. I was in and out when the testimony was being taken, and I was not paying any particular attention. I was reading a part of the time.

Cross 26. You said in your direct examination that the car John Tyler had a double brake on; please describe what is known as a double brake.

A. I will do so as near as I know how. The term that I meant to use for a double brake is a brake connected in the centre of the car with a lever, so that the application can be made at either end of the car upon the brakes of the two trucks. I say further that I am not a car-builder, and don't know the phrases used by car-builders.

394 Cross 27. Did you notice this double brake on any other car about that time?

A. No, sir; I am under the impression that it is the first one they ever put on of that description.

Cross 28. Why do you think that was the first one?

A. My attention was called to it by men in the shop. My attention is generally called to any improvements for the cars by the bosses and foreman. I am generally careful to take notice of all the improvements connected with cars on railroads, and have been in the employ of M'r

Edwin A. Stevens, the former president of the road, ever since I was 15 years of age.

Cross 29. Do you recollect the Stevens and Hodge brakes when they were put on that road?

A. No, sir.

Cross 30. Do you recollect any other brake being put on that road?

A. I don't recollect when they were put on. I remember seeing other kinds of brakes; treddle-brakes and lever-brakes.

Cross 31. What other car do you recollect seeing this brake on, like Exhibit A, after June, 1843?

A. I could not particularize any one car at all. The brake has finally drove all others out; I know that. Neither could I have pointed the one out like Exhibit A, if it had not been the first one I had ever seen, and the car that it was attached to being a matter of curiosity is all the reason why I can tell it was there, it being the first one I had ever seen.

Cross 32. How soon after it was put on the Tyler car do you recollect it being put on any other car?

A. I don't remember any particular time. I cannot say.

Cross 33. You say it drove all other brakes out; how soon did it drive all other brakes out?

A. I don't think they have used any other kind for a number of years. I could not specify any particular time when the rest were drove out.

Cross 34. Do you recollect seeing it on any other car previous to 1847?

395 A. Yes, sir; one of the crate-cars that carries the baggage-crates.

Cross 35. Did that crate-car run in the train with the Tyler car?

A. It may have done so before now. They generally made that crate-car up in through lines, sometimes to Amboy, and sometimes to New Brunswick. The Tyler car was not constantly used when it first came out. They used to lay it away for big occasions. The conductors used to brag about it, and we generally knew it, us men who were connected with the road.

Cross 36. When that crate-car run through to New Brunswick, did they change cars there, or did they run it through to Jersey City?

A. I did not travel on that road enough to know at that time.

Cross 37. How do you know, then, that it run through to New Brunswick?

A. I don't know, only I have seen it in through trains that were coming this way.

Cross 38. About how early a date can you fix when you saw this brake on that crate-car, which you say you saw on before 1847?

A. Well, sir, I can't say positively; several months afterwards. I won't state any time.

Cross 39. Several months after what?

A. After the Tyler car came there.

Cross 40. Do you recollect the number of this crate-car?

A. I do not. They are all numbered.

Cross 41. Now, can't you recollect whether the double brake, like Exhibit A, was put on the new cars that were built by that company after the Tyler car first came?

A. No, sir; I do not know. The novelty had worn off the matter, and I cannot state any particular time.

Cross 42. Do you recollect whether the said brake was on the said Tyler car when you trimmed it in 1849?

A. Yes, sir; it was.

Cross 43. How was that car broken up before it was rebuilt in 1849?

396 A. By a collision. One train running into the other.

Cross 44. What condition was the car in before it was repaired in 1849?

A. I don't remember whether the roof was torn off, the side smashed in, or the end broken in. I have seen so many of these cripples.

Cross 45. Then you recollect, do you, that the brake like Exhibit A was put on this car again after it was rebuilt in 1849?

A. I think it was.

Cross 46. And you do recollect whether it was put on any other passenger cars or not before 1847?

A. I do not recollect particularly; the novelty had then worn off. I don't know whether M'r Lockwood used any other brake after that. I think he put it on all new cars after that, and all that were repaired. I have known of others try experiments there, but did not take any particular notice.

Cross 47. Was there a great deal said about this double brake at the time it was put on the car first? I mean, was it talked about by railroad men as being a great improvement?

A. There was more or less talk about it around the shops amongst us all. They seemed to think it was about what was wanted.

Cross 48. Do you recollect any other particular kind of brake put on there called the McLoughlin brake; and, if so, when?

A. I remember such a brake being around there. I don't remember the construction of it, nor when it was put on, or whether it was put on at all or not. I am unable to say.

Cross 49. Do you recollect whether it was before or after this brake was put on the John Tyler that you heard the McLoughlin brake spoken of?

A. I think it was several years afterwards, if my memory serves me right.

Cross 50. About how many years, as near as you can judge?

A. I don't think I could guess within five years.

397 Cross 51. Can you say positively that you saw this double brake, like Exhibit A, on any passenger-car, except the Tyler, before the Tyler was rebuilt, in 1849?

A. I can say, as positively as I think a man can say about anything of that kind, that I have.

Cross 52. Do you think it possible that you may be mistaken about seeing it on one of the cars before 1849?

A. I don't think I am mistaken about that; I don't see how it could be possible for me to be mistaken about a matter of that kind.

GEO. W. THOMPSON.

Subscribed and sworn to before me this 1st day of August, 1867.

R. E. STILWELL,
Examiner, &c.

NICHOLL F. SMITH, called and sworn as a witness on the part of the defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Nicholl F. Smith; 56 years of age; reside at Bordentown, State of New Jersey; and am a car-builder.

Q. 2. Have you been in the employ of the Camden & Amboy Railroad Company; if so, when and how long were you so employed?

A. I went to work for them in 1845, on the 19th day of November, I think, and have been employed by them in different capacities about 20 years.

Q. 3. What kind of work was you set to do when you first went into the employ of said company in the year 1845?

A. Repairing cars and building new ones.

398 Q. 4. Did you have occasion to do any repairs on a car called the John Tyler; if so, what part of said car did you work on and what were the circumstances connected with said work?

A. I was ordered to work on the John Tyler; a man by the name of Vandergrift was ordered with me to take the trucks out; I had occasion to go under the car before we could get the trucks out and unhook the brake, which was like the model Exhibit A.

Q. 5. Please describe said brake?

A. It was a double acting brake, as near like model A as I can recollect; it was the same thing.

Q. 6. Do you know of the application of the brake as seen in Exhibit A to any other cars of the Camden & Amboy Railroad; if so, please state of your knowledge of the use of said brake from 1845 to the present time.

A. Some time after that there was a crate-car came in the shop to be repaired, it was some time during that winter and before the spring, with the same brake on her as on the model A, or Tyler car; the brake became in general use some time after that.

Adjourned to 10 a. m., the *the* 2d instant.

FRIDAY, *August 2d*, 1867.

Present, counsel for the respective parties.

Q. 7. How do you fix the time of entering the employ of the Camden & Amboy Railroad, which you say was in the year 1845?

A. I fix it by the shop time-book of the company (and the witness here presents a book purporting to be the time-book kept in the shop of the Camden and Amboy Railroad Company, and says that his name appears upon it under date of December 19th, 1845, and says that is the time to the best of his knowledge); the only way I can get at the time is by the books of the company.

Q. 8. Do you mean by that the exact time to a day?

A. I do.

399 Cross-examined by M'r Sayles in person:

Cross 9. Do you know the time referred to in the book is correct?

A. I believe it to be so.

Cross 10. Do you know of your own knowledge that it is correct?

A. To the best of my belief and other circumstances, it is. I have a deed at home, which I forgot to bring with me, of property which I bought that fall; I moved to Bordentown that fall, and it was at that time I bought the property.

Cross 11. Did you not give a statement a few months ago, in writing, of what you knew concerning this brake being on the car John Tyler in 1845, and in that statement did you state the time you bought this property in Bordentown?

A. I think it likely I gave such statement, and think it quite likely I stated about the purchase of the property in Bordentown.

Cross 12. Did you not in that statement say that you purchased that property at some other time than the fall of 1845?

A. I don't recollect it; I hadn't the deed with me when I gave the statement; it was mere verbal, and I looked at the deed afterwards.

Cross 13. Did you mean the crate-car you spoke of was brought in the shop for repairs (with a brake on like Exhibit A) in the winter of 1845 and 1846?

A. It was along during that winter; it might have been as late as February.

Cross 14. Did you help build any new passenger and baggage cars for the Camden and Amboy Company in 1845 and 1846?

A. I don't recollect of any; I was working on repairs.

Cross 15. Was this brake like Exhibit A put on other cars as they were repaired during the years 1845 and 1846?

400 A. They were not generally put on; they might have been put on new passenger cars; they came into use gradually, and in a few years they had them on most all of them.

Cross 16. About how many years, as near as you can tell, before they had them on most all of them?

A. I could not tell; probably from two to ten years.

Cross 17. Do you think they had them on the majority of their passenger and baggage cars as early as 1850?

A. I can't tell whether they had or not; they might and they might not.

Cross 18. Did you ever have occasion to repair the Tyler car after the fall of 1845?

A. I have worked on it after that.

Cross 19. At what time?

A. I can't tell; a few months, it might have been longer.

Cross 20. Was that car often repaired in the shop?

A. No more than any other.

Cross 21. Was it not in the shop for repairs a number of times before 1850?

A. It might have been.

Cross 22. Did you help rebuild it in 1849?

A. I might; I can't recollect whether I did or not.

Cross 23. Did you often have occasion to take the trucks out from under passenger and baggage cars when repairing them?

A. I did.

Cross 24. How long did you work at repairing cars?

A. At new and repairing, about twelve years from 1845, to the best of my knowledge.

Cross 25. Did you, during that twelve years, often have occasion to go under the cars and unhook the brake in order to get the truck out?

A. Not always; they had not all that kind of brake on; for a single brake there is no occasion to go under.

Cross 26. Did you several times during that period have to do so?

A. I might more than that and I might not as much.

Cross 27. When was your attention first called to this brake like Exhibit A?

401 A. Within a few days after I commenced working with the company.

Cross 28. Has your attention been called to this brake matter within the last year? If so, when and by whom?

A. Edwin Lockwood first asked me if I recollected the Tyler car; this was about five months ago.

Cross 29. How long before that had you thought particularly about this brake being on the Tyler car in 1845?

A. I don't know that I can specify any time.

Cross 30. Had you for a number of years before?

A. I had seen them for a good many years in use of the same kind.

Cross 31. You had often repaired cars, then, with these brakes on, had you?

A. Yes, sir.

Cross 32. Do you remember of other double-acting brakes being used on the Camden & Amboy cars?

A. I have seen them since I left the shop several different times.

Cross 33. When did you see them; what year?

A. I saw them about a year ago, I think.

Cross 34. Did you ever see any there before that?

A. I might.

Cross 35. Do you now remember ever seeing any there between 1845 and 1855?

A. I don't remember ever seeing any double brake during that time, except the one like Exhibit A.

Cross 36. What did you do for that company after the first twelve years?

A. Superintended a section of the track, between Bordentown and New Brunswick.

Cross 37. During what years?

A. I can't tell exactly just now. I can't tell at all; I have nothing to go by. I would guess it was about six years ago, and acted in that capacity from six to eight years.

Cross 38. Is it possible for you to be mistaken about this brake, like Exhibit A, being on the Tyler car when you first repaired it, and not at some future time?

A. It is possible I might, but I don't think I am.

402 Cross 39. Is it possible for you to be mistaken about said brake being on the said crate-car you spoke of in the winter of 1845 and 1846, and not some other time?

A. It is possible I might, but I don't think I am.

Cross 40. How was this Tyler car constructed? Was it different from other cars then in use on that road? If so, in what respect?

A. It had several different kinds of seats in it; a panel cut out of the end of the car to put a light in it. There might be other differences, but I don't recollect.

Cross 41. Was the general appearance of the car outside quite different from the other cars at that time?

A. It was.

Cross 42. Please state the differences.

A. It had six-wheel trucks, different springs, two different kinds, both spiral and elliptic; it had a different brake, painted up a little more fancy, and a better-looking car altogether in its outward appearance, likewise in the interior, than any other car on the road.

Cross 43. At the time you saw this brake, like Exhibit A, did you hear it spoken of by the railroad men in the shops generally as being a great improvement on the single brake?

A. In this way. I asked how it was different from the others—that is, the single brake—and they said it was an improvement on the single brake.

Cross 44. Did you often see the car John Tyler?

A. I did, when it came in the shop for repairs, and sometimes on the road in the train when it passed the shop.

Cross 45. Did you often see it in the train while you were superintending a section of the track?

A. I used to see it once in a while. I don't think it was run regular. I am not positive that I saw it at all. I might and I might not.

Cross 46. Do you know who was at the expense of making Model Exhibit A, or have you heard Edwin Lockwood, the witness in this case, say who paid the expense?

A. I think I heard him say that the company did. I didn't 403 understand him to say the Camden & Amboy Railroad, but he might have meant that.

N. F. SMITH.

Subscribed and sworn to before me this 2d day of August, 1867.

R. E. STILWELL,
Examiner, &c.

LETCHWORTH COX, called and sworn as a witness on the part of the defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Letchworth Cox; 53 years of age; resides at Jamesburgh, New Jersey. I am a car-builder and repairer of cars.

Q. 2. In the employ of what railroad company are you now engaged? How long have you been in such employ?

A. In the employ of the Camden & Amboy Railroad, and have been in their employ since 1838.

Q. 3. Where on their lines were you employed by them in 1847?

A. At Amboy.

Q. 4. Do you know anything about the use of a double brake on a car or cars of that road at any time during the year 1847? If so, state what you know, and give the particulars connected with such knowledge.

A. I do. In the year 1847 I saw a double brake on a crate-car that came to Amboy, where I was engaged. It was a brake connected in the centre by a cross-lever, with a rod running from it to the brake lever, and another rod from the centre lever to each end of the car attached to an upright shaft on each end of the car. On each end of the car there is a rod running from this lever which was in the centre of the 404 car; also, there was a rod running from the lever to the brake, lengthwise, that connects the brakes together. I have begun at the wrong end to describe it, and will now commence with the cross lever first. A rod was attached to the cross-lever running to each end of the car, attached to an upright shaft; a rod was attached to the centre lever which connected with the brakes. That is about all the particulars I can say about it. (The witness evidently confused.)

Q. 5. The witness is now presented with the Model Exhibit A, and he is asked whether that is such a brake as he wished to describe?

A. Yes, it is.

Q. 6. Did this brake apply the power of the brakeman to both trucks of the car at the same time and from either end of the car?

(Objected to as leading. Plaintiff objects to showing witness the model, inasmuch as he has not explained the brake.)

A. It did.

Q. 7. How do you fix the date of your seeing this brake which you have described on the crate-car which came to Amboy?

A. By the age of my son. I was at work on the brake on that day, and was called away. I had to get it ready that night, as the car had to go out next morning.

Q. 8. Where were you called?

A. I was called to go for the doctor to attend my wife, who was sick.

Q. 9. Was there at that time born to you a son? If so, at what date was he born?

A. There was; it was on the 27th day of February, 1847.

405 Cross-examined by M'r Sayles in person:

Cross 10. Are you sure that the brake on that crate-car in 1847 was exactly like Exhibit A?

A. The principle was exactly like it; there might be some small variations; I couldn't say exactly about that.

Cross 11. When did you commence working at Amboy for that company?

A. It was at the end of 1845 or the first of 1846; somewhere along there.

Cross 12. What was your particular business there?

A. To look after cars and see if they were all in running order, and if they were not to have them taken out.

Cross 13. You had to examine the trains, then, when they came in, to see if they were in running order?

A. Yes.

Cross 14. That was the first time you had seen such a brake, was it?

A. No, sir.

Cross 15. When and where did you first see such a brake?

A. I can't give the date when; but it was before then at the Bordentown shop.

Cross 16. Was that the first you saw of such a double brake at Amboy?

A. I could not say positively about that.

Cross 17. Have you any recollection of seeing said brake at Amboy before 1847?

A. I can't say positively that I ever did.

Cross 18. Did that crate car run regular on that line to Amboy, or did it run to Jersey City part of the time?

A. I cannot say. It did not come to Amboy every day. Sometimes it came in a few days and sometimes in a week.

Cross 19. How often would a car come to Amboy when it run regularly on that route?

A. Every day.

Cross 20. Did you often have occasion to repair cars that had on the double brake, at Amboy, after February, 1847?

406 A. I never had anything to do with repairing more than a bolt or so; I marked them for repairs, and sent them off to the shop at Bordentown.

Cross 21. Did you often see cars at Amboy with this double brake on after February, 1847?

A. I frequently did.

Cross 22. Did that company have such long crate-cars attached to all of their passenger trains that run to Amboy in February, 1847?

A. I think not all of them; some of them which came in at night hadn't.

Cross 23. Now, sir, have you a distinct recollection of the construction of the brake that you say you saw on that crate-car in February, 1847, or have you described it from seeing Model Exhibit A, or from having seen it on other cars within the last year?

A. I believe I have a distinct recollection of it.

Cross 24. Did they have a brake-house on that crate-car on one end, for the brakeman?

A. No, sir.

Cross 25. Are you positive that that crate-car could be broke, or the brakes applied from either end of the car to all of the wheels of said car simultaneously?

A. I am positive.

Cross 26. Is it not possible for you to be mistaken in seeing this double brake on that car in February, 1847; might it not have been at some time thereafter?

A. It was in 1847.

Cross 27. Were there more passenger-trains run on that line to Amboy, from 1845 to 1850, than on the other line to Jersey City?

A. I could not say; I did not see the other trains.

Cross 28. What called your attention to this brake in February, 1847, as you have stated?

A. One of the rods was broken.

Cross 29. Did the rods often break on the brakes of the cars?

A. Not very frequently; sometimes they did.

Cross 30. About how many times do you think they would break in the course of a year?

A. I could not say.

407 Cross 31. Can you swear that you did not find them broken on the cars as many as twelve times in a year?

A. I could not pretend to say anything about that; I won't swear that they didn't or did.

Cross 32. Did you often see the car John Tyler at Amboy, from about the time you went there to 1850?

A. Not very often; she was there sometimes.

Cross 33. About how often do you recollect seeing her there?

A. That I could not say.

Cross 34. Do you think she was there as often as once in two weeks from 1845 to 1850?

A. I could not say positively about that.

Cross 35. During that time did the Tyler car run on the Jersey City line most of the time?

A. I could not say; but think she did, as she didn't come to Amboy often.

Direct resumed by M'r Whipple:

Q. 36. In answer to the 15th cross-interrogatory, you say that you had seen this double brake at Bordentown before 1847; on what car or cars did you see it, and where did you see it?

A. I saw it on a car which was afterwards called the John Tyler car; she was not named at that time.

Q. 37. (Witness is shown Model Exhibit A, and asked to point out the rod that broke, as stated in his 28th cross-interrogatory, and which he mended, and by which he identifies the brake.)

A. The witness points out the rod, and says that it is the rod that connects the brakes with the cross lever.

Q. 38. Do you mean to say that it is the rod which connects the upright lever in one of the trucks with the cross lever attached to the body of the car?

(Objected to as leading.)

A. I do mean to say so.

408 Cross-examined by M'r Sayles:

Cross 39. At what point was that rod broken?

A. Near the cross lever, in the centre of the car.

Cross 40. About how many feet from the cross lever?

A. I didn't measure it, but I should think from six to eight inches from the cross lever.

LETCHWORTH COX.

Subscribed and sworn to before me this 2d day of August, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to the 6th inst., at 10 a. m.

TUESDAY, *August* 6, 1867.

Present, counsel for the respective parties, as before.

WILLIAM VENABLE, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. William Venable; 52 years of age; reside at Bordentown, New Jersey, and am a car-builder.

Q. 2. By whom are you now employed, and how long have you been so employed?

A. By the Camden & Amboy Railroad Company, and have been so employed from 1838 to 1840, and from 1847 to the present time.

Q. 3. How were you employed from 1840 to 1847?

409 A. I was employed the first two years in coach-making; from March, 1843, to June 1st, 1843, I was at work at M'r Stevens' house, at Hoboken; from June 1st to the 28th of August, 1843, I was then at work in building crates, and on carpenter's work; on August 28, 1843, I went to work for M'r Edward Lockwood, in building and repairing cars in the Camden & Amboy shops, at Bordentown, and have continued there until the present time.

Q. 4. Do you wish to be understood that you commenced work for the Camden & Amboy Railroad on the 28th of August, 1843, and continued to the present time, or, as you have already stated, from 1847 to the present time?

(Objected to as leading.)

A. I wish to be understood that I commenced working for them on the 28th day of August, 1843, and have continued with them to the present time.

Q. 5. Is there any event or circumstance which took place in Bordentown, in June, 1843, that you now remember as having taken place in that month. If so, state that event.

A. On June 10, 1843, I saw John Tyler, President of the United States, pass through Bordentown on his tour to Bunker Hill monument. I recollect of his being in a certain car that was afterwards named John Tyler.

Q. 6. Did you know, at that time, what kind of a brake was on the said car, afterwards called the John Tyler?

A. I did not, at that time.

Q. 7. Did you know at any time thereafter? If so, state, as near as you can recollect, when, and the circumstances connected with it.

A. I think in the latter part of the year 1844 I was called upon to repair the trucks and brake of that car, and I noticed the cross-lever attached to the body; and the reason I noticed it more particularly, was on account of its being connected with an upright lever attached to the truck. It was necessary, therefore, to unconnect the rod attached to each lever in one truck, that the trucks might be taken out from under the car.

410 Q. 8. Do you mean the lever in the truck or each lever in the truck?

A. I mean the upright lever in each truck.

Q. 9. (Witness is now shown Model Exhibit A, and asked) Is this a correct representation of the brake as applied to the car John Tyler, spoken of by you? If so, point out on the cross-lever of this model where you disconnected the lever in the truck from the cross-lever under the body of the car.

(Objected to as leading.)

A. I disconnected it from the upright lever attached to the brake-bar of the truck, and from the upright lever at the other end of the car.

Q. 10. And did you disconnect the rods from the windlasses connecting the cross-lever with the same?

A. No, sir; it was not necessary to do so.

Q. 11. What name do you give to this cross-lever brake?

A. The back-action brake.

Q 12. By that do you mean a double brake?

A. I do.

Q. 13. Do you know of the use of this brake on any other car or cars on the Camden & Amboy road before the year 1847?

A. I do, on a crate-car.

Q. 14. Is this brake in general use on the cars of the Camden & Amboy road at the present time?

A. It is.

Cross-examined by M'r Sayles, the complainant, in person:

Cross 15. Where was this John Tyler car when you first saw it?

A. When I first saw that car to notice it, I think it was when he, the President, was first carried through Bordentown, June 10th, 1843.

411 Cross 16. How do you know it was June 10th, 1843?

A. I take the engineer's time-book for the date.

Cross 17. Is that all the reason you have in knowing that it was on that day?

A. That is all the reason I can give of the date for its being on that day.

Cross 18. Do you know of your own knowledge that the engineer's book is correct?

A. To the best of my knowledge and belief, I do.

Cross 19. Did you see those dates put down in the book at that time?

A. I did not.

Cross 20. Do you know that the engineer himself put them down at that time?

A. I do not.

Cross 21. Please describe the peculiar construction of that John Tyler car, wherein it differed from the other passenger-cars on the road at that time.

A. The John Tyler car at that time was a plain-looking car with end doors, a lamp out through the panel at each end of the car. It had different kinds of chairs or seats; it had also elliptic springs, and spiral springs and springs within springs.

Cross 22. Had this car simply a plain door on the platform where you entered the car, or was there some kind of an entry or vestibule?

A. Nothing but a plain common panel door.

Cross 23. Did you often have occasion to repair cars that had on double brakes, like Exhibit A, from August, 1843, to 1850?

A. At times we had some of those cars to repair, taking off the single brakes and attaching the double brakes, like Exhibit A.

Cross 24 On what route was the John Tyler when you first saw it?

A. When I first saw it, as I said before, it was at the Bordentown station. At that time, I think, it went to New Brunswick. They did not run them through as at the present time. They changed at New Brunswick.

412 Cross 25. Did they change their baggage also at New Brunswick at that time?

(Objected to, for the reason that the witness is not supposed to know anything about it, being a car-builder.)

A. That is more than I am able to say; I had no occasion to travel, and therefore cannot say.

Cross 26. In M'r Edwin Lockwood's testimony, taken in this case last week, the following question was asked him on direct examination in question No. 5: "Was the brake referred to applied to other cars on the Camden & Amboy Railroad; and, if so, to what extent?" Answer. "They were applied to other cars. We also applied it to a crate-car for carrying baggage. Directly after that we continued then putting it on all our cars for passengers and baggage use as we could spare them off the road. Our cars at that time were very limited, and when we took any of them in for repairs we applied the brake." Now, after you went to work for the Camden & Amboy Company in 1843, was this double brake, like Exhibit A, put on all the passenger and baggage cars as they came in the shop for repairs, and on new cars that were built?

A. They were put on after 1844; perhaps some time in the latter part of 1844. After that they were put on the cars as they were cleaned up or repaired, and also on the new cars as they were built.

Cross 27. When did you first see this brake on the John Tyler car?

A. As I stated before, in the fall of 1844, when I repaired it.

Cross 28. This being the first car that brake was put on, and its being a great improvement on the old single brake, as has been testified to by the other witnesses in this case, was there not considerable talk about it by the hands in the shop, as being something new, at the time when you first saw it?

413 A. There was some considerable talk amongst them about its being a great improvement on the single brake.

Cross. 29. Do you recollect any other double brake or brakes being tried on that road at any time; and, if so, when?

(Objected to, for the reason that it is the introduction of matter not involved in the direct examination.)

A. I do recollect other double brakes tried on the cars on that road, but can't the date.

Cross 30. About what year were they so tried?

(Same objection repeated.)

A. I am not able to give any date as to the year.

Cross 31. Was it between 1843 and 1847?

A. I should say not.

Cross 32. Was it between 1846 and 1850?

A. I should think not.

Cross 33. Are you sure that it was not before 1847?

A. I am to the best of my knowledge and belief.

Cross 35. What were those other double brakes you speak of called? (Objection repeated.)

A. There was one called the Hodge brake, also one called the Stevens brake.

Cross 35. Are you sure that those brakes were not tried there before 1850?

A. I am, to the best of my knowledge and belief.

Cross 36. Do you think they were put on the cars there in 1850 or 1851?

A. I did not see any put on.

Cross 37. Do you know of any being put on in those years?

414 A. I don't know when they were put on. I have seen the cars with the brakes on. I believe other parties put them on themselves to try the experiment.

Cross 38. What other parties put them on?

A. I mean those concerned in the brakes. M'r Lockwood would not have much to do with those things.

Cross 39. You have referred now, have you, to the Hodge and Stevens brakes you have spoken of?

A. I have.

Cross 40. When did those parties put those Hodge and Stevens brakes on the cars; when was the work done, and by what workmen? (Objection repeated.)

A. The work was done at the Camden & Amboy shops; I can't tell who the workmen were.

Cross 41. Was it the workmen that were under M'r Lockwood, as the superintendent of the car-shops, that done the work?

A. I cannot say that it was. I never done any of it myself, and I don't recollect of ever seeing it done.

Cross 42. How many cars were the Stevens brakes put on on that road?

A. I recollect that there were two cars with that brake on.

Cross 43. How long were they continued on those cars?

A. I cannet say.

Cross 44. Were they finally taken off and brakes like Exhibit A put on?

A. Perhaps they have been.

Cross 45. How long since you last saw them on the cars?

A. I can't say how long.

Cross 46. About how long, as near as you can tell?

A. I have nothing to refer to at all.

Cross 47. Well, about how many years since you recollect seeing that brake on your cars?

A. I can't say; I can't give you any date.

415 Cross 48. How many of the Hodge brake were put on the cars on that road?

A. I cannot say how many they had on.

Cross 49. Well, about how many? Tell as near as you can.

A. I can't give you any number; I did not put them on, nor help put them on.

Cross 50. Were they put on in the shops where you were at work?

A. I don't recollect of ever seeing any put on.

Cross 51. Were not these Hodge brakes put on their cars (the Camden and Amboy cars) by the Camden & Amboy Company?

A. I can't say; I never heard anything said about it.

Cross 52. Was it before or after the Stevens brake was put on there, before the Hodge?

A. I think the Stevens brake was put on after the Hodge brake.

Cross 53. Do you think there was more of the Hodge brakes put on than the Stevens, or less?

A. There might, perhaps, have been more of the Hodge brake put on.

Cross 54. How long were they continued on the cars?

A. I am not able to say how long.

Cross 55. How long since you recollect seeing any of them on the cars?

A. Probably five years ago. It was on a car built at Trenton Car-Works, built for the West Jersey Company. We took the brake off and put on one like Exhibit A.

Cross 56. How long since you recollect of seeing the Hodge brakes that were first put on at the Camden and Amboy shops?

A. I can't say how long.

Cross 57. Have you been working at car repairs to the present time?

A. At new work and repairs.

Cross 58. How many times did you help repair the old Tyler car from 1843 to 1850?

A. I can't say.

Cross 59. Did you a number of times?

416 A. I can't say about that.

Cross 60. Can you say that you did not as many as six times between 1843 and 1850?

A. I cannot say.

Cross 61. During that period of time, did you often help repair cars that had on brakes like Exhibit A?

A. I have repaired cars after the latter part of 1844 with those brakes on; I can't say how many.

Cross 62. Is it not possible for you to be mistaken about seeing this brake like Exhibit A in the fall of 1844 first, and not at some future period, inasmuch as you say you had repaired cars with that brake on after that time?

A. According to the best of my knowledge and belief, it is not.

Cross 63. Do you mean to swear positively that that brake was on that car, John Tyler, when you first repaired it in the fall of 1844?

A. According to my best knowledge and belief, that brake was on that car before I undertook to repair that car.

Cross 64. Is it not possible for you be mistaken about that?

A. According to my knowledge and belief, I am not mistaken.

Cross 65. I asked you if it was not possible for you to be mistaken? (Objected to, for the reason that the question has been already answered.)

A. I believe I have answered the question over and over.

Cross 66. When was the brake like Exhibit A put on the crate-car you have spoken of? Was that on before you repaired the Tyler car, in the fall of 1844?

A. I can't say positively.

Cross 67. How many of those long crate-cars did the Camden & Amboy Company have in 1844?

A. I cannot say now.

417 Cross 68. Did they have quite a number of them, according to your best recollection, in 1843 and 1844?

A. They had not.

Cross 69. About when did they commence using those long crate-cars?

A. They might have had one or two of them from 1844 to 1847.

Cross 70. Did they not have any before 1844?

A. I cannot say whether they had or not.

Cross 71. Can you say positively that the Stevens and Hodge brakes, or either of them, were put on the cars of the Camden & Amboy road between 1850 and 1855?

A. I cannot.

Cross 72. Can you say they were put on between 1850 and 1857?

A. I cannot say when they were put on.

Cross 73. Did you hear the witnesses Lockwood, Thompson, Smith, and Cox testify in this case here last week?

A. I did.

Cross 74. Are you acquainted with all of them?

A. I am.

Cross 75. Have you often, within the last three months, heard them speak of this John Tyler car, and the brake that was put on it in 1843, and have you often talked with them about it?

A. Two of those witnesses I have never talked with about it, and never heard them express themselves in reference to it, until they testified; the other two I have not talked the matter over with to gain any information; I have not talked with them on the subject.

Cross 76. Did you come on to New York with them last week from Bordentown, and did you remain here with them from Wednesday until Friday afternoon, and did you then return with them to Bordentown?

A. I came on with the four on Wednesday morning, and returned with one on Friday afternoon; I remained on Wednesday with two of them in this city.

418 Cross 77. Did you often, after the fall of 1844, have occasion to unhook these double brakes when repairing cars with them on, in order to take out the trucks—I mean between 1844 and 1850?

A. I had with those cars which had the double brake on like Exhibit A.

Cross 78. Please mention the time when you repaired any car after the fall of 1844 with said double brakes on?

A. I can't specify any particular time now.

Cross 79. Can you recollect of doing so in either the winter, spring, summer, or fall of 1845?

A. I recollect we had one car in the shop during that time with the double brake on.

Cross 80. What car was that, and at what time; what season of the year?

A. It was the car John Tyler, but at what season of the year I can't say. I repaired cars a month ago, but I could not give the date; I can't remember.

Cross 81. Can you say positively whether it was in the spring or fall of 1845 when you repaired the Tyler car?

A. No, sir: I cannot.

Cross 82. Now, sir, did you repair the said Tyler car late in the fall of 1846?

A. I don't know that I worked on her at that time; I might and I might not.

Cross 83. Might it not have been possibly in the fall of 1846 that you worked on her instead of 1845?

A. I can't say about that.

Cross 84. How do you fix any of the dates you have given of seeing the brake like Exhibit A?

A. I was called out to help repair the car with a patent brake, or cross-lever brake, like Exhibit A, and, in order to get the truck out, I had to detach the rod which was connected with the cross-lever attached to the body of the car, and with an upright lever attached to the brake-bar of the truck. My attention was called to it the latter part of 1844.

Cross 85. Is that all the sure means you have of knowing that it was at that time and not at some subsequent period?

A. It is, to the best of my knowledge and belief.

419 Cross 86. At what time did the Camden & Amboy passenger trains first commence running through to Jersey City?

A. I don't know; I am unable to say.

Cross 87. How do you know that they did not run through in 1843?

A. Well, I never heard that they did or did not, and therefore cannot say anything about it.

Cross 88. Did you not say that they changed passengers at New Brunswick in 1843; that the cars did not run through to Jersey City at that time?

A. I did.

Cross 89. Why, then, did you say, in answer to question 87, that you never heard, and therefore knew nothing about the cars running through to Jersey City in 1843?

A. I never heard of our cars running through to Jersey City in 1843, and therefore I cannot say.

Cross 90. Then you do not know whether they did run through to Jersey City or stopped at New Brunswick in 1843, do you?

(Objected to, as the witness is not a dispatcher of trains nor keeper of the running of trains, but is a car-builder.)

A. I do not.

Cross 91. Was the said Stevens and Hodge brakes, or the cars that they were on, ever repaired in your shops at Camden and Amboy while those brakes were on them, to your knowledge?

A. I presume they have been repaired there while those brakes were on; if they haven't, it would be very strange. I have no recollection of them.

Cross 92. You speak, in one of your answers, of being called out to help repair a car with patent brake, or cross-lever brake. Did you understand at that time that this cross-lever brake was patented or that there was a patent on it?

420 A. I never heard anything about that until M'r Sayles called at our shop to see me, about a month or two ago. He was talking to me about this brake, which he told me was patented, and that there was some trouble about it. That was the first I ever heard about the brake being patented, and he put some questions to me, asking me if I didn't think there was a possibility of my being mistaken as to dates, &c. I told him I didn't think I was. He said there was a considerable amount of money at stake in this concern, in the brake affairs. I don't recollect what I said. He said he would like to have me weigh the matter, or think it over, and see if I am not mistaken. I don't think there was much more said about it, as M'r Sayles was not there but a few minutes.

Cross 93. At how early a date do you recollect of seeing this double brake, like Exhibit A, on the crate car you spoke of?

A. The first time I saw that brake on that crate-car was in 1847.

Cross 94. Can you say positively that you *see* it on that car before 1848?

A. I think I can, according to my best knowledge and belief.

Cross 95. What circumstance was there connected with it that makes you remember that it was in 1847 and not in 1848?

A. It was one of our first long crate-cars that had a brake attached to it like Model Exhibit A.

Cross 96. Did you not say, in answer to the last question, it was the first long crate-car that had the patent brake on, when M'r Whipple, defendant's attorney, said the cross-lever brake, and then did you not change your answer?

A. I said it had a patent brake, or cross-lever. I was thinking about the conversation with Mr. Sayles at our shop when I first heard of its being a patent brake.

Cross 97. Now, sir, can you swear that it was not in 1845 or 1846 that you first saw said double brake like Exhibit A on that long crate-car?

A. I won't swear anything about that it was not in those years, but think it was in 1847.

421 Cross 98. When was your attention first called to this car John Tyler, or the brake that was on it in connection with this suit, and by whom?

A. I don't exactly recollect the time; probably three months ago, perhaps not so long—not over two months. M'r Edwin Lockwood asked me if I recollected the car, and the springs connected with it, brakes, side motions. I told him that I had a recollection of the car—I had worked on it several times in its day; but I don't know what words we exchanged about it particularly. He said there was some trouble about the cross-lever brake we were using, but he didn't say that it was a patent brake or anything of the kind, nor I didn't ask him.

Cross 99. Did you ever see M'r Whipple, the defendant's attorney, here before you saw M'r Sayles, a month or two ago? If so, where and when?

A. I saw the gentleman at Bordentown; I can't give date; it was over two months ago.

Cross 100. How much over two months ago, as near as you can recollect?

A. I have nothing to refer to, and therefore I can't tell.

Cross 101. Was it as much as three months ago, in your opinion?

A. It don't seem to be that long.

Cross 102. Was it four months ago when you first saw him?

A. I can't say.

Cross 103. Can you say that it was not five months ago?

A. It was not five months ago, I think, according to my best knowledge and belief.

Cross 104. Did you at that time, when you first saw him, give M'r Whipple a statement in writing as to what you knew of this car John Tyler and the brake that was on it?

A. I did.

Cross 105. What did you say in that statement which you gave Whipple that you knew of the John Tyler and the brake that was on it?

422 A. I gave him a statement that it was a cross-lever attached to the body of the car to an upright lever attached to the brake-bars of the truck, and that connecting the cross-lever with an upright lever to the brake-bar of the truck with a long rod running to the cross-lever,

and attached to the centre of the body, and then attached to an upright shaft, as you find represented in Exhibit A.

Cross 106. Did you state to him at that time, the time when you first saw this car, the John Tyler, that is, in the statement you gave Whipple?

A. The first time I don't think I did.

Cross 107. Have you given him more than one statement in writing in reference to it?

A. I have no knowledge of doing so.

Cross 108. Did you not say in that statement in writing that the back action or double brake had been in use on the Camden and Amboy road, or on the car John Tyler and other cars, for a certain number of years; and, if so, how many years did you there state?

A. I don't recollect the number, but it was over twenty years. I hadn't thought anything about time. That was the reason I gave him the answer as I did.

Cross 109. Did M'r Whipple, the defendant's attorney, here, while the last question was being written down, make the remark, "over twenty years," before you answered the question?

A. Yes; I heard him here.

Cross 110. Did not M'r Whipple tell you about the time you gave him that statement that he would want you as a witness in this case?

A. I don't think he did.

Cross 111. Have you seen him since that time before you came on here as a witness last week?

A. I met him in the street in Bordentown, between six and seven o'clock, some weeks since, and he said he was in a hurry, he wanted to catch the train; I think I shook hands with him, and he left.

Cross 112. Did you hear him say about the time you gave him that statement anything about any patent being on that brake?

423 A. I did not hear him say anything about any patent until I heard M'r Sayles speak about it. That was my first knowledge of its being patented.

Cross 113. What did you understand that he wanted that statement from you for?

A. I understood from him that there would be a little trouble about the brake.

Cross 114. Did you not understand from him, or from some others about that time, that there was a suit pending about that brake?

A. I did not from M'r Whipple at the time. I think M'r Edwin Lockwood spoke about it some days afterwards.

Cross 115. Did you learn from M'r Lockwood, or anybody else about that time, that the Camden & Amboy Company had bought the right to use that brake?

A. I never had heard anything about that until M'r Sayles called down to see us, and he said that the Camden & Amboy Railroad Company had paid him for the use of the right of it. I asked M'r Edwin Lockwood how it was, and he said he didn't know anything about it, and then the subject was dropped.

Cross 116. Do you remember a brake being tried on the Camden and Amboy road called the McLoughlin brake?

(Objected to for the reason that the subject-matter has nothing to do with the matter involved in this controversy.)

A. I do.

Cross 117. Please describe the construction of that brake.

A. The McLoughlin brake had a bar extending from the under side of the car-body from centre to centre, with a yoke attached, and two arms extending out at each end of the car, connecting with a cross-lever, so that when the cars come together it would act on the brakes through the centre lever.

Cross 118. When was this McLoughlin brake put on the cars?

424 A. Perhaps fourteen years ago; I can't exactly tell.

Cross 119. How long did they remain in use on the road?

A. Perhaps there might have some of them remained on eight or nine years; I know they kept throwing them off along.

Cross 120. Did the cars belonging to the New Jersey Railroad & Transportation Company often come to your shop for repairs between 1843 and 1852?

A. No, sir.

Cross 121. Did they occasionally?

A. I can't say that they did.

Cross 122. Did you see this double brake, like Exhibit A, on any of their cars before 1851?

A. I can't say that I ever did; I did not very often see them to know.

WILLIAM VENABLE.

Subscribed and sworn to before me this 6th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

CHARLES YUNDT, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Charles Yundt; 51 years of age; reside at the city of Camden, New Jersey; and at present am in a restaurant—was formerly a locomotive engineer.

Q. 2. In the employ of what railroad company?

A. The Camden & Amboy.

Q. 3. When did you commence as locomotive engineer on that road, and for how many years were you so employed?

425 A. In 1840, on the 19th day of April, and left in 1856, making 16 years.

Q. 4. Do you recollect the company running excursion-trains? If so in what year did they run such trains?

A. In 1843, 1845, and 1846. I run them myself as engineer.

Q. 5. Do you know anything about the use on the cars of that road of double brakes? If so, when was your attention first called to such brakes? State the circumstances attending such knowledge.

A. To the best of my knowledge, it was in 1845; I had a car on that had a double brake on, and it gave out, and I had to put another bolt in, and put the rod up to its place; the rod was connected at one end to a cross-lever.

Q. 6. Where did you get your bolt?

A. I got it out of my tool-box on my engine.

Q. 7. Did the falling down of this rod make any noise on the track?

A. Yes, sir; they rung the bell, and I stopped; when I stopped the passengers jumped out of the car, and thought it was off the track; they thought something was wrong.

Q. 8. (Witness is here shown Model Exhibit A, and asked) if it was a brake like the one seen in said exhibit; if so, he is asked to point out the rod which fell down upon the track, and which he put up again by the aforesaid bolt which he got from his engine.

A. It was a brake like the exhibit; the bolt came out of the rod attached to the end of the cross-lever; the rod was dragging the same way I was going.

Q. 9. Supposing it had been the rod connecting with the other end of the cross-lever, what would have been the effect?

A. It would have bent the rod all up.

Q. 10. How do you fix the date of these excursion trains, run at the time of this occurrence of the falling down of the brake-rod?

A. I cannot do that.

Q. 11. Do you know that it was in the year 1845 that these excursion trains were run, and that this thing, or circumstance of the rod falling down took place?

426 (Objected to because he has answered it.)

A. I do know that these excursion-trains were run in 1845, and that this circumstance must have been in July or August.

Q. 12. Was this double brake, at this time, on any other car or cars of that road beside on the one in which the brake-rod fell down, and which you put up, as you have stated?

A. I don't remember but the one.

Q. 13. Do you know of such brake being used on the cars of that road after this time?

A. Yes, sir.

Q. 14. Are such brakes now in general use on the cars of that road?

A. I believe they are to the best of my knowledge.

Q. 15. Were they in general use when you left the road, in 1856?

A. Yes, sir.

Adjourned to 10 a. m., the 7th inst.

WEDNESDAY, *August* 7, 1867.

Present, counsel for the respective parties, as before.

Q. 16. How do you fix the date of running the excursion-trains alluded to in a previous question, in the year 1845?

A. I was married in 1844, and I did not run any during that year; and in 1845 and 1846, I run them.

Q. 17. Do you know of a special train passing over the Camden & Amboy Railroad with President Tyler on board? If so, what do you know about it?

A. I run it myself, about the middle of June, to the best of my knowledge; it was in the year of 1843.

427 Q. 18. From what place did you take such special train? Where did you take the President on board, and where did you leave him?

A. From Camden, New Jersey, where President Tyler came on board, and we left him at Princeton, New Jersey.

Q. 19. Did you afterwards take the President in said special train from Princeton to any other place? If so, to what place?

A. We did; we took him to New Brunswick.

Q. 20. From New Brunswick to what place did the President go, and how was he conveyed?

A. He went by carriages from New Brunswick to Perth Amboy.

Q. 21. How did he get from Perth Amboy to New York—by what conveyance?

A. By steamboat.

Q. 22. Do you know anything about a car used on the Camden & Amboy Railroad called John Tyler?

A. I do.

Q. 23. Had said John Tyler car a double brake on it like the one on the car on which the brake-rod fell down in said excursion-train of 1845?

A. Well, I can't say that; the Tyler car had a brake on like the one that the rod fell down had on; there were two cars in the train that had that brake on, but I can't tell which one it was that the rod fell down on.

Q. 24. Who was conductor of said excursion-train, and who was brakeman?

A. I can't tell exactly who the conductor was; sometimes we had one, and sometimes another; William Crim was a brakeman on that train at the time when the rod fell; from the best of my knowledge, I believe he was.

Q. 25. Is the person sitting at the left of the commissioner William Crim?

A. It is.

Cross-examined by M'r Sayles in person:

Cross 26. Where were those excursion-trains run to?

428 A. Run from Philadelphia to South Amboy, then they took the steamboat and came to New York, and then back to Amboy, where they took the cars and went to Bordentown, and the steamboat took them from there to Philadelphia, the whole excursion being made on the same day.

Cross 27. Were those excursion trains run after 1845; if so, how long?

A. I run them in 1846.

Cross 28. Were they run after 1846?

A. To the best of my knowledge, that was the last year they run them.

Cross 29. Did you run as engineer on the road after 1846?

A. I did, until 1856.

Cross 30. What portion of the road did you run on after 1846?

A. I run between Camden and South Amboy, and between Camden and New Brunswick, and between Tacony and New Brunswick.

Cross 31. Did you ever have any brake-rods fall down in your train, except on the occasion you have mentioned?

A. Not that I remember.

Cross 32. And how many years did you run as engineer when brakes like Exhibit A were on your cars?

A. I run from 1845 to 1856.

Cross 33. How long was your train detained in consequence of that rod falling down?

A. Just long enough to put the bolt in.

Cross 34. About how many minutes should you judge?

A. I could not tell.

Cross 35. About how long? Tell as near as you can.

A. About ten or twelve minutes, I should suppose.

Cross 36. Was it a common occurrence for your train to be detained a short time in consequence of some of the machinery of the train being out of order during every year while you were engineer?

A. Not very often; very seldom.

Cross 37. Was it occasionally the case?

A. I told you it was.

429 Cross 38. In what respect were the running of these excursion-trains, so far as you as engineer was concerned, different from the trains run after 1846 between Camden and South Amboy?

A. There were no more run, to the best of my knowledge, after 1846.

Cross 39. What time did your excursion-trains leave Camden?

A. I think quarter past six o'clock; they left Philadelphia precisely at six.

Cross 40. After 1846, was there a train left Philadelphia about the same time in the morning for South Amboy?

A. There was one left at seven o'clock that run to South Amboy with New York passengers; there was no six o'clock train in 1847, but there was a passenger and freight train somewhere in 1848 and 1849; I could not say positively; I run the seven o'clock train in 1847.

Cross 41. In what respect was this seven o'clock train, in 1847, different from the excursion train you have spoken of, so far as the engineer of the train is concerned?

A. It is a through train for passengers from Philadelphia to New York.

Cross 42. Did each of those trains run from Camden to South Amboy?

A. The seven o'clock train did; the excursion sometimes run from Camden to Amboy, and sometimes the steamboat took them from Philadelphia to Bordentown.

Cross 43. Were your duties as engineer very different on the excursion-trains in 1845 and 1846 from what they were on the seven o'clock train in 1847?

A. There was no difference; it was the same.

Cross 44. Whereabouts on the road was that train when this break-rod fell down on the track?

A. Two or three miles beyond the station of Hidestown.

Cross 45. How many cars were there on that train at the time?

A. I could not tell at that time; sometimes we had eight, and sometimes as high as fifteen passenger-cars.

Cross 46. Did the most of the passenger-cars at this time have brakes on like Exhibit A?

430 A. I don't remember that; but I know the brake was on this car at the time when the rod fell down.

Cross 47. How many passenger-trains were run on that line to South Amboy a day, in 1845?

A. There were two through passenger-trains.

Cross 48. Were there any other trains on that route with passenger-cars connected with them at that time?

A. Yes, sir; there was freight-trains with emigrant-cars attached to them, and there was one passenger-car to pick up way-passengers along the road; there was one each way a day, separate trains.

Cross 49. You say the excursion-train at this time made the round trip each day, did you not?

A. No, sir.

Cross 50. What did you say in regard to that?

A. We made excursions once or twice a week; the excursion was called the New York day excursion; there and back the same days.

Cross 51. Did the same train of cars which took the passengers to South Amboy take the passengers back from South Amboy the same day to Bordentown or Camden?

A. Yes, sir.

Cross 52. Now, did the other passenger train you speak of being run on the same day, run from Camden to South Amboy and back to Camden the same day?

A. They had their own train, two separate trains, they same as they now have.

Cross 53. Then do I understand that it required three separate trains of cars to run the two trains—the excursion-train and the other passenger-train you speak of as being run the same day as the excursion-train was run, in 1845?

A. There were three separate trains of cars.

Cross 54. Were not these emigrant-cars you speak of called passenger-cars?

A. No, sir, not while I was there; they were always called emigrant-cars; they were not finished like the regular passenger-cars; the seats were not cushioned, but they had windows in the sides, and slide-doors; they were long cars; some of them had six-wheel trucks, and some four-wheel trucks.

431 Cross 55. About how many of these emigrant-cars had that company in 1845?

A. I don't know; they sometimes had as many as four or five on a train, especially from New York; there were two trains, and they were attached to the freight-line.

Cross 56. You say on the excursion-train in 1845 you sometimes had eight cars, and sometimes fifteen in the train; about how many passenger-cars were run on each of the other two passenger-trains that run the same day you run the excursion-trains?

A. From three to five, as near as I can remember.

Cross 57. Did each of those three trains you speak of have these long crate-cars attached to them in 1845?

A. Yes, sir; on the route between Camden and Amboy.

Cross 58. What other passenger-trains at that time, in 1845, did the Camden & Amboy Company run, and on what route?

A. They run on the Philadelphia and Trenton road to New Brunswick; there was one mail-train run each way; there were two separate trains of cars run from Tacony and Bristol to Jersey City; one train belonged to the Camden & Amboy Company, and one to the New Jersey Railroad and Transportation Company.

Cross 59. Did they not run two trains each way from Philadelphia to New York, by the way of New Brunswick, in 1845?

A. I don't remember.

Cross 60. How many passenger-cars were attached to those two trains you speak of, running to Jersey City?

A. There were three to five to each of them, and a long crate-car attached to each of them also.

Cross 61. Did the Camden & Amboy Company at this time, in 1845, have a number of surplus passenger-cars—I mean more cars than they run regularly at that time?

A. Yes; for excursion days they had to go all around and get them.

Cross 62. During this time, in 1845, you say the excursion-trains run to New York once or twice a week; at what time did the trains
432 leave Philadelphia in the morning at that time on the days between the running of the excursion-trains?

A. I think at seven o'clock.

Cross 63. What cars do you recollect of seeing this brake like Exhibit A on, during the first year you saw them?

A. I never saw them till 1845, that I remember; I can't tell which car it was on; I don't know whether it was on the Tyler car or the Amboy; I know it was on one of the train.

Cross 64. When did you first see the Tyler car?

A. In the spring of 1842 or 1843, I went after it—went after it from the Trenton road, to put it on the Amboy road; and after the car was finished, I took John Tyler through on the same car, and that is the way she came to be named John Tyler.

Cross 65. Is it not possible for that brake-rod to have fallen down in 1846 instead of 1845?

A. I suppose it might have done so, but it didn't with me.

Cross 66. Why are you so positive that that occurred in 1845, and not at some other time?

A. I have told you that I was married in 1844, and I took the excursion-trains in 1845, and it was in that year that the rod fell down.

Cross 67. That, then, is all the reason you have, is it?

A. That is all; I got my clothes all dirty going under the car, and my wife asked me what was the matter with me when I got home, and I told her what was the matter with me, that I had to go under the car; at that time they didn't carry any tools in the baggage-car, as they do now, and if anything happened to the passenger-cars along the road, the conductor always came to the engineer first to fix them; and if it couldn't be fixed, we had to leave the car on the switch or siding.

Cross 68. Did you ever have occasion to go under a car at any other time to repair it in any other way?

A. Yes, often; previous to that time, and also after.

Cross 69. Did you ever get your clothes dirty in going under the cars at any other time?

433 A. Yes, sir; every time; I couldn't help it.

Cross 70. Did you often tell your wife that you got your clothes dirty by going under the cars?

A. Not so very often; I did when something happened; a breakdown or something of that kind.

Cross 71. Was this double brake on the crate-cars which run in your train in 1845 and 1846?

A. Not as I remember.

Cross 72. Did the Tyler car generally run in your trains at that time?

A. Yes; it did sometimes run on excursions.

(At this point in the case, S. B. Cozzens appears in the case on behalf of M'r Sayles.)

Cross 73. When did they first begin to carry the tools in the baggage-cars?

A. I think it was somewhere along in 1846; they carried chains, connections, links, bolts, jack-screws, crowbars; the small tools were carried on the engines.

Cross 74. Fix this time more nearly, if you can.

A. Somewhere along there; I think it was the last year on our excursions I got the jack-screws, which was in 1846.

Cross 75. On how many cars do you recollect having seen this brake like Exhibit A, in the years 1846, 1847, 1848, 1849, and 1850?

A. I don't know; I never counted them.

Cross 76. State as near as you can.

A. I can't come anywhere near it; I don't remember.

Cross 77. Were there as many as a half dozen?

A. I should think so.

Cross 78. Were there as many as twenty?

A. I don't know.

Cross 79. To the best of your recollection, were there as many as 20?

A. I never counted them; I could not tell.

Cross 80. Is there any one of the years named in which,
434 to the best of your recollection, there was as many as twenty?

A. I don't remember anything about it.

Cross 81. Do you know about how many cars the trains you ran in the year' 1846, '47, '48, '49 averaged?

A. No, I don't; sometimes they run four or five, sometimes a dozen, and sometimes as many as fifteen.

Cross. 82. Can't you tell about how many of these cars were fitted with brakes like Exhibit A?

A. I cannot; we had a good many different kinds of brakes on what I run, and others, three different kinds; I do not know anything about how many of those cars had on brakes like Exhibit A.

Cross 83. Do you know whether cars which had on brakes like Exhibit A ran pretty often to South Amboy in the years 1845, '46, '47, '48, or '49?

A. Yes; most every day except Sundays.

Cross 84. Did either or both of the two cars of which you have spoken in your direct examination as being provided with brakes like Exhibit A run pretty often to South Amboy in the years just mentioned?

A. The first one I saw myself was in the year 1845; and I run it during the excursions in the summer myself; I run one or two a week; yes, those cars did run pretty often to South Amboy in the years mentioned, 1846 and 1847.

Cross 85. Was there a car on the Camden & Amboy road named the Amboy?

A. I don't remember.

Cross 86. When, recently, was attention first called to this brake like Exhibit A?

A. About a month ago.

Cross 87. Who spoke to you about it then?

A. Thomas Herbert, I think it was.

Cross 88. Did you about that time or since have any conversation with M'r Lockwood about it?

435 A. Yes, sir; M'r Lockwood came to see me, and he asked me if I remembered anything about the brake, and I told him I did.

CHARLES YUNDT.

Subscribed and sworn to before me this 7th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

WILLIAM CRIM, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. William Crim; 55 years of age; reside at Camden, New Jersey, and am engaged in the repair-shop of the Camden & Atlantic Railroad Company.

Q. 2. Were you ever in the employ of the Camden & Amboy Railroad Company?

A. Yes, sir.

Q. 3. From what time to what time, and how were you so employed?

A. From 1833 to 1850; I was most part of my time brakeman.

Q. 4. Do you know Charles Yundt; and, if so, did he run excursion-trains on that road, and were you his brakeman at any time when such trains were run?

A. I do know him, and I was his brakeman during 1845 and 1846.

Q. 5. Do you know of the use of double brakes on any car or cars on that road during the years 1845 and 1846; if so, what circumstance, if any, called your attention to the fact of such use?

A. I do know of a double brake, one or two during that time;
436 there was one of the rods of the double brake fell on one of the excursions, and the train was stopped, of course, and M'r Yundt, the engineer, put a bolt through the lever of the brake-rod.

Q. 6. (Witness is now shown Model Exhibit A, and is asked) if the brake on that model is like the one on the car on which the rod got loose from the centre lever attached to the body of the car, and fell to the track?

A. Yes, sir.

Q. 7. Please point out the rod connected with the centre lever that became detached from it, and fell to the track.

A. It was the rod as the car was going ahead which fell and dragged upon the ground; it made a great rattle and a great deal of dust.

Q. 8. To what part of this centre lever was the rod which fell attached; to the end of the lever, or between the end and centre?

A. I can't exactly say whether it was the middle one or out end ene.

Q. 9. Was it the rod extending towards the engine or from the engine?

A. From the engine.

Q. 10. Do you know anything about the use of a car on that road called the John Tyler? If so, what was there peculiar about it which makes you remember the case?

A. The car was called John Tyler, and it had different seats from what cars have nowadays; they worked on a pivot; some were round, some armed chairs, and different shapes.

Q. 11. Do you know of your own personal knowledge that there was in use upon said John Tyler car, in the year 1845 or 1846, a double-acting brake like the one here on model Exhibit A?

A. Yes, sir.

Cross-examined by M'r Cozzens, counsel for complainant:

Cross 12. Was the brake like Exhibit A the first double-
437 acting brake of any kind which was used on the Camden and Amboy road?

A. The first that I knew of.

Cross 13. Do you think you knew when double-acting brakes came to be used first upon that road?

A. I think I do.

Cross 14. In the years 1845, 1846, 1847, and 1848 how many cars on the Camden and Amboy road were fitted with brakes like Exhibit A? State to the best of your recollection.

A. That I cannot say; I should think there were a couple of dozen, to the best of my knowledge.

Cross 15. Did some of these cars in those years run pretty often to South Amboy?

A. They did.

Cross 16. Do you know whether any of those were ever repaired there?

A. Not to my recollection.

Cross 17. Did any of these cars fitted with brake like Exhibit A run to Jersey City during the years above mentioned?

A. Indeed I can't say.

Cross 18. Did they run on the through-mail trains?

A. I don't know.

Cross 19. Who first spoke to you about what you would be wanted to testify in this suit?

A. Richard C. Walcott, a witness now present.

Cross 20. Has M'r Edwin Lockwood had any conversation with you about it?

A. No, sir.

Cross 21. Who has conversed with you about it except M'r Walcott?

A. No one.

Cross 22. In the years 1845 and 1846, how many cars were there on the Camden and Amboy road fitted with brakes like Exhibit A?

A. I could not pretend to say how many.

Cross 33. Can you swear positively there was more than one?

A. There were two that I know of.

438 Cross 24. Was there any particular names for these two cars; if so, what names?

A. None, except the Tyler car; the other one never had any name or number that I know of.

Cross 25. Didn't this Tyler car run to Jersey City?

A. I cannot tell you whether she did or not.

Cross 26. Were you in the habit of paying particular attention to the construction of the brakes on those two cars you have mentioned?

A. No more than in the time of braking.

Cross 27. Did you ever know of the brake-rods falling down at any other time than the time mentioned in your direct examination?

A. I never did.

Direct resumed:

Q. 28. After it was found that the rods were liable to fall down, did they put up leather straps or links to prevent their falling in case they should break?

(Objected to.)

A. I think they put up links, staples or straps; iron straps in 1845, I think.

Q. 29. You say you do know when double brakes were first used on the Camden and Amboy Railroad; have you any knowledge of the use of such brake before 1845?

A. The first I knew of the brake was in 1845, I think; I don't know whether I knew of it before or not.

Cross 30. Then can you say you know that it was not used before 1845?

A. I can't say.

Q. 31. Do you know anything of a double-acting brake on that road before 1845?

A. I do not before 1845.

Q. 32. Do you wish to be understood that you do not know when it was first used?

439 A. The first of my knowing when it was used was in 1845; it might have been used years before that for all I know.

WILLIAM CRIM.

Subscribed and sworn to before me this 7th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to 11 a. m., the 8th instant.

THURSDAY, *August* 8, 1867.

Present, counsel for the respective parties, as before.

RICHARD C. WALCOTT, called and sworn as a witness on the part of the defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Richard C. Walcott; 54 years of age; reside in Hoboken, New Jersey, and am a locomotive engineer.

Q. 2. Are you employed as such now, and by whom?

A. I am employed by the Land Improvement Association, at Hoboken.

Q. 3. Have you ever been employed as engineer of the Camden & Amboy Company; if so, from what year to what year were you so employed?

A. I commenced running a locomotive for them on the 13th day of December, 1835, and continued with them as engineer for twenty years.

Q. 4. What train were you employed to run in the early part of the year 1848?

440 A. I was sent to run the train from Trenton to Philadelphia, on the Pennsylvania side.

Q. 5. What event or circumstance enables you to determine the time when you commenced running this train?

A. The engineer who formerly run the train was killed February 25, 1848; I took his place the next morning, the 26th.

Q. 6. How do you fix the date of the 26th. as the day when you took his place?

A. I went down to Trenton and took the date of his death from his tombstone, which was February 25, 1848, and his name was Joseph Cox.

Q. 7. Do you remember about the time of taking his train of the use of a double-acting car-brake on that line; if so, what circumstance do you now call to mind that fixes the fact in your recollection?

A. Yes, sir; I do; we had a crate-car which run from Philadelphia to Trenton and back, which I run on that line back and forth every day. In going from Tacony to Trenton, we had no specified time in going, but in going from Trenton to Tacony, the steamboat left Bordentown one hour ahead of us; I had to go and make all the stops, twenty-five stops, and meet the boat at Tacony, and she took the passengers to Philadelphia. In going up to Trenton, we could stop just where we pleased, and in going down we had to hurry up and stop quicker; because, if we didn't get there ahead of the boat, the boat would have to wait for us; and M'r Van Rensselaer (the superintendent of the road) said if I didn't beat the boat, or get down in time for the boat, he would have to put some one there who would do it. In going down, and stopping at a place, we would go by; and I commenced talking pretty harsh to the brakeman about not putting the brake on. He said he put the brake on as hard as he could, but it would not hold. I told him to tell Abraham Claypole to leather the brake-blocks, and he told Abraham to leather the brake, and he told the brakeman that it did not want any on it. After I got out of the shop with the engine to drill the cars ready to start back, I saw Abraham, and I asked him if he had
441 leathered that brake; he said no; I said, "Why didn't you leather
it?" and he said it didn't want leathering; I told him it did, because we couldn't stop in the morning going down; and he said the brake was good, and says to me, "Get up on the crate-car and I will put the brake on;" I got up and screwed the lever up, and the chain caught in here (pointing to model Exhibit A), overlapped on the windlass-staff, and caught fast in the apparatus or stirrup in which the windlass staff is suspended, and it would not apply the brake; he took three or four links out of the chain by which it was shortened, and it held.

Q. 8. Do you wish to be understood that the reason why the brake would not hold on said crate car when the train was going down to

Tacony was that the chain attached to the brake-rod and winds around the windlass-staff caught the stirrups connected therewith, and hence the power of the brakeman could not be transmitted to the brakes, and that taking out three or more links of the chain this difficulty was obviated, and the brake thereafter held just as well in going to Tacony as when coming back from Tacony to Trenton, on the other end of the car?

A. After that it held just as well in going one way as the other.

Q. 9. Is Exhibit A a correct representation of the brake as then applied to the said crate-car in question?

A. Yes, sir.

Q. 10. Do you know of the use a car on that road called the John Tyler, before you took the train of M'r Cox, to run in 1848; if so, what kind of a brake was there on it?

A. It was a double brake, with a brakeman at each end; the same as Exhibit A.

Q. 11. Did this brake apply the power of the brakeman to both trucks at either end of the car?

(Objected to.)

A. Yes, sir; it did.

442 Cross-examined by M'r Cozzens:

Cross 12. How long did you run this train from Trenton to Philadelphia?

A. Five years.

Cross 13. Do you know of any cars on the Camden & Amboy road, between 1848 and 1850, which had such brakes as Exhibit A, beside the two cars you have mentioned?

A. Yes, sir.

Cross 14. How many such cars were there during this period?

A. I am pretty positive it was on the crate-cars on the mail-trains running to Jersey City and to South Amboy; it runs very strongly in my mind that it was on the ladies' car No. 12, running on the mail-train to Jersey City. I think it was on this car.

Cross 15. Didn't these crate-cars run regularly to Jersey City and Amboy, and didn't the ladies' car run regularly to Jersey City?

A. The crate-car and ladies' car run regularly every day to Jersey City; the other crate car was on the Amboy line on the other side of the river, and ran regularly in that line every day, except Sundays, to South Amboy.

Cross 16. About how long a period did these cars run in this way?

A. I don't know. I run one of the crate-cars five years, and the others I don't know about, because they were put on other trains.

Cross 17. Did the crate-car you run, run to Jersey City, or, if not, where did it run to?

A. The crate-car run between Tacony and Trenton.

Cross 18. I understood you just now to say that one of the two crate-cars you have been speaking about run regularly to Jersey City; was this crate-car the one which you ran or not?

A. No, sir; the one I ran I had every day.

443 Cross 19. Then you mean that the crate-car you ran ran only from Taconey to Trenton, and that the crate-car or crate-cars which ran to Jersey City were on trains with which you had nothing to do?

A. Yes; I had nothing to do with the other trains; the other locomotive got out of repairs, and I run them for a day or two.

Cross 20. Now, aside from the cars on these trains spoken of by you,

how many cars fitted with brakes like Exhibit A were there, to the best of your recollection, on the Camden and Amboy road between 1848 and 1850?

A. Well, I think to the best of my knowledge there were five different cars altogether, two besides the three I have spoken of.

Cross 21. What trains did those other two cars run in between 1848 and 1850?

A. One run on the mail-line from Philadelphia to Jersey City, and the other from Camden to Amboy.

Cross 22. Had those cars, or either of them, any name or number by which they could be designated?

A. These last two cars did not have any name or number that I remember.

Cross 23. Have you any other way of fixing the time when you took Cox's train than the date on the tombstone?

A. Yes, sir; M'r Fish told me to go down to Bordentown and tell Capt. Shipman (then superintendent of the road) that Joe Cox was killed, and send an engineer up; he said to me, "Wilkie, I don't know who to send, without I send you;" he then said, "Who will run your engine?" and I said my fireman could do that for a day or two; he then told me to go and run till further orders. I run for five years.

Cross 24. How does this enable you to fix February 26, 1848, as the time you commenced running this train?

A. How do I know I was born? I don't understand the question.

Cross 25. Between 1848 and 1853, which make the five years you have spoken of, did you know of any other kind of double brake, except that shown in Exhibit A, to be used on the cars of the Camden and Amboy road?

A. No, sir.

444 Cross 26. Did you, during any of these five years, see any double brake on cars on that road which had two cross-levers under the cars?

A. It appears to me I did see a brake of that kind on one of the cars. I don't know whether it was on the Camden and Amboy road; it might have been some other road, and I can't remember when it was.

Cross 27. What was the name of the brakeman on the train you ran, as you have stated, which run from Taconey to Trenton?

A. There were three or four different ones. Edward Doherty was on the line when I first went on. I don't know whether he is living. Joseph Davis was the next; he went out to Owego, or somewhere out that way. I don't know whether he is living or not. I think James Leeds took it next. I think he is living in Trenton. William Provost took it next; he is living and running a locomotive on the Jersey City road, from New Brunswick to Jersey City.

RICHARD C. WALCOTT.

Subscribed and sworn to before me this 8th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

JOHN H. JOBES, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. John H. Jobes; 63 years of age; reside in Jersey City, and have charge of the oils of the New Jersey Railroad & Transportation Company.

Q. 2. How long have you been in the employ of this company, and how were you employed before taking charge of the oils of said company?

445 A. I have been in their employ 32 years; the most of that time has been as a brakeman.

Q. 3. Do you remember that during this time, to wit, between the years 1843 and 1849, of a double-truck car belonging to the Camden & Amboy Railroad Company, coming to Jersey City with a double brake on it?

A. I do.

Q. 4. Please describe the circumstance that called your attention to said brake, and then describe the same.

A. The first that called my attention was, they said a car had arrived there with a double-acting brake on it; the reason why I took more notice of the brake was I was a brakeman and had a great deal of brakeing to do. I was very anxious to get them to put on the car that I was b'akeing on at the time; the brake, if my recollection serves me right, is what they call a double-acting centre-lever brake. If I had not seen the brake from the time I first saw it until the present time I should have known the brake by the drawing.

(The witness is here shown the Model Exhibit A, and is asked)—

Q. 5. If the brake on it is like the one which you saw on the car which you say came from the Amboy road, over the line of your road, to Jersey City between the years 1843 and 1849?

A. It is the same as near as can be drawn.

Q. 6. Did you examine the brake on the car when you saw it; if so, in what way, and what were the circumstances connected with such examination?

A. I got under the car to see this brake. I had never seen one of the kind, or one work before, and I was very anxious to see the movement of the brake.

JOHN H. JOBES.

Subscribed and sworn to before me this 8th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

446 THOMAS HERBERT, called and sworn as a witness on the part of the defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Thomas Herbert; 47 years of age; reside at Camden, New Jersey, and am an inspector of cars for the Camden & Amboy Railroad Company.

Q. 2. How long have you been in the employ of that company, and when did you begin?

A. I hired with M'r Lockwood (the superintendent of the car department of that road) in 1844, in April, I think, and begun with him at the time, and continued in their employ up to the present time, with the exception of three years I was in the United States service, from 1863 to latter part of 1865.

Q. 3. In what years were you employed by the Camden & Amboy Company, in which you worked at Bordentown?

A. In 1844, 1845, 1846, and in July, 1847. I was sent to Camden.

Q. 4. Do you know anything about double acting car-brakes, in use on that road, during the years 1844, 1845, and 1846; if so, what do you know? Please state of your own knowledge.

A. Passenger cars came in there to be repaired; sometimes they

would be single brakes and sometimes double brakes. I couldn't hardly tell the number of the cars. In 1846, I think, the Tyler car came on there, and me and my father put a pair of wheels under her. In the latter part of 1846, M'r Lockwood took me from repairing to go in the shop with Charley Vandergriff, and he wanted me to stay with Charley and help him. I went to Charley, and I told him the boss sent me there to help him fix the trucks, and run them under, and let this passenger-car down on these trucks. The brake was a double brake which we put on the car; it had a cross-lever in the centre of the car; connected with this lever were four rods; one lever or rod on the right running to a post at the end of the car, on the platform; another one connected
447 with that about four inches back from the rod; on the opposite side of the lever there were rods connected, which ran to the post on the other platform, at the other end of the car.

Q. 5. (Witness is here shown Exhibit A, and asked) if the brake on this model is such a one as you have just described?

A. Yes, sir; that is the same kind of a brake.

Q. 6. You say that you and your father had occasion to put a pair of wheels under the Tyler car. Was there on this car, at that time, a brake like Exhibit A?

A. There was.

Q. 7. After you went to Camden, in 1847, as inspector of cars, and repairer of the same, did you know of the use of such brakes on cars of that road, as they came to Camden?

A. Yes, sir; there was one on a crate-car, and, I think, one on a passenger-car.

Q. 8. At how early a date did this double brake come into general use on that road on passenger-cars?

A. In 1848. The whole train had them on; a train of five cars, I think. To my knowledge, the five cars had them on.

Q. 9. Have nearly or quite all of the passenger-cars which come to Camden at the present time the double brake on?

A. Nearly all of them.

Cross-examined by M'r Sayles:

Cross 10. When was your attention first called to this double brake recently, and by whom?

A. I am not certain, but think that is the man (pointing to M'r Sayles) that was at my house. David Reynolds was with him. That was the first I knew concerning this brake about a suit.

Cross 11. How long have you been an inspector of cars at Camden?

448 A. From 1849 to 1863, when I went into the service, and resumed my place in 1865, and am so employed at the present time.

Cross 12. About how many cars did you and Vandergriff put this double brake on while you were at work with him?

A. I couldn't tell you, certain; some two or three, and perhaps there may have been more. We put them on all the new passenger-cars that were built in the shops while I was at work with him.

Cross 13. How long were you at work with him?

A. Some two years, I suppose.

Cross 14. It was also put on all of the old passenger and baggage cars when they were rebuilt or repaired during that time, were they not?

A. No, sir; they were not put on at the time they came in to be repaired or rebuilt. Some passenger cars came in to be repaired that had this brake on.

Cross 15. During the two years that you were with Vandergriff, was this double brake like Exhibit A put on the cars that run in the passenger-trains when they came in the shop for repairs or to be rebuilt; I mean those which hadn't this brake on previous to that?

A. I never put it on, nor help put it on, that I know of, on the old cars.

Cross 16. Did you work on the old cars at the time you were with Vandergriff?

A. Some days there would be five or six passenger-cars broke down; the boss would come to us and want us to go and help fix the cars, to send them out. Such a thing might happen one day and not again in three months.

Cross 17. Then you didn't work at repairing cars during this two years, only on extraordinary occasions, as you have just mentioned?

A. No, sir; I did not.

Cross 18. When you first went to Camden as inspector of cars, did most of the passenger and crate cars have this double brake on?

A. They hadn't all of them. Some had and some hadn't. The crate-
cars had them on, I know. There were more or less of the pas-
449 senger-cars on all the trains which run to Camden had them on.
Some had the single brake and some the double brake.

Cross 19. How many trains left Camden in a day at that time?

A. A train left at a quarter to six in the morning, and a train at twelve o'clock, and a way-line to Bordentown left at four in the afternoon. The twelve-o'clock line went to South Amboy and by steamboat to New York, and the quarter-past six went to Jersey City.

Cross 20. Did you ever see any other double-acting brake on the Camden and Amboy cars except the one like Exhibit A; and, if so, describe it?

A. Not to my knowledge. They might have been on, but they didn't come where I was.

Cross 21. You don't remember of ever having seen what was called the McLoughlin brake, do you?

A. I might have seen it, but have no recollection of it.

Cross 22. What were your particular duties as inspector of cars?

A. To feel all the boxes when they came in, to see whether they were cool or hot; and it was my place to examine the wheels, to see if they wore broken, and brakes, to see if they were in order, and everything underneath, to see that all was in running order.

Cross 23. Then, all the double brakes you recollect of having seen on the Camden and Amboy cars were arranged and applied like the brake shown on Exhibit A, were they?

A. Yes, sir.

Cross 24. Did I understand you to say in one of your answers that this double brake was put in general use on that road in 1848?

A. No, I think not.

Cross 25. Did you ever see a brake on any of the Camden and Amboy cars that had two cross-levers under the cars instead of one like Exhibit A?

A. Not to my knowledge. They might have been on. They didn't run where I had a chance to see them. They didn't come down where I was at Camden.

450 Cross 26. Has M'r Edwin Lockwood ever talked to you about this brake matter; if so, when?

A. He came down on the Amboy line from Brodentown to Camden, and jumped off the train, and told me that he wanted me to go to New York on a trial about a double brake, and that is all he said to me, and went aboard the boat. I didn't see him again until I saw him here yesterday.

Cross 27. Then he did not ask you what you knew about it, did he ?

A. No; I don't think he did; he was in a hurry.

Cross 28. Had you ever told anybody what you knew about it until you came to New York as a witness ?

A. George Vernon, the boss over the engines at Camden, he came to me on Monday last and told me to get ready to come to New York, by order of M'r Lockwood. I asked him what it was for, and he told me on account of this brake, and he asked me if I knew anything about it. I told him I did. He told me to get ready and come off the next morning by 5 o'clock train, by order of M'r Lockwood.

Cross 29. Who else have you talked with about this brake ?

A. There were several around the yard asked me if I knew anything about it; they knew I did.

Cross 30. How did they know you did.

A. I had been working at the cars so long they thought I ought to know something about the brakes.

Cross 31. Is that all the reason they had for knowing that you knew all about these brakes ?

A. That I couldn't answer.

Cross 32. Are they the only ones that have talked to you about the brake ?

A. They are the only ones, with Dan Reynolds. He spoke to me about it.

Cross 33. What did you say to Dan Reynolds about the brake ?

A. Dan asked me if I knew anything about the brake. I told him I did. He said if anybody knew I ought to know.

451 Cross 34. Is that all you said to him about it ?

A. I think that was all the conversation that passed between us about it.

Cross 35. Who was with Dan Reynolds at the time you had this talk about the brake ?

A. I think M'r Sayles, the complainant. It was night, near nine o'clock, when he came to my house.

Cross 36. Then you have not talked with M'r Whipple, defendants' attorney, about it since you have been in New York, have you ?

A. He asked me if I knew anything about this brake, and I told him I did. I never saw him before till I came here.

Cross 37. Did you not talk with M'r Lockwood about it yesterday ?

A. No, sir.

Cross 38. Have you not talked with the other witnesses in the case about it since you have been in New York ?

A. William Venable and me were talking about it.

Cross 39. Did you not say in one of your answers that those men in Camden were the only ones you had spoken to about it ?

A. You asked me if Lockwood hadn't been talking to me about it; I told you that he hadn't, that he wanted me to go to New York about a trial about the brakes; the only one in Camden I had spoken to about it, I meant.

Cross 40. Were there brakes on nearly all the cars that run in the passenger-trains that run to Camden in 1861 and 1852 ?

A. Some had them on and some hadn't; some had double brakes and some single brakes.

Cross 41. At how early a date did the majority of the cars running in the passenger-trains have these brakes on ?

A. In 1848 they had them on some of the cars on the passenger-trains that run from Camden to Amboy and from Camden to Jersey City.

452 Cross 42. You say in 1847, when you went to Camden, there was three trains left there a day. How long after that before there was a train left there in the evening for New York or after 12 o'clock noon?

A. I couldn't tell exactly, they altered the line so. I should think in 1850. I am not positive, any way.

Cross 43. Can you swear that they did not run a New York train from Camden after 12 o'clock in 1847?

A. I don't think I can swear about that. I don't think they did.

Cross 44. Did this train that you speak of in answer to the 8th direct interrogatory run from Camden to Amboy or to Jersey City?

A. That run to Jersey City regularly.

Direct resumed:

Q. 45. Do you wish to be understood that there was a trial run from Camden to Jersey City with five cars in it, all of them having double brakes on, in 1848?

A. I don't think I said they all had them on. I said there was five cars in the train, and I said some had them on and some did not.

Q. 46. Is that what you wish to be understood in your answer to the 8th direct interrogatory?

A. Yes, sir.

Cross resumed:

Cross 47. What was your answer to the 8th direct interrogatory, which was as follows: "At how early a date did this double brake come into general use in the passenger-cars of that road?" Did you not say in 1848 the whole train had them on, a train of five cars, I think, to my knowledge?

453 A. Well, I might have said five cars—that we run five cars. I couldn't say about brakes on all of them; they had on some, I know.

THOMAS HERBERT.

Subscribed and sworn to before me this 8th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to 11 a. m., the 9th inst.

FRIDAY, *August* 9, 1867.

Present, counsel as before.

BENJAMIN L. WALCOTT, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Benjamin L. Walcott; 45 years of age; reside at Bordentown, New Jersey, and am ticket-collector on the Camden & Amboy road.

Q. 2. When did you enter the employ of the Camden & Amboy company; what did you do first, and what have you done from that time to the present as the employee of said company?

A. I entered it in 1843, as brakeman. I was a brakeman until about the latter part of May or the first of June, 1845. I then went as fireman. I fired for a man by the name of Charles Yundt, who always went by the name of Dutch Charley. I was conductor after that, and then ticket-collector, which office I now hold.

454 Q. While you were fireman with Yundt, did the company run excursion-trains; if so, in what year, and what circumstance enables you to fix the date?

A. They did, in 1845. I was married on the 13th day of April, 1845. A few weeks after that I commenced firing, and fired for that man eleven months.

Q. 4. During the time that you were fireman for said Yundt, on said excursion-train, did you know of the use of a car in that train which had a double brake on it; if so, what was the name of said car, if it had any, and what circumstance is connected with your applying the brake to said car?

A. I did. The car went by the name of the John Tyler car. In going down the cut, two miles this side of South Amboy, the engineer went to reverse his engine, and his lifting-rod, or a pin came out of the lifting-rod, broke (I can't say which), so that he had no control of his engine. There was a man on the engine with us by the name of William Sharp. Him and myself went over the top of the cars to put the brakes on to stop the train. I went right to this Tyler car first and put the brake on. My reasons for going there was because it had a double brake. The double brake held on both trucks, and all the other cars between had only one brake, which held on one truck only. The brake on this Tyler car was the first double brake I ever saw.

Q. 5. (Witness is shown Model Exhibit A, and asked) if the brake on this exhibit is like the one on the John Tyler, referred to in his last answer.

A. Yes, sir; that brake acts as near like it as I could explain it.

Q. 6. Did you know Joseph Cox, a locomotive engineer on the Camden & Amboy road; if so, when did you know him, and did you at any time act as his fireman? If so, did you know of the use of a brake like Exhibit A on any car or cars in the train run by him?

A. I knew Joseph Cox. I knew him in 1845, 1846, and 1847, and was firing for him when he was killed, and fired for him in 1846 and 1847. The crate-car that was run in that train had a double brake on it like Exhibit A.

455 Q. 7. Is that double brake in use on the passenger-cars of the said Camden & Amboy road at the present time?

A. Yes, sir.

Cross-examined by M'r Cozzens:

Cross 8. How long were you a fireman on the Camden & Amboy road?

A. Three years and six months; from about the latter part of June, 1845, to the forepart of 1848.

Cross 9. When you first commenced firing on that road, what kind of trains did you fire on?

A. I think about the first firing I done was on the mail-train.

Cross 10. When was that?

A. About the forepart of June, 1845.

Cross 11. Were there any double brakes on any of the cars on that mail-train?

A. I don't know of any but this Tyler car. This Tyler car was run on the mail-train.

Cross 12. From what place to what place did that mail-train run?

A. It run from Camden to Jersey City.

Cross 13. And the Tyler car ran in it to Jersey City, I suppose?

A. Yes, sir.

Cross 14. Often?

A. No; it did not run there steady. Whenever they had an excursion they would select out the cars and run them on excursions.

Cross 15. I didn't ask whether it ran steadily, but whether it run often to Jersey City.

A. Sometimes it would run on that train for a week or two at a stretch.

Cross 16. How long did you fire on that mail-train?

A. I fired that train about eleven months, but was off out of that time on excursion-trains about three months.

456 Cross 17. Did that Tyler car run in that train to Jersey City all, or nearly all, of that eleven months except the three months spoken of?

A. That I can't tell you.

Cross 18. To the best of your recollection, how much of that eleven months did that car run in that train to Jersey City?

A. I think it run pretty much all the winter of 1845. I mean the winter of 1845 and 1846. I fired on that train all that winter, and I think that car was in the train pretty much all the time.

Cross 19. Was that car so constructed that its brakes and the brake-levers under the car could be seen without difficulty?

A. Not without getting under the car, I shouldn't think.

Cross 20. Did that car have fish-bellied side-sills like the Model Exhibit A?

A. That I am not able to say.

Cross 21. If it had not, what difficulty would there have been in seeing its brakes and the brake-lever under the car if a person had stooped down at the side of the car?

A. There wouldn't have been anything to hinder.

Cross 22. Are you very familiar with the practical construction of double-acting car-brakes?

A. Yes, sir.

Cross 23. Do you know the construction of what is called the Hodge brake, in which there are two cross-levers under the car?

A. No, sir.

Cross 24. Do you know the construction of what is called the Stevens brake, in which there are four vertical levers under the car?

A. No, sir; I have never seen any of them that I know of.

Cross 25. What time did you commence to be ticket-collector on the Camden and Amboy road?

A. Three years last New Years; that is, in 1864.

Cross 26. Then from 1843 to 1864 you were on that road either as brakeman, fireman, or conductor, were you not?

A. Yes, sir; except five months.

457 Cross 27. During all that time did you never see on any of the cars on that road a double brake with two cross-levers under the car-body?

A. No, sir.

Cross 28. Where is the William Sharp you spoke of?

A. Dead and buried, some time ago.

Cross 29. Was the time when, as you say in your direct examination, you put the brake on the John Tyler the only time you noticed the brake of the car?

A. No, sir; long before that I noticed them.

Cross 30. How long before?

A. The first I ever saw of a car with a double brake on was the day they took President Tyler from Camden to Princeton.

Cross 31. How many times after that did you notice the brake of that car up to the time referred to in your direct examination?

A. I couldn't tell. I had been using that car two nights in a week the whole summer season.

Cross 32. What summer was that?

A. Well, I think I was with that car from off and on from the time they carried President Tyler till the time I commenced firing, in May or June, 1845.

Cross 33. Where was that car running mostly the time?

A. On the mail-train from Camden to Jersey City.

Cross 34. How long since you last saw the brake in the Tyler car?

A. I don't know that I have seen the Tyler car in over three years.

Cross 35. When were you first spoken to about testifying in this case?

A. Yesterday, about twelve o'clock.

Cross 36. How long before that had any one talked to you about the brake on the Tyler car?

A. I think about a week ago M'r Lockwood asked me what I knew about the Tyler car, and I said I didn't know anything about it. I hadn't seen it for some time. I thought he wanted to know where the car was.

Cross 37. What did M'r Lockwood say then?

458 A. M'r Lockwood told me that he would like me to study out what I could about that car. When I saw him again, which was the next evening, I asked him what he wanted to know about the Tyler car. He wanted to know what I could tell him about it. I told him I could tell him what kind of doors it had, what kind of cushions, what kind of seats there was in it. Some of them was made like a chair, to turn around on a pivot, some of them was just a lean-back, with rods to run down the back of the seats, and some of them had a wide back that turned over, something similar to what they had nowadays. Some of them were split right in two, to turn different ways. I told him it had a lamp in each end of the car. I told him it had a six-wheel truck under it. I told him it had a crank on each end of the hand-railing. I told him it had a cross-lever underneath, about midway of the car; that it had a long rod from the end of the lever till it came within about 18 inches of the brake-post, and there was about 18 inches of chain that run to the brake-post, a bolt run through that, and a nut screwed on the end of it; a short rod connected in about six inches from the end of this cross-lever that connected into the brake-lever.

Cross 38. Didn't M'r Lockwood say anything at all to you when he first spoke to you concerning the Tyler car, about wanting to know what brakes it had?

A. Yes, sir; he asked me if I knew what kind of brakes the Tyler car had on, and I told him I would have to study a little. That is all. He went on board the steamboat and I didn't see any more of him till the next night.

Cross 39. Didn't he say anything to you about a patent, or about there being some questions about brakes?

A. He didn't at that time. He didn't at any time about there being a patent.

Cross 40. Did he at any time say anything about there being a question or controversy about brakes?

A. No, sir.

Cross 41. Didn't he tell you why he wanted to know what kind of brakes the Tyler car had?

A. He didn't at that time.

Cross 42. At what time did he tell you?

A. The next night, when I saw him.

459 Cross 43. What did he say to you about it, then?

A. The next night I went to the depot to meet my wife. While I was waiting there Mr. Lockwood came there. I then told him all I could what kind of a car the Tyler car was, and after I told him all, he told me what he wanted to know for. He told me there was a lawsuit on this patent brake, and he wanted to know how far back I could remember. I told him the first that I knew of the Tyler car was when they took the President to Princeton, and that is all that was said about it between him and me.

Cross 44. Didn't he say anything about its being an important matter to prevent the parties sueing on that patent from succeeding?

A. He did not to me.

Cross 45. He didn't say anything like sueing or anything of that kind?

A. No, sir.

Cross 46. Will you swear positively that that was all that passed between you and Mr. Lockwood about this Tyler car on these two occasions?

A. Yes, sir.

Cross 47. Did he tell you that he had asked anybody else on the road what they knew about this Tyler car?

A. No, sir; he did not say anything to me about any one else.

Cross 48. You say that he told you that he would like you to study out about that car. Didn't he speak of any particular thing he wanted you to study out about it?

A. No, sir.

Cross 49. When you saw him the next night, did you tell him what kind of springs that car had?

A. Yes, sir; I told him it had spiral springs.

Cross 50. How many other cars were there on the Camden & Amboy road between 1843 and 1848 respecting which you could now tell what sort of doors, cushions, seats, trucks, and springs they had?

A. Well, I don't suppose I could go to work now, after passing through from fifteen to twenty cars a day, to tell you the colors
460 of the seats. Well, I don't think there was more than two cars on the road which had double doors to them, and they were small cars with steps to them.

Cross 51. Can you now tell what sort of cushions, seats, trucks, and springs the other cars on the road besides the Tyler, between 1845 and 1848, had?

A. I think they were small cars, steps on the ends of the platforms, with four-wheel trucks under them, a brake on one end of them, yellow cars, glasses and slides to let down, seat about forty passengers. The color of the cushions were mostly red and plush.

Adjourned to the 12th inst., at 12 m.

MONDAY, *August 12th*, 1867.

Present, counsel for the respective parties.

Cross 52. Then the Tyler car was very easily distinguished from the other cars on the road at that time, was it?

A. Yes, sir; you could tell it in the train from any other car.

Cross 53. State, as near as you can, for about how long a time it continued to be so different from the other cars on the road that it could be so easily distinguished in the train at any time?

A. Well, I think all the time that it was on the road.

Cross 54. Do you know how long it was after the President was carried in that car that it came to be called the Tyler car?

A. I think they commenced calling it right away after that the John Tyler car.

Cross 55. Now, Mr. Walcott, in your 37th cross-answer you say that Mr. Lockwood told you that he would like you to study out what you could about that car. Are you positive that that was all he said?

A. Yes, sir; that is all he said to me one way or the other.

461 Cross 56. How did you know from that brief remark what kind of information he wanted about the car?

A. I didn't know at all what kind of information he wanted.

Cross 57. What did you think he wanted?

A. I didn't know whether he wanted to know something about the seats inside of it; I did not know what he did want. I can't tell what I thought he wanted.

Cross 58. How long before that was it that you had had your attention called to or had thought anything about the brakes on the Tyler car?

A. I don't know that I had had my attention called to or thought anything about the Tyler car for the last three years.

Cross 59. What called your attention to it or made you think about it three years ago?

A. Running it in the train, more or less.

Cross 60. Why did that call your attention to that car particularly?

A. The reason my attention was called to that car at that time (I won't say three years, it may be longer) was coming out of Amboy I heard a squeaking around the train. I stopped the train and found that a box under the John Tyler car, the brass on top of the journal, was cut out. I drilled the car off and left it on the side track.

Cross 61. Did you at that time look first at the boxes?

A. Yes, sir.

Cross 62. That is rather a common cause of stoppage on railroad trains, is it not?

A. Yes, sir.

Cross 63. After you had found that the trouble was a journal cut out, there was no need of examining that car any farther before putting it out of the train?

A. No, sir.

Cross 64. Did you examine the brake of the car on that occasion?

A. No, sir.

Cross 65. Now, how long before that was it that your attention had been called to or that you had thought anything about the brake of the Tyler car?

462 A. I don't know, sir. Whenever I would run the car, of course, I would see the brakes.

Cross 66. Did you, whenever you would run the car, get down and look underneath it to see the brakes?

A. Not without something was the matter with the car.

Cross 67. Could you see the cross-lever and its connecting rods unless you did get down underneath and look at the car?

A. Not without stooping down.

Cross 68. Did you, whenever you run that car, stoop down and look at them?

A. I always made it a practice when backing on a turn-out, day or night, to see whether the brakes, wheels, and all were right.

Cross 69. Did you do the same thing to all the other cars in the trains you were on as brakeman or conductor?

A. Not as a brakeman I didn't do it, but as conductor I did.

Cross 70. At these times did you pay any more attention to the wheels, brakes, &c., of the Tyler car than any of the other cars in the train?

A. I did not, sir.

Cross 71. You said just now it might be longer than three years. How much longer than three years might it be?

A. I should think about four years ago, as near as I can tell.

Cross 72. Now, how long before that four years ago had you had your attention called to or had you thought about the brakes of the Tyler car except as you looked at them on turn-outs as you have stated?

A. I can't say; I don't know when.

Cross 73. Can you say that you had had for ten years before?

A. I couldn't name any day, or date, or month. I had been running the car more or less during that time.

Cross 74. Do you mean by this answer that you cannot say that you had had for ten years before?

A. No, sir; I cannot say.

463 Cross 75. Then, at the time Mr. Lockwood spoke to you, you had not had your attention called to the brakes of the Tyler car any more than to the brakes of other cars you have run for fourteen years. Now, how did that brief remark of Lockwood's that he wished you would study out what you could about that car lead you after a lapse of all those years to be able to tell him the next evening so particularly about the rigging of the car?

A. I first went on the night when I met him; he asked me what I had studied out. I said, don't say anything to me, and I will tell you what I know, and see whether I am right or not. I told him it had double doors on each end. I told him what kind of seats was in the car, all the slides let down in the car, each slide had three panes of glass in. The cushions were kind of a drab color; some of the seats were fixed like two round chairs sitting side by side, then turned around on a pivot; some were seats with a wide back that turned over; some were just to lay back, with two iron rods run down to the bottom of the seat, a bolt went through the bottom, and a split key put in the bolt; then there was another kind of a seat that you could turn them so that you could look one another in the face. It had a lamp in each end of the car, a platform on each end of *of* the car. Iron railing about one-third of the way on each side of the car; a chain went from one side to the other, and was the same on both ends; a brake-crank on each end of the car; one cross-lever under the bottom of the car; one long rod from the cross-lever to about 18 inches of the brake-post. A bolt en the end of the chain went through the post with a nut on the end of it; a short rod running from there to the brake-lever on the back end of the truck going one way, and the front end going the other way, the same on both ends; six-wheel truck, tallow-boxes, spiral springs. I believe that is about all as I explained it to M'r Lockwood that night, and he told me I knew all about it.

Cross 76. Did you get at all this from that slight remark of his—that he would like you to study up what you could about the car?

A. Yes, sir, I did.

464 Cross 77. Are you sure that he did not at that first interview say anything more to you than that remark, that he wished you would study up what you could about that Tyler car?

A. That is all he said; he said no more.

Cross 78. Do you swear positively to that?

A. Yes, sir.

Cross 79. Did not he say anything to you in that interview about the brakes of the car?

A. He did not, sir; just at that time my wife came along, and I went away home with her.

Cross 80. Will you swear positively that he did not say anything at all to you about the brake at that time?

A. He did not at that time; I will swear positively to that.

Cross 81. Now, did you not on Saturday swear that when M'r Lockwood first spoke to you concerning the Tyler car, he asked you if you knew what kind of brakes it had on, and you told him you would have to study a little?

A. He asked me what I knew about the Tyler car. I told him I did not know anything about the Tyler car; I hadn't seen the Tyler car for some three or four years; well, that was all that was said on that day. I don't recollect saying that; if I did, I did not know what the question was.

Cross 82. Could you now, after this lapse of time, describe the brakes on any of the cars in the trains you run?

A. They are pretty much rigged the same as on the Tyler car; yes, sir, I can describe them.

Cross 83. Would you have to study any time to do so?

A. I would not.

Cross 84. Why did you need "to study a little" to tell M'r Lockwood what kind of brakes the Tyler car had?

A. He did not ask me what kind of brakes she had; he asked me what I knew about the car.

Cross 85. Question repeated.

A. I did not have to study to tell him.

Cross 86. Now, M'r Walcott, when M'r Lockwood first spoke to you about the Tyler car—it was nearly twenty-two years since you say you had first seen the car, and you have just testified that it was fourteen years since you had had your attention called to the brakes 465 of that car any more than to the brakes of other cars of the trains you run—do you not think it is a difficult matter, under such circumstances, and after such a lapse of time, to remember positively what kind of a brake a particular car had on twenty-two years ago?

A. No, sir; I can remember just as well as can be; one reason that I can remember it well in 1844 is, I lost my father August 3d; the night before, I slept in the John Tyler car, what little I did sleep. I was cleaning the car on that day, when I got word that my father laid at the point of death; he died that day, the 3d of August, 1844.

Cross 87. You said, in your 82d cross-answer, that the brakes of the other cars of the trains you run were rigged pretty much the same as the Tyler—you knew, didn't you, that the Tyler car, and the other cars of the trains you run, had the same kind of brakes for a great many years?

A. Yes, sir; there was some little difference in the levers; sometimes the levers were on the front end of the trucks, and sometimes on the back end.

Cross 88. Now, when you were studying up about the Tyler car, after

Lockwood spoke to you, it was in your mind that the majority of the passenger-cars on the Camden & Amboy road had, for many years, had on them brakes like Exhibit A?

A. Yes, sir.

Cross 89. When you were studying up about the Tyler car, was it in your mind what kind of seats it had, so that you could have said off-hand what kind of seats they were?

A. Yes, sir.

Cross 90. And what kind of doors it had?

A. Yes, sir.

Cross 91. And what kind of springs?

A. If M'r Lockwood had stood still fifteen minutes, I could have told him all about it—what springs it had, and what seats, and what brakes it had, and what kind of lamps it had; but he went on board of the steamboat.

466 Cross 92. Did you, in that studying out, pay any more attention to what brakes it had than you did to what seats it had, what springs it had, what trucks it had, &c.?

A. I did not, sir.

Cross 93. You just worked it out in your mind, didn't you, as it was when you last recollected seeing it, and when you next saw Lockwood you so described it to him, didn't you?

(Counsel for the defendant objects to counsel forming his question in such a way as to assume what the witness may not be disposed to admit.)

A. Yes, sir.

Cross 94. Was that all there was said about it?

A. That was everything that was said about it.

Cross 95. Did Lockwood then, or at any time afterwards, tell you what he knew about the Tyler car?

A. No, sir.

Cross 96. Have you talked with any other employees of the Camden & Amboy road about this Tyler car, lately?

A. No, sir.

Cross 97. Who has talked with you about it since the last conversation you had with Lockwood on the subject?

A. There has no one spoken to me about the Tyler car, but I have spoken to one about it. I was at South Amboy on Saturday last. I was laying in a car, on a cushion; James Van Dusen came along down the track. I don't know that I had seen him for two years. I asked him where the old Tyler car was; he said he tore it up, and burnt part of the wood up; he said the boat was coming in, and he must get to the dock; and that was about all I said to him about it.

Cross 98. Should you say that it had been well known, and generally known, among the employees of the Camden & Amboy road ever since 1846, that this Tyler car had double brakes?

A. Yes, sir.

467 Cross 99. Did you ever see on the Camden & Amboy road a cross-lever brake called the McLoughlin brake?

A. If I did I didn't know it; I don't know it by that name.

Cross 100. The McLoughlin brake is a brake with a cross-lever, and a yoke near each end of the car, and it works by the bumpers; does this enable you to remember whether you ever saw any such brake on the Camden & Amboy road?

A. They have had brakes there where the lever run out about even with the bumpers; they were rigged in the same way on the tenders to stroke these brakes, so that when you were backing the train it would put the brake on; oftentimes they would get caught on, so that you could not get them off when you would start the engine ahead; I have went under the car and pryed them off myself, and I have seen others do it, but I never knew the name of the brake.

Cross 101. Do you know when the brake you have just described was first put on the road?

A. I do not.

Cross 102. Can you state when it was taken off?

A. No, sir; I cannot.

Cross 103. Do you know anything about how many cars it was put upon?

A. No, sir; I do not.

Cross 104. Do you not know that it was put, and for a long time continued on, one or more whole trains on the Camden & Amboy road?

A. No, sir; I do not.

Cross 105. Did you ever hear of this brake, which has been called the McLoughlin brake, spoken of as the Spider brake?

A. No, sir; I never heard it spoken of until I heard it spoken of in this room.

Cross 106. Did you ever know of a brake in use on the Camden and Amboy road called the Spider brake?

A. No, sir.

468 Cross 107. At the time when you say you were going down the cut, spoken of in your direct examination, whereabouts on the train were you?

A. I was on the locomotive at the time.

Cross 108. Were you constantly on the locomotive?

A. That was my place, on the locomotive.

Cross 109. What is there that makes you think that the time spoken of, when you went to the Tyler car to stop the train in the cut, was in 1845, rather than in any other year?

A. I only fired for him one summer, commencing the latter part of May or the first part of June, 1845.

Cross 110. Do you say that during one summer was the only time that you fired for Yundt?

A. It was the only summer that I fired for him; I had fired some trips after that.

Cross 111. About how many trips after that?

A. About as near as I can tell you, it was the latter part of May, 1846, I fired for him right straight along; I can't tell the number of trips.

Cross 112. Well, what makes you think that the circumstance which happened in the cut occurred in 1845, rather than in any other year?

A. Well, it was the only year that I ever fired on the bay excursions, which were the excursion trains spoken of heretofore.

Cross 113. Did not these excursion trains run twice a week, and the other days in the week (unless perhaps Sunday) did not the engineer and fireman of the excursion trains run the mail-trains you have before spoken of?

A. The other days we stood as an extra engine, and run it when there was anything the matter with the regular mail-train engine.

Cross 114. How many days in the week, on an average, did this arrangement cause you and your engineer to run the mail-train?

A. That is something I can't tell you; we had to fire up every morning and stand ready. On an average it would be two days in a week, anyhow.

Cross 115. Did that mail-train ever run to Amboy ?

A. No, sir.

469 Cross 116. What is there that makes you think that it was when you were firing on the excursion trains with Yundt, rather than when you were firing on those trains with Cox, that the circumstance occurred in the cut ?

A. To the best of my knowledge, I never went to Amboy with Joseph Cox in the world, neither on locomotives or any other way.

Cross 117. Is there no other cut on the road except the one two miles this side of South Amboy ?

A. There is one on Gravel Hill, fourteen miles from Amboy; one at Blackstock, four miles from Bordentown, towards Amboy. There are cuts between Camden and Bordentown.

Cross 118. Are there any cuts on the route pursued by the mail-train running from Camden to New Brunswick ?

A. Two miles this side of Camden, which is a sand-cut. There are four cuts between Camden and New Brunswick; one of them is down a heavy grade.

Cross 119. Now, if you ran on the mail-train so often as at least twice a week, and if there were so many cuts on the route pursued at that time by the mail-train, how are you able to state positively, after this lapse of time, that the circumstance occurring in the cut did not take place with one of these mail-trains in some one of these other cuts ?

A. If it had took place in any other cut except where it did, I wouldn't have taken any notice of it. The engineer had to shut his engine off, and the train would not run a mile without stopping; the further the train went down this grade the faster it would go. I and every one in that train was in danger of their lives under the circumstances.

Cross 120. Would it or not be true that the further a train ran down the heavy grade in the cut just spoken of between Camden and New Brunswick, the faster it would go ?

A. Yes, sir.

Cross 121. Would it not, therefore, be possible for such a circumstance as you say took place in the Amboy cut, to take place in this other cut between Camden and New Brunswick ?

A. Yes, sir.

470 Cross 122. How long before you attempted to fix a date for applying the brakes of the Tyler car had you thought about the event in the cut ?

A. I hadn't thought of it at all.

Cross 123. Had the fact of the engineer losing control of his engine, and your trying to stop the train, been in your mind, or thought of by you, for ten years until now, recently ?

A. I don't suppose I have went down the cut three times since but what I have thought of it.

Cross 124. Did you then always, when you went down the cut and thought of it, think to yourself that the Tyler had double brakes when the event happened ?

A. No, sir.

Cross 125. Did you ever, on those occasions, think anything about whether the Tyler had double brakes or not, when the event happened ?

A. I have often thought that if we had not had the Tyler car we would have had an accident, and it would not have been many minutes either; they would have ran into the river; some cars on a train, previous to that time, did go into the river.

Cross 126. In you' sixth direct answer, you speak of a crate-car running in a train of which Joseph Cox was engineer; was the train there referred to, "that train," the train Cox was using when he was killed?

A. Yes, sir; he was running that train the day he was killed.

Cross 117. Was the time referred to by you, when that crate-car was in that train, the time Cox was killed?

A. Yes; it was to the best of my knowledge.

Direct resumed by M'r Whipple:

Q. 128. Were there peculiarities connected with the Tyler car that did not belong to any other car or cars of that road—if so, state them as they occur to you—during 1844, 1845, and 1846?

471 A. When the slides were down, very near one-half of the car was thrown open—while in any other car there was only here and there a small slide to let open; when those slides were all shut up, it was glass from one end of the car to the other. It had wide platforms, while the rest of the cars had steps; one lamp in each end of the car, which the others had not; a privy on the outside of the car, on the platform; no other cars had privies but the ladies' cars, whith were inside; it always went by the name of the Tyler car. I don't suppose there was ten men on the road but what knew it; you could tell it as far as you could see it; the doors had no locks on them. When the men went in there to sleep at night, we used to tie the door to; if it stood along by the platform, you could let a window down and crawl right in; there were four different kinds of seats that I knew of in the car; whenever they wanted to try an experiment, they would try it on the Tyler car. I have slept in that car many a night, and have set down into it many a time and eat my dinner.

Q. 129. Is it these peculiarities distinguishing it from all other cars on that road that enables you now to identify it, and explain it in detail?

A. Yes, sir.

Q. 130. Do you know of your own knowledge that there was a cross-lever brake on this car, having four connecting-rods, at the time of the death of your father, to wit, in August, 1844?

A. Yes, sir; I do. I slept in the car the night before, and cleaned the car the same day of his death.

Q. 131. In answer to the sixth direct interrogatory, you speak of a crate-car being in the train run by Joseph Cox; was there anything connected with that car, such as drilling it into place in the train, or otherwise, that enables you to determine that there was a double brake on it like the one on Exhibit A? If so, please state.

(Objected to.)

472 A. Whenever we would go into the depot and let our passengers out, then we would back the train up the road—what we call drilling; the brakeman would take the passenger-cars, then I would get off and cut this crate-car loose, and let it into the pit where they loaded the crates, on the outside of the house; then they would put it up out of this pit back into the passenger-cars; I would let this crate-car down in this pit pretty much every day, in order to save time to get her engine to the wood-pile, and to get water, and get her engine in the shop, so that I could get at my work in wiping off; there was always a crate kept on this crate-car to put way-baggage in.

Q. 132. Was all this spoken of in your last answer, prior to the death of Joseph Cox?

(Objected to.)

A. Yes, sir.

B. L. WALCOTT.

Subscribed and sworn to before me this 12th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

GEORGE STOCKHAM, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. George Stockham; 55 years of age; reside at Bordentown, New Jersey, and am a house-carpenter.

Q. 2. By whom are you now employed, and in what capacity?

A. By the Camden & Amboy Railroad Company, and have charge of repairs of the tenders in the locomotive department.

473 Q. 3. When did you enter the employ of said company?

A. In 1843.

Q. 4. About that time, or a year or so thereafter, did you know of the use of double-acting brakes on the cars of that road?

A. Yes, sir.

Q. 5. State how and when your attention was called to those brakes, and where.

A. I went into the paint-shop of an errand in about winter of 1844 or spring 1845, when Charley Vandergrift called my attention to it. I got in under the car where he was at work, and I saw the cross-lever and the lever on each truck, and *from* connecting-rods. (Witness is shown Exhibit A, and he says it was like the brake on that.)

Q. 6. Have you any way of fixing the date referred to in your last answer? If so, please state it.

A. There was a gentleman wanted me to come out to Downingtown, Pennsylvania, and work for him in that spring, 1845. That is all I know about it.

Q. 7. How does that enable you to fix the date?

A. This was right away after I saw this brake.

Q. 8. How do you fix the time of entering the employ of the Camden & Amboy Railroad Company, as you have stated, in 1843?

A. I came on here with M'r Palmer to work on M'r Stevens' house, at Hoboken. That was in March, 1843. We went back in the fore part of June, same year, to Bordentown. There we erected an office on the arch which spans the railroad-track at that place. Then I commenced with Isaac Dripps, the master-machinist on that road. This was on the 20th of October, 1843. I got the date from the books of the company kept at that place.

Q. 9. Are brakes like Exhibit A now in use on the cars of the Camden and Amboy road?

A. Yes, sir.

Q. 10. And have they been in use from the time you saw them on the car in the paint-shop, in 1845, to the present time?

474 A. To the best of my knowledge, they have.

Adjourned to the 13th inst. at 11 a. m.

TUESDAY, *August* 13, 1867.

Present, counsel for the respective parties.

Cross-examined by Mr. Cozzens:

Cross 11. What led Vandergrift to call your attention to the brakes in the paint-shop; were they a new thing at that time?

A. I don't know, sir.

Cross 12. Had you paid any special attention to brakes before that?

A. Only on tenders.

Cross 13. They did not have double brakes on tenders, did they?

A. No, sir.

Cross 14. You were not interested in the subject of double brakes, were you?

A. No, sir.

Cross 15. What has your being wanted to go to Downingtown, in the spring of 1845, to do with your having seen the brakes as you say?

A. I only remarked that that gentleman told me that if I would come on there he would give me a job. I was on my way to New York, and I met the gentleman from Downingtown in the cars, and I haven't been to New York since, to the best of my knowledge, till last Friday. I only fix it from that time, that's all.

Cross 16. How long did you look at the brake when Vandergrift called your attention to it?

A. It was not a great while; I can't say how many minutes.

Cross 17. Was it more than a few minutes?

475 A. All I can tell you, it was just long enough to see the cross-lever under the car connected with four connecting-rods.

Cross 18. Have you any memoranda of the time you met that gentleman in the car?

A. Nothing, only coming to New York in the spring of 1845.

Cross 19. How long did you remain in New York at that time?

A. I returned that same day.

Cross 20. Did you go to any hotel or public house or tavern while you were here?

A. I don't think I did.

Cross 21. Did you have any business in New York?

A. No, sir, I had no business in New York; I just came over.

Cross 22. Did you see anybody there, and, if so, who?

A. No one that I knew that I recollect of now.

Cross 23. How often have you thought about this matter of meeting this gentleman in the car since you so met him?

A. Well, I can't tell you how often; I just recollect the circumstances.

Cross 24. Have you thought of it often?

A. Oh, no.

Cross 25. Is it not possible that it may have been in 1846 instead of 1845 when you met this gentleman?

A. No, sir; I don't think it possible.

Cross 26. Did you go to Downingtown to work?

A. No, sir.

Cross 27. Did you see there double brakes often in 1844 and 1845?

A. No, sir.

Cross 28. Did you see them more than that once in 1844?

A. I don't think I did.

Cross 26. When was the next time, to your recollection, that you did see one of those double brakes after, as you say, Vandergrift first called your attention to it?

A. I cannot say; I cannot tell you any time at all, for I am not in that shop.

476 Cross 30. Can you say that you saw one of them again before 1848?

A. I don't recollect taking any more notice of the brake; I can't say that I saw one of them again before 1848.

Cross 31. Can you say that you saw one of them again before 1850?

A. They were on the cars at the time 40 and 41 (two locomotives) ran together at South River; I can't tell when that was; it was somewhere about the fiftys; this occurrence was not before 1850, I think; yes, I think I can say I saw another one before 1850.

Cross 32. When was it, and what car was it on?

A. I can't tell you, sir.

Cross 33. Can you swear positively that you saw another one before 1850?

A. I don't recollect taking any particular notice; I can't swear positively that I did before 1850.

Cross 34. Can you swear positively that you saw another one before 1856?

A. No, sir; I think, to the best of my knowledge, it was at South River.

Cross 35. Can you swear that the collision at South River was before 1855?

A. I think it was, to the best of my knowledge.

Cross 36. How long before?

A. I cannot say; it was between 1850 and 1855; I can't swear it was before 1854.

Cross 37. After this collision when did you again see one of those double brakes?

A. I can't say, sir.

Cross 38. Can you say that after the collision you saw another before 1858?

A. I can't say, sir.

Cross 39. Can you say you saw another one before 1860?

A. I cannot, sir.

Cross 40. Can you say you saw another one before 1864?

A. No, sir.

477 Cross 41. With the exception of the two instances you have mentioned, have you any personal knowledge that these brakes, like Exhibit A, have been in use on the cars of the Camden & Amboy Road from 1845 to the present time?

A. I have not; but to the best of my knowledge I think they have.

Cross 42. Do you know that double brakes have two cross-levers under the cars, and known as the Hodge brake, and double brakes having no cross-lever, but four upright levers, known as the Stevens brake, were put on to cars on the Camden & Amboy Road a great many years ago, and that at least some of the Hodge brakes are used on the cars at the present time?

A. I do not.

Cross 43. Then, for aught you know, with the exception of the two instances you have mentioned, these double cross-lever brakes and the brakes with four upright levers might have been in use on all the cars of the Camden & Amboy Road from 1845 to the present time, might they not?

(Objected to on the ground that it is calculated to confuse and mislead the witness.)

A. I must acknowledge I do not understand the question.

The question being explained, witness says: I cannot say that the other cars might not have had those other brakes on.

Cross 44. Did you ever hear of a brake called the McLoughlin brake being used on the Camden & Amboy Road?

A. Yes, sir, I did.

Cross 45. Can you tell when that brake was first put onto the cars?

A. No, sir.

478 Cross 46. Can you state how long it was kept on?

A. I cannot, sir.

Cross 47. Can you state how many cars it was put on?

A. No, sir.

(Counsel for defendant objects to this mode of examination for the reason that the witness is not employed in the car department of that road, but in the locomotive-tender department, and is, therefore, not supposed to know what is used on the cars of that road.)

Cross 48. Did you ever see that McLoughlin brake on any car or cars?

A. I have seen it, and I think on more than one car.

Cross 49. Please state, as nearly as you can, when you first saw it.

A. Well, I should judge it was some thirteen years ago; it may be more; I don't know.

Cross 50. Do you feel pretty certain that it is more than thirteen years ago?

A. I cannot tell the time; I don't think it was more than thirteen years ago.

Cross 51. But you think it was about thirteen years ago?

A. I can't say for certain whether it was more or less.

Cross 52. Was there any name for this car which you say you saw this double brake on in the paint-shop in 1845?

A. I can't say that I took any notice of any name or number on the car.

Cross 53. Do you think it was the Tyler car?

A. It might have been, but I don't know.

Cross 54. Was there any number for whatever car you saw the brake upon which you say you saw at the South River accident; and if so, what was the number, if you know?

A. I can't tell you the number.

479 Cross 55. Was that car on which you say you saw the double brake, in the shop in 1845, being repaired?

A. I think it was at that time.

Cross 56. Who was that Downingtown gentleman you met in the car?

A. He was a stranger to me. I don't know his name.

Direct resumed by M'r Whipple:

Q. 57. Has your time been exclusively occupied in the locomotive-tender department since you took charge of it to the present time?

A. Yes, sir.

GEORGE STOCKHAM.

Subscribed and sworn to before me this 13th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

THOMAS W. DUNN, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence and occupation?

A. Thomas W. Dunn; 42 years of age; reside at Bordentown, New Jersey, and am foreman of the car-trimming department of the Camden & Amboy Railroad Company.

Q. 2. How long have you been in the service of that company, in that capacity, and from what year do you date?

A. Since October, 1844.

Q. 3. Do you know of a car formerly in use upon that road by the
name of John Tyler; if so, when did it take that name, when
480 were you first acquainted with it, and what are the circumstances
connected therewith, and what are the peculiarities that distinguish said Tyler car from other cars on that road at the time named?

A. I do; it took that name in 1844. It was a car that was used to convey the President over the road. I became acquainted with it in 1844; it came into the shop for repairs at that time. I retrimmed it during the winter of 1844 and 1845, and it was repainted at that time; and it had looking-glasses placed in the ends of the car, with a light in the centre of the glass, with the name of John Tyler under the light—I should have said a lantern was placed in the centre of the glass. It was an experiment car, and there were several different kind of seats in it. It also had six-wheel trucks on it, with a brake on both trucks, which could be applied from either end of the car. The trucks were different from any other cars I ever saw. It had large spiral springs set on half springs, similar to our elliptic springs.

Q. 4. By whom, or through what means was you' attention called to the kind of brake on the said Tyler car at this time?

A. By seeing a man by the name of Charles Vandergrift, who was working at the repairs, and who got upon the platform and applied the brakes to see if they worked right. He first tried them on one end, then passed through to the other end, and applied them there also.

Q. 5. And did the brake apply the power to both trucks at the same time?

A. It did.

Cross-examined by Mr. Cozzens:

Cross 6. When you, as you say, saw the brake on the Tyler car in the winter of 1844 and 1845, how came you to be where the car was?

A. My business called me in and out of the car several times during the day.

Cross 7. Did Vandergrift call your attention to the brake?

A. He did not.

481 Cross 8. Did you know before that there was such a brake on that car?

A. No.

Cross 9. Had you never before, when cars were in the shop for repairs, seen anybody get on the platform to try the brakes?

A. Not to the best of my recollection.

Cross 10. Isn't that a very common thing to be done when cars are being repaired?

A. I believe it is.

Cross 11. Did it strike you as anything unusual when you saw Vandergrift do it, as you say?

A. Yes, sir.

Cross 12. How long did you remain near that car on that occasion?

A. Only about long enough to see the operation of the brake.

Cross 13. Did you examine the construction of the brake?

A. Yes, sir.

Cross 14. How many minutes did it take you to see the operation of the brake?

A. Not over more than ten minutes.

Cross 15. Did you then go away from the vicinity of the car?

A. I did.

Cross 16. Did your position in the trimming-shop bring it within the line of your knowledge to know much about the brakes on the cars?

A. It did not belong to my business.

Cross 17. After you first saw that brake, as you say, when did you see such an one again?

A. I could not say positively when I did see it again. I never had my attention called to any other kind of brake until about 1852 or 1853, as near as I can tell. I have reference to a double brake. I didn't examine cars to see what kind of brakes they had on. What I mean to say is that I didn't see any brakes of any kind to examine them, and did not have my attention called to any again until 1852 or 1853.

482 Cross 18. You say you didn't have your attention called to them to examine them, could you have told how they were constructed without examining them?

A. No.

Cross 19. Then I understand you to mean that between the winter of 1844 and 1845 and the year 1852 or 1853, you never saw any brakes to know how they were constructed; is this so?

A. No, sir; I didn't mean so at all. The probability is that I saw the brakes and might have examined them during that time. There is nothing by which I can fix any particular period when I did it.

Cross 20. Then do you mean that you cannot say with certainty how any brakes that you saw between those times were constructed?

A. No, sir; I don't mean to say so.

Cross 21. Well, you have said that in that interval you did not see any brakes of any kind to examine them, and that you could not tell how they were constructed unless you did examine them. Now can you tell how any of the brakes you saw (if you did see any during that time) were constructed?

A. I mean to say that I did not see any other kind of brakes until 1852 or 1853.

Cross 22. I will try that once more. Between the winter of 1844 and 1845, and the years 1852 and 1853, did you examine any of the brakes you may have seen (if you did see any) to see how they were constructed?

A. Not particularly.

Cross 23. Are you able to describe the construction of the brakes you saw during that interval (if you did see any)?

A. Yes, sir.

Cross 24. Were they all like the one you saw in the winter of 1844 and 1845?

A. Yes, sir.

Cross 25. How many did you see?

A. I did not count them; I can't tell anything about the number.

483 Cross 26. Can you swear positively that they all had cross-levers?

A. All that I saw.

Cross 27. Did the cars you saw them on have deep side sills?

A. No, sir; not during that period.

Cross 28. Did you stoop down and look under the cars to see how the brakes were rigged?

A. I did.

Cross 29. What led you to do so?

A. To see how they operated.

Cross 30. Why did you want to see how they operated?

A. Merely curiosity.

Cross 31. What kind of brakes did you see in 1852 or 1853?

A. I saw a brake called a patent brake. The first patent brake I ever saw.

Cross 32. What name did it go by?

A. I don't know, sir.

Cross 33. How was it constructed?

A. I never understood the operation of it at all.

Cross 34. Was it on the Camden and Amboy cars?

A. It was put on one of them.

Cross 35. Did you ever see the passenger-cars of the New Jersey Railroad & Transportation Company with double brakes?

A. Yes, sir.

Cross 36. Did such cars ever come into the Bordentown shops for repairs?

A. They have for slight repairs.

THOMAS W. DUNN.

Subscribed and sworn to before me this 13th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to 11 a. m., the 14th instant.

484 WEDNESDAY, *August* 14, 1867.

Present, counsel for the respective parties.

JOHN CONOVER, called and sworn as a witness on the part of the defendants, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. John Conover. I was born in 1810. I reside in Philadelphia, and am through-baggage master on the through-line between New York and Washington.

Q. 2. Were you ever in the employ of the Camden & Amboy Railroad Company; if so, when did you commence work, and what did you do, and how long were you so employed, and where?

A. I was. I commenced working for them as railroad carpenter in 1839. I was employed between Trenton and Camden for five or six months, on bridges and railroad-tracks. I then went to Camden for the same company, and attended switches, and made myself generally useful in the depot at anything they had for me to do.

Q. 3. While so employed at Camden, do you recollect that the President of the United States took passage on board of a train at that place bound north; if so, what do you know about it, and the car on which he rode?

A. I do. I know it was in 1843. The car he went in was a car lately done up, and had these double-acting or double-shifting brakes. That I know positively, because I was under the car, looked at them, and examined them, and got a man who was employed by the company to work them for me while I was under the car to see how they worked. I have frequently worked them myself when we were drilling the cars. I set the switches and got on the car, and used the brakes myself, and saw that it worked on both trucks at either end of the car at once. The plan is the same as the one on Exhibit A in this case. The car was named the Tyler car after the President went in it, and it continued to have this brake on it.

485 Cross-examined by Mr. Cozzens:

Cross 4. How long did you remain in the employ of the company at Camden?

A. I think it is five or six years, and it may be more, since I left there, but I have been in the employ of the same company at Kensington depot and Walnut-street wharf, at Philadelphia.

Cross 5. While you remained at Camden, did you see most of the other cars of the company which came there, and did you know what brakes were on them?

A. No; I didn't take so much pains about the rest of them; but this one being the first car with that kind of brake I took more pains with that; but how long it was before they got other brakes like that one rigged, I won't pretend to say.

Cross 6. Did you ever see on any of the Camden and Amboy cars a double brake which had two cross-levers under the car-body, and known as the Hodge brake?

A. I don't know but I may have done so, but I can't say anything about that.

Cross 7. Did you ever see on any of the Camden and Amboy cars a double brake which had, instead of a cross-lever, four upright levers under the car-body, and known as the Stevens brake?

A. I don't know anything about that. Being in one station, I hadn't a chance of seeing all the cars the company owned.

JOHN CONOVER.

Subscribed and sworn to before me this 14th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

486 **Joseph Head**, called and sworn as a witness on the part of defendants, deposes and says;

Q. 1. What is your name, age, residence, and occupation?

A. Joseph Head; 52 years of age; reside at Bristol, Pennsylvania, and am in the employ of the Camden & Amboy Railroad, in taking up the wood-fuel and cross ties, and measuring lumber.

Q. 2. When did you enter the employ of said company, and how were you employed at the time, and thereafter?

A. On the 21st day of March, 1845, as superintendent at the Bristol depot, at Pennsylvania. I was there till 1847; and when the Bristol depot was abandoned, I went to Tacony in the same capacity, to take charge of the depot.

Q. 3. How do you fix the date, to wit, the 21st of March, 1845?

A. (Witness here produces a letter of his appointment to take charge of the depot and of the property of the company, dated March 21st, 1845, signed by M'r Gatzner, for E. A. Stevens, the superintendent, and says it was given to him at that time.

Letter objected to, until proof of its handwriting is made.)

Q. 4. When you entered the employ of said company at that place, did you know anything of the use of a double brake on any car or cars of that road during that time? If so, what do you know? Please state of your own knowledge, and tell what kind of a brake it was.

A. I know of a double brake on the Tyler car. I found it there when I went there; it was a brake with a lever and four rods, which would pick up both trucks at once.

Q. 5. Witness is here shown Exhibit A, and asked if it represents such a brake as he has described.

A. It does.

487 Cross-examined by M'r Cozzens:

Cross 6. When do you last remember seeing the Tyler car?

A. I had it with me at Tacony, and I was there eight or nine years; I took it to Tacony with me in 1847 from Bristol. I don't mean to say that I had it there with me all that time. I don't recollect when I last saw it; cars are constantly getting changed in the shop. I can't recollect at all when it left there.

Cross 7. Did it have the same kind of brake on during the whole of the eight or nine years you say you had it with you at Tacony?

A. I did not say it was there during the whole time I was there, at Tacony, but as long as it was there it had the same brake.

Cross 8. Can't you state how long that was?

A. No, sir.

Cross 9. Can't you give any idea of the time?

A. No, sir.

Cross 10. Did you see the Tyler car after it ceased to be at Tacony?

A. Frequently, on the road.

Cross 11. Don't you know anything about when you last so saw it?

A. No, sir, I do not.

Cross 12. What first called your attention to the brake of the Tyler car?

A. At the time that I was appointed, it was the only car that had that brake on at the depot, which I had charge of.

Cross 13. What made you first notice the brakes it had?

A. On account of it being my first employment on a railroad, and I, of course, was anxious to learn my business, and for that reason I took notice.

Cross 14. Did you notice the brakes of the other cars?

A. Yes, sir; they were the old-fashioned lever-brake to take up one truck at a time.

488 Cross 15. Did they have more than one of those brakes to a car, or did they have one at each end?

A. One at each end.

Cross 16. What did the brakeman move to put those brakes in operation?

A. A crank, by the hand, with a handle, like Exhibit A.

Cross 17. How long did they have these brakes which you have called old-fashioned, that operated with a handle, like Exhibit A?

A. I can't say; there may be some in operation now, for what I know.

Cross 18. Were they on passenger-cars?

A. Yes, sir.

Cross 19. Did any of them remain on passenger-cars for as much as ten years?

A. That I can't say.

Cross 20. Did they remain on passenger-cars for a number of years?

A. Yes, sir; a few years, and they may be on still for what I know.

Cross 21. Did they use these brakes you have called old-fashioned on all the cars, except those which had double brakes?

A. Yes, sir.

Cross 22. While you knew about this Tyler car where did it run to?

A. It ran on the mail partly, and partly on the Trenton way train, which went from Bristol to Trenton, and stopped there and went no further.

Cross 23. Were these all the trains it ran on while you knew about it?

A. Yes, sir; that is all I know about.

Cross 24. Did you know what trains it did run on during the time enquired about?

A. Yes, sir; it ran on the mail and way trains.

Cross 25. While you knew about it, did it run on any other kind of trains than the mail and way trains?

A. Not as long as I had charge of it.

489 Cross 26. Now, what is the best information you can give us as to how long you had charge of it?

A. Well, I should judge I had it from five to six years, counting from 1845, but I can't say positively.

Cross 27. Did you have charge of it for at least four years, counting from 1845?

A. I think I had.

Cross 28. Did you ever see on any of the Camden & Amboy cars double brakes, which had two cross-levers under the car instead of one, and known as the Hodge brake?

A. No, sir.

Cross 29. Did you ever see on any of the Camden & Amboy cars any double brakes which, instead of a cross-lever, had four upright levers under the car, and known as the Stevens brake?

A. No, sir.

Cross 30. Did you ever see on any of the Camden & Amboy cars any brake which had a yoke near each end of the car, and were worked by the bumpers, called the McLoughlin brake?

A. No, sir.

Cross 31. After, as you say, you first noticed the brakes of the Tyler car, were you in the habit of paying any particular attention to them?

A. No, not particular; all were looked after alike; not that more than any other.

Cross 32. When did the company begin to have other brakes like the brake you say was on the Tyler car?

A. The next one I saw was under a flat car for carrying baggage-crates on the mail-line; that was in the latter end of 1845; it was there that winter before I left to go to Camden.

JOSEPH HEAD.

Subscribed and sworn to before me this 14th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

490 **Joseph Reed**, called and sworn as a witness on the part of the defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Joseph Reed; 44 years of age; reside at Bordentown, New Jersey; and am a carpenter on the repairs of the track on the Camden and Amboy road, and have been so employed since 1851.

Q. 2. How were you employed for the year 1850?

A. I was employed as brakeman of the Camden & Amboy Company.

Q. 3. Do you know anything of the use of double-acting brakes on the cars of that road in the year 1850? If so, what do you know? Please state fully of your own knowledge.

A. Yes, sir, I do. Well, they had a lever in the middle of the car. It was on the Tyler car and on the crate-car, or a baggage-car as some call them, and on number 9 and 10 passenger-cars that run in the train that I was brakemen.

Q. 4. Will you please give some further description of the brake in use on said cars? State as to the location of the levers and the connections composing said brake.

A. They had four rods, and they broke on each end of the car. The brake on either end would work on both trucks. We put the brake on with a crank.

Q. 5. Witness is here shown Exhibit A, and asked if it is such a brake as he has just described?

A. Yes, sir; it is the same kind of brake.

Cross-examined by M'r Cozzens:

Cross 6. Were the brakes you have been speaking of on any other of the cars on the road except the cars you have mentioned?

A. Well, it is very likely there was. I was on a regular line, and was not shifting about. These cars were on the line I run on.

Cross 7. Are you able to say whether it was on any other cars?

491 A. Well, I don't wish to testify to anything I don't know. I don't know whether there was or not.

Cross 8. Where did this train you say you run on run to?

A. From Trenton to Tacony.

Cross 9. Did it go beyond Trenton going one way and beyond Taconey going the other?

A. No.

Cross 10. How long did you run on that train?

A. I went on in 1850, and was on in 1850 and 1851.

Cross 11. What time in 1850 did you commence?

A. First day of May.

Cross 12. Did you run on it the whole of 1851?

A. I cannot be positive about that, but very near it.

Cross 13. Were there any other cars in the train you run; and, if so, what kind of brakes did they have?

A. There were no other cars in the train I run, and all cars I had anything to do with had that kind of brakes on.

Cross 14. Did you ever know of brakes being used on the Camden and Amboy cars having two cross-levers under the car, and known as the Hodge brake?

A. No, sir.

Cross 15. Did you ever know of a brake being used on the Camden and Amboy cars with four upright levers under the car, and known as the Stevens brake?

A. No, sir.

Cross 16. Did you ever know of brakes being used on the Camden and Amboy cars fitted with a yoke towards each end of the car and operated by the bumpers, and known as the McLoughlin brake?

A. No. sir.

JOSEPH REED.

Subscribed and sworn to before me this 14th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

492 THURSDAY, *August* 15*th*, 1867.

Present, counsel for the respective parties.

JONAS HAGAR, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Jonas Hagar; about 40 years of age; reside in New Brunswick, and am a watchman around the round-house of the New Jersey Railroad & Transportation Company.

Q. 2. Were you ever in the employ of the Camden & Amboy Railroad? If so, where were you employed, and what did you do from time to time while so engaged. When did your services commence and when terminate?

A. I was in their employ from 1848 to first of May, 1864. I was on the brake from 1848 to 1856 or 1857, somewhere along there: then I was conductor on a freight-train. Then I came from there to the New Jersey Railroad & Transportation Company as fireman on their road. I fired there till two years ago last January. Then the engine blew up on the through Washington line, at which time I got hurt and lost my arm, when they gave me the position of watchman at the round-house, where I now am.

Q. 3. Do you know anything of the use of the double brakes, known as the centre-lever brake, on the cars of the Camden and Amboy Railroad in the year 1848? If so, state the circumstances connected with such knowledge, and how you fix the date?

A. I do. In 1848, the 23d day of March, I was married, and in peach time that same year I went on the brake, and I continued on it until peaches were done, which was in September of the same year, and then I went on to a dirt-train as brakeman, under Alfred Thompson, and I had charge of oiling the boxes and keeping the train together. At nights when we were done work we backed our cars in what we
493 called Bordentown wharf. In the morning when we took them out we generally drilled off the extra passenger-cars that were shoved in ahead of our train, and I saw this Tyler car there, and one morning I was looking at this brake on this car; I saw it was a double brake. I said to my engineer, Joseph Trout, I would like to have the brake off that car, because it was a double brake; and he said to me, I wish we could get a brake like that on our train, as it would hold the train so much better than the brake we had on, which was only a single brake.

Q. 4. Will you please give a description of the brake which you then saw on the said Tyler car in the year 1848?

A. It had a lever right in the centre of the car, and had four rods attached to the lever, and you could get on either end and put on all four brakes at once.

Q. 5. (Witness is here shown Exhibit A, and is asked). Does this represent such a brake as you have just described?

A. Yes, sir.

Cross-examined by Mr. Sayles.

Cross 6. What time in 1848 did you first see this Tyler car?

A. Well, it was in the fall; I couldn't exactly tell you the date or the month.

Cross 7. Did you commence as brakeman first in May, 1848?

A. I commenced as brakeman in 1848, in peach-time; that is the first I ever was brakeman.

Cross 8. When was that peach-time?

A. In August and September.

Cross 9. Had you ever been engaged on a railroad before that?

A. I was at work on the track and repairing track, but had nothing to do with the rolling-stock before that.

Cross 10. That, then, was the first you ever saw of the double brake, was it, in the fall of 1848 on said Tyler car?

494 A. Yes, sir.

Cross 11. What called your attention to it at that time?

A. We were drilling our said train out. We had to drill this Tyler car out so that we could get the sand-train out of the way, and then I observed this brake on it, by applying the brake on it to drill it to its proper place.

Cross 12. That, then, was the first that you knew anything about the double brakes when you were applying it to that Tyler car, was it?

A. That was the first I knew anything about it; then me and the engineer looked at it and I called the engineer's attention to it after applying the brake.

Cross 13. How did you apply the brakes to the cars you were running?

A. With a windlass and crank the same as Exhibit A.

Cross 14. Was the brake on the Tyler car applied in the same way, by a windlass and crank?

A. Yes, sir; we put it on in the same way, but it applied all four brakes, whereas the cars we were running applied it to only two.

Cross 15. When you called the engineer's attention to this double brake did he tell you that he thought it was better than the single brakes?

A. Yes, sir, he did.

Cross 16. Did he at that time examine it thoroughly?

A. We got under the side of the car and looked to see how the levers were rigged on it.

Cross 17. That was new to him then at that time, as well as you, was it?

A. That I couldn't fairly say whether it was or was not; he didn't say to me at that time that he had or hadn't seen it before.

Cross 18. Did you see this Tyler car after that.

A. Yes, sir; I saw it after that.

Cross 19. How often did you see it after that?

A. I saw it often after that, but I could not explain how many times. It was while I was brakeman and conductor too.

Cross 20. Where did you see it mostly?

495 A. Well, I saw it around Bordentown, and saw it at Trenton, and I saw it at Amboy. I did not see it in the train after that often. I think it was running down on the other side, in Pennsylvania, but won't say certain.

Cross 21. Did you see the same brake on any other cars?

A. Not at that time, to take notice of them, but did some time afterwards. You see I wasn't on the passenger-cars, I was on the sand-cars, and did not have a chance to get around among the passenger cars so much.

Cross 22. How long after that did you see it on other cars?

A. Well, I couldn't exactly state how long, for I didn't keep any memorandum of the date or year.

Cross 23. Did you ever see a brake on the Camden & Amboy cars with two cross-levers underneath the car, called the Hodge brake?

(Objected to because it has nothing to do with the issues in this case.)

A. I couldn't say that I did. I have no recollection of seeing any.

Cross 24. Did you often have occasion to drill out passenger-cars there, at Bordentown, to get them out of the way of your sand-train?

A. Yes, sir; we had to drill them out pretty often.

Cross 25. Did you often drill out other passenger-cars as well as the Tyler?

A. Well, not so very often; once a week, and perhaps twice a week. We had to drill out more freight-cars than passenger-cars.

Cross 26. Did these other passenger-cars have on this same double brake?

A. Well, I don't recollect of their having them on.

Cross 27. How long did you continue brakeman on that dirt-train?

A. I continued onto it until the canal froze up—the Delaware and Raritan Canal. I then went on the freight-train from Amboy to Camden.

496 Cross 28. Can you swear that you saw these double brakes on any other car except the Tyler car before 1851 or 1852?

A. I don't know as I could. I saw them afterwards, but I didn't keep any memorandum of the number or the year.

his
JONAS + HAGAR.
mark.

Subscribed and sworn to before me this 15th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

WILLIAM COULTER, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. William Coulter; 47 years of age; reside at Jersey City, and am a railroad conductor on the New Jersey Railroad & Transportation Company.

Q. 2. How long have you been so employed?

A. Permanently since the 8th of October, 1845.

Q. 3. Do you know anything of the use of a double-acting brake on the cars of the Camden and Amboy Railroad about the years 1845 or 1846? If so, please state what you know, and the circumstances connected with such knowledge.

A. Well, they are very brief. In my applying the brake at one end of the car I found it did not hold. I let go, and some one was applying it on the other end, and I knew nothing about it. When he let go, the handle I had had hold of flew back and hit me on the hand. This was either in the fall of 1845 or the spring of 1846, I can't tell which.

497 Q. 4. Witness is here shown Exhibit A, and is asked to explain, if he can, by working the model, the circumstances alluded to in his last answer.

A. After I found the brake would not hold I stopped applying it, because the brakeman had his on, and I was not aware of it, and it flew back and hit me on the hand.

Q. 5. Were you at that time aware of the fact that this brake applied the power to both trucks at the same time, and from either end?

A. I was not.

Q. 6. Were you aware of the fact at any time thereafter that this brake did apply the power to both trucks at the same time?

A. Yes, sir.

Q. 7. What was the name or number of the car (if it had a name or number) with which this circumstance, named in your previous answer, is connected?

A. I know of no number; it was called the Tyler car.

Cross-examined by M'r Sayles:

Cross 8. You say, in your direct examination, that when you attempted to apply the brake on the Tyler car that it did not operate—that it didn't apply the brakes to the wheel, did you?

A. I did not, sir, from the fact that it was being applied on the other end of the car, which I found out afterwards.

Cross 9. Did you then find out that in case that brake was applied from both ends of the car at the same time that the brakemen would operate against each other, and so not apply the brake?

A. I never experimented with it. I judge so from the action of that brake at that time.

Cross 10. Did you often see this Tyler car, after this time you speak of, for a number of years thereafter.

A. I think as late as 1848, from the fact that on the first of April, 1848, I took charge of the Philadelphia train permanently, and it was occasionally put in the train as an extra car.

498 Cross 11. Do you recollect of seeing any other double-acting brake on the Camden and Amboy cars before 1852 or 1853?

A. Not to examine them. I don't recollect any.

Cross 12. At how early a date do you recollect seeing the brake, the same as was on the Tyler car, as you have stated, on any other of the Camden and Amboy cars?

A. I couldn't recollect distinctly about that. They kept applying them gradually after that, I think. I could not say for certain.

Cross 13. Do you distinctly recollect seeing it on any of their other cars before 1851 or 1852?

A. I couldn't say about that. I heve no recollection; but my impression is as early as 1850.

Cross 14. Do you recollect of seeing a double-acting brake on any of the Camden and Amboy cars with two cross levers under the car, called the Hodge brake?

A. I do not.

Cross 15. What kind of a brake is used on the passenger-cars of the New Jersey Railroad & Transportation Company?

A. Similar to the one on Exhibit A.

Cross 16. How long have such brakes been used on those cars?

A. That I couldn't tell.

Cross 17. At how early a date do you recollect seeing them on those cars?

A. It would be an indefinite answer, at any rate. I probably could not tell within two or three years, and then I might be mistaken at that.

Cross 18. Please state some year as near as you can.

A. I can safely go back to 1860, I think. It might be before that, and it might be later than that.

Cross 19. Can you swear positively that the double brakes which were on the passenger-cars of the New Jersey Railroad & Transportation Company, as you say you think about 1860, were at that time like the brake shown on Exhibit A?

A. No, I could not.

499 Cross 20. Can you say positively that the brakes on those cars

(Objected to because it has nothing to do with the issues in this case.)

A. I couldn't say that I did. I have no recollection of seeing any.

Cross 24. Did you often have occasion to drill out passenger-cars there, at Bordentown, to get them out of the way of your sand-train?

A. Yes, sir; we had to drill them out pretty often.

Cross 25. Did you often drill out other passenger-cars as well as the Tyler?

A. Well, not so very often; once a week, and perhaps twice a week. We had to drill out more freight-cars than passenger-cars.

Cross 26. Did these other passenger-cars have on this same double brake?

A. Well, I don't recollect of their having them on.

Cross 27. How long did you continue brakeman on that dirt-train?

A. I continued onto it until the canal froze up—the Delaware and Raritan Canal. I then went on the freight-train from Amboy to Camden.

496 Cross 28. Can you swear that you saw these double brakes on any other car except the Tyler car before 1851 or 1852?

A. I don't know as I could. I saw them afterwards, but I didn't keep any memorandum of the number or the year.

A. Similar to the one on Exhibit A.

Cross 16. How long have such brakes been used on those cars?

A. That I couldn't tell.

Cross 17. At how early a date do you recollect seeing them on those cars?

A. It would be an indefinite answer, at any rate. I probably could not tell within two or three years, and then I might be mistaken at that.

Cross 18. Please state some year as near as you can.

A. I can safely go back to 1860, I think. It might be before that, and it might be later than that.

Cross 19. Can you swear positively that the double brakes which were on the passenger-cars of the New Jersey Railroad & Transportation Company, as you say you think about 1860, were at that time like the brake shown on Exhibit A?

A. No, I could not.

499 Cross 20. Can you say positively that the brakes on those cars

at that time did not have two cross levers under the car, instead of one, like Exhibit A?

A. I could not say anything about it.

Direct resumed:

Q. 21. Is there any doubt in your mind as to whether the circumstance alluded to in your direct examination connected with the Tyler car took place before 1847?

A. Not in the least.

W. COULTER.

Subscribed and sworn to before me this 15th day of August, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to 12 m., the 16th instant.

FRIDAY, *August* 16, 1867.

Present, counsel for the respective parties.

Adjourned by the examiner to the 3d day of September, 1867, at 12 m.

TUESDAY, *September 3d*, 1867.

Present, counsel as before.

JOHN H. HILLMAN, called and sworn as a witness on the part of defendant, deposes and says:

500 Q. 1. What is your name, age, residence, and occupation?

A. John H. Hillman; 52 years of age; reside at Trenton, New Jersey, and am at present in the lumbering business, but have served my time at wheelwright business and coach work.

Q. 2. Do you know the circumstance of President Tyler's coming over the Camden and Amboy road on a tour north; if so, what do you know, and how do you fix the time?

A. I do know of his coming on a tour north. I remember the circumstance, and fix the date by the daily State Gazette, published by Sherman & Hanon. I took the paper at the time. The day he passed through Trenton was June 10, 1843.

Q. 3. Have you had occasion of late to refer to said paper; if so, where did you obtain it, and of whom; and is the volume containing said paper in your possession?

(Objected to.)

A. I have. I obtained it from the office of said paper, and from the present editor and proprietor, Jonathan Vannote. The volume of said paper is in my possession.

Q. 4. Witness is here requested to refer to the volume of said paper, and state the date in which a record is made of the tour of the President above referred to?

(Objected to.)

A. It is on Monday, June 12, 1843.

Defendant now offers in evidence a copy of an editorial taken from the said weekly State Gazette, volume 4, 1843, as follows:

(Objected to.)

501 State Gazette, Trenton, Monday, June 12, 1843.

For President,

HENRY CLAY.

THE PRESIDENT IN NEW-JERSEY.

On Saturday afternoon President Tyler and suite entered the State of New Jersey, on his way to Bunker Hill. On reaching the Jersey shore at Camden, the President was received with three cheers, and being escorted to a grove at a short distance, was addressed by Captain Mickle on behalf of the city of Camden. The President replied, complimenting the Jersey Blues on their patriotism. (An elegant bouquet was here presented to the President, which was committed to the charge of the United States marshal and his deputies, who carried it as they accompanied the President to Princeton.) In a few minutes the company were seated in the cars of the Camden and Amboy Railroad, and the train started for Burlington. At the upper end of Camden a large assemblage of ladies, ranged along the road, saluted the President with waving handkerchiefs.

On arriving at Burlington the company left the cars, and proceeded in procession to the house of William R. Allen, esq., mayor, where the President was waited on by many of the citizens. After a short stay the company again took seats, and the train proceeded to Bordentown. On passing White Hill a salute was fired. At Bordentown the company proceeded to Kester's, where the President was addressed by the Rev. M'r Lathrop, and made a suitable reply.

In a short time the company again started, and soon arrived at Trenton. He was here received with cheers, the several bells of the city ringing. The committee of the common council, who had proceeded to Philadelphia, escorted the President from the cars, where D'r John McKelway, chairman of the committee of citizens, introduced him to the mayor, Charles Burrows, esq. The mayor tended to him the
502 hospitalities of the city in a neat speech, to which the President
made a handsome reply. A salute of artillery was fired from a field adjoining, and the company again took the cars for Princeton, where, we understand, he remained until this morning, and then proceeded to New Brunswick.

Q. 5. Do you know anything about a car called the John Tyler, in use on the Camden and Amboy road; and, if so, what do you know about it?

A. I know there was such a car in use for some ten years, and I remember it from the spring of 1844. I remember it from its having "J. Tyler" in gilt letters on the inside. I have rode in the car myself.

Q. 6. Do you know what kind of a brake was on said Tyler car?

A. Merely from the brakeman speaking of their having a double brake on the car.

Q. 7. Do you know anything of the use of double brakes on the Camden and Amboy road of your own knowledge? If so, please state the circumstance, if any, connected with such knowledge.

A. In May, 1845, I was coming from Philadelphia to Trenton. I was asked to help put on the brakes by the conductor. I took hold of the crank of the brake, and felt another person drawing the brake at the other end of the car, or, in other words, the brakes were put on from the other end of the car, and I noticed when the train started, and the brakes came off, that the crank I had hold of flew around of itself.

JOHN H. HILLMAN.

Subscribed and sworn to before me this 3d September, 1867.

R. E. STILWELL,
Examiner, &c.

503 JAMES SEEDS, called and sworn as a witness on the part of the defendants, deposes and says:

Q. 1. What is you name, age, residence, and occupation?

James Seeds; about 47 years of age; reside at Trenton, New Jersey, and am a carpenter.

Q. 2. Were you ever in the employ of the Camden and Amboy Company; if so, when were you so employed, and in what capacities?

A. Yes, sir; I did used to work for the Camden and Amboy Company, in the freight-house, about 1841 or 1842, at Trenton. In about a year or so after that I took the draw where the road crosses the canal at Trenton. When I was there, and when I was at the freight-house both, I was frequently called away as an extra brakeman. I was an extra brakeman about two years before I became a pemanent brakeman. I followed the brake some two years. I can't tell exactly, and went to firing. I fired a locomotive then about two years. I then left that and took the job of night watch of Trenton depot, and, I think, that is about the last work I done for the company.

Q. 3. While brakeman for said company were you knowing to the use on the cars of that road of double or connected brakes; if so, what do you know about it, and what circumstance, if any, fixes the thing in your mind?

A. I was. The first that I recollect of it was on the Tyler car. It was on the Tyler car when it first came on Quinton's line, as we called it, or the way line from Philadelphia to Trenton. What makes mere member the Tyler car is that it had a water-closet on it, and we used it as a lady's car. There was another thing that brought the Tyler car to my mind; it was rather a singular car; it hadn't three seats in it alike.

Q. 4. About what year, as nearly as you can recollect, did the car come on to that line?

A. 1844.

Q. 5. Do you know of this double brake being in use upon any
504 other car at any time when you were brakeman; if so, what circumstance, if any, fixes the brake in your mind?

A. In about 1845 or 1846 it was put on a crate-car on Quinton's line. There being only one brakeman on the line, it was put there to have more effect upon the wheels than a single brake would have. On that connected brake I could chock (stop) eight pair of wheels; I mean four pair of wheels, two front and two back.

Q. 6. Have you ever seen the wheels in both trucks slide upon the rail in the application of this connected brake when applied by yourself or by another?

A. I have in both cases.

Q. 7. While you were brakeman did you know Joseph Cox; if so, what do you know about him, and is he still living?

A. I knew Joseph Cox; he was an engineer on the Trenton way line. I have broke and fired for him extra on his train. He was killed between Bristol and Nachamany bridge.

Q. 8. Did what you have stated in reference to the double or connected brake take place before or after the death of Joseph Cox?

A. I think part before and part afterwards.

Q. 9. What part took place before?

A. I am not certain whether we had the double brake on Josie's crate-car before or afterwards, made me speak that way.

Cross-examined by M'r Cozzens:

Cross 10. Where you brakeman on any train in which the Tyler car ran?

A. Yes, sir.

Cross 11. What train?

A. The way-train between Trenton and Philadelphia.

Cross 12. In what years did the Tyler car run on that train?

A. The first I recollect of it was in 1844, and, I think, it was there two or three years after that.

505 Cross 13. Do you mean all the time for two or three years after 1844?

A. No, sir; I can't say it was there all the time.

Cross 14. How much of the time was it there, according to your best recollection, for two or three years after 1844?

A. I don't think I would be out of the way in saying half of the time; I can't say certain.

Cross 15. Was it in that train all the time your were brakeman on the train?

A. All the time I was regular brakeman it was; but when I was extra brakeman I was on various lines.

Cross 16. How long were you regular brakeman?

A. I couldn't say exactly; somewhere between two and three years.

Cross 17. Was these two or three years the next two or three years following 1844, that you were regular brakeman?

A. I thing there was a year between, as near as I can recollect now.

Cross 18. Then the two or three years would commence in 1845, would they?

A. To the best of my knowledge.

Cross 19. About what time in 1845, to the best of your recollection, did you so commence to be regular brakeman?

A. I don't think it was much before the middle of the year, as near as I can recollect; it was about the middle of the year, as near as I can tell.

Cross 20. You say that the first that you recollect of a double brake, it was on the Tyler car. Now, is it a matter of positive recollection with you that the Tyler car had a double brake on it in the year 1844?

A. Yes, sir.

Cross 21. What makes you recollect it positively in that year?

A. From using it daily whenever it was on our line.

Cross 22. What line do you mean by "our line"?

A. The way line between Philadelphia and Trenton.

506 Cross 23. You mean, do you not, that you recollect the Tyler car from its peculiarities of construction as differing from other cars on the road?

A. Yes, sir.

Cross 24. You remember, do you not, that during many of the last years you recollect the Tyler car it had a double brake?

A. Yes, sir; a connected brake, I used to call it, which is one and the same thing, I suppose.

Cross 25. You feel positive, I suppose, that there was such a car as the Tyler car on the Camden and Amboy road in the years 1843, 1844, 1845, 1846, and 1847, as well as later, having certain peculiarities of construction which distinguished it from other cars on the road?

(Objected to, as the witness has not stated that he has any knowledge of the Tyler car in 1843.)

A. I am positive between 1844 and 1847.

Cross 26. If anybody, at any time within the past year, had asked you if you remembered the Tyler car in the years 1844, 1845, 1846, and 1847, would your memory of it been clear enough to enable you to say at once that you did remember it in those years?

A. Yes, sir.

Cross 27. It is a well-known fact, is it not, that there was a Tyler car on that road in those years?

A. I know it, sir, and most all the brakemen who had the care of it know it.

Cross 28. Wasn't it well known on the road by others besides the brakemen?

A. I suppose so, sir; I can't say for certain.

Cross 29. When lately, during this present year, 1867, has anybody talked to you on the subject of the Tyler car or double brakes on the Camden and Amboy road?

A. I have been asked what I knew about the Tyler car within two or three months.

Cross 30. Who asked you?

A. M'r Edwin Lockwood.

507 Cross 31. In what words did he ask you what you knew about it, and what conversation took place? State the whole of it.

A. He asked me if I recollected the Tyler car, and I told him I did. He asked me if I recollected what kind of a brake it had on it. I told him it had a double connecting brake on it. I spoke of its having a water-closet; I also spoke about the seats inside, that there was no three of them alike. That is all I recollect telling him.

Cross 32. Did he say anything more to you than you have stated; if so, what?

A. No, sir; I don't recollect his saying anything more to me.

Cross 33. Didn't he say anything to you about there being a lawsuit, or a question about double brakes?

A. No, sir; he merely asked me the questions I have told you.

Cross 34. Did he tell you that perhaps you would be called upon to be a witness about the John Tyler?

A. He did not tell me so directly; I found out afterwards from M'r Hillman that he wanted me as a witness. I mean by he, M'r Lockwood.

Cross 35. You say Lockwood did not tell you directly. Did he say anything at all about it indirectly?

A. All he said to me was, do you remember the Tyler car, and he asked me if I knew about it.

Cross 36. How did you mean that he did not tell you so directly then?

A. I don't think that he ever told me that he wanted me as a witness at all; I mean that I got it through others.

Cross 37. Is this brief conversation that you have detailed between yourself and Lockwood the only conversation you have had with anybody during the present year about the John Tyler or its brakes?

A. No, sir; it is the only one I had with M'r Lockwood.

Cross 38. With whom else have you had a conversation on the subject, and when?

A. M'r John Hillman.

Cross 39. With anybody else?

A. I don't recollect anybody else at present.

508 Cross 40. What was the conversation between you and Hillman?

A. He asked me about the same questions as Lockwood did, as near as I can tell. He asked me if I knew about the Tyler car. I told him the same as I have told you heretofore about it; that it had a water-closet on it, and a double brake on it, and that it had different kinds of seats inside, and he guessed he would want me to go to New York. I can't recollect exactly the words he used. He told me that he thought there was a lawsuit, and he would want me as a witness. I inferred that it was about the Tyler car, as we had been talking about that.

Cross 41. Are these two short conversations the only ones you have had with any one this year about the Tyler car and its brakes?

A. To the best of my knowledge, I believe they are.

Cross 42. Have you any knowledge of there being at any time a double brake on the Camden and Amboy road called the Hodge brake, having two cross-levers under the car-body?

A. I don't recollect such a brake.

Cross 43. Have you any recollection of there being at any time a double brake on the Camden and Amboy road called the Stevens brake, having four upright levers under the car-bodies, and no cross-levers?

A. I can't say that I do.

Cross 44. Have you any recollection of there being at any time on the Camden and Amboy road a brake called the McLoughlin brake, which was worked by car-bumpers?

A. I don't recollect any.

Cross 45. While you were in the employ of the Camden and Amboy road, were you in the habit of noticing in a general way the cars on the road from time to time, so that you knew how they were constructed?

A. Well, I never took any particular notice, but in a general way, I did.

Cross 46. Did you, while in such employ, from time to time, notice the brakes on the cars in a general way?

A. Yes, sir.

509 Cross 47. When did you leave the employ of the Camden and Amboy Company?

A. Well, sir, I don't know that I can come within a year or two, but somewhere along 1855 or 1856, I should think.

JAMES SEEDS.

Subscribed and sworn to before me, this 3d September, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to half past ten a. m., the 4th inst.

WEDNESDAY, *September 4th*, 1867.

Present, counsel as before.

Adjourned to the 5th inst., at eleven a. m.

THURSDAY, *September 5th*, 1867.

Present, counsel as before.

JOSEPH CAPNER, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Joseph Capner; 45 years of age; reside at South Amboy, New Jersey, and am a miller.

Q. 2. Were you ever in the employ of the Camden and Amboy Railroad; if so, when did you commence, and how long did you continue, and what did you do?

510 A. I was. I commenced with them on the 3d day of August, 1847, and continued with them sixteen years. I went on the brake for the first six months, and after that as conductor, on the way freight and passenger; some call it the Trenton line, or Capner's line, from the fact that I run it.

Q. 3. While brakeman did you know anything of the use of a double brake on that road; if so, what circumstance brings the thing to your mind?

A. They had them on the mail-cars, and I often used to wish that they would put them on mine. I always looked after my own brake.

Q. 4. What further knowledge have you of the use of this brake, at any other time after you were brakeman?

(Objected to.)

A. In 1848 and 1849, at the time of the starvation in Ireland, we got some new cars, and one or two had them on.

Q. 5. When you came on the road in 1847, did you know thereafter, and during that year, of a car called the John Tyler; if so, do you know what brake was on it? and, if so, describe the same.

A. Well, I knew the car very well, and there was a connected or double brake with a cross-lever under the bottom of the car on it; the connecting lever had four rods and there was a crank on both ends, and when there was a crank on one end they had three rods, and they all acted on both brakes.

Q. 6. Do you mean to say that when the brake was operated from one end of the car only, that the brakes were applied to both trucks?

A. Yes, sir.

Q. 7. Had there been a windlass and connecting-rod put on the other end, would the brake be applied as stated in your last answer?

A. Just as well from one end as the other.

Q. 8. Witness is now shown Exhibit A, and is asked what it represents.

A. A brake on the bottom of the car, and what we call a connected brake, and is such as I have described.

Q. 9. When you first became acquainted with the cars on the Amboy road was there a paw' and ratchet applied to the brake staff or windlass, by which the power was applied to the brakes; if not, was it afterwards so applied?

A. There was none at that time, but there was afterwards. The paw' and ratchet was to hold the brake on. The ratchet held the power which we used to hold with the hand.

Cross-examined by M'r Cozzens:

Cross 10. At the time you say you knew of the Tyler car, in 1847, was there a good deal of talk among the hands on the road about that car?

A. Yes; it was something new, and, of course, there was some excitement.

Cross 11. Do you mean that it was something new, and consequently created excitement?

A. The brake was something new, and, I suppose, excitement was caused by it. The men would say to one another, do you see that brake on the Tyler car?

Cross 12. The men talked about it considerably, did they not?

A. Yes, sir.

Cross 13. Did you ever know of any brake used on the Camden and Amboy road, having two cross-levers under the body instead of one, and styled the Hodge brake?

A. I did after that.

Cross 14. When first?

(Objected to as it has nothing to do with this controversy.)

512 A. It was about a year or a year and a half after; it may be longer. They were cars built by another company; a car-building company at Trenton.

Cross 15. Were those the first cars on which the Hodge brake was used on the Camden and Amboy road?

A. I rather think not; I don't know.

Cross 16. Can you describe the construction of this Hodge brake?

(Objected to for the reason that witness is not introduced as an expert.)

A. I never knew what name they called it; there was links hanging down, and levers on the links; a single rod from one lever to the other in the centre; then the rods were coupled on these the same as in the other connected brakes.

JOSEPH CAPNER.

Subscribed and sworn to before me this 5th September, 1867.

R. E. STILWELL,
Examiner, &c.

JAMES C. HILLMAN, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. James C. Hillman; 37 years of age; reside at Trenton, New Jersey, and am in the coal business.

Q. 2. Do you know anything of the use of brakes on a car or cars on the Camden and Amboy road when you were a boy; and, if so, what circumstance fixes the matter in your mind? Please state fully, 513 and tell all you know about it, and what car the brake was on, if you know, and also state how you fix the date or time of seeing said brake?

A. I know of the use of brakes on the Camden and Amboy road; it was in 1845. The way that I fix the date is that I was fourteen years old on the 10th day of August. I had my choice either to go to school or to work at the end of my vacation in August. I went to work. Now it was before that I saw this car. It was what they called the Tyler car. Myself and several other boys made a practice of being around the railroad when we were out of school. We heard the new engine (the Ben Franklin) and the Tyler car were at the old depot in Trenton, and at the lower tank. We boys got around the car, went inside and looked at it, came out and commenced fooling with the brakes, and in the operation of twisting them on and off at each end I was struck in the side with the brake handle, and it gave me a pretty severe lick. My inquiry was then who done it, and what done it, and the boy told me on the other end that he pulled the brake out of my hand. I couldn't see how that could be, because it was different from any brake I ever saw on a car. We then got down and looked at it underneath, and we found out that by putting the brake on at either end, that we put the brake on all the wheels.

Q. 3. Do you recollect whether there was a paw'and a ratchet on the brake-staff to hold the power when you wound up the crank?

A. No, sir; there was none on.

Cross-examined by M'r Cozzens:

Cross 4. Are you a brother of John H. Hillman, who has been examined in this matter?

A. Yes, sir.

Cross 5. What are the names of any of the others of the boys who you say were with you on the occasion you have referred to?

514 A. Joseph Jeffries and his brother, we called him Gill; he was killed at Boiling Springs; Henry Ashmore, and Joseph Justice, and Thomas Clayton, and others, whom I do not remember.

Cross 6. Where are Jeffries, Ashmore, Justice, and Clayton now?

A. I don't know where Jeffries is; Ashmore is in Easton, or was the last I heard of him; Justice went to Philadelphia, to learn the bricklaying with George Creel, near Seventh and Cherry streets. I don't know what ever became of Clayton.

Cross 7. Do you sell coal to the Camden and Amboy Railroad Company?

A. No, sir; in no way, directly or indirectly.

Cross 8. At the time you speak of in 1845 was there much talk about the Tyler car being different from other cars on the road?

A. It was considered a better-finished car, and a different pattern.

Cross 9. At that time was the car a good deal noticed, and a good deal talked about?

A. Yes, sir; with my associates it was.

Cross 10. Did you hear it talked about considerably among the hands on the road?

A. Yes, sir; and the engineer and fireman talked about it, brakeman, and all hands on the road.

Cross 11. Had it been recently fitted up, or refitted, at the time mentioned by you in your direct examination?

A. I can't answer that. It was in good condition; it looked new, clean, and nice.

Cross 12. After this time you have spoken of, did you ever again notice the brakes on the Tyler car?

A. Yes, sir.

Cross 13. Did you ever again get under the car to see how the brakes was arranged?

A. No, sir; I don't know that I ever did.

JAMES C. HILLMAN.

Subscribed and sworn to before me this 5th September, 1867.

R. E. STILWELL,
Examiner, &c.

515 ASHER PANCOAST, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Asher Pancoast; 52 years of age; reside at Camden, New Jersey, and am a locomotive engineer, and in the employ of the Delaware and Raritan Bay Company.

Q. 2. Were you ever in the employ of the Camden and Amboy Railroad Company? If so, when, and how long?

A. I went with them in the latter end of 1839, and left them in 1861.

Q. 3. What did you do in the year 1843?

A. I was a brakeman.

Q. 4. During the year 1843, did you know of the use of a double brake on that road? If so, what do you know about it, and what circumstance fixes the thing in your mind?

A. I did. In June, 1843, John Tyler was coming through the State, and I, being an extra man, was called on to be a brakeman. The afternoon before we started for Camden John Banney and myself were standing by the side of the car which conveyed the President. Benjamin H. Harber and Charles Vandergrift were at work on the undergearing of the car. John Banney said to me that I must ride behind the President. Mr Harber said that there was no use of more than one riding behind on that brake, for one man was as good as two. We got into a little kind of a contradiction there. He told us to get up on the car and try it, which we did. We found it was as he said. One was on each end of the car, and we both put the brake on. By that means we found Mr Harber was right in what he said. In the mean time Captain Shipman, the superintendent of the road, came along. He says, "Here you are talking again, as usual; more talk than work. I wish you would work more and talk less."

Q. 5. Please give some description of the brake, as then applied to this car referred to in your last answer.

516 A. The brake was connected with a rod from the centre of the truck with a bolt and a key to a cross-lever. I think it had four connecting rods—two to each lever—and the main rod went from one to the other in the centre.

Q. 6. How were the connecting rods attached to this cross-lever?

A. They were attached to the end of it—some by a hook and some with an eye and bolt; I can't say exactly about it.

Q. 7. Did this cross-lever apply the power of the brakeman to both trucks?

(Objected to.)

A. Yes, sir.

Q. 8. Witness is now shown Exhibit A, and asks what it represents.

(Objected to.)

A. It represents the brake, as near as I recollect; but I cannot recollect exactly. The cross-lever was connected to the bottom of the car, as in the model. One end of the connecting rod was connected by a pin and key. One of the rods on one end had two or three links of a chain, and hooked on to the cross-lever.

Q. 9. Are you sure that one of the rods connected with the cross-lever had two or three links in it, or do you testify only from recollection?

(Objected to.)

A. From recollection, as near as I can tell. It is a good while to remember.

Q. 10. Who was brakeman on the car which took John Tyler over the road, or, as you say, through the State?

A. William Crim and myself.

Q. 11. Who operated the brake on the car in which the President rode?

517 A. I did.

Q. 12. Do you know of your own knowledge that there was a double brake on that car?

(Objected to.)

A. Yes, sir.

Q. 13. Do you know anything about excursion trains being run on the Camden and Amboy road? If so, in what years were they run?

A. They were run in 1843 and 1845. I don't remember of any being run in 1844; I think there were none in 1844.

Q. 14. Were you at any time in 1845 a passenger on one of those excursion trains? If so, what circumstance occurred connected with the brakes while on said train?

A. Yes, sir; I was a passenger from Camden to Bordentown. About six miles from Bordentown something got wrong under the cars—under the train. We stopped, and the brake-rod was down, dragging on the ground. The engineer came to see what was the matter, and went to the engine and got his tools and bolt and put the rod up.

Q. 15. To what was this rod which fell down connected?

A. To the cross-lever.

Q. 16. State, if you know, who was engineer, who conductor, and who brakeman of that train on which you were riding.

A. Charles Yundt was engineer, John Holland was fireman, and Andrew Heath was conductor, and William Crim and Joseph Harber were brakemen.

Q. 17. Do you know anything about the use of this cross-lever brake on any other cars on that road than the one which carried the President? If so, state what you know.

A. There was a baggage-car made for the five o'clock mail line from Philadelphia to New York; they put eight wheels under that, and that had a cross-lever brake on.

Q. 18. About what time was this car put upon the road?

A. In 1844—about a year afterwards.

Adjourned to the 6th inst., at 11 a. m.

518 **Friday**, *September 6th*, 1867.

Present, counsel as before.

Q. 19. Is there any other circumstance than the one of President Tyler's passing over the road which enables you to fix the date of said double brake on the Tyler car in June, 1843? If so, please state the same.

A. Family affairs. I had a son born July 26, that same year; my wife was in delicate health. I was living in a house at Bordentown, Mansfield Township, and a man, Job Hooper, lived in part of the house with me. He said if I went on the brake he would attend to matters at home. I went down as extra brakeman on the Tyler car when the President was taken over the road.

Q. 20. In answer to the 5th direct interrogatory, in which you are asked to give some description of the brake in question, you say, "The brake was connected with a rod in the centre of the truck, with a bolt and key to a cross-lever." Can you not make the statement a little clearer by using some other words?

(Objected to.)

A. I want to say that the rod was connected with a lever from the centre of the truck or brake-beam to the cross-bar connected to the centre of the car.

Q. You then say, "I think it had four connecting rods, two to each lever, and the main rod run from one to the other in the centre." Is that what you wish to say on the further description of this brake, or do you wish to modify your statement?

(Objected to.)

A. Yes, sir; that is what I wish to say. I do not wish to modify the statement.

519 Q. 22. Do you mean to say that there were two rods to each lever, that is connected to each lever?

(Objected to.)

A. No, sir; I mean to say there were two rods at each end of the cross-lever.

Cross-examined by M'r Cozzens:

Cross 23. How do you know that John Tyler came through the State in June, 1843?

A. I saw him.

Cross 24. How do you know that it was in June, 1843?

A. I had a son born on the 26th day of July.

Cross 25. What has that to do with it?

A. When I was going away from home my wife was in delicate health and she did not want me to go, and I got a man to stay in my place.

Cross 26. Well, what relation has all that to the time when Tyler went through the State?

A. By my going to work on the railroad, and I know what I was doing at that time.

Cross 27. At what time?

A. In 1843.

Cross 28. At what time in 1843?

A. In June, 1843; I disremember the day of the month.

Cross 29. You say by my going to work on the railroad; going to work on the railroad, when?

A. I went to work in 1839 on the railroad.

Cross 30. How does your knowing what you were doing in June, 1843, and your going to work on the railroad in 1839 enable you to tell when Tyler went through the State?

A. By my family affairs; when my son was born on the 26th day of July.

Cross 31. You say, "when you were going away from home;" where were you going?

520 A. I was going to Camden.

Cross 32. Where was your home?

A. At Bordentown.

Cross 33. How far is it from Bordentown to Camden?

A. Twenty-six miles, or thereabouts.

Cross 34. You say you got a man to stay in your place; where did you get him to stay?

A. At my house, or at his own house; we both lived in the same house together.

Cross 35. How long was your wife in delicate health at that time?

A. You might say the whole nine months.

Cross 36. During that time did she frequently object to your going away?

A. Yes, sir.

Cross 37. And when you went did you frequently get a man to stay in your place?

A. Well, I don't know as I did until the latter part of the time, as I did not have much occasion.

Cross 38. During the latter part of the time did you frequently get a man to stay in your place when you went away?

A. I had no occasion to get a man all the time, because the man lived in the house with me all the time.

Cross 39. This man you got to stay in your place at the time referred to lived in the house with you, didn't he?

A. Yes, sir.

Cross 40. Then did you not frequently during the latter part of the time your wife was sick get that same man to stay in your place when you were going away?

A. I had no occasion; any one who knows anything of human nature knows that there are times when one is needed more than at others.

Cross 41. Then will you say that at no other time than the one referred to during the whole period that your wife was in delicate health at this time you got this man to stay in your place when you went away?

A. I don't recollect, sir.

Cross 42. Is it not possible that there might have been some other time?

521 A. Well, there might; I don't recollect it; it is a good while ago.

Cross 43. When you went away at these times what did you go away to do?

A. Sometimes to brake and sometimes to fire locomotive.

Cross 44. How many times, as near as you can state, did you go away to brake while your wife was sick at this date?

A. I don't recollect.

Cross 45. State as nearly as you can?

A. I couldn't state; I was braking for a living, and doing most anything I could get to do.

Cross 46. Did you go away twenty times?

A. I couldn't say.

Cross 47. Did you go away ten times?

A. I couldn't say anything about it, how many times I went away.

Cross 48. Do you mean to say that you fix the time that Tyler went through the State by your going away from home while your wife was sick, and by her not wanting you to go?

A. Yes, sir.

Cross 49. Have you any other means of fixing it?

A. No, sir.

Cross 50. Have you had children other than the son referred to?

A. My wife had one before this one; she had four altogether.

Cross 51. When were the other two born?

A. One was born in 1850 and the other in 1859.

Cross 52. Was the one born in 1850 a son?

A. No, sir; a girl.

Cross 53. Where were you living in 1850?

A. At Bordentown.

Cross 54. Was this man you referred to still living in your house at that time?

A. No, sir.

522 Cross 55. What were Harber and Vandergrift doing to the under-gearing of the car which you say the President was conveyed in?

A. I don't know, sir.

Cross 56. Did you see such a brake as you say was on the Tyler car on any other car in 1843?

A. I don't recollect about 1843, but in 1844 there was one.

Cross 57. You say in your fifth direct answer that "the brake was connected from the centre of the truck to the cross-lever, and had four connecting rods, and that the main-rod went from one to the other through the centre." Do you mean that this cross-lever had a connecting rod running to the centre of the truck and another connecting rod running off towards and connected to the windlass staff?

A. I mean it as I said it before, four rods connected to that cross-beam, and one rod from the centre of the truck or brake-beam.

Cross 58. What did you mean when you said in your fifth direct answer, "four connecting rods, two to each lever, and the main rod went from one to the other through the centre?"

A. I mean to say that there was two rods at each end of the cross-beam, and one rod goes through the centre of the brake-beam and one to the lever on the brake-beam.

Cross 59. What do you mean by the main rod you spoke of?

A. The one that connects the two brake-beams on the truck.

Cross 60. You said in your fifth direct answer "four connecting rods, two to each lever." What do you mean by each lever?

A. I said four connecting rods to each end of the cross-beam.

Cross 61. Are you sure of that?

A. To the best of my knowledge.

Cross 62. Look at your 5th direct answer and see if you said so, and state how you find it?

A. That is what I said if you understand it; four connecting rods; two at each end of the cross-beam.

523 Cross 63. Is this the best description you can give of that brake?

A. Yes, sir.

Cross 64. Did Crim help you operate the brakes on the car the President rode in?

A. He operated that himself; I rode in the gig-top on the tender.

Cross 65. You mean that he operated it the day the President went on the road, do you?

A. Yes, sir.

Cross 66. How do you know that it was in 1844 that the baggage-car that you have referred had a double brake on it?

A. It was on the mail line, and I had the braking of it.

Cross 67. After you first commenced to be brakeman, how long did you continue to be?

A. Until the first of 1845; the latter end of January, I think.

Cross 68. Were you never brakeman after that?

A. No, sir.

Cross 69. Can you give any further or other description of the brake on this baggage-car than you have given of the brake on the other car?

A. No, sir; I know it was a double brake, and that is all I know of it; there was a brake for either end of it; I could ride towards Jersey City on one end, and towards Camden on the other end.

Cross 70. Do you remember a brake on the Camden and Amboy road called the Hodge brake, having two cross-levers under the bottom of the car?

(Objected to for the reason before stated.)

A. I can't say that I do; I recollect such a man as being around.

Cross 71. When was he around, as near as you can state?

A. I couldn't say; I couldn't get anywhere near it; I don't know anything about it.

524 Cross 72. Was it while you were firing?

A. I couldn't say whether it was or not.

Cross 73. Was it before 1855?

A. I could not say whether it was or not; I don't know anything about it.

Cross 74. What was he around for?

your wife was sick get that same man to stay in your place when you were going away?

A. I had no occasion; any one who knows anything of human nature knows that there are times when one is needed more than at others.

Cross 41. Then will you say that at no other time than the one referred to during the whole period that your wife was in delicate health at this time you got this man to stay in your place when you went away?

A. I don't recollect, sir.

Cross 42. Is it not possible that there might have been some other time?

521 A. Well, there might; I don't recollect it; it is a good while ago.

Cross 43. When you went away at these times what did you go away to do?

A. Sometimes to brake and sometimes to fire locomotive.

Cross 44. How many times, as near as you can state, did you go away to brake while your wife was sick at this date?

A. I don't recollect.

Cross 45. State as nearly as you can?

A. I couldn't state; I was braking for a living, and doing most anything I could get to do.

Cross 46. Did you go away twenty times?

A. I couldn't say.

Cross 47. Did you go away ten times?

A. I couldn't say anything about it, how many times I went away.

Cross 48. Do you mean to say that you fix the time that Tyler went through the State by your going away from home while your wife was sick, and by her not wanting you to go?

A. Yes, sir.

Cross 49. Have you any other means of fixing it?

A. No, sir.

Cross 50. Have you had children other than the son referred to?

A. My wife had one before this one; she had four altogether.

Cross 51. When were the other two born?

A. One was born in 1850 and the other in 1859.

Cross 52. Was the one born in 1850 a son?

A. No, sir; a girl.

Cross 53. Where were you living in 1850?

A. At Bordentown.

Cross 54. Was this man you referred to still living in your house at that time?

A. No, sir.

522 Cross 55. What were Harber and Vandergrift doing to the under-gearing of the car which you say the President was conveyed in?

A. I don't know, sir.

Cross 56. Did you see such a brake as you say was on the Tyler car on any other car in 1843?

A. I don't recollect about 1843, but in 1844 there was one.

Cross 57. You say in your fifth direct answer that "the brake was connected from the centre of the truck to the cross-lever, and had four connecting rods, and that the main-rod went from one to the other through the centre." Do you mean that this cross-lever had a connecting rod running to the centre of the truck and another connecting rod running off towards and connected to the windlass staff?

A. I mean it as I said it before, four rods connected to that cross-beam, and one rod from the centre of the truck or brake-beam.

Cross 58. What did you mean when you said in your fifth direct answer, "four connecting rods, two to each lever, and the main rod went from one to the other through the centre?"

A. I mean to say that there was two rods at each end of the cross-beam, and one rod goes through the centre of the brake-beam and one to the lever on the brake-beam.

Cross 59. What do you mean by the main rod you spoke of?

A. The one that connects the two brake-beams on the truck.

Cross 60. You said in your fifth direct answer "four connecting rods, two to each lever." What do you mean by each lever?

A. I said four connecting rods to each end of the cross-beam.

Cross 61. Are you sure of that?

A. To the best of my knowledge.

Cross 62. Look at your 5th direct answer and see if you said so, and state how you find it?

A. That is what I said if you understand it; four connecting rods; two at each end of the cross-beam.

523 Cross 63. Is this the best description you can give of that brake?

A. Yes, sir.

Cross 64. Did Crim help you operate the brakes on the car the President rode in?

A. He operated that himself; I rode in the gig-top on the tender.

Cross 65. You mean that he operated it the day the President went on the road, do you?

A. Yes, sir.

Cross 66. How do you know that it was in 1844 that the baggage-car that you have referred had a double brake on it?

A. It was on the mail line, and I had the braking of it.

Cross 67. After you first commenced to be brakeman, how long did you continue to be?

A. Until the first of 1845; the latter end of January, I think.

Cross 68. Were you never brakeman after that?

A. No, sir.

Cross 69. Can you give any farther or other description of the brake on this baggage-car than you have given of the brake on the other car?

A. No, sir; I know it was a double brake, and that is all I know of it; there was a brake for either end of it; I could ride towards Jersey City on one end, and towards Camden on the other end.

Cross 70. Do you remember a brake on the Camden and Amboy road called the Hodge brake, having two cross-levers under the bottom of the car?

(Objected to for the reason before stated.)

A. I can't say that I do; I recollect such a man as being around.

Cross 71. When was he around, as near as you can state?

A. I couldn't say; I couldn't get anywhere near it; I don't know anything about it.

524 Cross 72. Was it while you were firing?

A. I couldn't say whether it was or not.

Cross 73. Was it before 1855?

A. I could not say whether it was or not; I don't know anything about it.

Cross 74. What was he around for?

(Objected to for the reason that witness is not supposed to know other men's business.)

A. I don't know.

Cross 75. Have you any knowledge of a brake on the Camden and Amboy Railroad called the Stevens brake, and having four upright levers under the car body?

(Objected to as irrelevant.)

A. No, sir.

Cross 76. Have you any knowledge of a brake on the Camden and Amboy road called the McLoughlin brake, which was operated by the bumpers of the cars?

(Objected to for the same reason.)

A. Yes, sir.

Cross 77. When did you know of this brake?

A. I can't say.

Cross 78. Can't you give us any idea of the time?

A. I used it some ten years ago.

Cross 79. Upon how many cars was it placed?

A. On one whole train, called the Amboy line; the regular mail train from Amboy to Philadelphia.

Cross 80. How many cars were there usually in this train?

A. Five to six and seven.

Cross 81. About how long did it continue on this train?

A. I couldn't say; a year or more.

525 Cross 82. Did that train run every day except Sundays?

A. Yes, sir.

Direct resumed by M'r Whipple:

Q. 83. You say in answer to eleventh direct interrogatory, the question and answer being as follows: "Who operated the brake on the car on which the President rode?" You say, "I did." Are you or are you not mistaken in saying that William Crim operated it and that you rode in the gig-top?

A. We were both one, you might say; my place was in the gig-top, and his also; he was there sometimes, and I was there sometimes, when I was forward.

Q. 84. Are you quite sure that William Crim was brakeman on that train which took the President through the State?

A. Yes, sir; to the best of my knowledge he was.

Q. 85. May you not have confounded his being a brakeman on an excursion train in 1845 with his being on the President's train in 1843?

A. No, sir; I was not a brakeman on the excursion train.

ASHER PANCOAST.

Subscribed and sworn to before me this 6th September, 1867.

R. E. STILWELL,
Examiner, &c.

Henry H. Disbrow, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

526 A. Henry A. Disbrow; 60 years of age; reside in South Amboy, and am a carpenter.

Q. 2. Have you been in the employ of the Camden and Amboy Railroad Company; if so, from what time to what time, and what did you do while so employed?

A. I have; I went to work for them in 1845 on the road; I worke on the road till 1847, and then went into the shop, and worked in the shop till 1855, and then left the employ of the company.

Q. 3. While at work in the shop, did you have occasion to repair brakes; if so, what kind of brake was it; what did you do in the way of repairing it?

A. I did; one in particular, I had occasion to repair, was one that worked from the centre of the car, which operated on both trucks at the same time; one of the rods connecting with the cross-lever was broken, and I had to take it down and take it to the blacksmith's shop and have it mended, and take it back again.

Q. 4. At what time, that is, what year did you repair this brake, and how do you fix the time?

A. Well, sir, it was in 1848, and the reason I know, my wife was confined at that time, and my eldest son came after me, and I went for the doctor; she had a boy, and from his age I know the time, that it was the 15th day of March, 1848.

Q. 5. Please state whether the rod which you had mended was one that connected the cross lever with the lever in the truck, or with the windlass of the car?

A. It connected with the one in the truck.

Q. 6. About where did this rod break which you had mended?

A. About two foot from the centre of the car, where it connects with the cross-bar which applies the brakes.

Q. 7. Please state whether there was or was not a pawl and ratchet in use at that time on the brake-staff and crank by which the brake was applied?

A. There was none.

Q. 8. How, then, was the power held?

A. Some would wind them up and stand and hold them, and some would tie them.

527 Q. 9. Do you know of the use of this brake on any other cars of that road while you were in the employ of said Amboy Company? If so, state what you know about the use of such brakes.

A. Yes, sir; there were several put on what we called the box-cars.

Cross-examined by M'r Cozzens:

Cross 10. You say you went into the shop of the Camden and Amboy Company in 1847; what sort of work did you do in that shop?

A. Repairing crates and cars. Sometimes making new brakes.

Cross 11. Was it part of your duty to repair brakes if they broke down?

A. That is what my occupation was altogether in repairing?

Cross 12. Can you give any idea how many brakes you repaired while you worked in that shop?

A. The first year (1848) we repaired but very few. In 1850, 1851, and 1852 they got more of that class of cars on, and there was more work to do, and the boss had to put more men on. There were only two of us at the first start. It is a hard matter for me to state. We may have repaired 4 0 or 500 brakes a year. I could not state. There were more or less coming in and going out all the time.

Cross 13. When you say that class of cars, what kind of cars do you refer do?

A. I mean eight-wheel cars. When I first went there they were four wheels.

Cross 14. Were these cars that you have been speaking of so far freight-cars?

A. The first one I have been speaking of was a passenger-car. The remainder were freight-cars.

Cross 15. Did there get to be a good many of these brakes, which operated on both trucks on the Camden and Amboy road in 1850, and 1851, and 1852?

528 A. They got to be pretty tolerable plenty, not over and above. They continued to increase during those years.

Cross 16. Do you remember brakes on the Camden and Amboy road, sometimes called the Hodge brake, which had two cross-levers under the body of the car?

(Objected to.)

A. Yes, sir.

Cross 17. Did you repair any of those Hodge brakes?

A. Yes, sir.

Cross 18. Did you repair any of those Hodge brakes in either of the years 1850, 1851, and 1852?

A. I do not recollect the year. I could not say on those cars, we had so many four and six wheel cars. There were a great many of them in operation in those years, and they were not fully done away with until 1854. I mean by "those cars," as above stated, those with the Hodge brake.

Cross 19. Were those cars with the Hodge brake freight-cars?

A. I guess some of them were emigrant-cars. I think some of them were freight-cars, but could not say positively.

Cross 20. Were the eight-wheel cars, the brakes of which you repaired, the same kinds of cars after the Hodge brake began to be used as they were before?

A. Well, I think they were very nearly the same kinds. I don't recollect particularly about that.

Cross 21. You say in your fourteenth cross-answer that the cars you were speaking of before you were asked about the Hodge brake were, with the exception of the first one, freight-cars, and you now say that the cars the brakes of which you repaired after the Hodge brake came into use were the same kind as you repaired before it came into use. Is it not, then, the necessary consequence that the Hodge brakes you repaired were on freight-cars?

(Objected to for the reason that the manner of putting the question is calculated to confuse the witness.)

529 A. I don't recollect about that.

Cross 22. Are you able to state what kind of a car it was that the Hodge brakes you repaired were on?

A. I think most of them were emigrant-cars, but can't state positively.

Cross 23. Can't you state any time when you repaired any of these Hodge brakes?

A. I would not be willing to state any certain time.

Cross 24. Did you repair them before you did away with the four and six wheel cars?

A. Four and six wheel cars were not fully done away till 1855; in the spring, I think. We did not do away with the four and six wheel cars. They were used more or less in peach time.

Cross 25. How long before you left, which you say was in 1855, did you repair Hodge brakes?

A. I could not say for certain how long?

Cross 26. Did you repair any at all?

A. I think I did in the course of the ten years that I worked for them.

Cross 27. Are you sure whether you repaired any of them or not?

A. I think I did, but I couldn't say sure.

Cross 28. Were there a great many Hodge brakes on the road before you left?

(Objected to, for the reason that it is evident the witness knows nothing about the Hodge brake, and the counsel for plaintiff is called upon to ask the witness to describe the Hodge brake before he proceeds further.)

A. Well, if I understand what you mean by the Hodge brake, I said there were a good many different kinds of brakes, but I may not understand what the Hodge brake is by the name.

Cross 29. In the fifteenth cross-question the Hodge brake was spoken
of to you as a brake which had two cross-levers under the body
530 of the car; now were there before you left a good many of those
brakes on the road which had two cross-levers under the car?

A. There was not a great many.

Cross 30. You remember that there were some, do you?

A. Yes, sir.

Cross 31. State, as nearly as you can, how long before you left the first of the brakes with those two cross-levers came onto the road?

A. I don't know that I can state the precise time.

Cross 32. Can you state whether it was a year before?

A. It might be a year, it might be three, and it might be five. I can't say for certain.

Cross 33. Do you remember what time it was that, as you say, you repaired a brake on the first car you spoke of, independently of the time your wife was confined, or is that the only means of fixing the date that you have?

A. That is the only means I have of fixing the date, the birth of my son and the trouble I had in fixing the brake, being a new hand in the shop.

Cross 34. Had you repaired brakes that operated only on four wheels before that time?

A. I repaired brakes that only operated on one end of the car before that time.

Cross 35. Did you repair a good many of them?

A. Not a great many of them. Our work was not very much the first year.

Cross 36. Did you ever have to repair any of them when the rod which ran from the lever in the truck to the brake beam on the other side of said truck was broken?

A. I don't know as I recollect, though I might.

Cross 37. In repairing brakes which operated on both trucks, did it happen every once in a while that one or the other of the rods connecting with the cross-lever was broken?

A. I don't recollect but the one car, and that was the first one.

Cross 38. Will you say that during the whole seven years that you
say you repaired double brakes, that you never knew of one in
531 which neither of the rods connecting with the cross-lever was
broken, except the single instance you have named?

A. I don't think that I did.

Cross 39. While you were repairing brakes during this seven years, did you often have to take one or the other of the rods connected with the brake gearing to the blacksmith's shop to be mended?

A. Not of that class.

Cross 40. Did you of any class, and if so, what class ?

A. Of the eight wheels, here they only broke on four wheels, I have taken them to the blacksmith's very frequently.

Cross 41. Will you say that during the whole seven years you never knew of any of the rods connected with the brake gearing of the double brakes, breaking on eight wheels, needing to be taken to the blacksmith shop to be mended, except in the single instance you have named ?

A. That was the only one I took, and I do not know of it, except in that instance.

Cross 42. When, before the present time, within this year, 1867, did anybody call your attention to or ask you about what you knew as to the use of double brakes on the Camden and Amboy road ?

A. I don't recollect anybody, except I heard them talking about being a lawsuit ?

Cross 43. Who did you hear talking, and what did they say ?

A. John Morgan was the man I heard talking about it, the painter; he said the company had a big lawsuit going on, but he did not tell me what it was about, and I didn't ask him.

Cross 44. What company had a big lawsuit ?

A. The Camden and Amboy.

Cross 45. Is that all that was said ?

A. That is all that I recollect was said; I was busy.

Cross 46. How did that remark call your attention to what you knew about double brakes ?

A. We were working in a Presbyterian church, and he was talking
about the company's having a big lawsuit, and a good many hav-
532 ing to go from Amboy, and I turned around and asked him what
it was about, and he made me no answer; he and the foreman
were busy, and he said it was a big lawsuit.

Cross 47. Is that every word that was said ?

A. That was every word that I heard.

Cross 48. As that remark did not make any mention at all of double brakes, how did it call your attention to the subject ?

A. After I was subpœn'ed last night, and was told what I was to go for, I then put my mind to the subject to recollect all I could about it.

Cross 49. Then you were supœn'ed before you knew what you were to testify to, were you ?

A. I was sir; I did not know what the suit was about.

Cross 50. Who subpœn'ed you ?

A. M'r William Disbrow.

Cross 51. Is he the same M'r Disbrow who has testified in this case ?

A. I suppose so; I wasn't here.

Cross 52. Is he your cousin ?

A. Yes, sir.

Cross 53. You said M'r Lockwood sent him to you; is that so, and what M'r Lockwood ?

A. That is what he told me; I don't know his first name, and am unacquainted with the man; he resides at Bordentown.

Cross 54. When your cousin subpœn'ed you, what did he say to you ?

A. He said they wanted me to come up to New York on the trial; I was to bed when he came, and I don't recollect what he did say.

Cross 55. Is what you have stated all that you can remember that he said ?

A. Well, pretty much; he told me to meet him and we would go down together in the boat.

Cross 56. Did you talk together about this lawsuit on the boat?

A. No, sir; I don't recollect of saying anything about it on the boat.

Cross 57. Nor about double brakes?

533 A. No, sir; I don't think we did; I am certain we did not, because we were not together long on the boat.

Cross 58. Then do you say that before giving your testimony to-day you had no conversation with anybody about the lawsuit and about double brakes, except the conversation with your cousin last night?

A. Not until I got here; I had a little conversation with the counsel; I don't know what his name is.

Cross 59. That you mean was this morning, do you, just before you were sworn?

A. Yes, sir.

Cross 60. Do you remember a brake on the Camden and Amboy road called the McLoughlin brake, which was worked by the car bumpers? (Objected to for the reason that it has nothing to do with the matters at issue.)

A. I recollect seeing one on the passenger line, but don't know how it was put on. I understood it was worked by the engine, but don't know.

Cross 61. State as near as you can how long before you left the road.

A. Well, I think likely two or three years.

Cross 62. Can you say that it was more than one year?

A. I could not.

Cross 63. Was that the only brake worked from the engine which you ever saw on the road?

A. I could not tell you. I think it was the only brake of that class I ever saw on the road.

HENRY H. DISBROW.

Subscribed and sworn to before me this 6th September, 1867.

R. E. STILWELL,
Examiner, &c.

534 **Charles Cox**, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Charles Cox; 47 years of age; reside at South Amboy, New Jersey, and am an engineer.

Q. 2. When did you first enter the employ of the Camden and Amboy Railroad Company, and when did you leave their employ, and what did you do during the years intervening?

A. In 1842; I left in 1850 or 1851; I cannot give the date. In 1842 I was chipping railroad iron for the track; in the spring of 1843 I was employed as a blacksmith in the company's shops; in the spring of 1846 I went on the road firing; in the spring of 1848, in February, I took an engine, the one that Colt Walcott run; he had taken the one that Joseph Cox had run, Joseph Cox having been killed.

Q. 3. At the time of taking Walcott's engine to run, or soon thereafter, did you know of the use of double-acting brakes on that road? If so, what circumstance fixes the thing in your mind, and the date?

A. The circumstance I have which fixes it in my mind is that I lost a child that year. I ran to meet every mail train, and I would wait there on the turn-out until the train from Philadelphia and from New York arrived; while standing there I saw the brake applied, and the wheels on the trucks of the cars at both ends slipping; I saw that scores of times during the years I was running there.

Q. 4. What kind of a car or cars did you see the wheels sliding on both trucks when the brake was applied?

A. On a flat crate car.

Q. 5. Do you wish to be understood that you fix the date of taking Walcott's engine to run, by the death of your child?

A. Yes, sir.

Q. Do you know of the use of this double brake upon any other car or cars on that road before 1850 or 1851?

A. It was on two cars; one crate car in each train.

Adjourned to the 7th instant, at 11 a. m.

535 SATURDAY, *September 7th*, 1867.

Present, counsel as before.

Cross-examined by M'r Cozzens:

Cross 7. You say you fix the time of seeing the wheels slip by the death of your child; what connection is there between those two circumstances?

A. I took an engine in the spring of 1848, and I lost the child July 12th, same year.

Cross 8. Do you not see that the loss of your child has nothing at all to with your seeing the wheels of cars slipping. How, then, does that enable you to fix the time?

A. It brings the date of the year fresh in my mind.

Cross 9. What if it does; what connection is there between the two circumstances?

A. The connection that I had to meet every mail running through Trenton.

Cross 10. What has that to do with it?

A. In meeting every train I was on the turn-out. While I was standing there the trains would approach; the brakes were applied by one brakeman only, both trucks of the car sliding.

Cross 11. Then you mean, do you, that you remember seeing the wheels slip by the fact that you were running to meet the mail train?

A. Yes, sir.

Cross 12. For how long a time were you engaged in running to meet these mail trains?

A. Over a year. I left there in the spring of 1849.

Cross 13. Are you sure you left there in the spring of 1849?

A. Yes, sir.

Cross 14. Upon how many cars in those mail trains were those brakes either double or single?

A. I noticed one car in each train. I think there were brakes on all the cars; I can't say what kind of brakes; the brake was 536 applied to one car. There was only one brakeman to a train at that time, for the whole year I was running there.

Cross 15. Was there only one brakeman upon each of these trains, and were the brakes applied upon only one car on each of them?

A. There was only one brakeman on each train, and, to my knowledge, only one brake applied.

Cross 16. How many cars did those mail-trains average?

A. From five to seven.

Cross 17. Where did those trains run to?

A. From Jersey City to Bristol.

Cross 18. They were the regular and only mail-lines running to Jersey City at that time, were they?

A. The only mail lines; yes, sir.

Cross 19. Who were the brakemen on those trains?

A. I can't remember the last name of one of them. I can remember the first name of one of them; his name was Barney; this was his first name. I can't remember the name of the other one.

Cross 20. Did you never see the brakes applied to any of the other cars in these trains except the car you have referred to?

A. No, sir.

Cross 21. And you never saw the wheels of any of the other cars slip?

A. Not connected with that train.

Cross 22. Did you ever see the wheels of any car connected with any other train slip?

A. Yes, sir.

Cross 23. What kind of brakes were there on such cars?

A. I never crawled under the cars to examine them. I judge from there being two cranks and one brakeman that they must have been a double brake.

Cross 24. What did you say about these brakes having two levers?

A. I don't mean to say anything about the brakes having two levers.

Cross 25. Didn't you say they had two levers?

537 A. I found my mistake, and applied it to the crank on the top of the car.

Cross 26. Did you ever, at any time, see the wheels of any of the cars slip, except those which had the double brakes?

A. Yes, sir.

Cross 27. When?

A. I have seen them at different times, in 1848 and 1849.

Cross 28. Were not the wheels of the cars with single brakes constantly liable to slip when the brakes were applied?

A. One end was.

Cross 29. Did you see them so slip very frequently during the years 1848 and 1849?

A. Yes, sir.

Cross 30. Did you after 1849 and up to the time you left?

A. Yes, sir.

Cross 31. In what trains?

A. Different trains; dirt-trains and wood-trains.

Cross 32. Any others?

A. I don't recollect any others distinctly.

Cross 33. Now, will you swear positively that you saw the wheels slip in both trucks of each of these cars on these mail-trains on which the brakes were applied as you say?

A. Yes, sir.

Cross 34. Did you always look to see whether they slipped or not?

A. Yes, sir. When I was standing there my attention was drawn towards the train as it was approaching.

Cross 35. You were standing there every morning and every night, were you not?

A. Yes, sir.

Cross 36. And you saw the wheels slip every time you were standing there, did you?

A. Every time the train passed me. Every time I was standing there I saw the wheels slip when the train came in.

Cross 37. Where were you at those times?

538 A. Sometimes on the engine, and sometimes standing on the ground.

Cross 38. What made you look to see whether the wheels slipped every time the trains came in?

A. What drew my attention was the fire flying out from under the truck.

Cross 39. What time did the morning mail-trains reach the place where you were standing?

A. At half past eleven.

Cross 40. Was there much talk among the railroad men about these brakes on the mail-train?

A. Not to my knowledge.

Cross 41. Didn't you hear anybody talk about them?

A. No, sir; not during my running on the road.

Cross 42. When did you hear anybody talk about them?

A. The first I heard anything was about three or four weeks ago.

Cross 43. Did you never, while you were running on the road, hear any talk about double brakes on any of the cars?

A. No, sir.

Cross 44. Did you get down under the cars on these mail-trains on which the wheels slipped to see what kind of brakes they had?

A. No, sir.

Cross 45. Could a person have seen how the brakes were arranged under the cars unless he did so?

A. He could see nothing but the blocks which took effect upon the wheels. I never saw anything of the brake except the blocks, which were applied to the wheels. I should judge a person could not see how the brakes were arranged unless he stooped down.

CHARLES COX.

Subscribed and sworn to before me this 7th September, 1867.

R. E. STILWELL,
Examiner, &c.

539 WILLIAM DISBROW, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. William Disbrow; 39 years of age; reside at South Amboy; and am a locomotive engineer on the Camden and Amboy road.

Q. 2. When did you enter the employ of that company, and are you now employed by the same?

A. On the 11th June, 1847, and am still employed by them.

Q. 2. What did you do for that company in 1847?

A. I fired a locomotive.

Q. 4. Do you know anything of the use of double brakes on that road; if so, what do you know, and what circumstances, if any, do you connect with such knowledge?

A. I do know of double brakes on that road. The first I knew of them was in the winter of 1847. I was firing on the Amboy line. At the end of our route at Camden, New Jersey, one of the cars was thrown from the track from some cause. It was a flat car for carrying baggage, and I was sent under this car, which was off the track, to disconnect the brake, by the engineer, which I did with a hammer and cold chisel. The brake had a cross lever in the centre of the car with four rods attached to the cross bar. I disconnected all the rods from the cross lever.

Q. (Witness is here shown Exhibit A, and is asked in relation to the brake, what it represents.)

A. It represents the brake I had to do with, and such as was on the car before spoken of.

Q. 6. (The attention of the witness is now called to the cranks by which the power is applied to the brakes) and is asked if there was a pawl and ratchet applied to the staff for the purpose of holding the power when applied by the brakeman. Please explain in relation to this matter.

A. No, sir; there never was any ratchet, to my knowledge, for some years after that.

540 Q. 7. Does the model correctly represent the staff and crank above the platform as seen in Exhibit A, as used in 1847 and thereafter, or not?

A. It does represent it exactly.

Q. 8. What do you know of the use of this brake on the cars of that road from 1847 to the present time?

A. Well, they have it in operation from that time to the present. I have seen it in operation.

Cross-examined by M'r Cozzens:

Cross 9. You say they have had the double brake in operation from 1847 to the present time. On how many cars was it in operation in 1847?

A. Only one, to my knowledge, in the latter part of 1847.

Cross 10. What car was that?

A. It was a flat car; the same one I have referred to.

Cross 11. How many in 1848?

A. I couldn't tell how many; no more, to my knowledge, than one.

Cross 12. How many in 1849?

A. Well, sir, there was some five or six, to my knowledge; box cars.

Cross 13. Do you mean box freight-cars?

A. Yes; freight cars.

Cross 14. How many in 1850?

A. I don't know whether they had any more or not.

Cross 15. How many in 1851?

A. I couldn't say.

Cross 16. Do you know whether they had more than in 1850?

A. No, sir.

Cross 17. How many in 1852?

A. Well, there were considerable more at that time; they became quite plenty, but I couldn't say how many.

Cross 18. Have you any knowledge of a brake on the Camden and Amboy road called the Hodge brake, having two cross levers under the car body?

541 A. No, sir.

Cross 19. Did you never see any such brake on any of the cars?

A. No, sir.

Cross 20. Have you any knowledge of any brake on the Camden and Amboy railroad called the Stevens brake, having four upright levers under the car?

A. No, sir.

Cross 21. Have you any knowledge of any brake on the Camden and Amboy railroad called the McLoughlin brake, which was a train brake operated from the engine?

A. Yes, sir.

Cross 22. When did you first know of the McLoughlin brake?

A. I couldn't tell within a year or two; perhaps more. I think it must have been along in 1853 or 1854; somewhere in that neighborhood. Am not positive.

Cross 23. Upon how many cars was the McLoughlin brake used?

A. It was used in the Amboy train, from five to seven cars, and, I think, it was used on all of them.

Cross 24. What caused the baggage-car to be thrown from the track at the time mentioned in your direct examination?

A. I don't know, sir, only as I was told.

Cross 25. What was you told?

A. The engineer told me that the brake had got down, and threw the car off the track.

Cross 26. What part of the brake?

A. The rod was bent underneath, and my orders were to disconnect it. I disconnected the rods in the centre of the car. I don't know what part of the brake was down.

Cross 27. Did you see any part of the brake down?

A. No, sir.

Cross 28. How long did you fire on that Amboy line?

A. I think, sir, only to the end of 1847; I am not positive.

Cross 29. When did you commence firing on it?

A. Some time in the fall. It was cool weather, at any rate. It might have been in the fore part of the winter.

542 Cross 30. How long after you commenced firing on that line did this car get thrown off the track?

A. It was the first day I ever fired that line.

Cross 31. Did that car ever get off the track at any other time?

A. Not to my knowledge.

Cross 32. What did you do after you got through firing on that line?

A. Firing a dirt train.

Cross 33. What part of the road did that dirt train run on?

A. South Amboy.

WILLIAM DISBROW.

Subscribed and sworn to before me this 7th September, 1867.

R. E. STILWELL,
Examiner, &c.

PATRICK BOGY, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Patrick Bogy; 55 years of age; live at South Amboy, New Jersey, and am helper in the machine shop of the Camden and Amboy Company.

Q. 2. When did you first enter the employ of said company, and how were you employed thereafter?

A. On the 10th of May, 1842, I went to work in the freight depot, and worked there until the 4th of July, 1843, when I went on the railroad as a brakeman on a freight train, with a passenger car attached. I was about five years a brakeman, and then I was put on as a conductor on a freight train.

543 Q. 3. While brakeman did you know anything about the use of double brakes on that road; if so, what do you know, and what circumstances, if any, called your attention to such brakes?

A. I saw the brake on the Tyler car, and on a flat car which carries the baggage. I have been in Camden, and saw the mail trains go in and out there every day, and I saw the brakeman put on the brake on this Tyler car, and saw the wheels slide in both trucks.

Q. 4. Was this circumstance of sliding the wheels in both trucks what first called your attention to this brake?

A. By hearing other men talk about this brake I made it my business to go and look under the car, and see how the brake was connected, and I found it connected by a lever under the centre of the car; when the man took hold the crank on one end of the car, it applied the brake to both trucks, and it made the wheels slide under both trucks at each end of the car.

Q. 5. How soon after you became brakeman in 1843 did you observe this double brake?

(Objected to.)

A. I observed it along in 1844 and 1845.

Cross-examined by M'r Cozzens:

Cross 6. Where did the freight train you were brakeman of run to?

A. From South Amboy to Camden.

Cross 7. How many hours was that freight-train usually on the road from South Amboy to Camden?

A. Sometimes five, sometimes six and seven hours, according to whether we met with any trouble on the way.

Cross 8. When you did not meet with any trouble, how many hours was it?

A. Well, it would go in five and six hours.

Cross 9. Did it usually run in that time?

A. When it did not meet with any accidents or delays on the road it did.

544 Cross 10. About how many times a week did it run in five or six hours?

A. It run at all times when it did not meet with any accidents or delays.

Cross 11. About how many times a week did it meet with accidents or delays?

A. That is more than I can tell now.

Cross 12. When it ran over in five or six hours, what time did it reach Camden?

A. We had no certain time on freight trains at that time.

Cross 13. Did you have any fixed time for leaving South Amboy?

A. We left there whenever the train was ready.

Cross 14. Did you leave South Amboy in the morning or in the afternoon?

A. I said we left there whenever the train got loaded and was ready.

Cross 15. Is that the best answer you can make?

A. Yes, sir.

Cross 16. Did the train ever leave South Amboy in the afternoon?

A. Yes; it left in the afternoon if it was loaded.

Cross 17. Do you remember any time when it left in the afternoon?

A. I can't bring it to memory now.

Cross 18. Did it ever leave South Amboy in the morning?

A. It left there when it was loaded at any time.

Cross 19. Can you remember any time when it left in the morning?

A. Not now I can't; not a certain time.

Cross 20. Can you recollect any time?

A. No certain hour; I can't.

Cross 21. I havn't asked anything about any certain hour. I ask if you can remember any time when it left in the morning?

A. I say it left whenever the train was loaded and ready; I can't remember any more than that now.

545 Cross 22. Was the time when that train reached Camden very uncertain?

A. Whatever time it could get there.

Cross 23. Did it have any regular time for leaving Camden to return to Amboy?

A. No, sir; no regular time.

Cross 24. How long were you brakeman on that train?

A. About five years.

Cross 25. Did you run on every trip of it during that time?

A. Not every trip; if I was sick I had the privilege to lay off.

Cross 26. Did you run every trip except when you was sick?

A. No, sir; if I had anything to do for myself, to go to New York to do a little business, or if I wanted to get in a little hay for myself—I kept a cow or two—or do any little business for myself in New York, or anywhere else, I also had the privilege.

Cross 27. Well, were you off pretty often during the time?

A. As often as occasion required me to do so.

Cross 28. Did occasion require you pretty often?

A. Well, as often as I wanted to do business for myself.

Cross 29. How often was that?

A. I believe that is the same question I have been asked, according as I view it; it was as often as my business required me.

Cross 30. Can't you state how often your business required you?

A. No, sir, I can't state how many times; it was as often as I wanted to.

Cross 31. Were you away a good many times during the five years?

A. As often as my business required me, or occasion led me to go.

Cross 32. Can't you state whether you were away pretty often during the five years?

546 A. I can't say how many times, probably a dozen times; and it may be more and it may be less.

Cross 33. Can you say whether you were away a dozen times, or whether you were away only twice?

A. No, sir, I can't say how many times; it might be a dozen, and it might be less; I can't say whether it was a dozen times or only twice.

Cross 34. Where did you live at that time?

A. At South Amboy.

Cross 35. You say you saw the brakeman put on the brake on the Tyler car; did the Tyler car run in the mail train at the time you observed it?

A. Yes, sir.

Cross 36. You said in your direct examination that you observed this double brake along in 1844 and 1845; will you say that it was the Tyler car you saw it on at this time?

A. Yes, sir.

Cross 37. Did you see it on the Tyler car in the mail-train in 1845?

A. I did, sir; and in 1844.

Cross 38. May it not have been later than 1845 when you first saw it?

A. No, sir; I first saw it in 1844.

Cross 39. What makes you think it was in 1844?

A. Well, I being sick, and having a doctor's bill to pay, and his bill was dated October, 1844; another thing that recalls it to my mind is, that I heard men talking about it, and it made me more anxious to see the car, more particularly to see how the brake was rigged on it.

Cross 40. What did you hear the men say about it?

A. I heard the engineer say that when the brakeman applied the brake on the Tyler car, that he felt the engine jerk, by means of having this brake put on; I heard them remark that it was such a good brake that if they had more of them they would not have so much trouble.

Cross 41. How did you know that the men did not say this in 1845?

547 A. As I said before, I had a doctor's bill to pay—(I had the intermittent bilious fever)—and the bill was receipted October, 1844.

Cross 42. Is that all you can say about it?

A. That is my meaning for its being in 1844, for a few days afterwards I was taken sick.

Cross 43. Was there a considerable talk about that brake?

A. Well, yes, sir.

Cross 44. Was it spoken of as a new thing?

A. It was spoken of as being on the road from the time the Tyler car came on it.

Cross 45. Did you hear a good many speak of it?

A. I heard the engineer and fireman.

Cross 46. Did you ever see a brake used on the Camden and Amboy cars, called the Hodge brake, with two cross-levers under the car-body?

A. I never heard tell of such a name for a brake until I heard it in this court-room, and I never saw such an one, to my knowledge.

Cross 47. Did you ever see a brake on the Camden and Amboy cars called the Stevens brake, with four upright levers under the cars?

A. No, sir.

Cross 48. Did you ever see a brake on the Camden and Amboy road, called the McLoughlin brake, which was worked from the engine?

A. No, sir; I never saw it, nor heard tell of it, till I came here.

his
PATRICK + BOGY.
mark.

Subscribed and sworn to before me this 7th September, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to the 9th inst., at eleven a. m.

548 MONDAY, *September* 9*th*, 1867.

Present, counsel as before.

ANDREW HEATH, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation; and by whom employed, and how long, and in what capacities?

A. Andrew Heath; 51 years of age; reside at Camden, New Jersey, and am captain of the steamboat State Rights. I am employed by the Camden and Amboy Railroad Company. I think I went with the company in 1838 or 1839; I am not sure when I first went with them. I engaged to drive a horse-car on that road. I then went as brakeman. I then went as baggage-master, then as conductor, and then as captain on steamboat Washington, and have continued as captain of various boats in their employ, up to the present time.

Q. 2. About what year did you commence as conductor on the Camden and Amboy road?

A. In 1843.

Q. 3. While so engaged, do you recollect taking a special train over that road with the President of the United States on board; if so, at what time, and what circumstances, if any, is connected with the event?

A. I do; it was in 1843; I think it was in June; I can't say exactly what day. I took the President from Camden and left him at Princeton.

Q. 4. Do you know of the running of trains on the Camden and Amboy road, called "Bay Excursion Trains"; if so, in what year or years, were such trains run? Please state from your own personal knowledge, and were you conductor on said trains.

A. I do; in 1843 and 1845. I was conductor on those trains.

Q. 5. Please state whether you know of the use, in said Bay Excursion Trains, a car called the Tyler car.

549 A. I do.

Q. 6. Do you know who was engineer on the excursion trains which you run in 1845? If so, please state, and who fired, and who was brakeman.

A. Yes; Charles Yundt; John Holland fired; I can't remember who was brakeman.

A. HEATH.

Subscribed and sworn to before me this 9th September, 1867.

R. E. STILWELL,
Examiner, &c.

ROBERT C. BUZBY, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Robert C. Buzby; 67 years of age; reside at Bordentown, New Jersey, and am time-keeper and clerk for the Camden and Amboy Railroad Company.

Q. 2. How many years have you been in the employ of said Camden and Amboy Railroad, and how employed at different times?

A. Thirty-four years the 4th day of last March. The first four years I was employed firing and running a locomotive; most of the time as engineer. Not quite two years I was captain of the ferry-boat running from Camden to Philadelphia. After that, in 1840, I went in the Camden and Amboy office as clerk and time-keeper, and have been employed there ever since.

Q. 3. Do you know Edwin Lockwood; if so, will you refer to your time-book and see if his name is recorded there in the year 1843?

(Objected to.)

550 A. I am positive without looking. The book is in my own handwriting; kept by me at the time of the different dates.

Q. 4. Will you please look in your time-book and see if you find the name of Nicholas Smith, called Nic Smith? If so, when did he enter the employ of the Camden and Amboy Railroad Company, and is his name entered in your own hand?

(Objected to.)

A. I find the name of Nic Smith under date of November 19, 1845; it seems to be the first entry on this book of his name, and is, and it is my handwriting.

Q. 5. Please refer to your time-book, and see if you find the names of George Stockham, Letchworth Cox, and William Venable, in the year 1845.

(Objected to.)

A. I do, and they are in my own handwriting.

Q. 6. And do you also find in the year 1846 the name of Charles Cox?

(Objected to.)

A. In 1845 and 1846, and in my own handwriting.

Q. 7. Will you please refer to the engineer's time-book, and see if you find the names of Charles Yundt and R. C. Walcott, in the year 1843; and, if so, are those names likewise in your handwriting?

(Objected to.)

A. I do find them, and they are in my handwriting.

Q. 8. Do you know George W. Thompson, R. C. Walcott, Thomas
551 Herbert, and Asher Pancoast? If so, state whether you know of
their being in the employ of the Camden and Amboy Railroad Company prior to the year 1847.

A. I know them all, and knew them at the time they were employed by them, except George W. Thompson, who was only employed when we had a job for him; I knew George W. Thompson also, and he was employed as early as 1840, in doing jobs in his line for the company; he done some of the work at his own shop, and some at the shop of the company; when it was to be applied to a car he came to the shop and put it on; he was a worker in tin and sheet-iron.

Q. 9. Are you personally acquainted with all the persons whose names appear in the foregoing questions, and do you know that they are or have been in the employ of said Camden and Amboy Company?

A. I am personally acquainted with all of them, and most of them are still in the employ of the company.

Q. 10. Will you please refer to the engineer's time-book under date of June 10, 1843, and see if you find the record of a special train over the Camden and Amboy road? If so, what is that record, and is that record in your own hand?

A. I find June 10, 1843, engine No. 16, Charles Yundt, engineer, and J. Holland, special train, with the President, Bordentown to Camden and back, and to Princeton, and then back to Camden, and the record is in my own handwriting.

Q. 11. Who was fireman?

A. John Holland was fireman.

Q. 12. Do you know of the use of a car on that road called the Tyler car, and do you know what brakes it had on before it left the shop in said special train to take the President of the United States over the Camden and Amboy road? If so, what do you know, and the circumstances associated with such knowledge?

(Objected to).

A. I do; it had a brake on which worked from each platform
552 of the car; all I know about it is, that it being a new car, or it
was new to us there; it had just come from the Philadelphia and Trenton road, and was fitted up in our shop, and I don't think it ran on our road till it was fitted up; I went around daily to take the time of the men in the shop; it was fitted up different from anything we had had before, made me notice it; it had different kind of springs from any we had had before; it had spiral springs, in connection with some other kind of springs, elliptic, I think they called them; I took notice of the brake, and looked underneath to see why, by turning one crank at one end of the car, it would put the brakes on the wheels of both trucks; I found it was by a cross-lever being fastened under the bottom of the car.

Q. 13. Was it new or not when it came from the Trenton road, and was the brake you speak of applied to it at the time it was refitted or not?

(Obiected to.)

A. The car was not *k*new when it came there from the Trenton road, and the brake was applied to it before or at the time it went out to take the President of the United States over the road.

Cross-examined by M'r Cozzens:

Cross 14. Does the alleged record referred to in your tenth direct answer say anything about what car or cars were in the special train mentioned, or what kind of brake such car or cars had on?

A. It does not.

Cross 15. Is there anything anywhere in the book from which you read such alleged record which states anything about either of those matters?

A. No; there is no other record in the book touching these matters that I know of.

Cross 16. Was there any book of any kind kept on and between 1843 and 1850 which contained any record of what the work was which the hands on the road did?

553 A. There was not, except as appears here in the books I have been reading from.

Cross 17. What appears on that subject in these books?

A. All that appears here is merely such a man was at work repairing cars or a car.

Cross 18. Does anything more appear by those books than in one column, in ink, a list of names of hands in the employ of the company, and then in another parallel column, in pencil, the words "car" or "car-shop," or "R. R. track," or some such short word, without any minute of what the work was which was done by the men on such car or car-shop, or track, &c.; and does the engineer's time-book, so called, contain anything except the names of the engineers and firemen, and the places between which their trips were, and here and there a remark briefly descriptive of what the business of the trip was?

A. Nothing else, I believe.

Cross 19. Is there anything at all of any kind, on any subject, in relation to the alleged record, referred to in your tenth direct answer, except what you stated in that answer?

A. I think not.

Cross 20. Is there a single word in either of those books on that subject except what you stated in that answer?

A. I can't say that; I hav'n't examined the books; I don't recollect of any at present; there may be.

Cross 21. Have you any knowledge of the use of a brake on the Camden and Amboy road, called the Hodge brake, having two cross-levers under the car bottom?

(Objected to.)

A. No, sir.

Cross 22. Did you ever know that that brake was in use for a considerable time, on a good many cars, on the Camden and Amboy road?

A. No, sir; I don't know anything about the Hodge brake.

554 Cross 23. Did you ever know of the use of a brake on the Camden and Amboy road, called the Stevens brake, having four upright levers under the car body?

(Objected to.)

A. I do not.

Cross 24. Did you ever know of the use of a brake on the Camden and Amboy road, called the McLoughlin brake, which was a train-brake worked from the locomotive?

(Objected to.)

A. They have had a brake on the road which was worked by the locomotive, I think.

Cross 25. Did you ever know that a brake worked by the locomotive was applied on the Camden and Amboy road to, at least, one entire train of cars, running on one of the mail lines, and was so used there for a considerable time?

A. I only know it from hearing men speak of it; I don't know anything about it.

Cross 26. You then never saw such a brake on such a train?

A. I can't say whether I ever saw it or not; I never noticed it.

(The car-book, and the engineer's book referred to by the above witness, are now put in as evidence by defendant's counsel, and marked A 1 and A 2.—R. E. STILWELL, *Examiner, &c.*

(Objected to.)

R. C. BUZBY.

Subscribed and sworn to before me this 9th September, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to the 10th instant, at 11 a. m.

555 TUESDAY, *September 10th*, 1867.

Present, counsel as before.

ROBERT S. VAN RENSSELAER, being called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Robert S. Van Rensselaer; about 60 years of age; reside at Bordentown, New Jersey, and am superintendent of the Camden and Amboy, and Philadelphia and Trenton Railroads.

Q. 2. How long have you been so employed by said company as superintendent?

A. I can't speak with certainty as to the time I was appointed superintendent of the road; I was appointed assistant superintendent of the Camden and Amboy road in 1849 or 1850, I can't tell which, and continued to act in that capacity until I was appointed superintendent, which was in 1855 or 1856, I think; I can't say that either of these are positively correct.

Q. 3. Do you know of any party or parties calling on the Camden and Amboy Company, at any time or times, for a settlement of patent-claims on brakes; if so, what were the views entertained by said company relative to those claims; by whom were they made, and have they been settled; if so, why was settlement made?

A. Yes, sir, I do; the first claim that I remember was a person representing the Hodge brake; it may have been M'r Hodge himself; it was settled in 1851, by direction of the President of the Company, M'r Robert L. Stevens, to avoid litigation, but not acknowledging the validity of any patent; the next, I think, was the Tanner brake party, represented by a M'r Sayles, that was also settled for in 1855; I remember in conversation with M'r Lockwood, that he objected to settling for them, as he did not consider them valid claims, as the brakes were in use by the company; I mentioned the objection of M'r Lockwood

556 to the officers of our company, the president and superintendent; and I know perfectly well, as to the Hodge brake, M'r Robert Stevens said, "You had better pay for it, if it is reasonable, rather than to litigate it;" M'r Lockwood also objected to the paying of the brake in dispute here, the Tanner brake as it is called, on the same grounds, but it was settled for by order of the superintendent or executive committee, I don't know which; my impression is, that that was settled for, also, to avoid (impression objected to) litigation, but am not certain.

(Objected to what M'r Lockwood said.)

Q. 4. What position did M'r Edwin Lockwood occupy, and does he now occupy the same?

A. He was master car-builder at that time, and still is, for the company.

Q. 5. When M'r Lockwood was consulted with regard to the use of double brakes on that road, did he or not say that the brake belonged to the company?

(Objected to.)

A. I can't say that he did at that time, but he has repeatedly said so since.

(Objected to.)

Q. 6. Did he object to the settlement with Hodge for his claim on brakes in 1851, upon the ground that the brake belonged to the company?

(Objected to.)

A. I can't repeat his language, and can't say whether he said the brake belonged to the company or not.

557 Q. 7. What did you understand in relation to this matter from conversations you had had with M'r Lockwood?

(Objected to.)

A. That the brakes were invented and introduced on to the cars at the company's expense.

Q. 8. And did M'r Lockwood then refer to the double brake then in use upon the cars of the Camden and Amboy Road?

(Objected to.)

A. Yes, sir.

Cross-examined by M'r Cozzens:

Cross 9. State as nearly as you can when the Hodge brake first went into use on the Camden and Amboy Road?

A. I know nothing about it, sir, except from hearsay.

Cross 10. How much did the company pay in settling for the use of the Hodge brake?

A. All I know of is $300; that is all I have any knowledge of.

Cross 11. Have you a knowledge of all that was paid?

A. I can only say that this was paid on the order of the president, $300; I think that was all that was paid; that is the only voucher I can find.

Cross 12. You say that claim was settled to avoid litigation, but not acknowledging the validity of any patent; how do you know of your own personal knowledge whether the validity of the patent was acknowledged by the company or not?

A. I don't know that it wasn't by the company, but I know I represented to M'r Stevens the impressions and statements of M'r Lockwood on the subject, and he said in reply, that we had better pay for it, rath er than contest or litigate it.

(What M'r Stevens said objected to.)

558 Cross 13. Has the company the original license under the Tanner brake patent?

A. Yes, sir; I believe they have.

Cross 14. Will you at some early convenient time produce the original of such license for the inspection of the complainant's counsel in this case, and will you also as soon as convenient annex to this deposition a sworn examined copy of such license.

(Objected to.)

A. I will do it if the company will let me have possession of it.

Cross 15. Will you ascertain whether the company will let you have possession of it, and will you so inform the complainant, M'r Thomas Sayles, by letter, addressed to New York, and if so, how soon?

A. I can do it within two weeks, I suppose.

Cross 16. Do you know what was the amount paid M'r Sayles in settling for the use of the Tanner brake?

A. I can say, but not for certainty; I would prefer to answer from reference to our books.

Cross 17. Will you examine the books and send word to the examiner what you find?

A. I will have them examined with the company's consent, and will send word.

Cross 18. When the Tanner brake claim was settled for, did you see M'r Sayles in connection with the matter?

A. Yes, sir; I saw him then, and several times before.

Cross 19. Did you at any time in connection with that settlement, or with any negotiation relating to it, communicate to M'r Sayles any information that the Tanner brake had been in use on the Camden and Amboy Railroad?

A. I do not remember whether I did or not.

Cross 20. Did anybody connected with the company do so in your hearing?

A. Not that I am aware of.

559 Cross 21. Do you remember the use on the Camden and Amboy Railroad of a train-brake, so called, usually styled the McLoughlin brake?

A. Yes, sir; I remember his method of operating the brake; it was in use on the road.

Cross 22. When did it first go in use on the road; upon about how many cars, as near as you can state, was it used, and about how long did it continue in use?

A. I can't say when it went into use on the road. I should say from 1853, 1854, or 1855. For some time, for six or eight months, or a year, it was used experimentally, and was then applied to two or three passenger-trains. I cannot tell how long it continued in use; I should say two or three years, perhaps more.

Cross 23. What kind of trains were those on which it was used?

A. They were the Philadelphia and New York trains, some of them.

Cross 24. They were among the leading trains on the road, were they not?

A. Yes, sir; first-class passenger-trains.

Cross 25. About how many cars per trip would those trains average?

A. The trains varied from three to six and seven cars.

Cross 26. Do you know what form of brake, in respect to the arrangement of levers under the cars, were considered best adapted to be worked by the McLoughlin apparatus?

A. No, sir; I do not.

Cross 27. Did you not own an interest in the McLoughlin patent?

A. No; I think not.

Cross 28. Have you at any time since you have been engaged for the Camden and Amboy Company, known of M'r S. M. Whipple, who is now present, calling upon any officer or person connected with the company, for the purpose of obtaining any information in relation to the use of double brakes, prior to about the spring of the present year?

560 A. I can't say the time, but M'r Whipple did call upon me for information prior to the present year. I don't remember when, I have so many calling upon me.

Cross 29. Is there not present existing among a large number of the railroad companies of the United States an association formed for the purpose of resisting claims made under the Tanner brake patent, and other patents?

(Objected to.)

A. I don't know, sir, except from hearsay.

R. S. VAN RENSSELAER.

Subscribed and sworn to before me this 10th day of September, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to the 12th inst. at eleven a. m.

THURSDAY, *September 12th*, 1867.

Present, counsel as before.

Adjourned to the 13th instant, at 11 a. m.

FRIDAY, *September 13th*, 1867.

Present, counsel as before.

URIAH VAN VOORHIS, called and sworn as a witness on the part of defendant, deposes and says:

Q. What is your name, age, residence, and occupation?

561 A. Uriah Van Voorhis; 51 years of age; reside at 536 Third avenue, New York, and am a conductor on the Third avenue railroad.

Q. 2. Have you been in the employ of the Long Island Railroad Company; if so, when were you employed, what did you do, and when did you leave the employ of said company?

A. I was employed by them on the second of May, 1843. I was yard-master, and had charge of the repairs of cars, and left their employ in 1846.

Q. 3. While so employed, do you know of the application of a double-acting car-brake on that road? If so, state the circumstances connected with such application, and the name of the person who applied to the president of the company for the privilege of applying said brake to a car.

(Objected to on the ground that the matter called for by the question is different from, and additional to, the alleged new matter upon which this case was reopened for further testimony, and upon the ground that the defendants are confined in their taking of testimony, on such re-opening, to the alleged new matter set forth upon their application to reopen; and on the ground that the complainant has had no notice of the alleged matter called for by the question; and on the ground that the answer in this cause does not set the same forth, and has not been so amended as to set it forth; and further objected to as leading.

Defendant's counsel here wishes to note that in the affidavit upon which this case was reopened complainant was notified of a brake known to one Joseph F. Talson and others; the evidence now being taken comes under that head.)

A. I do. In the summer of 1845, M'r George B. Fisk was presi-
562 dent of that road. He sent for me to the office. I went, and he introduced me to a Mr. Stanley, and showed me a drawing of a brake, and he wished me to give M'r Stanley a car to try that brake on. I did so, and M'r Stanley had some of my men to put the brake on.

Q. 4. Will you please give a description of the brake, as then applied, under the direction of said Stanley?

(Objected to as before, and as assuming what has not yet been proved.

The latter clause of the question withdrawn, stopping at the word "applied.")

A. We called it Stanley's double-acting brake, with a lever under the centre of the car, and a rod running from each truck to the centre-lever. There was a rod connected from this lever to the brake-staff, which enabled the brakeman to brake from either brake-staff, and which applied both brakes to both trucks. The reason we called it Stanley's double-acting brake was because the brake applied to both trucks. Formerly we had never used more than one brake to one truck.

(To save time counsel for complainant objects, upon the ground above stated, to all further questions and answers to this Stanley brake.)

Q. 5. You say you left the employ of the Long Island Railroad Company in 1846; how do you know it?

A. Because I went to work on the Harlem Road in April, 1846.

Q. 6. Do you know that N. H. Marshall, Joseph Farrell, and Josiah Phillips were in the employ of the Long Island Railroad Company in the years 1845 and 1846, and do you know of Josiah Phillips having his leg hurt during that time? If so, state what you know.

(Further objected to as leading.)

563 A. I do; once I knew of Josiah Phillips having his leg hurt while in such employ; he worked for me at the time, and I boarded at his house; I know he was hurt in May, 1845; the circumstances I have forgotten; I know he was lame at the time the brake was applied.

Q. 7. Do you know when the Long Island road was opened to Greenport? If so, please state the time.

A. It was on the 24th day of July, 1844.

Cross-examined by M'r Cozzens, subject to the objections heretofore noted.

Cross 8. Do you know where M'r Stanley is now?

A. I do not.

Cross 9. How long since you last saw him?

A. It is many years; I never had but little to do with him.

Cross 10. Do you know where he resided when you last saw him?

A. I do not.

Cross 11. Have you seen him since the time referred to in your second direct answer?

A. I don't know that I have seen him since 1845, to my knowledge; he used to come over during that year to see how the brake operated.

Cross 12. In what manner did this Stanley brake, as you call it, contemplate attaching the centre lever to the car body?

A. There was what we term a hanging strap; it had a hole at each end for attaching it to a couple of beams on the car body, and that strap dropped down three or four inches, and left a space for this lever to work in; the lever was connected to the strap by a bolt, and the strap carried the weight of the lever.

Cross 13. Was the hole in the lever through which the bolt fastening it to the strap went any larger than about enough to permit the lever to turn horizontally on the bolt?

A. No, sir; only a half inch, or a five-eight bolt.

564 Cross 14. Do you mean that the hole in the lever was only big enough to receive a half-inch or a five-eight bolt and allow the lever to turn easily on the bolt, without any more play than would permit this?

A. I do.

Cross 15. What arrangement of rods running from each truck to the centre lever did this brake contemplate?

A. We termed them brake rods; they were straight, plain rods, with a jaw on the end to fit on this centre lever, and these rods run from the centre lever over to the brake levers in the trucks.

Cross 16. What arrangement of levers and rods in the trucks did this brake contemplate?

A. There was an upright lever in the truck, and these brake rods connected the two levers together, the centre lever and the truck lever in each truck.

Cross 17. Did Stanley ever say to you that he had tried any brake on any other railroad than the Long Island Railroad?

A. I don't recollect any conversation of that kind with him, it is so long ago.

Cross 18. Did he ever say anything to you about where he got the brake up, or what he had done with it, or about it, before you saw him?

A. I don't recollect of anything.

Cross 19. Did he speak of it as an experiment he wanted to try?

A. Yes, sir; it was an experiment I had it put on for.

Cross 20. Was it regarded by the people connected with the Long Island road as an experiment?

A. Yes, sir; I think it was.

Cross 21. Did you ever hear Stanley say anything about his having tried a brake on the New Jersey Railroad?

A. I don't recollect of any conversation that passed between us at that time.

Direct resumed by M'r Whipple:

565 Q. 22. You say in answer to the fifteenth cross-question, "We termed them brake rods; they were straight, plain rods, with a jaw on the end to fit on this centre lever, and these rods run from the centre lever to the brake levers in the trucks," and were there or not rods connected with said centre lever running to the windlasses at each end of the car?

A. There were, on each end of the lever running to each end of the car.

Q. 23. Was this Stanley brake which you have described put on the cars of the Long Island road before you left in 1846?

A. Yes, sir.

Q. 24. You say it was first put on as an experiment; was the experiment successful or not?

A. Yes, sir; it was, because we used it on other cars.

Q. 25. Did the said Stanley claim this brake to be his invention or not?

A. I do not remember.

Cross resumed by M'r Cozzens:

Cross 26. Upon how many other cars was this brake put?

A. I don't know, sir; I went back there in 1847, and I put some on after I went back, and some had been put on while I was gone.

Cross 27. What time in 1847 did you go back?

A. The first day of May, 1847; I had been gone just thirteen months.

Cross 28. How do you know that it was put on other cars while you were away?

A. I went back to the same situation, and I found it on cars it was not on when I went away.

Cross 29. Do you know how long before you returned in 1847 it had been put on the cars it was not on when you went away?

A. I do not.

Cross 30. Can you state about how many cars you found it on in 1847 when you returned?

566 A. I don't remember.

Cross 31. Can you say whether it was on more than one car that it was not on when you went away?

A. Yes, sir.

Cross 32. Can you say positively that it was on more than two?

A. I think it was put on four while I was away, but am not positive.

Cross 33. About what was the number of double truck cars for passengers, baggage, express, and mail, on the Long Island road when you returned in 1847?

A. They didn't get any new cars while I was gone, and they had no more when I went back than when I we't away; there were twenty passenger cars and three baggage cars.

Cross 34. Upon how many cars did you put the brake after you returned in 1847?

A. I don't remember; I put them on all that had no double brake on them as fast as we overhauled them.

Cross 35. About how long were you in getting the double brake on them all?

A. I can't answer; as fast as a single brake gave out we put double ones on; I should think it took all of a year to get them all on; it might be a little longer.

Cross 36. Do you think it was inside of a year and a half that you got them all on?

A. I do, sir; we had a new president at about that time, and he was in favor of the double brake, and requested me to put them all on; perhaps it was inside of a year that they all got on.

Cross 37. Did you put them on to freight cars during this time?

A. Yes, sir; as fast as a single brake gave out we put on a double brake.

Cross 38. How many freight cars were there on the road when you returned in 1847?

A. I don't remember; I think we had twenty flat cars with double trucks and ten house-cars.

Cross 39. You say the new president requested you to put these brakes on; did he first speak to you on the subject, or you first speak to him about it?

567 A. I rather think I advanced the idea, as I had a great deal less trouble with double brakes than single ones, and I was in favor of getting them all on.

end for attaching it to a couple of beams on the car body, and that strap dropped down three or four inches, and left a space for this lever to work in; the lever was connected to the strap by a bolt, and the strap carried the weight of the lever.

Cross 13. Was the hole in the lever through which the bolt fastening it to the strap went any larger than about enough to permit the lever to turn horizontally on the bolt?

A. No, sir; only a half inch, or a five-eight bolt.

564 Cross 14. Do you mean that the hole in the lever was only big enough to receive a half-inch or a five-eight bolt and allow the lever to turn easily on the bolt, without any more play than would permit this?

A. I do.

Cross 15. What arrangement of rods running from each truck to the centre lever did this brake contemplate?

A. We termed them brake rods; they were straight, plain rods, with a jaw on the end to fit on this centre lever, and these rods run from the centre lever over to the brake levers in the trucks.

Cross 16. What arrangement of levers and rods in the trucks did this brake contemplate?

A. There was an upright lever in the truck, and these brake rods connected the two levers together, the centre lever and the truck lever in each truck.

Cross 17. Did Stanley ever say to you that he had tried any brake on any other railroad than the Long Island Railroad?

A. I don't recollect any conversation of that kind with him, it is so long ago.

Cross 18. Did he ever say anything to you about where he got the brake up, or what he had done with it, or about it, before you saw him?

A. I don't recollect of anything.

Cross 19. Did he speak of it as an experiment he wanted to try?

A. Yes, sir; it was an experiment I had it put on for.

Cross 20. Was it regarded by the people connected with the Long Island road as an experiment?

A. Yes, sir; I think it was.

Cross 21. Did you ever hear Stanley say anything about his having tried a brake on the New Jersey Railroad?

A. I don't recollect of any conversation that passed between us at that time.

Direct resumed by M'r Whipple:

565 Q. 22. You say in answer to the fifteenth cross-question, "We termed them brake rods; they were straight, plain rods, with a jaw on the end to fit on this centre lever, and these rods run from the centre lever to the brake levers in the trucks," and were there or not rods connected with said centre lever running to the windlasses at each end of the car?

A. There were, on each end of the lever running to each end of the car.

Q. 23. Was this Stanley brake which you have described put on the cars of the Long Island road before you left in 1846?

A. Yes, sir.

Q. 24. You say it was first put on as an experiment; was the experiment successful or not?

A. Yes, sir; it was, because we used it on other cars.

Q. 25. Did the said Stanley claim this brake to be his invention or not?

A. I do not remember.

Cross resumed by M'r Cozzens:

Cross 26. Upon how many other cars was this brake put?

A. I don't know, sir; I went back there in 1847, and I put some on after I went back, and some had been put on while I was gone.

Cross 27. What time in 1847 did you go back?

A. The first day of May, 1847; I had been gone just thirteen months.

Cross 28. How do you know that it was put on other cars while you were away?

A. I went back to the same situation, and I found it on cars it was not on when I went away.

Cross 29. Do you know how long before you returned in 1847 it had been put on the cars it was not on when you went away?

A. I do not.

Cross 30. Can you state about how many cars you found it on in 1847 when you returned?

566 A. I don't remember.

Cross 31. Can you say whether it was on more than one car that it was not on when you went away?

A. Yes, sir.

Cross 32. Can you say positively that it was on more than two?

A. I think it was put on four while I was away, but am not positive.

Cross 33. About what was the number of double truck cars for passengers, baggage, express, and mail, on the Long Island road when you returned in 1847?

A. They didn't get any new cars while I was gone, and they had no more when I went back than when I we't away; there were twenty passenger cars and three baggage cars.

Cross 34. Upon how many cars did you put the brake after you returned in 1847?

A. I don't remember; I put them on all that had no double brake on them as fast as we overhauled them.

Cross 35. About how long were you in getting the double brake on them all?

A. I can't answer; as fast as a single brake gave out we put double ones on; I should think it took all of a year to get them all on; it might be a little longer.

Cross 36. Do you think it was inside of a year and a half that you got them all on?

A. I do, sir; we had a new president at about that time, and he was in favor of the double brake, and requested me to put them all on; perhaps it was inside of a year that they all got on.

Cross 37. Did you put them on to freight cars during this time?

A. Yes, sir; as fast as a single brake gave out we put on a double brake.

Cross 38. How many freight cars were there on the road when you returned in 1847?

A. I don't remember; I think we had twenty flat cars with double trucks and ten house-cars.

Cross 39. You say the new president requested you to put these brakes on; did he first speak to you on the subject, or you first speak to him about it?

567 A. I rather think I advanced the idea, as I had a great deal less trouble with double brakes than single ones, and I was in favor of getting them all on.

Cross 40. While you were away from the Long Island road during the thirteen months you have mentioned, had you seen double brakes used anywhere?

A. I do not remember; I had nothing to do with cars while I was away; I was on the track at that time.

Cross 41. Do yo' think that you saw them used on the Harlem road during that time?

A. I am not positive.

Cross 42. Is it possible that you may have done so?

A. I wouldn't say.

Cross 43. Was M'r Fisk, the president in 1845, in favor of double brakes?

A. Yes, sir.

Direct resumed by M'r Whipple:

Q. 44. The witness is now shown Exhibit A, and is asked if the brake on this exhibit is like the one put on the cars of the Long Island road in the years 1845, 1846, and 1847.

A. That is the same principle.

Q. 45. And is the operation the same?

A. Yes, sir.

URIAH VAN VOORHIS.

Subscribed and sworn to before me this 13th September, 1867.

R. E. STILWELL,
Examiner, &c.

568 **JOSEPH FARRELL**, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Joseph Farrell; 49 years of age; reside at 88 Wychoff street, Brooklyn; and am a porter in the chief engineer's store-house department at the navy-yard.

Q. 2. Were you ever in the employ of the Long Island Railroad Company; if so, when, how long, and what did you do while so employed?

A. I was; I commenced in the year 1841 and left in 1856, the first day of December. The first year I went there I was on the repairs of the railroad. In the year 1843 I was put on the train as baggage-master, and continued through up to 1856.

Q. 3. While employed as baggage-master did you know of the use of double brakes on any car or cars of that road; if so, what do you know? Please state of your own knowledge.

A. I did. I know that my baggage-car was taken into the shop for repairs in 1845 or 1846, I can't tell which, and when it came out it had this double-acting brake on it; the wheel on the brake-shaft when screwed up would act on the eight wheels, or the two trucks; before the baggage-car went in to be repaired it had single brakes on, when it came out of the shop the wheel and brake-shaft was placed inside of the car, because when I had to screw up the brake I hadn't to go outside; the rod run from a lever under the centre to the brake.

Q. 4. Do you know of this brake being applied to any passenger-cars on that road; if so, how did it operate?

A. I do; often when I would screw up my brake, in case of danger, inside of the baggage-car, I would run and screw up the passenger-car also, which operated the same as in my baggage-car, on both trucks.

Q. 5. State, if you know, where this brake came from, or was it got up on that road?

A. I always heard that it came from New Jersey.

569 Q. 2. Do you know Josiah Phillips; if so, was he on that road in 1845 and 1846?

A. I do. He was on that road in 1845 and 1846. I knew of his being hurt at about that time; I saw him around on a crutch.

Q. 7. Who had charge of repairing the cars on that road at the time above stated?

A. M'r Van Voorhis.

Q. 8. Was the brake like the one put on your baggage-car and the passenger-car spoken of, put on other cars of that road before you left in 1856, and to what extent?

A. Yes; I should think on all the passenger-cars, and I think there were none without them.

Cross-examined by M'r Cozzens:

Cross 9. How did you get the idea that the brake came from New Jersey?

A. When they were puting it on the cars, the question was asked whose brake was that, or who was putting it on; the answer was that it was a man from New Jersey.

Cross 10. Is that all you know as to how the brake came to get on the Long Island road?

A. That is all I know; I never made any further inquiries.

Cross 11. You say they put that brake on all the passenger-cars; did they put it on the freight cars also?

A. They put it on all passenger and baggage and all the eight-wheel freight-cars, I think; I won't say positive.

Cross 12. About how early did they get it on all the freight-cars?

A. Between 1845 and 1855, I should think.

Cross 13. Was it on all the freight-cars as early as 1849?

A. That I can't say.

Cross 14. Was it on all or most of the freight-cars as early as 1850?

570 A. I can't say positive whether it was or not.

JOSEPH FARRELL.

Subscribed and sworn to before me this 13th September, 1867.

R. E. STILWELL,
Examiner, &c.

JOSIAH PHILLIPS, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Josiah Phillips; 53 years of age; reside at East New York, Long Island, and am a carpenter.

Q. 2. Have you been in the employ of the Long Island Railroad Company; if so, when did you begin, and when did you leave the employ of said company, and what did you do while so employed?

A. I have. I began in the spring of 1843 and left in 1848; I was carpenter, brakeman, baggage-master, and conductor.

Q. 3. While so employed do you know of the use of double brakes on the cars of that road? If so, state what you know, and give the particulars, and how you fix the date of such knowledge.

A. I do; I know they were put on in 1845, in June or July; the brakes acted on the cars so that they broke up eight wheels; the brakes worked under the cars by means of rods attached to a brake, and by turning the brake you broke up the whole car. This could be done from

either end. I fix the date of their being put on by my being hurt, which was on the 1st of May, 1845. I was hurt on the leg, and I was laid up about a month before I got out; when I did get out, I was on my crutches
down in the yard of the company; I saw them at work putting
571 on that brake; I sat down there; I stayed there about an hour
or so, and then went back again into the house.

Q. 4. Was this double brake applied to any other car or cars on that road before you left in 1848? If so, please state what you know of their application, and to what extent were they applied.

A. They were; they were applied to the cars as fast as the other cars got out of order.

Q. 5. Who had charge of the cars and repairs in 1845 and 1846 on that road?

A. Uriah Van Voorhis.

Q. 6. Was Joseph Farrell in the employ of the company at that time?

A. Yes, sir.

Q. 7. Do you know whether this double brake was got up on that road or not?

A. I think not; it came from New Jersey.

Cross-examined by M'r Cozzens:

Cross 8. What did you ever know, or what did you hear, of this brake coming from New Jersey?

A. I heard them say so when the men were putting it on.

Cross 9. What did they say about it?

A. They said it was another Jersey pattern.

Cross 10. Is that all you heard about it?

A. Yes, sir.

Cross 11. Did you hear the name of any person as the getter up of the brake?

A. No, sir; not to my knowledge.

Cross 12. You say you know the brake was put on in June or July, 1845; is your being hurt, as you say, the only way you have of fixing this time?

A. Yes, sir.

Cross 13. In the year 1845, what were you doing on the road?

A. I was baggage-master and brakeman on the car.

Cross 14. How did you get hurt?
572 A. Stowing away stoves up in a car; one fell down and struck
me on my leg.

Cross 15. Can you say that a double brake was applied to more than one car in June and July, 1845?

A. Yes, sir.

Cross 16. How many more?

A. Half a dozen more.

JOSIAH PHILLIPS.

Subscribed and sworn to before me this 13th September, 1867.

R. E. STILWELL,
Examiner, &c.

NATHANIEL H. MARSHALL, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Nathaniel H. Marshall; 57 years of age; reside at Oyster Bay, Long Island, and I am a railroad-track layer.

Q. 2. Have you been in the employ of the Long Island Railroad Company; if so, when, how long, and what did you do while so employed?

A. I have been in their employ between 1837 and 1838; I commenced with them, and remained until about 1850. I built the track, superintended and laid the road from Jamaica towards Hicksville; after we got the track built to Hicksville, we run to Hicksville until 1844. I was employed and had charge of the yard at Hicksville; after that we had a new president, George B. Fisk; some time in July, 1844, the cars commenced to run to Greenpoint. I then took the position of agent for the purchase of wood, and paid the men off, at all the points east of
573 Jamaica, and had charge of all of the stations east of Jamaica, and also held that position until I left.

Q. 3. While so employed did you know of the use of double brakes on the cars of that road? and, if so, please state of your own knowledge, and also give the time when you first saw such brakes in use.

A. I did know of the use of double brakes on that road in 1845; I should think not far from May; there was a car fixed with these brakes on it, which they had taken the other brakes off of, I think, and put these on to try them; it came out to one of the stations, when I was at Hicksville, I think. The old brakes used to operate on only one set of wheels, on only one truck—that is, the single brake; this new brake operated on both trucks from one end, and operated on the other end the same.

Q. 4. Have you any further knowledge of the use of this brake on that road before you left? If so, please state it.

A. Yes, sir; as fast as they fixed the cars they put on this brake.

Q. 5. Did you, in 1845, know Uriah Van Voorhis; if so, what was his business on that road?

A. I did; he was yard-master of Brooklyn, and had charge of all the cars; he overhauled them all, and see that they were sent out on time on the road; he attended to all the repairing of the cars.

Q. 6. Did you know M'r Josiah Phillips, and also Joseph Farrell, as employees of the Long Island Railroad Company in the years 1845 and 1846 and thereafter?

A. Yes, sir.

Cross-examined by M'r Cozzens:

Cross 7. What makes you think it was not far from May, 1845?

A. Well, what makes me think so is that I knew M'r Phillips hurt his leg, and that he was lame at that time and wore his crutch.

Cross 8. Have you heard M'r Phillips say that he was hurt about May, 1845?

574 A. Well, I heard him say here; he swore to it, and I couldn't help hearing him.

Cross 9. Had you heard him say so before he swore to it here?

A. I don't know that I did.

Cross 10. Do you know of your own knowledge that M'r Phillips was hurt in 1845?

A. Yes, sir; I do.

Cross 11. How do you know it?

A. I know, because I was on the road working with him, and saw him pretty much every day, and know when he was hurt.

Cross 12. How does this enable you to fix the time when he was hurt?

A. Well, I fix the time when he was hurt because it was not a great while from the time M'r Van Voorhis left; M'r Van Voorhis left shortly after; it was the same year, I think.

Cross 13. How soon after was it that M'r Van Voorhis left?

A. I could not tell to save my life the day and date; I can tell the year, but not the time in the year.

Cross 14. Was it a month after?

A. Well, I don't know, sir; I should think it was more than that.

Cross 15. How much more? State as nearly as you can.

A. I could not tell; I know he left shortly after M'r Phillips hurt himself.

Cross 16. What is your idea of shortly after?

A. Well, it might be four, five, or six months.

Cross. 17. Do you think it was within six months?

A. Well, I think it was.

Cross 18. Was the putting on of this brake at the time you mentioned in 1845 considered an experiment?

A. Yes, sir.

Cross 19. Do you know whose plan this brake was?

A. No, sir; I do not, only what I heard say.

Cross 20. What did you hear said about it?

A. I was on the road at work when I saw the car come up with
575 the new brake on it; I didn't see it put on; I wasn't down to the
shop; I heard the men as they came up on the road say that they
had got the new brake on; they told at the time who the man was who
brought it there; I think his name was Stanley.

Cross 21. Have you any other way of fixing the time you have testified to than what you have stated?

A. Well, I don't know as I have.

N. H. MARSHALL.

Subscribed and sworn to before me this 13th September, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to the 18th inst., at 11 a. m.

WEDNESDAY, *September 8th*, 1867.

Present, counsel for the respective parties.

FREDERICK BOYES, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Frederick Boyes; sixty-two years of age; reside in Jersey City, New Jersey; am a bookkeeper, at present employed by Robert Baile, gold broker, 27 Wall street, New York.

Q. 2. Have you been in the employ of the New Jersey Railroad and Transportation Company; if so, when, how long, and what did you do when so employed?

A. I have been; I commenced with them in 1839, and remained
576 with them till 1852; I was engaged as machine-shop clerk; I was
bookkeeper; I was purchasing agent, and had the keeping of the
time of the men in the shop, of both car and machine shops.

Q. 3. While so employed, did you know a man by the name of Stanley; if so, did he have an account with the company; if so, what was it about, what was the amount, when did it begin, and when terminate?

A. I did know a man by the name of Isaac Newton Stanley; he had an account with the company; I had instructions from M'r Schuyler, vice-president of the company, to open an account with him for work that he might want done in the shop; the account was for car-trucks; that is, for the wood and wrought-iron work; the amount was $234.22; it commenced on the 24th of September, 1842, and closed on the 28th of December, of the same year; the entries of said work and materials were made in the said company's books by me in my own handwriting.

Q. 4. During the time said Stanley was having this work done on said car-trucks, did he apply a brake to a car of the said New Jersey Railroad and Transportation Company? If so, state what you know about it.

A. He did apply a brake, but I don't know what kind of brake.

Q. 5. Have you examined the time-book and pay-rolls of the said company; if so, do you find the name' of Bernard Hughes, Moses Parcels, Erastus Reid, and Joseph F. Talson on said time-book and pay-rolls of said railroad company in the year 1842?

A. I have examined them, and find their names there, and know of my own knowledge that they were in the employ of the company before this time and afterwards; I made out the pay-rolls for the company.

Q. 6. Do you know who was foreman of the car department of said company in the year 1842?

A. I do; it was Joseph F. Talson.

Q. 7. Do you know when M'r Talson left the employ of the New Jersey Railroad and Transportation Company? If so, please state what you know.

577 A. I left the company in 1852, and M'r Talson left some time before that; I know he was there several years after the Stanley brake was applied.

Adjourned to the 19th inst. at 11 a. m.

FREDERICK BOYES.

Subscribed and sworn to before me this 19th day of September, 1867.

R. E. STILWELL,
Examiner, &c.

THURSDAY, *September 19th*, 1867.

Present, counsel as before.

JOHN H. JOBES, recalled on the part of defendant, deposes and says:

Q. 1. In your direct examination, August 8, 1867, in answer to the sixth question relating to a double brake on a car of the Camden and Amboy Railroad, you say: "I got under the car to see this brake; I had never seen one of the kind, or one work before, and I was anxious to see the movement of the brake;" have you any knowledge of a double brake being used on a car of the New Jersey Railroad and Transportation Company after this; if so, please state what you know, and any particulars connected with such knowledge.

A. I do know that during M'r Talson's time I was then brakeman on the Newark train; I was transferred to the Philadelphia train; I there found a double-acting brake upon a flat car; I mean by a double-acting brake, one with a centre-lever acting upon eight wheels at once; I used that brake on the Philadelphia line; I used it probably two or three years; I can't state the exact length of time.

578 Q. 2. Can you state the time more definitely than that it was in M'r Talson's time.

A. I can't any further than that it was in M'r Talson's time.

Cross-examined by M'r Sayles, the complainant, in person:

Cross 3. Do you recollect operating the brake on the New Jersey Railroad and Transportation Company's car for some two or three years, as you have just stated, as distinctly as you recollect the brake on the Camden and Amboy car, as you testified in this case on the 8th of August last?

A. I do.

Cross 4. Was Joseph F. Talson superintendent of car repairs on the New Jersey Railroad and Transportation Company's road when this brake of which you speak was used on one of the cars of that road?

A. He was.

Cross 5. Do you think that Joseph F. Talson would be more likely to recollect how long the said brake of which you speak, as put on the New Jersey Railroad and Transportation Company's car, was used than you do?

A. I think he would, rather.

JOHN H. JOBES.

Subscribed and sworn to before me this 19th September, 1867.

R. E. STILWELL,
Examiner, &c.

GEORGE OSMAN, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

579 A. George Osman; 43 years of age; reside in Brooklyn, Long Island. I am working in a car-shop of a horse railroad, in Brooklyn.

Q. 2. Have you at any time been in the employ of the Long Island Railroad Company; if so, when were you so employed, what did you do, and when did you leave the employ of the company?

A. I have; I commenced in 1848, and left them about six years ago, as near as I can remember; I was brakeman while in their employ.

Q. 3. How do you fix the time of going into the employ of said company, which you say was in 1848?

A. I came from England in 1847, and went in their employ the next year.

Q. 4. While employed as brakeman, to wit, in 1848, do you know of the use of double-acting brakes on that road? If so, please state what you know.

A. I do; the first I saw of it was on a baggage car, what they call a centre lever; the windlass for applying the brake was inside of the door; there were two or three passenger cars had the same kind of brakes on; some time after I was there, can't say how long, they were taken off and changed, and some other kind of brake put on in their place.

Q. 5. What kind; can you give some description?

A. There was a lever on each end of the truck, with a long rod under the car. This rod was formed of two rods, and a small chain connected these two rods, to take them up shorter as they were worn out, and there was a rod connecting these two levers in the truck, which rod run across the truck, then a chain from one end of the outside of these levers to the spindle. It had in all four levers; that is, two upright levers in each truck. This form of brake, I believe, is called the Stevens brake. Before this Stevens brake was put on these cars there was a brake put on with two cross levers under the car, which levers were suspended on links, so as to swing to and fro; this brake, I believe, is called the

Hodge brake; and these two brakes were put on after I went there, in the place of the centre lever brake, which I found on the cars when I went there in 1848.

580 Q. 6. Witness is now shown Exhibit A, and asked, referring to the brake, what it represents?

A. That represents the brake which was on the baggage car, and some of the passenger cars, when I went there in 1848.

Q. 7. While brakeman on that road, did you have occasion, while out on the road, to fix up these different kinds of brakes which you have described? If so, state anything which may occur to you bearing on this matter inquired of.

A. I did, sometimes, when I was on the road, have to take off the levers; they would get broken or worn off; sometimes the bolts would lose their nuts, and we would have to take the rods down; sometimes we would have to tie up the lever with ropes; when we got to the end of the read we would take it in the shop and have it fixed.

Cross-examined by Mr. Cozzens:

Cross 8. What time in 1848, as nearly as you can state, did you commence your employment with the Long Island Railroad Company?

A. In the month of August.

Cross 9. Was the centre lever of the brake which you say you first saw on the baggage car attached to the car in the same manner as in Exhibit A; that is, by being fulcrumed on a rigid bolt so that it could turn horizontally on the bolt without moving backwards or forwards when it turned?

A. Yes; there was no swing to it.

Cross 10. You say two or three passenger cars had it on in 1848, when you first saw it. Did any more passenger cars than those two or three have it on at that time?

A. I don't know how many there was; there were two or three, and there may have been more; that is all I saw.

Cross 11. Do you know how many passenger cars there were on the road in 1848?

A. No, sir, I do not; there might be ten or a dozen.

581 Cross 12. To your best recollection, how long was it after you first saw the brake with the single centre lever that said brakes were taken off and the other kind put on?

A. I couldn't say exactly, it might be five or six years; to the best of my recollection it was five or six years, or it might be less; because I know at one time there was a good deal of change in taking off and putting on brakes.

Cross 13. Do you think it was five or six years?

A. Well, I do.

Cross 14. Are you sure that this single centre lever brake was on any passenger cars in 1848—may it not have been only on baggage cars?

A. Yes, sir; there was some on some of the passenger cars.

Cross 15. Did the windlass come up inside on the passenger cars?

A. No, sir.

Cross 16. Can you state the number of any of the passenger cars upon which it was in 1848?

A. No, sir.

Cross 17. What trains did any of these passenger cars run in?

A. I couldn't tell you.

Cross 18. Was the brake on these two or three passenger cars changed to either of the other forms of brakes you have mentioned?

A. I couldn't say whether they were all changed or not, or whether any of them were changed. I think they were all changed.

Cross 19. How long after were they changed?

A. I couldn't say.

Cross 20. How many baggage cars was this single centre lever brake on in 1848?

A. I think there were two mail cars the same as Exhibit A; they were baggage cars.

Cross 21. Had brakes like Exhibit A been put on all the passenger cars before any of the passenger cars were changed to the Hodge or Stevens brake?

A. Not all of them.

582 Cross 22. What kind of brake was on those which had not brakes like Exhibit A when the change to the Hodge or Stevens was made?

A. They had single brakes on to brake at one end of the car.

Cross 23. Were there any brakes like Exhibit A put on the freight cars?

A. I don't know.

Cross 24. Were any of those passenger cars which had, as you say, brakes like Exhibit A, in 1848, on the road when you left it?

A. I don't know, sir.

Cross 25. While you were brakeman what train did you run on?

A. It would be impossible for me to tell. Sometimes I ran to Farmingdale, sometimes to Greenport, sometimes to Yaphank, and sometimes to Suffolk Station.

Cross 26. When you left the road did any of the passenger cars have on them the brakes which you say you saw in 1848?

A. I don't know, sir.

Cross 27. By the time you left the road had all the brakes of the passenger cars been changed to either the Hodge or Stevens?

A. I believe I have answered that question two or three times. They were not all changed by them, some had single brakes.

Cross 28. Did any of them have on brakes similar to those which you say you saw in 1848?

A. No, sir.

Direct resumed, by M'r Whipple:

Q. 29. While on that road did you know Uriah Van Voorhis; if so, what did he do?

A. I did; he was boss of repair shop at South Ferry Depot, in Brooklyn, on the Long Island Railroad.

Q. 30. And did you know Joseph Farrell; if so, what did he do?

A. I did; he was baggage master.

583 Q. 31. Do you recollect what kind of a brake was on the baggage car which he run?

A. Yes, sir; it was the same kind as on Exhibit A, which was called the centre lever.

Cross resumed by M'r Cozzens:

Cross 32. What duties did Van Voorhis have to perform as boss of the repair-shop, as you have stated?

A. To take charge of the men and look after repairs of the cars; if any of the brakes broke to fix them, or to do any other repairs that came up. The principal shop for repairing was at Jamaica.

his
GEORGE + OSMAN.
mark.

Subscribed and sworn to before me this 19th day of September, 1867.
R. E. STILWELL,
Examiner, &c.

Adjourned to 11 a. m., the 20th instant.

FRIDAY, *September 20th*, 1867.

Present, counsel for the respective parties.

JAMES S. GAMBLE, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

584 **A. James S. Gamble; 55 years of age; reside at Newark, New Jersey, and am in the auction and commission business.**

Q. 2. Have you been in the employ of the New Jersey Railroad and Transportation Company? If so, when, and in what capacity, when did you commence, and when leave?

A. I have been in their employ; I am not certain whether it was in April, 1837, or April, 1838; it was one of those years; I left in 1847 or 1848; I can't fix the date; I was there ten years, lacking a few days; I was a conductor on the Philadelphia train; first on the Newark train, and then on the Philadelphia train, where I was when I left.

Q. 3. While conductor on the Philadelphia line, did you know of the use of a double-acting brake on any car or cars run in that line? If so, please state what you know, and any circumstance, if any, connected with such knowledge?

A. I did. As near as I can recollect, this double-acting brake was applied some three years before I left the road; and, as far as my knowledge extends, was on the road when I left. The operation of that brake was different from the one we formerly had used, inasmuch as it broke upon both trucks at once, and from either end of the car, and upon all the wheels.

Q. 4. What kind of a brake did you formerly use, that you speak of?

A. It was called a single-acting brake, brakeing only upon one truck.

Q. 5. Who was your brakeman at that time?

A. John H. Jobes.

Q. 6. Who applied this brake to the car running in said Philadelphia line?

A. M'r Joseph Talson.

Q. 7. What position did he occupy on that road?

A. He was foreman of the car-shop, and superintendent of repairs.

Q. 8. Was he so employed during the whole time that you were in the employ of the company?

A. He was.

585 **Cross-examined by M'r Cozzens:**

Cross 9. I understand you to mean that it may have been in 1848 that you left the employ of the New Jersey Railroad and Transportation Company?

A. Upon reflection, I think it must have been in 1847; and according to my best recollection, it was in that year.

Cross 10. Please state, to the best of your recollection, what month in 1847 it was that you left?

A. I left the 1st of September, and it must have been nine years and some months that I was in their employ.

Cross 11. When you first commenced your employment with said railroad what did you do?

A. I was conductor.

Cross 12. Were you, then, conductor during the whole time that you were in their employment?

A. I was.

Cross 13. You say you were conductor, first, on the Newark train. This train ran from Jersey City to Newark and back, did it not?

A. Yes; I also made one trip a day from Jersey City to New Brunswick and back.

Cross 14. What kind of a train was it on which you made the trip from Jersey City to New Brunswick and back, each day?

A. A passenger train.

Cross 15. Was it a through Philadelphia train?

A. No; there was no Philadelphia trains running then.

Cross 16. Was it a mail train?

A. Yes, sir.

Cross 17. Do you remember what time in the day it left Jersey City?

A. It left New York at nine o'clock, and Jersey City at about a quarter past nine.

Cross 18. At the time you were speaking of, when passengers desired to go from New York to Philadelphia, by what railroad did they go?

A. Camden and Amboy, taking boat from New York.

Cross 19. Was this the only way they could go, at this time, by railroad to Philadelphia?

586 A. This was the way when I first went on the road.

Cross 20. About what time, to the best of your recollection, was there railroad communication established beyond New Brunswick, so that passengers could go from New York to Philadelphia all the way by railroad, starting from Jersey City?

A. The first of January, 1838 or 1839, to the best of my recollection.

Cross 21. How long were you conductor on this Newark train you have spoken of?

A. It was about five and a half years.

Cross 22. How long did you continue to make those daily trips from Jersey City to New Brunswick and back.

A. Until I took charge of the Philadelphia train.

Cross 23. After you took charge of the Philadelphia train, did you continue on it until you left the employ of the road?

A. I did.

Cross 24. What kind of brakes were used on the Newark train and the train you spoke of, from Jersey City to New Brunswick?

A. They were single-acting brakes, breaking only upon one truck, with the brake applied between the two wheels.

Cross 25. Were there none of the cars in either of those trains which had any other than the single brakes?

A. They all had single brakes, to the best of my knowledge.

Cross 26. You say, to the best of your knowledge; do you think there is any doubt about it?

A. I do not.

Cross 27. About how many cars did those Newark trains average?

A. When I first went on the road, the cars were four-wheeled cars, and sometime' had twenty in a train; after we got to using long cars, the Newark train would average three or four cars, and the Brunswick train five or six.

Cross 28. Were these Newark and New Brunswick trains what would be called first-class trains?

A. Yes, sir.

587 Cross 29. How many cars did what you have called the Philadelphia train average during the time that you had charge of it?

A. One platform-car and five passenger-cars.

Cross 30. That, I suppose, was a first-class train, was it not?

A. Yes, sir.

Cross 31. You say that while you were a conductor on that train you knew of the use of a double-acting brake; please state how that brake was constructed.

A. There was a lever in the centre under the platform car to which it was applied, with a rod running to and connecting with the brakes on the trucks at each end, and connected with a windlass at the same time. I know the operation was by the application of the windlass; the brakes bore upon all the wheels of the trucks.

Cross 32. How do you know that this was the manner in which the brake operated?

A. By personal observation.

Cross 33. Did you ever operate it yourself?

A. I can't say positively that I ever did, but I saw it operated by my brakeman.

Cross 34. How was that brake constructed and arranged in the trucks?

A. I can't answer that question; I never examined the mechanical construction of it.

Cross 35. Upon how many cars of that Philadelphia line was such a brake as this used?

A. But one to my knowledge; that was a platform car, upon which the crates carrying the baggage were carried.

Cross 36. The car was sometimes called a crate-car, was it not?

A. Well, we generally called them platform cars; some might have called them crate-cars.

Cross 37. What kind of brakes did the cars of this Philadelphia line, other than the platform cars, have?

A. The brakes bore only on the wheels of one truck; they were what we call single brakes.

Cross 38. From what place to what place did this Philadelphia line run while you were conductor on it?

588 A. From Jersey City to New Brunswick, and from New Brunswick beyond; part of the time to Camden, and part of the time to Taconey, and part of the time to Kensington.

Cross 39. What time in the day did that line leave Jersey City?

A. About quarter past nine in the morning?

Cross 40. Did you run on it beyond New Brunswick?

A. No, sir.

Cross 41. Do you know about what time that train would be due at Trenton?

A. About twelve o'clock.

Cross 42. Might it have been about half past eleven?

A. I hardly think that; it might have been quarter to twelve.

Cross 43. Do you know whether any train was run to meet your Philadelphia line at Trenton?

A. No, sir; I know there was not; Princeton was about the meeting-place.

Cross 44. I do not mean the other mail line passing it or meeting it; I mean a train running to connect with it at Trenton.

A. I can't answer that question definitely.

Cross 45. Was that double brake on that platform car the first brake of that kind which was used on the New Jersey R. R. & T. Company's road?

A. The first to my knowledge.

Cross 46. Was it the only one of that kind which was used on any of the through lines from New York to Philadelphia during the time you ran the Philadelphia line spoken of?

A. It was the only one to which my attention was particularly called; why I say particularly is that my brakeman, M'r Jobes, called my attention to it, and said it was a very desirable brake, and worked nicely; it was something new.

Cross 47. Was your attention ever called particularly, or in any other way, to any other brake of the kind, or any of the other through trains from New York to Philadelphia?

A. No, sir.

589 Cross 48. If there had been any other brake of the kind on any of the other trains from New York to Philadelphia during the time you run the Philadelphia line spoken of would you have been likely to know of it?

A. Not certainly; there might have been a brake on the Camden and Amboy road which I would know nothing of; but if it had been on any line belonging to the New Jersey Railroad and Transportation Company I should have known of it.

Cross 49. If there had been such a brake on any of the lines between New York and Philadelphia which ran over the New Jersey Railroad and Transportation Company's road during the time you were conductor on that road would you have known of it?

A. I think I would.

Cross 50. Have you any doubt that you would?

A. It is possible that I would not; I have a doubt whether I would know it positively.

Cross 51. If there had been such a brake on any of these through trains from New York to Philadelphia running over the New Jersey Railroad and Transportation Company's road while you were running the Philadelphia line spoken of would you have known of it?

A. I might possibly have not known of it, for they might possibly have applied brakes on the other end of the road that I knew nothing of; I speak of cars that were built in our shops.

Cross 52. You say you might possibly not have known of it; do you think you would have known of it?

A. No, sir; not certainly.

Cross 53. You say "they might have applied brakes at the other end of the road that you knew nothing of;" did not cars running in the through lines between Philadelphia and New York, and built at what you call the other end of the road, run over the New Jersey Railroad and Transportation Company's road while you ran as conductor on the Philadelphia line spoken of?

A. They did.

Cross 54. Did not some of such cars run in the Philadelphia line of which you were conductor?

A. Undoubtedly.

590 Cross 55. Now, if there had been such a brake on any of these cars built "at the other end of the road," and running in those through trains from Philadelphia to New York over the New Jersey Railroad and Transportation Company's road while you were conductor on the Philadelphia line aforesaid, would you not have been likely to know it?

A. Not necessarily; I might not have known of it.

Cross 56. You never heard of such a thing, did you?

A. No, sir; my attention was never called to any other double brake except the one on the platform-car spoken of.

Cross 57. At what shop was the platform-car fitted with the brake spoken of?

A. At the shop of the New Jersey Railroad and Transportation Company at Jersey City.

Cross 58. You say that, so far as your knowledge extends, this brake was on the road when you left, and that it had been applied some three years before you left; do you mean that it was in use the whole of that three years?

A. I do, to the best of my knowledge.

Cross 59. How sure do you feel of this?

A. I feel quite confident of it.

Cross 60. Do you think you may not be mistaken about it?

A. I think not; I should have known if it had been taken off.

Cross 61. Do you feel as positive as to the other things you have testified about as you do of this?

A. I think I do.

Cross 62. Do you think that M'r Talson would be likely to recollect how long this brake was used?

A. I should think he would.

Cross 63. Would he be likely to recollect how long it was used as well as or better than you do?

A. I think he would better, as he was foreman of the shop and had charge of the repairs, and would be more likely to know.

Cross 64. You say Jobes called your attention to this brake on the
platform-car as a desirable thing, and you say it was "something
591 new"; was there any talk among the hands on the New Jersey
road or on your train about it?

A. No, sir; not to my knowledge.

Cross 65. Did you hear any body speak of it except Jobes?

A. Not at that time; I might have heard people remark that it was a good brake; subsequently, no doubt, I did. I considered the brake a good one, and no doubt talked about it to this one and that one.

Cross 66. You say you might have heard people remark about it; did you hear them?

A. I have no doubt I did.

Cross 67. How long after the brake was put on the platform car did you hear people remark about it?

A. Shortly after; about the time.

Cross 68. Had you ever heard of such a brake before this one was put on the platform-car?

A. No, sir.

Cross 69. If such a brake had been used upon any considerable number of cars built at the Camden and Amboy Company's shops, which ran in the through trains between New York and Philadelphia, passing over the New Jersey Railroad and Transportation Company's road while you were conductor on the Philadelphia line you have mentioned, would you have known of it?

A. Not certainly.

Cross 70. Do you think you would have known of it?

A. I can only give the same answer—not certainly.

Cross 71. Do you mean to say that if a considerable number of such cars as are referred to in the 69th question had been running daily for years, during the time that you were conductor of the Philadelphia line, you would not have known of it?

A. I mean to say that I might not have known of it?

Cross 72. Would you not have been likely to know it?

A. Not necessarily.

Cross 73. You never heard of it, did you?

A. No, sir; if I had, I should have known of it. I speak to the best of my knowledge.

592 Cross 74. When, as you say, people remarked about this brake, they spoke of no other one, did they?

A. No, sir; the conversation referred to that brake.

Cross 75. Did any of those people speak of ever before having seen or heard of any such brake?

A. I don't think they did.

Cross 76. Was it spoken of as Talson's brake?

A. No, sir.

Cross 77. Was the name of Stanley spoken of in any way in connection with it?

A. I think not.

Cross 78. Did the people whom you heard remark about it speak of it as a new thing?

A. It was so considered.

Direct resumed:

Q. 79. Is there any doubt in your mind, or not, as to whether there was a double brake on the platform-car of that road which operated from either end of the car, and in use on said road while you were conductor on said Philadelphia train?

A. There is no doubt at all.

JAMES S. GAMBLE.

Subscribed and sworn to before me this 20th day of September, 1867.

R. E. STILWELL,
Examiner, &c.

Bernard Hughes, called and sworn as a witness on the part of the defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

593 A. Bernard Hughes; fifty-one years of age; reside at Jersey City, and am drill-master of trains of the New Jersey Railroad and Transportation Company, and have been so ever since 1849, but have been employed by the company since 1836.

Q. 2. How were you employed before being appointed drill-master?

A. On repairs of cars.

Q. 3. While so employed, did you know one Isaac Newton Stanley; if so, what are the circumstances connected with such knowledge?

A. Yes, sir, I knew him; he came there to apply a brake. I presume he was authorized by the superintendent of the road, George or Robert Schuyler, to try to apply this brake of M'r Stanley's, and M'r Stanley went to work and put the brake on under an eight-wheel platform-car, and in putting it in operation we took and tried the car up the road. Five or six men ran the car up the track ways, and then run the car down the track with all the force we could give it, and I won't be positive whether M'r Stanley was on the ground or on the car watching the brake to see how it applied to the wheels, but some one was; the result was that that was about the last of M'r Stanley's construction. The brake was applied, and the constructions were so light that the brake broke all to pieces; they were wire or string, I don't know which, a little of both.

Q. 4. Well, what kind of a brake did M'r Stanley try to construct; please explain?

A. He wanted to construct a brake that would brake upon eight wheels instead of four, and from either end of the car.

Q. 5. Well, after M'r Stanley gave up, what more was done with regard to this brake you have just described?

A. M'r Talson went to work and put on a brake similar to that, only put it on more substantial and on a platform car; the car was put on the Philadelphia line.

Q. 6. Was the brake on this platform-car put to service on that road? If so, state what you know about it.

A. It was put to service on that road, and I know it worked well and answered a good purpose.

594 Q. 7. About what time was the brake applied; that is, the year, and how do you fix the time?

A. Well, I think it was in the neighborhood of 1842 or 1843. I went to Wisconsin in 1842, in June, and returned in July, and I think that brake was put on in the fall following, if I am not mistaken.

Cross-examined by M'r Cozzens:

Cross 8. The brake which Stanley put on was only applied to one car, was it?

A. Yes, sir.

Cross 9. As Stanley put it on, was it a failure and abandoned?

A. Yes, sir.

Cross 10. As he put it on, how long did it stay on the car?

A. I don't think it stayed on any length of time at all, for I think we had to take it off to use the car.

Cross 11. What led the road to have Stanley try this experiment, if you know?

A. Well, I think the cause of them thus trying that brake was because they wanted to get the pressure on more wheels than they could on the brake they were using at that time, which only applied to four wheels.

Cross 12. When they took off the Stanley brake, what kind of brake did they leave on that platform-car?

A. The same brake that was on it.

Cross 13. Was the brake that was on it a single brake?

A. Yes, sir.

Cross 14. Did you yourself see this Stanley experiment tried?

A. I did.

Cross 15. After that experiment failed, what became of M'r Stanley, if you know?

A. I do not know; I don't know that I ever saw him after that.

Cross 16. Can you describe the construction and arrangement of the brake tried by Stanley?

595 A. Yes, sir; it was a brake with a lever in the centre of the car, and a rod running from one end of the lever to one end of the car, and reversed to the other end of the car; the brake was applied to the outside of the wheels instead of the inside.

Cross 17. To what, if anything, did these rods running from the end of the lever to the ends of the car connect?

A. They connected with a rod down through the platform of the car; it was the brake-staff.

Cross 18. By what means was the power applied from this lever in the centre of the car to the brakes?

A. It was by a connection of a chain and hook to a lever in each truck; the connection went from the centre lever.

Cross 19. Did that connection go from the extreme end of that centre lever, or from a little inside of the end?

A. A little inside of the end.

Cross 20. Was there a hook at each end of the chain to hook it to the lever in the truck, and to the centre lever?

A. Yes, sir.

Cross 21. How was the brake arranged in the truck so as to apply power from one side of the truck to the other side of the same truck?

A. It was done by an eyebolt passing through the centre of the brake-beam, with which was connected a rod running across the truck to the upright lever in the truck.

Cross 22. Are you positive that this is the way in which the brake was arranged?

A. Yes, sir; as near as I can come at it.

Cross 23. Are you positive that you have described its arrangement in the truck just as it was?

A. I am, as near as I can recollect.

Cross 24. Do you feel sure that you recollect it correctly?

A. Yes, sir, as near as I can recollect.

Cross 25. Do you think that you are at all mistaken about it?

A. I don't think I am.

Cross 26. Are you sure that the brakes were applied to the outside of the wheels, and not to the inside?

A. I am.

596 Cross 27. How long after this Stanley experiment was tried was it that, as you say, "M'r Talson went to work and put on a brake similar"?

A. I can't say; it was some time after.

Cross 28. Was it in the same year?

A. I could not say; I don't hardly think it was in the same year.

Cross 29. Was it within a year afterward?

A. I couldn't say whether it was or not.

Cross 30. Was it within two years afterwards?

A. I was just going to make a suggestion that we were very anxious to get clear of the brakes we had; it was in that light that the experiment was tried to get rid of the damage those brakes were doing. I could not say whether it was within two years; it might be, and it might be more.

Cross 31. Can you mention any time after within which it was?

A. No, sir; I cannot.

Cross 32. Was it before 1848?

A. Well, I think we had that brake in operation before that.

Cross 33. Can you give us some idea how long before that you think you had it in operation?

A. I could not; I could not come to no definite time.

Cross 34. How long, to the best of your recollection, was that brake kept in use after Talson put it on, as you say?

A. A good while—a long while; it was kept on for several years.

Cross 35. How was it constructed?

A. I have stated before.

Cross 36. Do you mean that as Talson put it on it was constructed and arranged as it was, when, as you say, Stanley tried it?

A. Yes, sir; it was a similar thing exactly.

Cross 37. After Stanley put it on, was it applied to more than one car?

A. I think it was.

Cross 38. How positive are you of this?

597 A. I am positive that it was put on more than one car.

Cross 39. How many more than one car?

A. I couldn't say how many more; cars were very few in those days.

Cross 40. Was it applied to a good portion of the cars?

A. Well, yes, sir; it was applied mostly to the passenger-cars of the Philadelphia train.

Cross 41. About how long after Talson, as you say, put the brake on was it applied to these other cars?

A. It might have been some time after it was put on the platform-car; we were building cars then, and I think it was put on the cars as they came out of the shop.

Cross 42. Would it have been within a few months after it was put on the platform-car?

A. It might have been.

Cross 43. Were you building new cars at the time Talson put the brake on the platform-car?

A. Yes, sir.

Cross 44. Do you think that it got on to the passenger-cars on the road about as fast as they were built after that?

A. Yes, sir.

Cross 45. Those cars you have spoken of, on which you say the brake was put after Talson applied it to the platform-car, were built by and used on the New Jersey Railroad and Transportation Company's road, were they?

A. Yes, sir.

Cross 46. Do you remember when Talson left the employ of the New Jersey Railroad and Transportation Company?

A. It must be 15 or 16 years ago.

Cross 47. May it have been longer ago than that?

A. Well, it might be a little longer; I won't be positive.

Cross 48. Were these brakes in use on those cars you have mentioned during the time M'r Talson remained on the road and when he left?

A. Yes, sir; I think they were on the road when he left.

598 Cross 49. Do you think that Talson would be likely to remember how many cars this brake were put on while he was on the New Jersey road, and how long said brake was used on the road while he was there?

A. I think he ought to; he was master mechanic of the cars.

Cross 50. Would he remember these things better than you do?

A. Yes, sir.

Direct resumed by M'r Whipple:

Q. 51. Do you wish to be understood that the difference between the brake as applied by Stanley and the one by M'r Talson was that the Stanley brake was constructed of light, frail material, and the Talson brake of firm and substantial material, fit for service?

A. Yes, sir.

Q. 52. Is the same brake now in use on the cars of the New Jersey Railroad and Transportation Company?

A. It is.

Cross 18. By what means was the power applied from this lever in the centre of the car to the brakes?

A. It was by a connection of a chain and hook to a lever in each truck; the connection went from the centre lever.

Cross 19. Did that connection go from the extreme end of that centre lever, or from a little inside of the end?

A. A little inside of the end.

Cross 20. Was there a hook at each end of the chain to hook it to the lever in the truck, and to the centre lever?

A. Yes, sir.

Cross 21. How was the brake arranged in the truck so as to apply power from one side of the truck to the other side of the same truck?

A. It was done by an eyebolt passing through the centre of the brake-beam, with which was connected a rod running across the truck to the upright lever in the truck.

Cross 22. Are you positive that this is the way in which the brake was arranged?

A. Yes, sir; as near as I can come at it.

Cross 23. Are you positive that you have described its arrangement in the truck just as it was?

A. I am, as near as I can recollect.

Cross 24. Do you feel sure that you recollect it correctly?

A. Yes, sir, as near as I can recollect.

Cross 25. Do you think that you are at all mistaken about it?

A. I don't think I am.

Cross 26. Are you sure that the brakes were applied to the outside of the wheels, and not to the inside?

A. I am.

596 Cross 27. How long after this Stanley experiment was tried was it that, as you say, "M'r Talson went to work and put on a brake similar"?

A. I can't say; it was some time after.

Cross 28. Was it in the same year?

A. I could not say; I don't hardly think it was in the same year.

Cross 29. Was it within a year afterward?

A. I couldn't say whether it was or not.

Cross 30. Was it within two years afterwards?

A. I was just going to make a suggestion that we were very anxious to get clear of the brakes we had; it was in that light that the experiment was tried to get rid of the damage those brakes were doing. I could not say whether it was within two years; it might be, and it might be more.

Cross 31. Can you mention any time after within which it was?

A. No, sir; I cannot.

Cross 32. Was it before 1848?

A. Well, I think we had that brake in operation before that.

Cross 33. Can you give us some idea how long before that you think you had it in operation?

A. I could not; I could not come to no definite time.

Cross 34. How long, to the best of your recollection, was that brake kept in use after Talson put it on, as you say?

A. A good while—a long while; it was kept on for several years.

Cross 35. How was it constructed?

A. I have stated before.

Cross 36. Do you mean that as Talson put it on it was constructed and arranged as it was, when, as you say, Stanley tried it?

A. Yes, sir; it was a similar thing exactly.

Cross 37. After Stanley put it on, was it applied to more than one car?

A. I think it was.

Cross 38. How positive are you of this?

597 A. I am positive that it was put on more than one car.

Cross 39. How many more than one car?

A. I couldn't say how many more; cars were very few in those days.

Cross 40. Was it applied to a good portion of the cars?

A. Well, yes, sir; it was applied mostly to the passenger-cars of the Philadelphia train.

Cross 41. About how long after Talson, as you say, put the brake on was it applied to these other cars?

A. It might have been some time after it was put on the platform-car; we were building cars then, and I think it was put on the cars as they came out of the shop.

Cross 42. Would it have been within a few months after it was put on the platform-car?

A. It might have been.

Cross 43. Were you building new cars at the time Talson put the brake on the platform-car?

A. Yes, sir.

Cross 44. Do you think that it got on to the passenger-cars on the road about as fast as they were built after that?

A. Yes, sir.

Cross 45. Those cars you have spoken of, on which you say the brake was put after Talson applied it to the platform-car, were built by and used on the New Jersey Railroad and Transportation Company's road, were they?

A. Yes, sir.

Cross 46. Do you remember when Talson left the employ of the New Jersey Railroad and Transportation Company?

A. It must be 15 or 16 years ago.

Cross 47. May it have been longer ago than that?

A. Well, it might be a little longer; I won't be positive.

Cross 48. Were these brakes in use on those cars you have mentioned during the time M'r Talson remained on the road and when he left?

A. Yes, sir; I think they were on the road when he left.

598 Cross 49. Do you think that Talson would be likely to remember how many cars this brake were put on while he was on the New Jersey road, and how long said brake was used on the road while he was there?

A. I think he ought to; he was master mechanic of the cars.

Cross 50. Would he remember these things better than you do?

A. Yes, sir.

Direct resumed by M'r Whipple:

Q. 51. Do you wish to be understood that the difference between the brake as applied by Stanley and the one by M'r Talson was that the Stanley brake was constructed of light, frail material, and the Talson brake of firm and substantial material, fit for service?

A. Yes, sir.

Q. 52. Is the same brake now in use on the cars of the New Jersey Railroad and Transportation Company?

A. It is.

Cross 18. By what means was the power applied from this lever in the centre of the car to the brakes?

A. It was by a connection of a chain and hook to a lever in each truck; the connection went from the centre lever.

Cross 19. Did that connection go from the extreme end of that centre lever, or from a little inside of the end?

A. A little inside of the end.

Cross 20. Was there a hook at each end of the chain to hook it to the lever in the truck, and to the centre lever?

A. Yes, sir.

Cross 21. How was the brake arranged in the truck so as to apply power from one side of the truck to the other side of the same truck?

A. It was done by an eyebolt passing through the centre of the brake-beam, with which was connected a rod running across the truck to the upright lever in the truck.

Cross 22. Are you positive that this is the way in which the brake was arranged?

A. Yes, sir; as near as I can come at it.

Cross 23. Are you positive that you have described its arrangement in the truck just as it was?

A. I am, as near as I can recollect.

Cross 24. Do you feel sure that you recollect it correctly?

A. Yes, sir, as near as I can recollect.

Cross 25. Do you think that you are at all mistaken about it?

A. I don't think I am.

Cross 26. Are you sure that the brakes were applied to the outside of the wheels, and not to the inside?

A. I am.

596 Cross 27. How long after this Stanley experiment was tried was it that, as you say, "M'r Talson went to work and put on a brake similar"?

A. I can't say; it was some time after.

Cross 28. Was it in the same year?

A. I could not say; I don't hardly think it was in the same year.

Cross 29. Was it within a year afterward?

A. I couldn't say whether it was or not.

Cross 30. Was it within two years afterwards?

A. I was just going to make a suggestion that we were very anxious to get clear of the brakes we had; it was in that light that the experiment was tried to get rid of the damage those brakes were doing. I could not say whether it was within two years; it might be, and it might be more.

Cross 31. Can you mention any time after within which it was?

A. No, sir; I cannot.

Cross 32. Was it before 1848?

A. Well, I think we had that brake in operation before that.

Cross 33. Can you give us some idea how long before that you think you had it in operation?

A. I could not; I could not come to no definite time.

Cross 34. How long, to the best of your recollection, was that brake kept in use after Talson put it on, as you say?

A. A good while—a long while; it was kept on for several years.

Cross 35. How was it constructed?

A. I have stated before.

Cross 36. Do you mean that as Talson put it on it was constructed and arranged as it was, when, as you say, Stanley tried it?

A. Yes, sir; it was a similar thing exactly.

Cross 37. After Stanley put it on, was it applied to more than one car?

A. I think it was.

Cross 38. How positive are you of this?

597 A. I am positive that it was put on more than one car.

Cross 39. How many more than one car?

A. I couldn't say how many more; cars were very few in those days.

Cross 40. Was it applied to a good portion of the cars?

A. Well, yes, sir; it was applied mostly to the passenger-cars of the Philadelphia train.

Cross 41. About how long after Talson, as you say, put the brake on was it applied to these other cars?

A. It might have been some time after it was put on the platform-car; we were building cars then, and I think it was put on the cars as they came out of the shop.

Cross 42. Would it have been within a few months after it was put on the platform-car?

A. It might have been.

Cross 43. Were you building new cars at the time Talson put the brake on the platform-car?

A. Yes, sir.

Cross 44. Do you think that it got on to the passenger-cars on the road about as fast as they were built after that?

A. Yes, sir.

Cross 45. Those cars you have spoken of, on which you say the brake was put after Talson applied it to the platform-car, were built by and used on the New Jersey Railroad and Transportation Company's road, were they?

A. Yes, sir.

Cross 46. Do you remember when Talson left the employ of the New Jersey Railroad and Transportation Company?

A. It must be 15 or 16 years ago.

Cross 47. May it have been longer ago than that?

A. Well, it might be a little longer; I won't be positive.

Cross 48. Were these brakes in use on those cars you have mentioned during the time M'r Talson remained on the road and when he left?

A. Yes, sir; I think they were on the road when he left.

598 Cross 49. Do you think that Talson would be likely to remember how many cars this brake were put on while he was on the New Jersey road, and how long said brake was used on the road while he was there?

A. I think he ought to; he was master mechanic of the cars.

Cross 50. Would he remember these things better than you do?

A. Yes, sir.

Direct resumed by M'r Whipple:

Q. 51. Do you wish to be understood that the difference between the brake as applied by Stanley and the one by M'r Talson was that the Stanley brake was constructed of light, frail material, and the Talson brake of firm and substantial material, fit for service?

A. Yes, sir.

Q. 52. Is the same brake now in use on the cars of the New Jersey Railroad and Transportation Company?

A. It is.

Cross 18. By what means was the power applied from this lever in the centre of the car to the brakes?

A. It was by a connection of a chain and hook to a lever in each truck; the connection went from the centre lever.

Cross 19. Did that connection go from the extreme end of that centre lever, or from a little inside of the end?

A. A little inside of the end.

Cross 20. Was there a hook at each end of the chain to hook it to the lever in the truck, and to the centre lever?

A. Yes, sir.

Cross 21. How was the brake arranged in the truck so as to apply power from one side of the truck to the other side of the same truck?

A. It was done by an eyebolt passing through the centre of the brake-beam, with which was connected a rod running across the truck to the upright lever in the truck.

Cross 22. Are you positive that this is the way in which the brake was arranged?

A. Yes, sir; as near as I can come at it.

Cross 23. Are you positive that you have described its arrangement in the truck just as it was?

A. I am, as near as I can recollect.

Cross 24. Do you feel sure that you recollect it correctly?

A. Yes, sir, as near as I can recollect.

Cross 25. Do you think that you are at all mistaken about it?

A. I don't think I am.

Cross 26. Are you sure that the brakes were applied to the outside of the wheels, and not to the inside?

A. I am.

596 Cross 27. How long after this Stanley experiment was tried was it that, as you say, "M'r Talson went to work and put on a brake similar"?

A. I can't say; it was some time after.

Cross 28. Was it in the same year?

Cross 31. Can you mention any time after within which it was?

A. No, sir; I cannot.

Cross 32. Was it before 1848?

A. Well, I think we had that brake in operation before that.

Cross 33. Can you give us some idea how long before that you think you had it in operation?

A. I could not; I could not come to no definite time.

Cross 34. How long, to the best of your recollection, was that brake kept in use after Talson put it on, as you say?

A. A good while—a long while; it was kept on for several years.

Cross 35. How was it constructed?

A. I have stated before.

Cross 36. Do you mean that as Talson put it on it was constructed and arranged as it was, when, as you say, Stanley tried it?

A. Yes, sir; it was a similar thing exactly.

Cross 37. After Stanley put it on, was it applied to more than one car?

A. I think it was.

Cross 38. How positive are you of this?

597 A. I am positive that it was put on more than one car.

Cross 39. How many more than one car?

A. I couldn't say how many more; cars were very few in those days.

Cross 40. Was it applied to a good portion of the cars?

A. Well, yes, sir; it was applied mostly to the passenger-cars of the Philadelphia train.

Cross 41. About how long after Talson, as you say, put the brake on was it applied to these other cars?

A. It might have been some time after it was put on the platform-car; we were building cars then, and I think it was put on the cars as they came out of the shop.

Cross 42. Would it have been within a few months after it was put on the platform-car?

A. It might have been.

Cross 43. Were you building new cars at the time Talson put the brake on the platform-car?

A. Yes, sir.

Cross 44. Do you think that it got on to the passenger-cars on the road about as fast as they were built after that?

A. Yes, sir.

Cross 45. Those cars you have spoken of, on which you say the brake was put after Talson applied it to the platform-car, were built by and used on the New Jersey Railroad and Transportation Company's road, were they?

A. Yes, sir.

Cross 46. Do you remember when Talson left the employ of the New Jersey Railroad and Transportation Company?

A. It must be 15 or 16 years ago.

Cross 47. May it have been longer ago than that?

A. Well, it might be a little longer; I won't be positive.

Cross 48. Were these brakes in use on those cars you have mentioned during the time M'r Talson remained on the road and when he left?

A. Yes, sir; I think they were on the road when he left.

598 Cross 49. Do you think that Talson would be likely to remember how many cars this brake were put on while he was on the New Jersey road, and how long said brake was used on the road while he was there?

A. I think he ought to; he was master mechanic of the cars.

Cross 50. Would he remember these things better than you do?

A. Yes, sir.

Direct resumed by M'r Whipple:

Q. 51. Do you wish to be understood that the difference between the brake as applied by Stanley and the one by M'r Talson was that the Stanley brake was constructed of light, frail material, and the Talson brake of firm and substantial material, fit for service?

A. Yes, sir.

Q. 52. Is the same brake now in use on the cars of the New Jersey Railroad and Transportation Company?

A. It is.

Cross resumed by M'r Cozzens:

Cross 53. Has said same brake been in use on the cars of the New Jersey Railroad and Transportation Company ever since Talson put it on, as you have stated?

A. The same principle.

Cross 53. I mean the same kind of brake; please answer this.

A. I say the same kind of brake.

BERNARD HUGHES.

Present, counsel as before.

Adjourned to 11 a. m., the 23d inst.

MONDAY, *September 23d*, 1867.

Present, counsel as before.

GEORGE W. FIELDER, called and sworn on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. George W. Fielder; forty-five years of age; reside at Hightstown, New Jersey; and am a produce commission-dealer in West Washington Market, New York.

Q. 2. Have you been in the employ of the New Jersey Railroad and Transportation Company; & if so, when did you commence, how do you determine the time, and when did you leave the employ of said company?

A. I have; I commenced in the spring of 1845; I have a distinct recollection of the time when I commenced, and my eldest son was born in January, 1845, preceding the time; I left their employ in the spring of 1848.

Q. 3. When you commenced work for said company what did you hear about the application of a double brake on a car of that road, and what did you thereafter know in relation to the use of a double brake?

(First part of the question objected to.)

A. I remember hearing it talked amongst the men that there had been such a brake, but it was considered complicated and rather weak for the purpose of brakeing up a train; my recollection is, that it 600 was the Stanley brake; I think the man's name was Isaac Newton Stanley; I never saw the man; my recollection is that from that brake, as I always understood it, M'r Talson used or got up this brake that was used on the car spoken of, and when I speak of M'r Talson, I speak of him as the foreman of the shop; I believed and supposed at the time that M'r Talson had simplified and got up that brake which was used on the car spoken of; I don't know this positively; in the Stanley brake there were two cross-levers underneath the car with wire connections; the simplification of the brake by M'r Talson, as I understand, is, that there was one cross-lever across the centre under the car, and that would brake the car at either end, all the wheels.

(So much of this answer as is hearsay, and the understanding and belief of the witness, objected to.)

Q. 4. On what kind of a car was this single centre-lever brake used, and by whom was it used as brakeman?

A. It was on a platform-car, the one that generally precedes the passenger-cars in the train; my recollection is that it was used as a brake-car by a man by the name of Jobes, a portly man; I haven't seen him since that time.

Q. 5. According to your best recollection, was this double brake in use on said platform-car during the time you were in the employ of said company?

(Objected to.)

A. I couldn't say it was all the time, but think it was most of the time.

Cross-examined by M'r Cozzens:

Cross 6. What kind of a train was it in which this platform-car ran?

601 A. It was the car which carried the baggage on the Philadelphia or New Brunswick train; I can't be positive which.

Cross 7. In what manner did the wire connections you speak of connect the two cross-levers in the Stanley brake?

A. I don't know that I could give you an understanding of it; it is a good many years ago; the original Stanley brake was not used while I was there, but the machinery of it was put up stairs in the car-shop, as I remember.

Cross 8. Are you able to describe how the Stanley brake was arranged in the trucks?

A. Well, I can give it to you partly, not probably full; the point which touched the brake was *too* pieces of wood carved out to the shape of the wheel; they were placed inside of the wheels, and then there was what we called a rock-shaft; a shaft of iron, that was of a length from one wheel to the other between the wheels, across the truck transversely; upon that rock-shaft there was an arm, and at each end of the rock-shaft between those wooden blocks was a little cam, which, when you broke the car at the end of the car, would, by the turning of the rock-shaft by means of the arm, be brought against the blocks, thereby forcing them tight against the wheels.

Cross 9. When, as you say, you supposed the brake was simplified by M'r Talson, was this arrangement in the trucks just described continued?

A. No, sir; I think not.

Cross 10. What was substituted for it?

A. The pieces of wood I speak of, and known as the brake blocks, was placed on the outside of the wheels instead of between; I hardly dare undertake to explain what was substituted for the rock-shaft, but I know the blocks were put on the outside, because it was the first work I did when I went there; I know there was a connection with the centre-lever with the brakes in the trucks.

Cross 11. How often did you, yourself, see that brake used on that platform-car?

A. As often as I saw that train come in or go out from the Jersey City depot; how often that was I could not give any idea; I was at work there all the time.

602 Cross 12. When was the first time that you saw it?

A. I could not tell, sir.

Cross 15. Are you able to recollect how much of the time while you were employed on the road that brake was used?

A. Definitely, I am not, but I can tell you about the general usage of cars on the road.

Cross 14. I only want to know about that particular car with that brake; are you able to recollect as to that car how much of the time while you were employed on the road it was used with said brake?

A. I know, as a railroad man; I know it would be used whenever that train ran (it being the brake-car of the train) except when it was out of order; that I speak as a railroad man.

Cross 15. Please bear in mind that I do not ask for your opinion, as a railroad man, as to how often such a car would usually run on such a train; I ask you whether you can recollect, as a matter of fact, how much of the time, while you were employed on the road, that car with that brake actually did run?

A. Definitely, I cannot tell.

Cross 16. Is the name of the M'r Talson you have spoken of Joseph F. Talson?

A. I do not remember his first name, but it was the M'r Talson who was foreman of the car-shop of the New Jersey Railroad at that time.

Cross 17. Do you think he would be likely to recollect better than you do how long that brake was used?

A. Yes, sir; I think so.

Cross 18. What kind of brakes were used on the other cars of the train in which this platform-car ran?

A. There were two kinds; neither one of them broke upon more than one end of the car; this is also true of all the cars belonging to the New Jersey Railroad at that time; I don't remember of any others; there may be exceptions, but I don't know of any.

Cross 19. How long did they use on those other cars these brakes which broke upon only one end of the car?

A. I think they were used all the time I was there?

603 Cross 20. You say the first work you did when you went to the New Jersey road was on the blocks to be put on the outside of the wheels; was this brake as got up by Talson, as you say, a new thing when you first went to the road?

A. The first work I did was to get out those blocks, not for that particular car, but to have on hand in case one should break, to put them on; I found this brake there when I commenced work there.

GEO. W. FIELDER.

Subscribed and sworn to before me this 23d September, 1867.

R. E. STILWELL,
Examiner, &c.

Smith Ryder, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Smith Ryder; 47 years of age; reside in Brooklyn, and am a broker.

Q. 2. Have you been in the employ of the Long Island Railroad Company; if so, when were you so employed, from what time to what time, and what did you do?

A. I was in their employ; I commenced in 1843, and left in 1852; in the first place, I run the freight train to carry materials to build the road through; I then run the short passenger train from Hicksville to Brooklyn, and then the Boston train from Brooklyn to Greenport; I ran the mail trains afterwards, and the freight trains, and had charge of the depot at Brooklyn during the latter part of the time I was with them.

604 Q. 3. While employed as conductor, did you know of the use of a double-acting brake on the cars of the Long Island Road; if so, please state what you know, and tell what kind of a brace it was; that is, what was the operation?

(Objected to.)

A. Yes, sir; we had a brake there double-acting; that is, I call it a double-acting brake; it was a brake where a man could stand at one end of the car and brake both trucks at once; I know it worked with a lever in the middle, because it worked on both ends at once, and from either end; we had to be very careful, I know, to notice the brake to keep the wheels from sliding; in wet weather, in chocking the wheels, we would occasionally slide them.

Q. 4. You say you had to notice the operation of the brake and keep the wheels from sliding; to what extent have you seen wheels slide on cars which had this double-brake attached?

A. Both trucks would slide, and I have seen the wheels of one truck slide; that was owing to the blocks between the wheels being worn on one truck more than on the other.

Q. 5. And was this sliding of the wheels in both trucks produced by one brakeman or not?

(Objected to.)

A. Yes, sir; it was produced by one brakeman braking at one end of the car.

Q. 6. Could he have done the same thing from the other end of the car?

A. Yes, sir; they were both alike.

Q. 7. During what year was this brake, the operation of which you have described, in use on the cars of the Long Island Road, and to what extent was it used?

605 A. I wont say positive whether it was in 1845 or '846; it was before 1847; for I know we hauled the train off—the through Boston train, I mean—in 1847.

Q. 8. While employed as conductor in the years 1845 and 1846, did you know Uriah Van Voorhis; if so, what did he do on that road?

A. I know a man by that name; he had charge of overhauling the brakes and cars on that road; we called him the carpenter; he done this at Brooklyn; the main shop for repairs was at Jamaica.

Cross-examined by M'r Cozzens:

Cross 9. Who was president of the Long Island Road in 1845, 1846, and 1847?

A. George B. Fisk was president in 1845, and, I think, in 1846; after M'r Fisk, M'r James H. Wells was president.

Cross 10. Upon how many cars of the Long Island Road do you know of your own knowledge, that there was in 1846 or 1847, such a brake as you have referred to?

A. I am sure there were two, and there may have been more.

Cross 11. What kind of cars were these two?

A. Passenger-cars.

Cross 12. What time in 1847 was that through Boston train taken off?

A. That is more than I can tell you here; if I was home I could tell you; I think it was in the spring.

Cross 13. Did these two cars run in that train?

A. They were on that train often; I think they were in it most of the time; it is so long ago I cannot recollect exactly.

Cross 14. Is your reason for supposing that these brakes you have spoken of worked with a lever in the middle because they broke on both ends of the car?

A. Yes, sir.

Cross 15. Have you any other reason for supposing they had a lever in the middle?

A. I am pretty positive of seeing a lever in the middle.

606 Cross 16. Are you so positive of it that you are willing after this lapse of time to swear to it absolutely.

A. Yes, sir; I am.

Cross 17. Now, please state the numbers of those two cars, which had, as you say, this brake?

A. That would be an impossibility for me to do, sir.

Cross 18. Can you state anything about those two cars, or either of them, which would identify them, or would distinguish between them and the other cars on the road?

A. These cars that the brake was on, if I am not mistaken, were built by Davenport & Bridges, of Cambridgeport, Massachusetts; I could not state anything about those cars to identify them from others on the road.

Cross 19. How many passenger cars were there on that through Boston train usually?

A. As a general thing it would average three passenger cars; I have run as high as seven or eight.

Cross 20. What kind of brakes was on these other cars in this train, except these two?

A. They had brakes on each end of the car; they were single-brakes.

Cross 21. How long a time did they use single-brakes on those cars?

A. That I can't say; they run them as long as the train ran.

Cross 22. Are you able to say how long before the through Boston train was hauled off that these brakes were used?

A. I could not be positive as to the time.

Cross 23. Did they have any of these double-acting brakes on the freight-cars?

A. Not the freight-cars that I know of; I don't think they did; my opinion is, that they did not while I was there; they had one car that M'r John Arrison put it on, which was a baggage and mail-car; he put the windlass on the inside, and the man would stand inside of the car and brake.

Cross 24. When did M'r Arrison do this?

607 A. Well, that was during 1845 to 1847; I can't say what month or year it was in; I think it was in the spring of 1847 that I first noticed it.

Cross 25. Who was M'r Arrison, and what was his position?

A. Mr Arrison was the man at Jamaica who repaired the cars, built the cars, and was master of car repairs at Jamaica.

Cross 26. Did he have charge of putting brakes on the cars of the road, when they needed any?

A. He put the brakes on when the cars were sent to him at Jamaica for repair, but if there was anything they could do at Brooklyn they did it there, as they had a blacksmith and a carpenter there to do the work.

Cross 27. Did they send the cars to Jamaica when they needed any considerable repairs?

A. Any considerable repairs they sent to Jamaica.

Cross 28. Did these two cars you have spoken of as built by Davenport & Bridges have double-acting brakes on when they came on to the road?

A. Not to my knowledge.

Direct resumed by Mr. Whipple:

Q. 29. You say that you ran in the Boston train as many as eight cars, including the two which you say had the double brakes on; may not some of the other cars have had a double brake on, which escaped your observation?

A. There is a possibility about it; I could not say whether they had or not.

SMITH RYDER.

Subscribed and sworn to before me this 23d day of September, 1867.

R. E. STILWELL,
Examiner, &c.

Adjourned to 11 a. m., the 24th instant.

608 TUESDAY, *September 24th*, 1867.

Present, counsel as before.

JOSEPH F. TALSON, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Joseph F. Talson; sixty-two years of age; reside in Hudson City, New Jersey; and am in the rubber car-spring business.

Q. 2. Have you been in the employ of the New Jersey Railroad and Transportation Company; if so, when, how long, and in what capacity?

A. I have been in their employment from May, 1836, to August, 1849, as the superintendent of the car department of that road.

Q. 3. While so employed did you know of the application and use of a double-acting brake on a car or cars of that road? If so, please state what you know of your own knowledge, and at length, and give particulars.

A. I remember a man by the name of Isaac Newton Stanley bringing a note from M'r Robert Schuyler, vice-president of the New Jersey Railroad and Transportation Company, and a model with a double-acting brake upon it; this was twenty-five years ago this present month; that note requested me to give Stanley all the facilities that he wanted to apply this brake upon a car; I gave him the facilities he needed for so doing, and he applied his brake with two levers, under the body of the car, some distance from the centre; he made the connection with wire, about the size of telegraph wire, and the connections came short in closing together; the connecting rods were about six inches too short; he went to the waste-box and got some cotton-strings, and tied them together, then he asked me to order out a locomotive to try his brake; I told him they would laugh at me with cotton-strings to test a locomotive's power; I told him I would take 609 five or six of the men from the shop and would start the car on a momentum, and told him to go and get on the car and when I told him to brake, to do so; we started the car, and I stepped one side, and told him to brake, and he did so, and the strings gave way, and the men laughed at Stanley and he went away; we set the car one side on the outside track, and I did not see M'r Stanley again for six weeks; in the mean time we had to use the car; I took M'r Stanley's brake off, and laid it away carefully up-stairs in the car-shop; I then put a brake upon it myself with a single-acting lever, making the connecting rods five-eighths, and the car run upon the road on the Philadelphia line.

Q. 4. To what kind of a car was the brake applied?

A. It was applied to a brakeman's car, on what we call the Philadelphia line; it was a platform car for carrying baggage-crates on.

Q. 5. You speak, in answer to the third interrogatory, of a model in connection with the note which said Stanley brought from said Schuyler. Please describe the brake on said model, both as applied to the body of the model and to the trucks of the same.

A. The model had a single-lever in the middle with rods connecting at the extreme ends of the centre-lever, connecting with the levers on each truck; the connection from the centre-lever run to the windlass or crank, where the brake was applied at both ends; one end was the same as the other; there were two levers on each truck, one on each brake-bar. I asked Stanley why he did not put one centre-lever on his brake instead of two; his answer was, I am a watch and clock-maker, and I never worked outside of a watch or clock, and when I come to a car which is forty-five feet on the body I am lost, and that is the reason that I put two levers instead of one upon your car. I asked him why he had four levers, one on each brake-bar; he said the reason was he meant to connect the inside levers with a single rod, and do away with the bar; he connected his windlass or crank with the outside lever of each truck.

Q. 6. How did you understand that he thought the using of the two levers, instead of one, under the body of the car, would aid him in applying his brake to so long a car?

610 A. He said the reason why he used two levers was because of the great length, to divide the distance, his rods being so very light that they would not hold up; he had on his a chain running over a pulley to bring the levers back again to their proper place.

Q. 7. Please describe how the brakes were arranged in the trucks on the cars of that road at the time M'r Stanley applied his brake, and how were they arranged in the car on which he did apply the same?

A. In the first place, there was a long rock-shaft which run parallel with the axle-trees, and at each end was a cam; in the centre was a long arm or lever connecting with a connecting-rod to another rock-shaft at the end of the car; that connected with an upright step lever, and that applied by the connecting-rod to the cam betwixt the brake-blocks between the wheels. Stanley's brake was exactly as I have just described it, in one truck; the other truck, the brake-blocks were outside the wheels; he hitched his connecting-rod to the arm of the rock-shaft betwixt the wheels; the other end, he applied it with two levers, one on each end of the truck; when I took hold of the car, I put all the brake-blocks on the outside of the wheels, and made the connections with one lever in the centre of the car.

Q. 8. After the application of this brake by said Stanley, did you see him at any time or times? If so, please state the interview or interviews with him.

A. I did; he came to me about six weeks after, and I told him that I had the car in use, and he went away a few moments and came back again; I told him I thought of applying his brake to some other cars on the road, and he didn't seem to oppose it until he came the third time to me, when he said I must not do it; he said he had had an interview with M'r Timothy L. Smith, the superintendent of the motive power on that road, and that he said I had made an improvement on his (Stanley's) brake, and that I would get a patent on the improvement and knock him, Stanley, out of his right; we were applying at this time a bumper-brake, to be acted upon by the locomotive with a long draw-

beam running through the car, forming the bumper at both ends;
611 the man that brought the patent and the model there said that
he had agreed to give M'r Smith, to introduce it on that road,
$500; I never saw Stanley from that time until three years after; I met him one day in Greenwich-street, in New York. I asked him why he didn't carry out his brake-patent; his answer was, it was for the want of means. I asked him why he didn't let his case be known to me, that I would have furnished means, or found some person that would; he took hold of me and said, "Oh, if I had only carried that out (his patent), it was the greatest thing out," he said; that is all; I have never seen the man since.

Q. 9. Did you ever know Francis A. Stevens, of Burlington, Vermont, and did he call upon you at your house, in Hudson City? If so, please state his business and the conversation between you and him concerning brakes, and any particulars connected with that meeting that you may have a recollection of.

A. I well remember, four or five years ago, he came to my house, in Hudson City, and said that he was the inventor of the Stevens brake, and said if I would give him a certificate for his brake being superior to any other brake in use, he would give me $50 for that certificate. I told him I could not do it without I saw his brake and understood it well before I gave an opinion; he said if I would go with him to Jersey City he would explain it to me, and show it to me in actual use; I came from my own house to Jersey City with him, and examined the cars on the side track on the New Jersey Railroad; the first car we came to, there was a Hodge brake on it, the next was a single-lever brake, a Stanley brake; the next was a Stevens brake; he began to explain the superiority of his brake over the others, and we kneeled down at the side of the car; I heard him patiently through his explanation; I told him then that it was Stanley's brake, not his; he went away, and I have never seen the man since; I gave no affidavit nor any certificate.

Q. 10. You say, 25 years ago, said Stanley came to you with a note,
model, &c.; how do you fix that time, that is, the year?
612 A. I fix the date by the New Jersey Railroad and Transportation
Company's books; when I was called, I went immediately to the books; the account with Stanley began September 24th, 1842, and ended in December, the same year; the account was first with the brake; we at that time ran our wheels very close together; Stanley wanted the wheels further apart than we were in the habit of putting them; he went to M'r Schuyler and got permission to build a pair of trucks; he employed four men to do it, and the trucks were never completed, and Stanley went away, and the New Jersey Company had to pay the men, and that account stands on the books of the company to this day against Stanley, and during the time they were building these trucks the brake was applied.

Q. 11. Was the brake which you say was put by yourself on the platform-car and run by the New Jersey Railroad and Transportation Company in the Philadelphia line ever taken off, to your knowledge?

A. No, sir; it never was, to my knowledge; but I remember once having a hook repaired. Samuel S. Hutton, foreman of the blacksmith shop, steeled it in the throat of the hook. He said that would last as long as the car would last.

Q. 12. How were the connections made to the centre lever which you applied to said car; that is, what were their relations to each other?

A. The centre lever of the car, as I connected it, had a large hole at each extreme end of the lever sufficiently large to allow both hooks to hook in the some hole of the lever.

Q. 13. Please state, if you know, how the connections in said centre lever differ from the one now used on the cars of that road.

A. The New Jersey Railroad now connects theirs with a hook and chain, or link and hook.

Q. 14. Please state, if you know, how the same connections are made on the cars of the Camden and Amboy road.

A. The connections on the cars of the Camden and Amboy Railroad are made from about eight to ten inches from the end of the lever, and this part of the brake connects with the brake-bars or levers on
613 the trucks. The connections on the end of the bar or lever connects with a windlass when the brakeman brakes at the end of the car, which gives eight or ten inches leverage and fulcrum.

Q. 15. While in the employ of the New Jersey Railroad and Transportation Company, did you know of the use of a centre-lever brake on a car, or cars, on the Camden and Amboy road, running in connection with the New Jersey Railroad and Transportation Company? If so, state what you know, of your own knowledge

A. I do, sir; on a car called the Tyler-car. The first time I ever saw that car was in the fall of 1843. I made the remark to one of my men—I don't know which one it was—that the Camden and Amboy road never followed the example of anybody. They made the alterations in connecting the ends of the lever, and brought it down about eight or ten inches—I mean the connections with the trucks. That was, as I suppose, to give it more power.

Adjourned to the 25th instant, at 11 a. m.

WEDNESDAY, *September 25th*, 1867.

Present, counsel as before.

Q. 16. The witness is now shown Exhibit A, and his attention is called to the brake thereon, and is asked what it represents.

A. I think, as far as my knowledge extends, that that is a fair representation of the brake on the Tyler-car, as I saw it in the fall of 1843.

Q. 17. While in the employ of the said New Jersey Railroad and Transportation Company, did you know Edwin Lockwood; if so, what were your respective relations to each other during that time?

A. I have known Edwin Lockwood ever since 1836; he was the master car-builder on the Camden and Amboy Railroad, and is in that capacity still. Our relations to each other were, that our cars from
614 our road run to the Camden and Amboy road and theirs run to the New Jersey road, and I held the same position on the New Jersey road that he did on the Camden and Amboy road.

Q. 18. Have you had any conversations with M'r Lockwood of late in reference to the use of double brakes on the cars of his road; if so, when, and what was said on the occasion?

A. I have had none since last winter. M'r Whipple employed me last winter to get evidence in this case. I immediately proceeded to Bordentown. I had an interview with M'r Lockwood. I asked him if he remembered when the first double-acting brake was first put upon the Camden and Amboy Railroad. He said the first double-acting brake that he remembered being in general use on the road was put on the Tyler-car, to convey President Tyler to the Bunker Hill Monument celebration.

Cross-examined by M'r Cozzens :

Cross 19. Are you aware that in this suit there have been examined, on the part of the defendant, about thirty witnesses, who have testified concerning the Tyler-car, and other cars on the Camden and Amboy road ?

A. I am not. I don't know anything about how many witnesses.

Cross 20. Do you know that there have been quite a large number of witnesses examined respecting such cars ?

A. I do not. I never spoke to any but M'r Lockwood and one other man, whose name I don't know, about this Camden and Amboy question.

Cross 21. When did you speak to this other man ?

A. It was at the first interview, last winter, I had with M'r Lockwood.

Cross 22. What time in the winter was that ?

A. Well, I cannot say. I know that there was ice and snow on the ground, for I walked from Trenton to Bordentown.

Cross 23. You are sure, then, that it was in one of the months of last
winter, and not in either of the fall months of 1866 ?
6 5 A. To the best of my knowledge, it was in December, 1866.
Cross. 24. State who has brought together and prepared the testimony employed by the defendant in this case; state all you know on this subject.

(Objected to.)

A. The Camden and Amboy matter I have not had anything to do with; the New Jersey Railroad I have seen all the witnesses that have come on the stand; the Long Island Railroad, I saw four.

Cross 25. Do you know who has seen witnesses in regard to the Camden and Amboy matter ?

A. I do not; but I believe that M'r Lockwood has had the whole charge of the matter, so far as my knowledge extends.

Cross 26. Please mention the names of all the witnesses or persons whom you saw in regard to the brake on the New Jersey Railroad.

A. I saw John Jobes, Bernard Hughes, James Gamble, and George Fielder; and I saw Moses Parsells and Erastus Reid; I have seen a great many other persons, besides those named, that would come if I wanted them, but I didn't want them.

Cross 27. State the names of those other persons.

A. Hurd is one, but what his christian name is, I can't say; Ambrose Ward is one; there is another one yet, but I cannot remember his name.

Cross 28. In giving this last answer, did you remember Ambrose Ward's name until you were reminded of it by M'r Whipple ?

A. I did not.

Cross 29. Are Hurd and Ward, and the third one whose name you can't remember, all of them, or are there others, besides ?

A. There are several others.

Cross 30. Can you state the names of any of those others ?
616 A. Yes, sir; there is Edgar Morris, Nicholas Schæffer, George
Fielding, James Clarke, William Sanderson; I can't remember any more just now; I have no doubt there are more, but I can't think of them just now, but I have seen all the men.

Cross 31. State what conversation took place between you and these persons, including both those who have been witnesses and the others.

A. Edgar Morris said he knew nothing at all about it; Nicholas Schæffer said that he couldn't remember anything at all about it; George Fielding said that he couldn't remember anything at all about it; James Clark said he couldn't remember anything at all about it—he worked on the trucks, he said, for Stanley; Moses Parcells said that he remembered the brake, and was willing to come and make a statement to that effect; William Sanderson said that he worked upon the trucks for Stanley; that he remembered the man, and remembered the brake; Ambrose Ward said he remembered that on a baggage-car on the New Jersey Railroad there was a double-acting brake with one centre lever on it; M'r Hurd, who runs a locomotive on the New Jersey road, said he was willing to come into court and testify that there was put on, by me, a double-acting brake with one centre lever, and that it run on the New Jersey Railroad; Erastus Reid was foreman under me; he was here, in court, one day, but his health was so poor that he could not stay in court; he is very feeble, and went home without giving his evidence; he said he would testify that Stanley put the brake on the road, and that I strengthened it, and that it ran on the road.

Cross 32. Do you think that those are all you saw?

A. I cannot state whether it is or not.

Cross 33. Within how long is it that you have seen all those persons? State as near as you can.

A. It is since M'r Whipple employed me in this case; I have seen all the men I have stated, since M'r Whipple employed me; some of them I have seen within the last two weeks, and I have had interviews with them all along, during this year.

617 Cross 34. State more definitely, if you can, when you saw Morris and Reid.

A. I haven't seen Morris since January or February, I think, of this year; and I saw Reid here, in court, last week; I had seen Reid before about this matter; I have had three interviews with him; the first one, I should think, was over six months ago; the second one, I should think, about three or four months ago, and the last one was last week; I think those were all the times I have seen him about this matter.

Cross 35. Did you know a man by the name of Edward Beattie, and is he living?

A. I did know him—he is not living.

Cross 36. Did you know Timothy L. Smith, and is he living?

A. I did know him—he is dead.

Cross 37. When you saw these various persons mentioned in regard to this New Jersey brake, what did you say to them? State as fully as you can.

A. Well, I will tell you what I said as near as I can remember; I asked them if they remembered Isaac Newton Stanley applying a double-acting brake upon the New Jersey Railroad; some would say they did, others would say they did not; those who said they did remember, I talked to upon the subject; those who said they did not, I stopped the conversation.

Cross 38. To those who said they did remember, what did you say?

A. I asked them to describe the brake, and they did so.

Cross 39. Did you tell them how long the brake was used, or did you talk to them about how long it was used?

A. No; whatever there was, they said themselves; I did not dictate to them in any way or shape.

Cross 40. Did you remind them of any circumstances connected with it, or try to refresh their memory in any way?

A. I might have done it, but I think not.

Cross 41. Did you find those who did remember about it, fresh and clear in their recollection?

618 A. I did, sir.

Cross 42. Did they not require any time to think the matter over, to bring the facts to their mind?

A. As a general thing they did not.

Cross 43. What did you say to those who did require time?

A. I told them to consider over it and let me know; those who wanted time, to consider of it.

Cross. 44. Are you able to state anything which you said, or may have said to any of those persons, by way of refreshing or helping your memory?

A. Not as I know of; I don't remember as I said anything; their memories were as fresh as mine.

Cross 45. Are you, then, positive that you did not say anything to any of them to help or refresh their memory?

A. I might, or I might not; I cannot say that I did.

Cross 46. Did you, while this last question was being dictated to the examiner, see the counsel for the defendant shake his head, as if intimating that a negative answer should be given to the question?

A. I saw him shake his head just as I have seen Mr Cozzens shake his head to Mr Sayles a number of times.

Cross 47. Are you able to remember anything at all that you may have said to any of those persons referred to, by way of helping their memory?

A. I am not.

Cross 48. Did you not say anything to any of them about how long the brake remained on the road, or how many cars it was applied to?

A. I might have done it to get at the facts in the case.

Cross 49. What did you so say?

A. I cannot remember.

Cross 50. Can you remember the substance of what you so said?

A. No, sir; only as I stated before to get at the facts in the case.

Cross 51. Did you tell them in substance that it was used on the road a long time?

A. I did not, sir.

619 Cross 52. Did you tell them in substance that it was not used on the road a long time?

A. The same answer; I did not.

Cross 53. Referring particularly to Bernard Hughes; state whether you said anything to him when you talked with him, by way of refreshing his memory?

A. I don't think I did; Bernard Hughes was one of the witnesses on the trial at Albany.

Cross 54. Can you state positively whether you did or not?

A. To the best of my knowledge and belief, I believe I did not.

Cross 55. Do you know the substance of what Bernard Hughes has testified to in this suit?

A. I do not.

Cross 56. When you talked with him what did he tell you that he remembered about the subject?

A. He said he remembered it distinctly, and said the car and the brake was on the road to this day; he said he thought the car was on the freight train.

Cross 57. Is that all he said that he remembered?

A. No, sir; he distinctly remembered the whole of it, he said, and he described it to me.

Cross 58. Please repeat the description of it which he gave you.

A. It was the tying up of the Stanley brake with the strings, pushing the car on the track, Stanley brakeing upon the same, and me strengthening up the rods, and putting one lever instead of two.

Cross 59. Was he able to describe to you how the brake was arranged and constructed between the trucks, and in the trucks; and if so, how did he describe it?

A. He described as Stanley having two levers, and mine having but one, his being very weak and mine of sufficient strength to do the duty of the brake; he said something to me, if I mistake not, about Stanley's brake, that one truck broke inside and the other on the outside of the wheels; he could not describe it mechanically, because he was not a mechanic.

620 Cross 60. Did he give you any description at all about how it was constructed and arranged in the trucks?

A. No more than I have described.

Cross 61. Did he mention about the rock-shaft that was used in the trucks?

A. I don't believe that he did, for we used altogether that kind of rock-shaft on the road.

Cross 62. Did he know whether the Stanley brake had a rock shaft in the trucks, or not?

A. I believe I did, for I believe he helped to shove the car when we tried the Stanley brake, and we all of us thoroughly examined the car at that time.

Cross 63. Prior to the experiments with the Stanley brake, had there been any of the trucks of the cars on the New Jersey road, which had brake rigging on them at all which did not have the rock-shaft arrangement, which you have described?

A. There were two different kinds, each of which had a rock-shaft; one of these kinds had two rock-shafts, and the other, one rock-shaft; there was a third kind which had a triangle worked by a foot-lever which was pressed out by the driver, and worked by two wheels only; after Stanley came all these were dispensed with, and the clogs, as a general thing, were put on the outside of the wheels; Stanley originated the idea of putting the clogs on the outside of the wheels, as far as I know.

Cross 64 Down to the time of the Stanley experiment were there on the New Jersey road, to your knowledge, any other kind or kinds of brake gear in the trucks which were not either this triangle form you have described, or some variety of the rock-shaft form?

A. I know of others, but I am not able to give a description of them at this late day.

Cross 65. How many of those other kinds were there?

A. If I mistake not there were five kinds; three of which I have described, and the other two I cannot describe them minutely.

Cross 66. In regard to those other two kinds, cannot you give some idea of the means by which the brake blocks were forced against the wheels?

A. I cannot.

621 Cross 67. In those other two kinds were the brake gear in the trucks, like the brake gear in the trucks of Exhibit A?

A. No, sir.

Cross 68. Was it like the brake gear in the usual four-wheel trucks of double truck, or eight-wheeled cars, which use the centre-lever brake, such as are now used on the New Jersey railroad?

A. It was not.

Cross 69. Did Hughes remember anything more, or give you any more descriptions than you have above stated?

Cross 70. Has any other person beside yourself been engaged in seeing and talking with the persons, who have been seen in relation to this brake on the New Jersey road?

A. Yes, sir; M'r Sayles, M'r Waterman, Edgar Morris, and M'r Whipple.

Cross 71. Who, besides M'r Whipple and yourself, have done so on the part of the railroads?

A. Nobody, to the best of my knowledge.

Cross 72. If anybody else had, you would have known it, would you not?

A. I think I would.

Cross 73. Did M'r Whipple see and talk with them, before you did, or afterwards?

A. I cannot say that, sir.

Cross 74. After you had talked with them did you inform M'r Whipple of what they said?

A. Sometimes I did, and sometimes I did not.

Cross 75. Did you in any instances suggest to M'r Whipple to call on them, himself?

A. I did not.

Cross 76. In the cases in which you did not inform M'r Whipple of what the parties said, did you get the parties to go to him?

A. I might have done it, and I don't know as I did.

Cross 77. After you had seen Jobes, Hughes, Gamble, and Fielder, did you inform M'r Whipple of what they said?

A. I did; that is what M'r Whipple employed me for.

622 Cross 78. Before you saw these last-named persons, had M'r Whipple seen them?

A. No; because I had been acquainted with them 25 years.

Cross 79. Were you the first to give M'r Whipple or any one else connected with the defendants in this case, the information that these last-named persons would be of use to the defence?

A. I was; M'r Whipple brought an instrument to me in writing, dated, if I mistake not, in 1853; he asked me if the signature on it was mine; I told him it was, and he asked me if I could prove what that instrument stated; it was an affidavit sworn to by me, respecting the double-acting brake, drawn by Richard Middleton, and he told me it was drawn for M'r Gifford and M'r North, of the Hudson River Railroad; M'r Whipple asked me if I could prove that affidavit by good and substantial witnesses; I told him I could get him from ten to twenty witnesses from different roads; he asked me if I was in business; I told him I was not in any business at that time; M'r Whipple told me that he wanted to employ me to work up this case, and I have been so employed at different times, since that time, and I believe that was in December last.

Cross 80. Have you that affidavit, or a copy of it in your possession?

A. I have not; I believe M'r Whipple has it; I have not seen it, to the best of my knowledge, since.

Cross 81. Will you please state, as nearly as you can remember, the contents of that affidavit?

A. That affidavit stated, that in the year 1842, one Isaac Newton Stanley brought a model of a double-acting brake to the New Jersey Railroad, and that it was applied upon the same road, giving a description of the brake; that is about the substance of it.

Cross 82. Did it state that Stanley's brake failed, and that you took up the matter and strengthened the brake, and put it on to a car; and did it state how long the brake, as you arranged it, was used on the road, and upon how many cars it was used?

623 A. It did state after Stanley's brake failed that I did take it up and strengthen the brake, but the length of time it was on the road it did not state; but I have asked since then, in looking up this evidence, several parties, if they ever knew the brake to be taken off; they said they did not remember of its ever being taken off, neither do I; it did not state that Stanley put it on one car, and that I changed it on the same car; and it did not say anything more than about one car; and I say distinctly, that it never was used on more than one car of that road while I was on the road; that, in substance, is all there was in the affidavit.

Cross 83. Please state the circumstances under which that affidavit was made by you?

A. I don't know. Mr. Gifford and Mr. North were in the room, and I had, I think, either three or four models of little cars with a double-acting brake upon them. Mr. Gifford says to me, "Mr. Talson, I want you to give me a mechanical opinion on these double-acting brakes." I examined each model carefully, and I said, so far as my mechanical ingenuity carries me, there is a little mechanical difference in the arrangement, but the princip*al* is the same thing. That is my opinion as I then told him, and Mr. Gifford said that he thought my opinion was correct; and that is all that is said. It was from one to three months afterwards, I think, when I made the affidavit. The affidavit was drawn under my direction by Richard Middleton, who is now dead.

Adjourned to 11 a. m., the 26th inst.

THURSDAY, *September 26th*, 1867.

Present, counsel as before.

Cross 84. State, if you know, whether at the time that affidavit was made by you a suit had been brought by Henry Tanner against the Hudson River Railroad Company upon the patent concerned in this case?

A. Not that I know of.

624 Cross 85. State, if you know, whether Mr. Gifford and Mr. North or either of them saw that affidavit?

A. Not to my knowledge.

Cross 86. Did Mr. Whipple say to you where he obtained that affidavit? If so, what did he say?

A. He said, if I understood him right, that he obtained it from the Hudson River Railroad.

Cross 87. Did he say when?

A. He did not.

(Counsel for the defendant here states that he will have a certified copy of the original of said affidavit annexed to the deposition of this witness.)

Cross 88. Do you know any other persons besides those whose names you have mentioned who know anything about this brake on the New Jersey Railroad? If you do, please state their names.

A. Yes, I do. I know several men, and think I could add to the list by looking over my memorandum at home; but I don't know as I remember their names now.

Cross 89. Will you, when you return home this afternoon, look at those memoranda, and will you, to morrow, give the additional names you may find in them?

A. I will endeavor so to do.

Cross 90. With the exception of the names already mentioned in this deposition, and with the exception of such additional names as you may find in those memoranda, do you know of any other persons who know anything about the use of this brake on the New Jersey Railroad prior to 1847?

A. I don't know as I do, but I think I do.

Cross 91. Will you to-morrow give us the names of all those persons whom, as you say, you think you know to be acquainted with the subject enquired about?

A. I will endeavor to do so.

Cross 92. Have you communicated to defendants' counsel all you know on the subject of the brake on the New Jersey Railroad?

625 A. I believe I have communicated all to Mr. Whipple.

Cross 93. You say that immediately upon Mr. Whipple's employing you in this case in December, 1866, you went to Bordentown to see Mr. Lockwood. What made you go there, and why did you want to see Mr. Lockwood?

A. The reason was I told Mr. Whipple that the Camden and Amboy road had a double-acting brake upon it the year after we put it on the New Jersey Railroad. He told me then to go and see about it. I went and had an interview with Mr. Lockwood at Bordentown. The first question I asked him was what year it was they put the first double-acting brake upon their road. He said, "I cannot tell the year, but it was on the Tyler car"; and that is all that was said at that time. We sat there for a little while, and I then asked him if would refer to the books and give me the dates, and I then left him. The next interview I had with him was about from two to three weeks afterwards, and he said then that the Tyler car was put on the road in 1843, and that they had bought the car from the Philadelphia and Trenton Railroad Company, a new car; and that in 1843 they took John Tyler over the road in that car to New Brunswick on his way to the celebration of the Bunker Hill Monument; and that after that car had run awhile they put on double-acting brakes on two or three other cars, and that they were still on the road.

(At the request of the defendants' counsel this answer was here read over to the witness, whereupon the witness said he desired to correct the remark about its being a new car by saying that he did not mean to say that it was a new car, but that it was a new car to them on their road, and when they bought the road the car came to them.)

Cross 94. Before saying that you wished to make this correction, did Mr. Whipple pass to you under the table a piece of paper or show you a piece of paper?

A. He did not, sir. I never touched a piece of paper from Mr. Whipple nor see it.

Cross 95. Is that all the conversation that occurred at both those interviews between you and Lockwood?

A. It was not.

Cross 96. Please state it all.

626 A. Mr. Lockwood, when I asked him to be so kind as to make a model, said that he didn't know that the Camden and Amboy Railroad would care about going into the suit. I understood him to say that they had bought the brake, and paid for it to Mr. Sayles, for a small amount, and under those circumstances he thought the company

would not go into the suit. I told him that the patent had been renewed, and he said that would make a difference; and I never saw Mr. Lockwood again until I saw him on the stand. That is all I had to do with the Camden and Amboy concern.

Cross 97. When was it that M'r Lockwood said that the road had bought it or paid for it a small amount to M'r Sayles?

A. It was at the second interview, which was in January, I think, 1867.

Cross 98. When you saw M'r Lockwood at these times, did you know that a large number of the railroad companies of the United States had formed an association to, among other things, defend this patent?

A. I did not, nor neither do I know it yet.

Cross 99. When you first saw M'r Lockwood, did you find his memory clear and fresh about this double brake on the Tyler car?

A. I did, sir.

Cross 100. Did he, without any help from you, give you without any hesitation or reflection a clear and full account of it and of its being used as you say he stated?

A. He gave me a full account of it, but coming upon him so unawares that he said that he wanted a day or two to reflect upon it. But he told me distinctly of the Tyler car brake with its operations and a single lever in the middle of it. That he described very minutely, and I could not describe it better than he did.

Cross 101. What was it, then, that he wanted a day or two to reflect upon?

A. He said he wanted to see M'r Van Rensalaer, and see if they would enter into the matter.

Cross 102. Was that all he wanted to reflect upon?

A. He didn't assign anything else.

627 Cross 103. At your first interview, was his memory fresh and clear that after the brake was used on the Tyler car in 1843 it was soon after put on other cars on the Camden and Amboy road?

A. It was.

Cross 104. Did he, at either of the interviews had with him, mention the names of any persons who could testify in regard to this brake on the Tyler car?

A. He did.

Cross 105. Whose names did he mention?

A. I could not say who the men were, for they were entire strangers to me, but he named over one man that I knew; that was John Barney; and he said that if John Barney was alive at this time he would have been a very good witness in this case.

Cross 106. Did he name to you Nichol F. Smith and William Venable as persons who knew about the use of this double brake on the Tyler car?

A. He named over to me six or seven names, but whether he named those persons I could not say; he might or he might not.

Cross 107. Did he say whether he remembered anything about the trial of the Stanley brake, and of said brake, as you changed it, in 1842?

A. I don't know that we ever named the Stanley brake. I went to see him, and I said we put our brake on in 1842, and you did the year after. I believe that was all that was said about it.

Cross 108. What made you think that they put on the brake the year after the Stanley brake?

A. I didn't think at all. I was sure, because I saw it with my own eyes.

Cross 109. When and on what car?

A. In 1843, on the Tyler car.

Cross 110. Did you see it often on that car in 1843 and afterwards?

A. No, sir; I did not often see it. That was a special car, fitted up different from other cars. The seats inside were what you may term rocking-chairs, tete-a-tetes, and armed chairs, and, I believe, what they call conversation chairs. There were five or six different kinds,
628 and that car was only used over the New Jersey Railroad on special occasions.

Cross 111. Did you see the double brake on that Tyler car in 1843 and afterwards often enough to have a clear recollection that it had a double brake, and how such brake was constructed and operated?

A. I believe I did.

Cross 112. When, as you say, you told Lockwood that "we put our brake on in 1842, and you did the year after," did you mention the name of the car on which the Camden and Amboy road put it on the said year after?

A. I did not, sir. M'r Lockwood did himself.

Cross 113. Didn't you remember what car they put it on the year after?

A. Yes, I did, sir; but I didn't remember the name until M'r Lockwood called it the Tyler car, and then I distinctly remembered the name.

Cross 114. Did you remember enough about it to recollect that the car on which the Camden and Amboy Railroad put the double brake the year after was a special car fitted up in the peculiar manner you have mentioned?

A. Yes, sir.

Cross 115. Did you remember all that when you first went to see Lockwood, and before you had seen him on the subject?

A. I did. I have never conversed with M'r Lockwood or any of the Camden and Amboy people about the fitting up of the car. M'r Lockwood told me that he had told M'r Sayles that the double-acting brake was on the Tyler car. He said M'r Sayles and a M'r Waterman had both been there.

Cross 116. How long did your first interview with M'r Lockwood last, and how long did your second one last?

A. I think it was about an hour each time.

Cross 117. At which of the interviews was it that M'r Lockwood said this about M'r Sayles and M'r Waterman?

A. I think it was the last one, in January, 1867.

Cross 118. Did you, when you first went to see Lockwood, remember enough about this brake on the car on the Camden and Amboy road to be able to speak of it to him?

A. I did, sir.

629 Cross 119. How soon after your first interview with him commenced were you able to allude to it to him?

A. Immediately.

Cross 120. Did he first speak to you or you first speak to him about it?

A. I first spoke to him and said, "You had a car on your road with a double-acting brake on it the year after we had on the New Jersey road." He said, "Yes, the Tyler car."

Cross 121. Did you, in the course of your conversation with Lockwood at your first interview, speak of the peculiarities of this Tyler car, or allude to them in any way?

A. I did not, nor to any other witness, to the best of my knowledge, nor till I described it in this court.

Cross 122. How long, then, have you kept in your memory the peculiarities of this Tyler car which you have to-day mentioned?

A. Ever since 1843. I have never seen a car fitted up inside as that car was before nor since, to the best of my knowledge, and that is the peculiarities of that car.

Cross 123. Do you, then, mean to be understood that ever since 1843 down to the present time you have remembered that Tyler car and its peculiarities?

A. I do, sir.

Cross 124. Could you at any time since 1843 have called it to recollection and described it?

A. I could have done it at any time had I been called upon.

Cross 125. Could you at any time since 1843 down to the present time have remembered that it had upon it in 1843 a double-acting brake?

A. I could, sir.

Cross 126. Such a double-acting brake as is shown in Exhibit A?

A. Yes; and I believe it is a fair representation of the brake on the Tyler car.

Cross 127. Do you mean to be understood that at any time since 1843,
when you might have been called upon, down to the present time,
630 your recollection of this brake, which you say the Tyler car
had on in 1843 and afterwards, was clear enough to have enabled you to describe its construction and arrangement, as it is shown in said Exhibit A?

A. I think I would, with a few days' reflection.

Cross 128. May you not be mistaken about your remembering it so clearly as that during all this time?

A. I think not, with a few days' reflection.

Cross 129. Mr. Talson, do you mean to be understood that at any time since 1843 down to the present time, when you might have been called upon, your recollection of this brake, which you say was on the Tyler car in 1843 and afterwards, was clear enough to have enabled you to state that it was a brake which operated on both trucks of the car, from either end of the car?

A. I do, sir. I will give you my reasons. I have had it under advisement for a good many years. I was employed by the New York and Erie Railroad when they had a suit in Albany against this Batchelder & Thompson's brake. I wanted them to take up this brake at that time, and that makes me so pretty well posted on that brake and car.

Cross 130. Could you at any time since 1843 have told that this brake, which you say was on the Tyler car in 1843, did, as you have stated, act on both trucks of the car, from either end of the car, without a few days' reflection?

A. Yes, sir; in a moment. I could have told it any time.

Cross 131. Could you so have told that it did this by means of a lever under the body of the car?

A. I could, sir; because I have never seen it since it run upon the road in 1844 or 1845, to the best of my knowledge; and the reason why is that its connections were made from eight to ten inches from the end of the centre lever; was different from Stanley's brake. That is the reason why I was so impressed with this Tyler brake.

Cross 132. When did you first notice this peculiarity about the connections of this Tyler brake?

A. The first time I saw it in 1843.

Cross 133. You then reason, do you, that at any time since 1843 down to the present time you could have told, without needing to reflect, that this brake, which you say was on the Tyler car in 1843 and after- 631 wards, acted on both trucks of the car, from either end of the car, by means of a centre lever under the car having this arrangement of connections you have mentioned?

A. Yes, sir; I could have done that at any moment without reflection.

Cross 134. Have you consulted at all with M'r Whipple in relation to anything connected with the putting in evidence by the defendants in this suit of this Tyler brake?

A. I have; M'r Whipple employed me for that.

Cross 135. Has all of which you have testified to in this case, in regard to the brake on the Tyler car, and also in regard to the brake on the New Jersey road in 1842, been fresh in your recollection from the time these brakes were put on, as you say, down to the present time?

A. Not all the time in my mind; it has been fresh in my recollection. If I see a railroad improvement I very seldom forget it. The next day after M'r Whipple employed me I went immediately to the Camden and Amboy road, because I knew the brake was there.

Cross 136. Do you then mean that what you have testified to in this case, both about the Tyler brake, and the brake on the New Jersey road, has been fresh in your recollection ever since 1843?

A. I think it has, and I will tell you my reasons. I have been waited upon by different patent agents of brakes, M'r Sayles, M'r Hodge, M'r Stevens, and others, that even if I would have let it rest in my mind, they came to me so frequently to consult with me that they kept it fresh in my mind all the time.

Cross 137. Then, at any time since 1843, you could have testified about this Tyler brake, and this New Jersey Railroad brake, if you had been called upon to do so, as you have testified in this case, could you?

A. I could, if I had had the same time allowed me to have worked up the case as it is now.

Cross 138. Do you then mean that it would have taken you considerable time to recollect what you have in this case 'tified to about these two brakes?

632 A. I give the same answer as I did before, that if I had had about two or three days myself I could have done it; but I am speaking of others.

Cross 139. What do you mean by the expression, "I am speaking of others"?

A. I mean other witnesses that have been examined in this case.

Cross 140. And how do you mean to apply this remark to your answer number 138?

A. I mean that the witnesses lived so far apart that it would have taken me weeks to have seen them, nearly a month; but I had no difficulty with the witnesses, but I had difficulty in finding them at home; sometimes I would not find them home in two or three days; the major part of the witnesses were entire strangers to me.

Cross 141. At any time, between 1843 and the present time, how much could you have told if you had been asked about the brake on the Tyler car without needing time to reflect?

A. I could not have told the name of the car, but I could have told you that the Camden and Amboy road had such a car with a double-acting brake, acting in both trucks from either end of the car, with a centre lever and four connecting-rods.

Cross 142. Could you also have told when they had such a brake, or about when?

A. I have answered that question before; near a year after we applied it on the New Jersey Railroad.

Cross 143. Do you mean by this answer that you could have told that it was about a year after you had applied it on the New Jersey road?

A. I do, sir.

Cross 144. Could you also have told that you had seen this brake on the Tyler car again after you first saw it as you say, and, if you could, what could you have told?

A. I could; just what I have told now in this deposition.

Cross 145. At any time between 1843 and the present time, how much could you have told, if you had been asked about this brake which you have testified to on the New Jersey road, without needing time to reflect?

633 A. I could have answered the question if you had asked me immediately, all that I have said here in this deposition; I needed no time to reflect, because I superintended the work myself.

Cross 146. You are sure, are you, that, without needing any time to reflect, you could at any time, between 1843 and now, have testified about this brake on the New Jersey road, if you had been asked, just as you have testified about it in this deposition?

A. I believe I could, sir.

Cross 147. May you not be mistaken about that?

A. No, sir.

Cross 148. Please state, if you know, the names of any other persons than those who have testified in this case about the Long Island Railroad who could testify about the brake which has been put in evidence from that road by the defendant.

A. I will give you the names to morrow from my memorandum-book.

Cross 149. Who has had the principal charge of looking up and getting together the testimony which has been put into this case by the defendants, about the brake on the Long Island road?

A. I began, looked up two or three witnesses; I then put it into the hands of M'r Josiah Phillips, and he brought the witnesses here.

Cross 150. What did you have M'r Phillips do in the matter besides bringing the witnesses here?

A. Nothing at all. I went to M'r Phillips and I asked him if he knew anything about a double-acting brake being put upon the cars of the Long Island Railroad, and he said he well remembered it; he had his leg broke the year that this brake was put on; I asked him what year that was; he said it was 1845; I asked him if he was not mistaken; he said no; says he, "I will bring you twenty or thirty witnesses to prove it." I told him I wanted him to get them for me until I told him to stop; he did bring the witnesses here; some testified, and some had to go back; their business called them, they could not wait.

634 Cross 151. How came you to know anything about there being a double brake used so long ago on the Long Island Railroad?

A. I went to Arison, the superintendent of the Long Island Railroad car department, now superintendent of the Brooklyn City Railroads; he told me that he was the inventor of the double-acting brake. I asked him when he put it upon the cars of the Long Island Railroad; I asked him what year it was in; he said he thought it was in 1845 or 1846, and it might have been earlier; he could not fix the date, he said, by anything; he sent me to Hunter's Point to his brother-in-law; I think his brother-in-law's name was Bennett, but am not sure. Bennett told me that he could not remember the date, but he referred me to M'r Robert White, the superintendent of the Long Island road, who gave me the names of several men, and among the rest was this M'r Phillips.

Cross 152. What first led you to go to the Long Island road at all?

A. Well, I will tell you. In 1844 the New Jersey Railroad Company's ferry-boat brought four eight-wheeled passenger cars from Eaton & Gilbert, at Troy, to the Long Island Railroad; M'r Schuyler sent a note to me to go and take these cars off the boat and put them on the Long Island road at South Ferry, Brooklyn; I did so, and I saw what I thought appeared to be the remains of a double-acting brake at that time; that is what made me go to M'r Arison. M'r Arison said that he was at Jamaica at this time, and one of his men did go to Van Vorhis, one of the witnesses who testified in this case.

Cross 153. What remains of a double-acting brake did you remember seeing at that time, and where did you see them?

A. It appeared to me to be two rods and part of a lever, and they laid on the side of the dock near the car-house.

Cross 154. How long have you remembered that you saw those remains?

A. Ever since that time in 1844, when they opened the road through to Greenpoint; I was a good deal acquainted with that road. I lent them cushions from the Harlem road when they opened the road
635 to Jamaica, which was in April, 1836, and I agreed with M'r
George Schuyler to go the first day of May, 1836, on the New Jersey road to take charge of the car department.

Cross 155. How long did you continue to be a good deal acquainted with that road?

A. I can't tell; from that time to this.

Adjourned to the 27th instant, at 11 a. m.

FRIDAY, *September 27th*, 1867.

Present, counsel as before.

Cross 156. With the exception of the witnesses or persons speaking in relation to this brake on the Long Island road, who were seen by M'r Phillips at your suggestion, as you have stated, have you seen all the others of whom enquiries have been made respecting said Long Island brake?

A. No, sir.

Cross 157. Who else, beside you and Phillips, has seen any of them?

A. No one has seen them, to my knowledge, except those who have come here to court, and M'r Whipple has seen them after they came here; but M'r Phillips said that he had a number of names of persons that would come and testify in the case if required.

Cross 158. Do you mean that those witnesses who have testified about the Long Island brake, in this case, saw and talked with other persons on the same subject?

A. I cannot say that; the parties who did not testify told me of several other parties that they named, who would willingly come forward and testify in the case, and they told me that they were good witnesses.

Cross 159. Were these persons who told you of those other parties the persons who came here to testify, but, as you before stated, went away without testifying.

A. Some of them were, and some of them were not.

636 Cross 160. Had M'r Whipple seen any of the witnesses, who have testified about the Long Island brake in this case, before they were brought to him, shortly before they were examined?

A. Yes, sir; he saw M'r Phillips. I went with M'r Whipple to East New York, and that is all he saw. M'r Whipple asked him if he knew anything about a double acting brake on the Long Island Railroad; he said, he well and distinctly remembered it. M'r Whipple asked him if he could prove it by others to back him up in the case; he said he could get from twelve to twenty witnesses. M'r Whipple told him to do so, and bring them to 41 Chambers street; he did so, until M'r Whipple told him to stop.

Cross 161. Who first brought to M'r Whipple's notice this matter of the use of a double brake on the Long Island road in 1845?

A. I did myself.

Cross 162. Have you, in the course of your looking up witnesses in this case, traveled considerably or at all about the country? If so, please state in a general way how much you have travelled, and to what places you have been?

A. I am employed by M'r Whipple to look up evidence in this case, and I am traveling-agent for the Mead Rubber Car-Spring Company; in my traveling around the country I have been through the New England States, State of New York, New Jersey, Pennsylvania, Maryland, Delaware, and Virginia. I have done the business of the company in connection with M'r Whipple's business at the different points where I have traveled. I had two businesses; I went on the rubber business more particularly, and the business of looking up evidence for this case was incidental to it; the business of the rubber company took me to all the railroads.

Cross 163. Did you, in the course of this traveling about, wherever you thought there might exist facts or testimony which would be of use to defendants in this case, enquire about it and look for it?

A. Certainly I did; for I was employed for that.

Cross 164. Did you bring with you this morning the names which you were yesterday requested to procure?

637 A. I did, and they are as follows: From the New Jersey Railroad, Samuel Moore, Edward Cudlipp, Edward Moore, George Vanderhoof, William Parker, Joseph Aur, Mark Harrington, Howell Roe, John Overton, William Sanderson, George Fielding, James Clarke, Ambrose Wade, Isaac Van Horten, Nicholas Schaeffer, John Manahan. From the Long Island Railroad, David Reynolds, Isaac Creigley, Robert White, Lewis Morton, M'r Runtil, Captain Rogers, M'r White, M'r Arison, W'm McLaughlin, M'r McGee, William Humphreys, Andrew McBride, John Smith, Patrick Mitchell.

Cross 165. Are these names and the others heretofore mentioned by you in this deposition all the persons who know about the Long Island brake and the New Jersey Railroad brake, whose names you at this time are able to recollect and stat'?

A. I don't know but what I might remember two or three more. I won't state any more, however.

Cross 166. Was the pivot or bolt by which the two levers under the car body were attached to the car in the Stanley experimental brake like the pivot attaching the centre-lever in Exhibit A, or were those levers, or either of them, fulcrumed on a pivot or pivots which were not fixed?

A. They were not the same as Exhibit A; the pivot was fast in the centre through the bottom of the car, but no strap over it as in Exhibit A.

Cross 167. You mean then, do you, that the Stanley cross-levers were attached to the car body the same as the centre-lever in Exhibit A is attached, except that they had no strap over them?

A. Stanley's brake-levers were fastened to the bottom bar of the car; Exhibit A has a longitudinal timber in it which carries the lever; there is that difference.

Cross 168. What other difference or differences were there besides this one of the longitudinal timber and the matter of the strap you referred to?

A. There was no difference except the strap and longitudinal timber.

Cross 169. How was the centre-lever in the brake you put on
638 to the car on the New Jersey Railroad attached to the car?

A. It was attached to the bottom bar.

Cross 170. What do you mean by the bottom bar?

A. I mean one of the timbers which run crossways on the car which supports the floor.

Cross 171. By what means was the centre-lever attached to this bottom bar?

A. By a bolt running through the bar, through the lever, and through the floor of the car.

Cross 172. Did this bolt attach the lever to this bar in the same way as the bolt in Exhibit A attaches the centre lever to the longitudinal timber in that exhibit?

A. It was the same as in that exhibit, leaving out the strap and the longitudinal timber, and the bolt went through the bottom of the car; it was a nut-headed bolt, boxed into the bottom of the car, with a jamb-nut underneath the lever or bar.

Cross 173. Was there any more play or movement allowed to the levers upon these bolts in the Stanley experimental brake and the brake you put on than is represented by the model Exhibit A?

A. No, not a bit; and Stanley's and mine were both alike in that respect.

Cross 174. In the brake which you put on to the car on the New Jersey Railroad, how did you arrange brake levers in the trucks?

A. Connected them to the centre-lever and likewise to the windlass at the end of the car; it was arranged in the trucks as follows: The upper end of the front lever, that is, the lever nearest the windlass, I attached to the truck, the lower end I connected with the brake-bar, and from the lever on this brake-bar I connected across the truck under the axles by a rod to another lever on the back brake-bar, and this last lever was connected to the centre-lever; in the Stanley brake it was arranged in this manner in one of the trucks, while in the other truck it was arranged with a rock-shaft arm and cams, as I have before described; when I put
the brake on I removed the rock-shaft from this truck, put the
639 brake-bars on the outside of the wheels, and arranged the levers
and connections, as I have already described it, in the other
truck.

Cross 175. When did you last see Isaac Newton Stanley, and is he living or dead, if you know?

A. The last I saw of him was about three years after he applied the brake, and, as I stated, in Greenwich street, New York. I have made diligent enquiry, and as far as my enquiry goes and my knowledge extends, he is dead; at the time he applied the brake, I should think he was fifty years old.

Cross 176. State, if you know, where he resided at the time he applied the brake, or when you last saw him.

A. I do not know where he resided at any time.

Cross 177. Will you mention the places and the persons where and of whom you have made the enquiries referred to respecting him?

A. In New York, in Philadelphia, and Baltimore. I made the enquiries of officers of railroads, and other persons whom I thought would be likely to know.

Cross 178. How near to three years after he applied the brake was it that you last saw him?

A. I could not define any more than my recollection carries me (and which I have testified to two or three times), that it was as near three years as can be, and that it was in 1845, as near as I can recollect.

Cross 179. When you saw him at this time, did you meet him accidentally?

A. I did; my business as superintendent of the cars brought me up Greenwich street at that time. I was going, I believe, to Ogden's yard for some mahogany.

Cross 180. Did you get the mahogany?

A No, sir; I did not get the mahogany myself; I always sent the carman for it: I made the purchase.

Cross 181. What was Ogden's first name?

A. The firm name was Brown & Ogden, at that time; I believe it is Ogden now.

Cross 182. Where did Brown & Ogden carry on business?

A. In Washington street; the yard runs from Washington to West; Ogden keeps the same place now.

640 Cross 183. You have in this deposition stated that you have no recollection of the brake which you put on to the car on the New Jersey Railroad ever being taken off; will you state, to the best of your knowledge, how long that car with that brake on continued in use, running on said railroad?

A. They asked me that question in Albany, on the trial at Albany of Henry Tanner against the New York and Erie Railroad, and I answered it; the question was asked, did it run a month; I said it did; and he asked me if it run two months; I said yes; and he asked me if it run three months; I said I believed it did; and he asked me then, to the best of my recollection, if it run six months; I said I believed it did; and he asked me if it run a year; I told him I couldn't say that; I have no recollection of its ever been taken off; I have asked as many as eight or ten different individuals on the road if they ever knew of its being taken off, and they said no; I would have gone into more of an explanation at Albany on the trial, but I was stopped by the counsel for Mr Tanner.

Cross 184. Question repeated.

A. Till the car wore out; when I left the road in 1849, to the best of my knowledge and belief, that brake and that car was on the road; I mean that car with that brake on was on the road when I left, in 1849.

Cross 185. How came you to be first spoken to about giving any testimony on this trial at Albany?

A. I don't know who it was that first spoke to me; the first I knew of it was a subpœna with my mileage; when we got to Albany the defendants were not prepared for trial, and they sent me back to New York to get a model of the car; I didn't get it, and I made one myself in Albany.

Cross 186. Do you know where that model is now?

A. I do not, sir. I know nothing about it.

Cross 187. What were the circumstances under which you first heard anything about that there was to be any trial at Albany, and the circumstances under which you were first spoken to about giving any information to the New York and Erie Railroad Company?

641 A. There were several people came to me to ask about the brake at different times; I know not who they were, and I did not know that there was going to be a trial until I received a subpœna and my mileage; Nehemiah Hodge was the man that conducted the case when I got in Albany; he said to me he wanted to kill the Tanner patent and to save his own.

Cross 188. After you did hear anything about there being a suit on the Tanner patent against the New York and Erie Railroad, with whom did you converse on the subject of double-acting brakes?

A. With nobody but Hodge and Carmel. I think he was from Dunkirk.

Cross 189. Do you mean that the several people whom you say called upon you, but whom you did not know, came to see you about the time of the suit against the Erie road?

A. They were there after me frequently, a year before the trial was—they, and other parties, too.

Cross 190. Cannot you mention the names of any of those persons?

A. No, sir; I never saw but one of them, to the best of my knowledge, and that was in Albany; and I told him that had I known that you were going to bring me here, I would not have told you what I did; he said, "I knew that, and that was the reason I kept it from you."

Cross 191. You say you made a model yourself in Albany; what was it a model of?

A. It was a model of the Stanley brake, with ball and chain, and two levers, with the connecting-rods tied together with strings.

Cross 192. How nearly was it like the Stanley brake, as you have described the latter in this deposition?

A. I believe there was this difference, that the trucks were both alike; they said they didn't care about the rock-shafts, all they wanted was the two levers, the connecting-rods, and windlass connected as I put the brake on; the ball and chain and the two levers under the body were in the model.

642 Cross 193. Then, you mean, do you, that the model, as you made it for the Albany trial, showed no rock-shaft in either truck?

A. It might have done so, but I think not.

Cross 194. In that model, where did you place the brake-blocks?

A. I think they were outside.

Cross 195. Was that the only model used at the Albany trial of the brake on the New Jersey Railroad, either as Stanley tried it, or as you tried it?

A. To the best of my knowledge, it was either as Stanley tried it, or as I tried it.

Cross 196. In addition to yourself, what other person testified at that trial in regard to this New Jersey Railroad brake, either as applied by Stanley or by yourself?

A. Frederick Boyes, Edward Beattie, Bernard Hughes, and Moses Parsels.

Cross 197. What did each of these persons testify to?

A. I cannot say.

Cross 198. Are you sure that Edward Beattie testified at that trial?

A. I am not sure, but I think he did; he was there, but I could not say whether he testified or not.

Cross 199. Can't you state anything about what either Hughes or Parsels testified to at that trial?

A. I cannot.

Cross 200. At the time of that trial, did Hughes and Parsels know the facts about the use on the New Jersey Railroad of the double brake, as Stanley tried it and as you tried it?

A. They did.

Cross 201. How well did they know them—how familiar were they with them?

A. They were familiar enough to testify in the case.

Cross 202. Did you hear each of them testify?

A. I don't know that I did; I think not.

Cross 203. Are you able to state what you yourself testified to on that trial?

A. I have answered that question, but I would like to make an explanation. I testified at Albany under peculiar circumstances.
643 M'r Sayles came to me before the trial came on and said to me
"M'r Talson, I know that you hold in your hand sufficient evidence to seriously injure my patent, or to kill it, but if you will not advance anything on this trial, and I win the suit, I will make you a very handsome present"; when I would begin to advance anything in explanation of the model I made, the counsel on his side would say to me he didn't want me to talk about that, he wanted me to talk about some other part of the model; the counsel for the railroad company didn't sustain me and I let it go without an explanation.

Cross 204. Having now succeeded in getting out the matter which you have so long, in this cross-examination, been waiting for a chance to state, will you be kind enough to answer the question I asked you, which was—are you able to state what you yourself testified to on that trial?

A. I ought to be, for M'r Mowry brought the evidence that I gave in Albany, and read it to me in the Merchants' Hotel, in Courtlandt street, and said he wanted me to testify to the same; I told him that I did not want anybody to dictate to me what I should testify to.

Cross 205. Question repeated—are you able to state what you testified to on that trial?

A. I cannot state word for word, but the substance was what I have testified to in this case—that is to say, as far as my knowledge extends, that Isaac Newton Stanley was entitled to that brake.

Cross 206. Is that all you can state, whether as to words, or as to substance of what you testified to at that trial?

A. I have answered that, already, in the foregoing question.

Cross 207. In what foregoing question have you answered it?

A. In answer 205, where I said, in substance, that Isaac Newton Stanley was the original inventor of that brake, to the best of my knowledge and belief.

Cross 208. Is this all that you can remember of what you testified to on that trial?

A. That was all the counsel asked me to testify on the Isaac Newton

Stanley brake; he asked me in substance, and I answered in substance.

644 Cross 209. Is that all you can remember of what you testified to on that trial—this, namely, "that Isaac Newton Stanley was the original inventor of that brake, to the best of your knowledge and belief"?

A. Yes, sir; that is what they employed me for, to testify to that.

Cross 210. You say that Mr. Mowry brought you the evidence, in Albany, and read it to you—can you remember what it was, as he read it to you?

A. I cannot; I told him I would not hear it—I did not want to hear it; I told him, then, the peculiar circumstances there was at Albany at the time the evidence was given; that was all that passed between M'r Mowry and myself at that interview.

Cross 211. Were the matters to which you testified at the Albany trial true?

A. They were, so far as they went.

Cross 212. How much do you now remember of what you testified to at that trial, respecting the facts and circumstances of your applying to the car the Stanley brake?

A. I made a statement that I applied the brake about six weeks after Stanley had done, with one lever instead of two; that is as near as I can tell now what I testified to.

Cross 213. Do you mean that it is all that you can now state that you testified to about it at that trial?

A. I believe that it is; for it has hardly entered my head since, I thought so little about the trial altogether.

Adjourned to the 16th of October, at 11 a. m.

WEDNESDAY, *October* 16, 1867.

Present, counsel for the respective parties.

Cross 214. Are you now able to state, since the adjournment, anything more than you have done, in regard to what you have testified to at the Albany trial?

645 A. On the Albany trial, they asked me my name, age, residence, and occupation, and if I knew anything respecting a brake put on the New Jersey Railroad cars by one Isaac Newton Stanley—I told them that I did, in the year 1842, in October. They asked me what kind of a brake it was—I explained to them the model that I had made of Stanley's brake; I tried to explain how Stanley applied his brake with two levers under the body of the car, with a ball and chain to bring those levers back after the brake had been applied to the wheels, and then I tried to explain how I modified his brake and strengthened it by taking off the two levers, putting on one in the centre, and likewise took off the ball and chain; but as soon as I attempted to explain the mode that I applied it, the counsel for the prosecution said he didn't want to hear anything about that; he would then point me to some other part of the model (which was the Stanley model), and said he wanted me to explain on that part of the model, and not what I was speaking about; they then called in, as an expert, Professor Mapes; the counsel asked him how much power it would require to move that chain and ball—he said it would take the power of a yoke of oxen to do it; I don't know that I can remember anything more; that is about the sum and substance of what I said except what I have stated before in this deposition.

Cross 215. At that trial, did you not testify, upon your examination, in chief, as follows: "I reside in Bergen, Hudson County, New Jersey; for fourteen years before the last three years, I resided in Jersey City; I was, during that fourteen years, superintendent of the car department on the New Jersey and Transportation Company"; and at this point, the model which you have referred to being shown to you, did you not further testify, upon such examination in chief, as follows: "That model exhibits a double-action brake, with lever in centre; each windlass acts on both brakes at the same time; the brakes were placed between the wheels, and were worked by the common rock-shaft, and were never changed to the outside of the wheels; a brake was put on like that Jersey model; a double-acting brake was first put on by Isaac Newton Stanley, on the New Jersey Railroad; Stanley put one on in 1842; 646 the brake he put on never went into use; it was so light and imperfect that it never answered the purpose; I threw all his gearing off and applied it mechanically, like the Jersey model; I took this brake and strengthened the rods and connections; Stanley's brake differed from the Jersey model in its levers; he had three or four levers in the middle; when I put on the brake, I added one transverse lever, the same as the model; I operated the brakes like this Jersey model; that brake ran on a car to Philadelphia, or opposite to it; it ran two or three times; it might have run more, it might have run less than three times; this was the Jersey model; I put this brake on in 1842; I am sure of this; Timothy L. Smith followed me in superintending that road; this brake was not put on any other car; Smith came in in 1844, and was opposed to this brake; before that, he was superintendent of the motive power; Smith wanted to put in Griggs' brake, from Baltimore, to act by a bumper; I can make a drawing of a car and build it; this Jersey brake would act on a curve; I never saw it in operation on a curve; this brake would not act so well on a curve as the plaintiff's; the mode of forming the connection between the brakes of the two sets of trucks is substantially the same in the Jersey model as in the plaintiff's brake; if you take out the arrangement of the Jersey model within the trucks and put in Tanner's within the trucks, you will have Tanner's brake; M'r Boyes had charge of the company's books at the time the Jersey model brake was made; I reported to Boyes what charges to make"?

A. I did testify so, down to where it says, "each windlass acts on both brakes"; I testified to the best of my knowledge and belief that one truck was fitted to the brake with a common rock shaft which broke betwixt the wheels; the other, the brake bars were outside the wheels; I am now speaking of the Stanley brake, not of my brake or the one I put on, because counsel would not allow me to explain my brake; the rest is as I testified, down to "like the Jersey model"; at the Albany trial, I stated that I put the brake-bars of the trucks on the outside of the wheels; at the end of that, counsel said that he did not wish me to explain that; I did not say that Stanley had three or four 647 levers in the middle of the car, because he never had but two; I said I reduced the levers to one in the centre of the car; I never said Timothy L. Smith followed me in the superintending of that road in 1844; Timothy L. Smith was on the road when I went there, in 1836, and he left the road before I did; what is said of Grigg's brake was done in the fall of 1849, and the early part of 1843; it was put on ten or twelve cars; Timothy L. Smith at that time was the superintendent of the motive power on that road; I think the part speaking of the action of the brake upon a curve, I don't remember stating that; with the exceptions I have stated, I testified as enquired in the question.

Cross 216. Who was the counsel, as you say in your last answer, told you he did not wish you to explain your brake or certain parts of your brake?

A. M'r Keller.

Cross 217. On your cross-examination at the Albany trial, did you not testify as follows: "Stanley's brake broke the first time it was tried; it was put together with rods; they came short, and we tried them with strings; I last saw Stanley two and a half or three years after this brake was applied; he said he had given up his brake and was not going on with it"?

A. I testified so with the exception of, it was "he" (Stanley) tried his brake, and not "we," and the reason he assigned, when I met him in Greenwich street, for not going on with his brake, was for want of means; if he had only had means, he said, it was the greatest thing out; I believe, to the best of my knowledge and belief, I testified at the Albany trial as I have now stated in this answer.

Cross 218. On said cross-examination at the Albany trial did you not further testify as follows: "From September, 1842, till January, 1843, we had no superintendent; after the brake ran a week it was changed to a single foot brake; I left the road in the last of August, 1849; Smith left in June or July, 1849; from the time I altered this to a single foot brake there were no double-acting brakes on the cars till I left the road that were acted on by a windlass at either end; there were double-acting brakes on the tenders, but they were not operated on by a
648 windlass at either end; the self-acting brake of Griggs was
never put on; within the trucks the Jersey brakes were different from Tanner's"?

A. I do not remember of ever testifying that we had no superintendent from 1842 to January, 1843; that about changing to a foot brake is a mistake; we were changing the foot brakes at that time to the windlass brake, and the blocks were put from betwixt the wheels to the outside; I think I never stated at the trial that I altered that brake to a single foot brake; I think, to the best of my knowledge, I did not state that there were no double-acting brakes on the road when I left; I believe that I made at that trial the statement that the Griggs brake was finished on one car, and the work was put on ten or twelve others, but the connections were never made; with these exceptions, I testified as enquired in the question.

Cross 219. On your redirect examination at the Albany trial, did you not testify as follows: "The brakes on the tenders could not be operated from both ends; the brakes on the tenders did not have the intermediate lever, and only a single connecting rod; Stanley's two experiments cost between two hundred dollars and three hundred dollars; one failed; the other ran to Jersey City; the brake I made was paid for by the company"?

A. I don't understand the part where it says, "the other ran to Jersey City," because the work was done at Jersey City, and that was the starting point for the cars; the rest is as I testified.

Cross 220. After testifying as above enquired about, were you not recalled at said trial, and upon being so recalled did you not testify that "after the trial of this brake we continued to use the single-acting brakes on all the cars"?

A. I do not remember anything of the kind.

Cross 221. Did you at or about the time that you saw M'r Thomas M. North and M'r George Gifford in relation to the matter with the Hudson River Railroad, testified to in your cross-answer No. 79, or at any time

say to M'r North that "the only double brake operated from both ends
of the car that you knew of up to the time you left the New Jersey
649 Railroad, in 1849, was the brake tried on the New Jersey road in
1842, and abandoned"?

A. To the best of the knowledge and belief, I never spoke to M'r North at all about the double-acting brake on the New Jersey Railroad no further than this: In my foregoing evidence I have stated that I made an affidavit respecting the Stanley brake and the one that I put on on the New Jersey Railroad; M'r Middleton, the gentleman who made the drawings on that instrument, and likewise wrote the instrument itself, told me to go to M'r North and M'r North would give me twenty-five dollars for my services; I went to M'r North, and he told me he should not give me anything, that M'r Middleton must pay me; and to the best of my knowledge and belief, that was all that passed between us at that time, and I have not spoken to M'r North since, to the best of my knowledge and belief; I would not know M'r North if I met him in the street, and I do not know that it was M'r North that I was talking to at the time, further than I was told.

Cross 222. Did you, at any time, in connection with this Hudson River matter, say to M'r George Gifford, that "the only double brake operated from both ends of the car that you knew of, up to the time you left the New Jersey Railroad, in 1849, was the brake tried on the New Jersey road in 1842, and abandoned"?

A. I did not, to the best of my knowledge and belief; as I have stated before, that I know nothing of the matter with the Hudson River road, and do not to this day; I don't know that they ever had a suit; I don't know anything about it; nor do I remember M'r Gifford ever speaking to me about that brake, except since I have been employed in this present case, before the taking of the evidence; M'r Gifford came to my house, in Hudson City; I was not at home; my wife told me that M'r Gifford had been to see me, and wished to see me in his office. Before I went to M'r Gifford's office, I went and saw M'r Stoughton, the counsel in this case; I asked him if there was any impropriety in my seeing M'r Gifford, the counsel against the railroads; he said there was none; he said, you are a man of discretion, and he said M'r Gifford was
a gentleman and would not take advantage of what I might say.

650 Cross 223. Question repeated.

A. To the best of my knowledge and belief, I did not.

Cross 224. Did you, at or about the time of the Albany trial, say the same thing to M'r Sayles, the complainant in this suit, and also to M'r Charles M. Keller, the plaintiff's counsel at that time?

A. I don't believe that I ever did to either of them; M'r Sayles put the words into my mouth more than once, twice, or thrice, but I did not say so.

Cross 225. Did you say the same thing to M'r Sayles about a year and a half ago, in Hudson City?

A. No, sir; I never did.

Cross 226. Have you said the same thing to M'r Sayles, at different times, between a year and a half ago and the time of the Albany trial?

A. I never did, neither between that trial nor any other time; M'r Sayles, I think, it may be about a year and a half ago, and it may be nearly two years ago, I received a note from him at the Astor House, to meet him at 11 o'clock that morning; I hurried myself and came down and met him at the Astor House; he says, "Talson, I want you to go to Chicago to testify in a suit that I have commenced in Chicago;" I asked him what was the suit; he said it was on the double-acting brake; I said to M'r Sayles, "it is time you and me now had an explanation betwixt us;" I said, "M'r Sayles, till you pay me what you owe me, honorably and honestly, I will not go one step for you;" he said, "didn't I give you five dollars in Broadway?" I said, "you never did;" he said, "come and go to Chicago and I will pay your expenses before you start;" he said, "you know very well that that brake on the New Jersey road was only an experiment, and that it amounted to nothing;" I told him that was not so; the facts in the case were decidedly against his patent, and if I went to Chicago I should so state.

Cross 227. You say, in your cross-answer No. 136, that you have been waited upon by different patent agents of brakes—M'r Sayles, M'r Hodge, M'r Stevens and others;-did you ever tell them, or either of them, what you have testified to in this deposition about the use
651 of double-acting brakes on the New Jersey Railroad, and about the brake you say you saw on the Tyler car in 1843?

A. I went into an explanation of the brake used on the New Jersey railroad, but I do not remember saying anything about the Tyler car-brake; I did tell them as I have testified in this case, as near as I can recollect.

Cross 228. You say, in your cross-answer No. 187, in answer to a question asked you about giving information to the New York and Erie Railroad Company, that several people came to you to ask about the brake at different times; did you tell those people what you have testified to in this deposition, about the brake on the New Jersey railroad, and about the brake on the Tyler car?

A. My answer is the same as to the preceding interrogatory.

Cross 229. Did you tell the same things to the other parties who came after you as you testify in cross-answer No. 189?

A. I told them, to the best of my knowledge and belief, the same in substance that I have done in this case; there was one man, I think, I spoke to about the Tyler brake, and told him, I think, that I could work that case up to his satisfaction.

Cross 230. Can you state the name of that person?

A. I cannot, sir? they were all strangers to me.

Cross 231. In your cross-answer No. 31, you speak of Erastus Reid being here one day, but leaving because his health was poor without giving his evidence; did he state to you then, or before then, what he could testify to about the use of a double brake on the New Jersey road; and if so, what did he tell you?

A. The first interview I had with M'r Reid, he said he well remembered Stanley applying the double-acting brake, and Stanley wanted to employ him; he said he remembered assisting in pushing the car down after Stanley had rigged his brake upon the car; and I asked him if he remembered when I strengthened the brake and put it on with a single lever, and he said he did; I asked him if he remembered the
652 brake being taken off that I put on; he said he did not, and he thought it was on the road when he left, and that was in 1849; that was in substance what he said.

Cross 232. Is not the Mead Rubber Company, by which you say you are now employed, unfriendly to the patent on which this suit is pending?

A. Not to my knowledge in any shape or form.

Cross 233. Had you not, prior to the time when M'r Whipple employed you in this case, as you have stated, lost a considerable sum of money in Pennsylvania or somewhere else?

A. I had not, sir.

Cross-examination closed here.

Attorney for defendant here states that he desires to adjourn till the 14th of November, 1867, and counsel for complainants assents upon the understanding that if, in the mean time, the witness should die, or for any reason be incapacitated from completing his deposition, that the deposition, as far as it has proceeded, shall be used in the case. Upon this understanding, the matter is adjourned.

MONDAY, *November* 18, 1867.

Present, counsel for the respective parties.

Direct resumed:

Q. 234. Since the adjournment in October, have you read your evidence, both direct and cross; if so, have you anything to explain, or any further matter or thing to add for the benefit of either the complainant or defendant in this case; if so, please state the same?

653 A. I have read my evidence, both direct and cross; some of the minor points might have been more fully explained, but the evidence that I have given in this case I believe is substantially correct.

Q. 235. In your evidence purporting to be given at Albany, in the case of Henry Tanner vs. The New York and Erie Railroad Company, tried at Albany, in 1854, you say, alluding to the Stanley brake, or rather the brake which you applied to a car on the New Jersey Railroad and Transportation Company's line, "that the brake (so applied) ran on a car to Philadelphia two or three times; it might have run more; it might have run less than three times." While it did run, did it do its work as efficiently, effectively, and practicably as a centre lever brake in use at the present time?

A. It did. It did it as effectually and efficiently, and as practicably as the centre lever brake does in use at this present time.

Q. 236. In what year was this brake so applied and operated, as above stated?

A. It was in the last of November, or beginning of December, 1842, as near as I can recollect—six weeks after Stanley applied his brake—and that date I got from the New Jersey Railroad Company's books.

Defendant's counsel now offers in evidence paper marked "Exhibit K."

Q. 237. Witness is now shown said exhibit, and asked, what does this represent, and is it the "instrument" referred in your answer to the 79th cross-interrogatory, and explained in answer to other cross-interrogatories which follow?

A. It is the instrument I referred to, drawn by M'r Richard Middleton, which M'r Whipple brought to me, as I stated in my examination in this case, when he asked me if it was my signature, and I told him that it was; and I would further state, that M'r Middleton told me that it was drawn by M'r Gifford. I now make the same affidavit as part of my present deposition, which is follows:

(Here follows a drawing of a Brake A, No. 1.)

654 This is to certify that a brake, answering to the description specified by the above drawing, was put onto the cars of the New Jersey Railroad and Transportation Company by Isaac Newton Stanley (whose residence now to me is unknown), according to date, October 20th, 1852, as the books of said company now show.

JOSEPH F. TALSON,

Superintendent of Cars of New Jersey Railroad Company, Jersey City.

(Then follows another drawing, marked "No. 2.")

B. This is to certify that a brake, answering to the description of drawing No. 2, was also put on to the cars of the New Jersey Railroad and Transportation Company by myself, in the year 1842.

JOSEPH F. TALSON,
Superintendent of Cars of New Jersey Railroad Company, Jersey City.

Witness says:

When this was signed I objected to the word "cars," as above, and wanted it "car;" M'r Middleton said it would make no difference in this matter; I was not superintendent at the time I signed this, but was at the time the brake was applied.

Q. 238. Please describe drawing No. 1 in said Exhibit, and tell what it represents more fully than described in the exhibit.

A. The drawing in Exhibit No. 1 is a drawing of Isaac Newton Stanley's brake, with two levers under the body of the car; the ball and chain were left off the drawing; Stanley's brake hooked in both hooks into one hole in the end of the lever; the ball and chain was at-
655 tached to that hole, the chain passing over a pulley to bring the
levers back again to their proper place after the brake has been applied to the wheels; his brake was applied by a rock shaft, with a long arm upon it, with a connecting rod and chain to the windlass or crank.

No. 2 is a drawing of the brake I put on, with the blocks outside the wheels instead of between the wheels, and the connections made with the centre lever at the end, with the connecting-rod running from that, connecting the lever on each truck, so that when we broke at either end of the car it would brake upon all the eight wheels at the same time.

The affidavit annexed to this exhibit is as follows:

STATE OF NEW YORK,
City and County of New York, ss:

Joseph F. Talson, being duly sworn, says that he was the superintendent of the cars used by the New Jersey Railroad Company for upwards of fifteen years, and that he continued to act as superintendent of said company until about the month of June, A. D. 1849. Deponent further says that the certificates signed by him, hereto annexed, are true of his own knowledge, and that said certificates are respectively marked A and B, and further deponent saith not.

JOSEPH F. TALSON.

Sworn to before me this 7th day of March, 1853.

LEWIS HURST,
Commissioner of Deeds.

Q. 239. Was this affidavit given before or after you testified in the case of Tanner vs. The New York and Erie Railroad Company?

A. It was given over a year before that.

656 Q. 240. (Witness is now shown Exhibit A and his attention called to the brake thereon, and is asked wherein it differs from that represented in drawing No. 2, Exhibit K.)

A. The difference is that in Exhibit A the connections to the centre lever are different; it had a leverage and fulcrum from eight to ten inches from the end of the lever; the levers in the truck Exhibit A are inside of the truck, and mine was on the outside.

Q. 241. Is the brake as represented in drawing No. 2, Exhibit K, and that on Exhibit A substantially the same in operation and effect, or are they different?

A. They are different; the mechanical arrangement is a little different, but the principle and effect is the same to the best of my knowledge.

Cross resumed by M'r Cozzens:

Cross 242. Did M'r Middleton make the drawing in Exhibit K?

A. He did; he made every particle of it just as you see it, and brought it to me.

Cross 243. In whose handwriting are the portions marked A and B called by you certificates?

A. I know no more than you, except that he (M'r Richard Middleton) told me that he made the drawings and wrote it himself; he used to be frequently in M'r Gifford's office and do a good deal of writing.

Cross 244. What did he tell you when he brought you that drawing?

A. He didn't tell me anything; he asked whether that was a correct drawing of Isaac Newton Stanley's brake, A No. 1; I said it was not, for there was no ball and chain upon it, and the connecting-rods were not connected at the extreme ends of the levers; then he asked me if B No. 2 was a fair representation of my brake with the clogs outside the wheels, and I told him that it did represent it very fairly, as I had previously explained it to him; I had showed Middleton the brake.

Cross 245. Did he say what was the object in making the drawing; if so, what did he say?

657 A. He said the drawing was made for M'r Gifford, and I have explained in my testimony that I was asked to give a mechanical opinion of those brakes in M'r Gifford's office, and I understood M'r Middleton that these drawings were to be used instead of the models, and that I never heard or said anything of this drawing from the day I swore to it until last December when M'r Whipple brought it to me; that is all I know about the matter.

Cross 246. Did you tell M'r North or M'r Gifford that the double brake put on the New Jersey Road by you, as you have stated in this deposition, was still on said road when you left there in 1849?

A. I never spoke to M'r North to the best of my knowledge and belief about the brake on the New Jersey Railroad or any other brake; I don't know M'r North; I don't know that M'r Gifford ever asked me any question about the brake on the New Jersey Road; all he asked me was a mechanical opinion of the models in his office, 17 Wall street.

JOSEPH F. TALSON.

Subscribed and sworn to before me this 18th day of Nov., 1867.

R. E. STILWELL,
Examiner, &c.

Defendant now offers in evidence model marked "Exhibit B."

R. E. STILWELL,
Examiner, &c.

Also model Exhibit C.

R. E. STILWELL,
Examiner, &c.

658 Also certified copies of Batcheldor & Thompson's application for a patent marked "Exhibit B 1."

Also certified copy of a patent to Henry Tanner, assignee of Lafayette F. Thompson and Asa G. Batchelder, for railway-cars marked "Exhibit C 1."

R. E. STILWELL,
Examiner, &c.

All this documentary matter objected to by complainant on the ground—

1st. That it relates to matter respecting which the defendants have no right to take testimony under the order opening the Interlocutory decree in this case.

2d. That it relates to a portion of the case already decided adversely to the defendants.

3d. That it is not in reply to anything elicited in the cross-examination.

vs.
THE CHICAGO & NORTHWESTERN RAILWAY Company.
} In equity.

Defendant's additional proofs.

660 Circuit court of the United States, northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.
} In equity.

Testimony taken on the part of the defendant, under the 67th rule of the Supreme Court of the United States, as amended.

MONDAY, *September* 7, 1868.

Present, S. M. Whipple, esq., counsel for the defendant; Samuel Cozzens, esq., counsel for complainant, and complainant in person.

JAMES E. HUTTON, called and sworn as a witness on the part of defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. James E. Hutton; 47 years of age; reside at 49 Mercer street, Jersey City; and am an engineer on the New Jersey Railroad and Transportation Co.

Q. 2. How long have you been so employed?

661 A. I commenced work on that road on the 1st day of May, 1839, and was there till August, 1844; I left then and came back in July, 1845, and was there till January 8th, 1855; I then left and came back January 7th, 1856. I then left May 11th, 1856, and was gone until August 11th, 1863. I then returned, and have been there ever since.

Q. 3. Does the New Jersey Railroad run in connection with the Camden and Amboy Railroad; if so, at what place do the two roads connect?

A. They do; and connect at New Brunswick.

Q. 4. Do you know of the use of an engine on the Camden and Amboy road, known as the Ben Franklin; if so, when did you know it, and where did you see it?

A. I do; I knew it in 1844 or 1845, and saw it at New Brunswick.

Q. 5. Was it a new engine at the time you first saw it, and who built it?

A. It was a new engine, and built by Norris & Co., of Philadelphia, and it was called a Norris engine.

Q. 6. Was there anything peculiar about this engine from other engines in use on the road at that time which makes you remember it?

A. It was a larger engine and had more power than engines previously used on that road.

Q. 7. What circumstance enables you to fix the date of your first seeing it in 1844 or 1845?

A. Well, that is about the time I left the road, and I can't say positive whether it was there when I left or when I came back.

Q. 8. It was there at one time or the other?

A. I think it was.

Q. 9. Are you acquainted with the operation of what is known as the single-acting railroad-car brake?

A. I am.

Q. 10. Are you also acquainted with the operation of the kind of double-acting brake known as the centre lever connected brake?

A. I am.

Q. 11. Did the brakes in use on the cars of the Camden and Amboy Railroad from the time you first became acquainted with railroading, have a pawl and ratchet on the windlass staff?

662 A. They did not.

Q. 12. Did they use cranks, or wheels on the windlass staff in the early part of your experience in railroading?

A. They used cranks.

Q. 13. When the brake is applied to a single truck by a crank with no pawl and ratchet on the staff, will the crank fly around when the brakeman lets go of it, and would it be likely to hit any one who might be in the way of it?

A. I think it would.

Q. 14. If you were then to apply the brakes of both trucks, of a car connected by a centre lever attached to the body of the car between the trucks, would the crank fly round when let go, as in the case of the single brake?

A. It would.

Q. 15. If the opposite windlass from the one to which the brake was applied in the last named brake was not wound up, would the letting off the brake at the other end in any way effect the crank by causing it to revolve, if as I have said, not wound up?

A. No.

Q. 16. Suppose the cranks at both ends of the cars are wound up and one is let go of by the brakeman, would this crank revolve if the one upon the other end is held in the hand of another brakeman?

A. No.

Q. 17. But suppose this other or second brakeman let go of the crank he has hold of, in that case would the opposite crank be whirled around with greater or less force?

A. It would.

Q. 18. And would it hit the brakeman with greater or less force if any part of his person were within the range of the revolving crank?

A. It would.

Q. 19. Have you been examined on the part of the complainant in this case?

A. I have.

Q. 20. Were you cross-examined at that time on the part of the defendant?

A. No, sir.

663 Q. 21. I would then like to enquire, having in view your testimony given at that time, whether you know the year, and the day of the year which President Tyler took his tour over the Camden and Amboy road alluded to in your evidence?

(All cross-examination of this witness at this stage of the case objected to.)

A. I know it was the year 1843, but the day of the year I don't know.

Q. 22. Do you know what brakes were on the car which took President Tyler over the Camden and Amboy road in his tour North, as already alluded to, whether they were single or double brakes?

A. I didn't see the car that day; I don't know whether there was a brake at all on it; I was in Jersey City that day, and the car did not come further than New Brunswick, and I don't know whether there was a single or double brake upon it.

(Cross-examination waived by M'r Cozzens, counsel for complainant.)

JAMES E. HUTTON.

Subscribed and sworn to before me, this 7th September, 1868.

R. E. STILWELL,
Examiner, &c.

Edward T. Moore, called and sworn as a witness on the part of the defendant, deposes and says:

Q. 1. What is your age, residence, and occupation?

A. I am fifty-five years of age; I reside in Elizabethport, New Jersey; and am an engineer in the employ of the Central Railroad Company, of New Jersey, and have been employed by said company about 16 years.

Q. 2. Have you been examined in this case on the part of complainant?

A. Yes, sir.

Q. 3. Was there any one present at that examination on the part of the Chicago and Northwestern Railway Company, the defendant in this case?

664 A. I don't know of any one being present.

Q. 4. Did any one but M'r Sayles ask you any questions at that time?

A. I don't think there did.

Q. 5. Was M'r Whipple present?

A. No, sir.

Q. 6. Who first called upon you to get you to testify in this case?

A. M'r Sayles, the complainant.

Q. 7. What did M'r Sayles say he wanted of you, and what reply did you make?

A. I think he wanted to know what I knew of the Tyler car and the double-acting brake; I told him I knew the car and had seen it frequently; in regard to the brake I told him I could not say whether it had a double-acting brake or a single-acting brake; it had a crank on the end for the purpose of operating the brakes; I told him I didn't know much about it; that I didn't think I would be of much use to him; that it might have had a double-acting brake on, or it might not; I could not tell anything about it; I told him the first double-acting brake I saw, to notice it, was on the New Jersey Central road, which was about 16 years ago, in 1852 or 1853.

Q. 8. Did the cars of the Camden and Amboy road come over the New Jersey and Transportation Co.'s road in their joint business while you were in the employ of the said New Jersey road?

A. Yes, sir.

Q. 9. May there not one or more cars belonging to the Camden and Amboy road have come over the New Jersey road to Jersey City in the joint business of the two companies from time to time, from 1846 to 1851, with a connected centre lever brake thereon, which may have escaped your notice or observation?

A. I don't recollect seeing any there during that time; there might have been a double-acting brake on the road during that time and I not have seen it; I run the night mail train the latter part of the time I was on; I didn't run any Camden and Amboy cars when I run the Newark train.

665 Q. 10. Did you run the night train and Newark train all the time you were there, or did you run other trains?

A. No; I run the Brunswick train also; when any one was sick I would run their train; I run the Rahway train at one time; I was an extra engineer.

Q. 11. Were there any Camden and Amboy cars run in those trains?

A. Only in the Philadelphia train.

Q. 12. When did the Camden and Amboy cars commence running through from Philadelphia to Jersey City as a regular business?

A. I could not tell you now.

Q. 13. You have said in your testimony for complainant in this case that you knew the Tyler car from 1846 to 1851, and that you knew what brake it had on while you knew it, to wit, a single-acting brake; I will now ask, in view of the fact that you were not connected with the car department of the New Jersey road, and the long time which has elapsed, on reflection may you not be mistaken as to the kind of brake in use on the Tyler car while you knew it?

A. M'r Sayles asked me, and I told him it might have had a double-acting brake and it might not, and I say so still; I had nothing to do with the cars; I would not swear what kind of a brake it had on.

Q. 14. You have said in answer to the 16th direct question, which reads as follows: "Please state what brake it (the Tyler car) had on and how you know." To this question you answer: "It had a single-acting brake. It never had anything else but a single-acting brake on it while I knew it." Is that what you wish to be understood?

A. I wish to be understood that I don't know what kind of a brake it had on.

Adjourned to the 8th inst., at 11 a. m.

TUESDAY, *September 8th*, 1868.

Present, counsel for the respective parties.

Cross examined by M'r Cozzens, counsel for the complainant:

666 Cross 1. I understood you to say yesterday, though I believe it was not put down in the record, that you were employed on the New Jersey Railroad at a time prior to 1846. Is this so?

A. That is so.

Cross 2. About when then did you first go into the employ of said railroad?

A. About 1837, I think.

Cross 3. About how long did you continue in their employ at this time?

A. About three years, I think; at the end of that time I went to Bridgeport, Connecticut, and remained there about three years and a half; I was there at the time of the Bunker Hill Celebration, and then returned to the New Jersey road again about 1845 or 1846, and remained there I think till the spring of 1851.

Cross 4. While you were on the road between 1846 and 1851, how much of the time did you run the night mail train you have spoken of?

A. I didn't run it a great while; perhaps two or three months.

Cross 5. Was that the train which you referred to in your previous examination at the 9th answer on page 99 of the complainant's new proof?

A. Yes, sir.

Cross 6. What two or three months were these?

A. It was pretty cool weather; I could not tell what year; I went to Harrisburg in 1851, in the spring, and I run this night mail train the season before, I think.

Cross 7. How many Camden and Amboy cars were there in that night mail train while you so run it?

A. There was a platform car we carried the crates on, and a mail car, and generally three or four passenger cars.

Cross 7. Was this the train in which you had the the Tyler car?

A. Yes, sir.

Cross 9. If there had been double-acting brakes on those Camden and Amboy cars in that train, would you not have been likely to know it?

667 A. They might have had them on; I would not have been likely to have known it; I had nothing to do with the brakes.

Cross 10. Did you at that time know the difference between a single-acting brake and a double-acting brake?

A. No, sir.

Cross 11. When did you first learn the difference between those two kinds of brakes?

A. About 1853; that was the first one I ever looked at.

Cross 12. How came you to see one at that time?

A. My brother asked me if I had seen the new cars, (these were two new cars that came from Springfield,) and my brother asked me if I noticed the brakes; he took hold of the wheel and screwed it up, and I looked under the cars to see how it operated; I told him that was simple enough, and I thought it was a good plan; the brake operated on all the wheels from one windlass.

Cross 13. In all the time that you run that night mail train containing those Camden and Amboy cars, did you ever see or hear of any brake on any of those cars which operated on all the wheels from one windlass?

A. No.

Cross 14. How many brakemen were there employed on that night mail train?

A. It depended upon the length of the train; the platform car had what you call a caboose house for the brakemen to ride in; the baggage master always attended the brakes on his car; they didn't carry more than those two, except they had extra cars on.

Cross 15. While you were running that train did you ever have any difficulty in stopping at the right place at stations, or did you sometimes run by the stations?

A. No more than any other; we would sometimes run by the length of a car or so.

E. T. MOORE.

Subscribed and sworn to before me, this 8th September, 1868.

R. E. STILWELL,
Examiner, &c.

668 EMORY STEBBINS, called and sworn as a witness on the part of the defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Emory Stebbins; 43 years of age; reside at Springfield, Massachusetts; and a cabinet-maker at present, and have been for the last year.

Q. 2. Have you ever been employed by any railroad company; if so, please state what company, how long you were employed, and what you did?

A. I have; by the Boston and Albany Railroad Company, formerly known as the Western Railroad Company of Massachusetts; I was employed from 18 to 20 years; for most of the time, say 12 years, I was inspector of cars at Springfield, Mass., at the depot of the company.

Q. 3. Do you understand the operation of the several kinds of brakes used on the cars on railroads; if so, name the different kinds with which you are acquainted?

A. I do understand them; the centre-lever brake, the Stevens brake, the Hodge brake, and the single brake.

Q. 4. Were all these different kinds of brakes which you have named in use on cars which came into the Springfield depot while you were engaged as inspector of cars, and did you operate all of them from time to time?

A. They were, and I did operate them.

Q. 5. After these different kinds of brakes which you have named have been applied to the wheels of the cars by turning up the brake-wheel or crank, will the wheel or crank revolve if no pawl or ratchet prevent, the instant the wheel or crank is let go of by the person at the windlass?

A. Yes, sir; they will.

Q. 6. Suppose you apply the centre-lever brake to the wheels of a car, or the Hodge brake, or the Stevens brake, there being no one at the opposite windlass in either of the above-named brakes, and the windlass or crank in either case be let go of, will the windless at the opposite end of either brake be revolved?

A. It will not.

669 Q. 7. But suppose in the application of the centre-lever brake by the brakeman, another person turns up the opposite wheel or crank, and then lets go (there being no pawl and ratchet on the back staff), will the wheel or crank in such case revolve?

A. It will not revolve.

Q. 8. Then suppose the brakeman who first applied the brake let go of his windlass, how will the opposite wheel or crank be effected, if the brake be a centre-lever double-acting brake, as already supposed?

A. It will turn and take up the slack of the chain.

Q. 9. Do you mean in this answer, to take up the slack or let off the slack that had been previously taken up?

A. It would let the brakes off the wheels; it would let the slack off.

Q. 10. Suppose it were a Hodge brake, or a Stevens brake operated in the same way as above stated, would the opposite wheel or crank be effected in the same way?

A. It would not.

Q. 11. Why not?

A. Because the slack is already taken up by the first man who puts the brake on.

Q. 12. Is there any slack in a Hodge or Stevens brake at the opposite end from which the brakes are applied?

A. None at all.

Q. 13. Is there a centre-lever brake?

A. There is.

Q. Is there any force on the opposite windlass of the centre-lever brake when the brakes are applied through the other windlass?

A. No, sir, there is not; it is perfectly loose at the time.

Q. 15. Is there any looseness of chain, rod or windlass in the Hodge or Stevens brakes at the opposite end from where the power is applied?

A. None at all

Q. 16. Can there be any reaction of the windlass in the Hodge or Stevens brakes at the opposite end of the car from which the brakes are applied when the brakes are let off?

A. None at all, I should say.

670 (The whole of this deposition objected to, so far as the same may be designed to apply to any question of infringement in this case.)

EMORY STEBBINS.

Subscribed and sworn to before me this 10th September, 1868.

R. E. STILWELL,
Examiner, &c.

Adjourned to the 11th inst., at 11 a. m.

SATURDAY, *September 12th*, 1868.

Present, the same as before.

WILLIAM COULTER recalled as a witness on the part of the defendants, deposes and says:

Q. 1. Do you understand the action of railroad car-brakes so far as the action of the crank or wheel used for applying the brakes is concerned?

A. I think I do.

Q. 2. Are you acquainted with the action of the crank or wheel used in operating the centre-lever double-acting brake?

A. I think I am.

Q. 3. You being a conductor, suppose your brakeman at one end of the car turns the crank or wheel of a double-acting centre-lever brake, and thus apply the brakes, and that you, at the other end of the car, turn the crank so as to take up the slack chain and then let go, will the crank you have let go of fly back if your brakeman still holds on to the other crank?

A. It will not.

Q. 4. Then suppose your brakeman lets go of the crank at his end of the car, how will his letting go effect the crank you had already let go of?

A. It would revolve rapidly to its place.

Q. 5. How do you know the crank would revolve rapidly to its place?

671 A. Well, I was once hit with it, and I have experimented with it since.

Q. 6. How do you fix the time you were hit, as stated in your former deposition in this case?

A. From the fact of my running a Philadelphia train as conductor: in my other evidence I think I stated it was in the fall of 1845, or spring of 1846; now I know it was in the fall of 1846; I was a little mistaken in my other deposition in regard to the time.

Q. 7. How do you know it was in the fall of 1846?

A. The conductor of the Philadelphia train, M'r Gamble, was engaged in Philadelphia as a witness in a lawsuit, and I was put on his train to run during his absence; the Newark train being my regular train at the time; I was put upon the Philadelphia train in the place of M'r Gamble for the time being, whose regular train was the Philadelphia train.

Q. 8. Have you any letter or anything of that kind by which you determine the date?

A. I have a letter which I received from M'r Smith at the time I was running the Philadelphia train spoken of, which is dated Nov. 17th, 1846.

Q. 9. And will you file the letter alluded to by you as an exhibit?

A. I have no objection.

Letter is hereto annexed and marked "Coulter's Exhibit."

(Letter objected to.)

Q. 10. You were running the Philadelphia train for M'r Gamble at the time you received this letter, and at the time you were hurt as testified to by you in your former deposition in this case?

A. It was during that week.

Q. 11. At what place did this occurrence of your being hit on the hand by the brake-crank happen?

A. It was on the morning train at Cambell's Station, which was then a stopping place for the Philadelphia train.

672 Q. 12. What circumstance, if any, caused you to be at the brake of any car or cars of that train?

A. We were about making a stop there, and I was on the rear platform of what we called the Tyler car. I thought he was going to run by, and I attempted to put the brake on; so I took hold of the crank and took the slack or chain up as far as it would go, and I didn't think it was holding any, so I let go of it, and after the cars had stopped I was standing on the platform, and when the crank revolved it hit me on the back of the hand, and it hurt me so that I felt it for a week or ten days.

Q. 13. Then your hand was not hold of the crank of the brake, was it?

A. No, sir.

Q. 14. Any pawl and ratchet on the brake-staff to hold the power?

A. I would not be certain about the staff; but there was no ratchet on the car. I had to hold the brake by main force; that is, those who applied it.

Q. 15. Did your brakeman make any remark at the time you were hurt, by his letting go the opposite crank, as you have stated?

(Objected to.)

A. Nothing more than he laughed at me, and said he had been knocked himself over the knuckles, or something like that.

(Objected to.)

Q. 16. On the same car?

(Objected to.)

A. I presume he meant so. I don't know.

(Objected to.)

Cross-examined by M'r Cozzens, counsel for the complainant

673 Cross 17. Did you ever know the crank or brake-wheel of a single-acting brake to fly back when it was let go after the brake had been put on?

A. I have.

Cross 18. Do you feel sure that your answer to the third direct question is correct?

A. I do.

Cross 19. Do you think what you say in that third direct answer would happen—did happen under the circumstances as you have stated them of your being hurt?

A. It did happen, just as I have stated.

Cross 20. Is it because—as you say—it happened, that you infer that the car spoken of had a double brake?

A. Well, I should judge so from the action I have seen since of double brakes; that is all.

Cross 21. Question repeated.

A. I judge it had. I infer now from that that it had a double brake on it.

Cross 22. That is all you know about its having a double brake at that time, is it?

A. That is all; the action of it.

Cross 23. You did not examine the brake, did you?

A. I did not.

Cross 24. When did you first know of your own knowledge, by actually seeing it, of a double brake acting at the same time on both trucks of the car from either windlass, being on any car either of the Camden and Amboy road or of the New Jersey road?

A. I could not judge about that distinctly. I should think about 1860; but can't tell.

Cross 25. You say in your seventh direct answer that M'r Gamble was engaged in Philadelphia as a witness in a lawsuit; how do you know he was?

A. I know it from the fact of his being subpœnaed, and will state the case if you want it. I know of his being subpœnaed from what he said; that is all.

Cross 26. How do you know that he went to Philadelphia as a witness; is it from his having told you?

A. That and other circumstances.

Cross 27. What other circumstances?

674 A. The circumstance of his going on the train with me.

Cross 28. Do you know that what he went to Philadelphia for was to be a witness, except from what he told you?

A. I know from that fact, and I have every reason to believe that he did go.

Cross 29. Is M'r Kester being away, as you say at this time, the reason that makes you think that the incident you have spoken of occurred in the fall of 1846?

A. Yes; M'r Smith, M'r Stebbins, and M'r Gamble went on to Philadelphia in the same case, and I got this letter I have produced from him at the time they were in Philadelphia.

Cross 30. Is your knowledge that M'r Smith and M'r Stebbins were engaged in this case derived from their telling you so?

A. Yes; from their telling me so, and the general knowledge I had of the case at the time.

Cross 31. Did you hear either of them testify in the case, or see either of them do anything in the case?

A. I did not.

Cross 32. Now, what connection has this letter with the crank of a brake flying back?

A. I received that letter some time during the week that I was hit with the crank.

Cross 33. Question repeated.

A. The first I ever ran on a Philadelphia train was during the week I was hit with that brake-crank; and that week I received that letter; and after that I went back to my regular train.

Cross 34. Then you mean, do you, that you think the letter shows when you were running the Philadelphia train?

A. Most certain.

Cross 35. Who was the M'r Kester spoken of in this letter?

A. He was the conductor running from Philadelphia to New Brunswick, and since dead.

Cross 36. Then it comes to this, doesn't it, that you think you remember that this crank flew around during the first week you run a Philadelphia train?

A. During the time I speak of; yes.

675 Cross 37. Have you never seen a brake crank fly around since that time?

A. Yes, sir.

Cross 38. About how many times?

A. Well, I suppose I have experimented myself ten times within the last two weeks. I have no recollection how many times.

Cross 39. Have you seen it fifty times?

A. I have no recollection.

Cross 40. Have you seen it twenty five times?

A. I have no recollection.

Cross 41. Have you seen it ten times?

A. I have as many as ten, and probably more.

Cross 42. What were these experiments you have been making the last two weeks?

A. With the different kinds of brakes.

Cross 43. What were you experimenting on with them; what were you trying to find out?

A. To see if any brakes in use on our road, except that centre-lever brake, or one on the same principle, would revolve after being wound up, the chain at the other end being wound up also.

Cross 44. Well, how did you find it to be?

A. I found that none of them would operate as it did on this Tyler car, except those on the same principle as the centre-lever brake.

Cross 45. Did you try any experiments with the single brake?

A. No, sir.

Case 46. At whose request or suggestion did you try those experiments?

A. My own.

Cross 47. Why did you want to do it?

A. I heard they were going to send for me again, and I wanted to be posted.

Cross 48. Prior to this two weeks, how many times did you see a brake crank revolve after the occurrence you think took place in the fall of 1846?

A. I couldn't answer how many times.

676 Cross 49. Can you state whether it was a great many times?

A. I have no definite means of telling anything about it. I haven't charged my memory with anything about it.

Cross 50. Have you seen it more than once?

A. I couldn't tell.

Case 51. Are you in the habit of often putting on the brakes at different times during the running of a train?

A. In case of necessity I do.

Cross 52. When did you first know, of your own knowledge, that this Tyler car had a double brake?

A. I don't know it yet.

Cross 53. Can you describe the construction and operation of double-acting brakes?

A. The operation from the platform; that is all, sir; the construction I know nothing about.

Direct resumed by M'r Whipple:

Q. 54. I will now take Exhibit A in this case, and assume that my right hand represents your brakeman and my left yourself; and then I will turn up the crank to the right with my right hand, and thus apply the brakes; with my left hand I will turn the crank to the left until the chain is wound up, and then let go. Does what I have done with my left hand correctly represent what you did before you were hit?

(Objected to as leading.)

A. I want to see the operation first. (The crank is let go, and witness says:) It does.

Q. 55. Then, did your brakeman let go of the other crank as I let go of this?

A. Yes.

Q. 56. And did the crank you had had hold of fly back and hit you on the hand as you have testified?

A. It did.

Cross resumed by M'r Cozzens:

677 Cross 57. At the time you say you were hurt you were trying to put the brake on, were you not, to stop the cars?

A. That is what I tried to do.

Cross 58. You tried to put it on with considerable force, did you not?

A. I tried to put it on with the force I ordinarily would use in putting on a brake.

Cross 59. That is, you were trying to make the brake-shoes press against the wheels to retard them, were you not?

A. Why, certainly.

Direct resumed:

Q. 60. Having applied the brakes, did you let go the crank by which you had applied them?

A. Yes.

Q. 61. And do I understand that the crank did not revolve when you let go of it, or fly back as you have stated?

A. It did not.

Q. 62. Is it not a fact that the cranks or wheels of all railroad car-brakes will fly back the instant they are let go of, if held by no pawl and ratchet, provided they are not held at the other end?

A. Yes, sir; all brakes that I have ever seen.

Cross-examined:

Cross 63. Is there the least doubt in your mind that, at the instant previous to your letting go of the crank, you had been trying to stop the car by making the brake-shoes press against the wheels?

A. There is no doubt.

Direct resumed:

Q. 64. Did the car to which you applied the brake in question run a short distance after you let go of the crank and before it flew back by the brakeman at the opposite end letting go of his crank? 678

A. A couple lengths of the train, I should think.

W. COULTER.

Subscribed before me this 12th September, 1868.

R. E. STILWELL,
Examiner, &c.

MONDAY, *September* 14, 1868.

Present, the same as before.

Adjourned to 2 p. m. this day.

Counsel on both sides present.

M'r Whipple wishes to note that he intended to resume the redirect examination of M'r Coulter this morning, but since the adjournment to 2 o'clock has been informed by M'r Coulter that he is sick and cannot attend, and therefore the case is adjourned to 11 a. m. to-morrow, as he has no other witness to examine to-day.

THURSDAY, *September 24th*, 1868.

Present, counsel for the respective parties, and complainant.

(All further testimony in this case on the part of the defendants objected to, as heretofore noted.)

WILLIAM COULTER, redirect continued:

Q. In view of all your evidence taken in this case, what will you have the court understand by your answer to the 52d cross-interrogatory, that is, "I don't know it yet;" that is, that this Tyler car had a double brake?

679 A. The same answer.

Q. Am I to understand that it was from not having examined the mechanism that you do not know that there was a double brake on the Tyler car?

A. I never examined it.

Q. Do you think there was a double brake on the Tyler car from the action of it at the time you was hurt in connection with its operation from the other end by your brakeman?

(Objected to.)

A. Only from what I have seen of the double brakes since.

Q. Is the action of the centre-lever double-acting brake now in use on the cars of the New Jersey Railroad and Transportation Company the same, under the same circumstances, as the action of the brake on the Tyler car, in *in* November, 1846, or the time when you were hurt?

A. They appear to be the same.

Q. Under the same circumstances, can you get the same action and reaction of the cranks or wheels of the Hodge brake or the Stevens brake?

A. I think not.

Q. Judging from the action of the brake on the Tyler car at the time you were hurt, and from what you know of the action of the centre-lever double-acting brake in use on the cars of your road, is there any doubt in your mind whether there was a connected double-acting brake on the Tyler car previous to 1847?

(Objected to.)

A. I have thought so from the action of the brakes I have seen from the platform since that time. That is all the means I have of knowing.

Q. Were there any Camden and Amboy cars run in the Newark train while you were conductor of that train?

A. No, sir.

Q. After you took charge of the Philadelphia train, as you say,
680 in April, 1848, was the Tyler car occasionally put in this train as
an extra car?

A. Yes, sir, it was.

Q. Did you ever have occasion to observe the action of the brake on the Tyler car after you were hurt?

A. No, sir; it was very seldom in the train.

Q. When you say in your direct evidence, taken August 15, 1867, that thereafter you were aware that the brake on the Tyler car did apply the power to both trucks at the same time, do you mean that you judge so from the action of the brake, and not from an examination of its mechanism?

(Objected to.)

A. My answer should have been, I was not aware of it; judging from the action from the platform, I think there was.

Cross-examined without noting the objections:

Cross. You have no knowledge, have you, what kind of brake was on that car in November, 1846, or afterwards?

A. No, sir.

Cross. Have you ever known the chain attached to the windlass of the double-acting centre-lever brake to catch so as temporarily to prevent the windlass or crank from flying back when the brake was let off?

A. Not particularly that brake; I have known chains to catch in that way; I don't know whether it was that kind of brake.

Cross. Have you known the chains to catch in this way with the kind of brakes now in use on the New Jersey Railroad?

A. Not of my own knowledge.

Cross. What brakes was it that you spoke of in your previous answer in which you had known the chain to catch?

A. I don't know what kind of brakes they were; but they were on the New Jersey road.

Cross. Have you observed this pretty often?

A. Not very.

681 Cross. About how often, as near as you can state?

A. I could not state any definite times; it depends upon circumstances.

Cross. Will it occur several times in the course of a year?

A. Well, I should judge it would on all the cars we are on; my knowledge of this mostly is from what I hear brakemen say.

Cross. Do you frequently have to call the attention of the brakemen to the fact that the brakes are not holding? and if you do, please state why.

A. I do; the reason is the fact of running by stations, and their answers are that the chains are too long or jammed.

Cross. What do you mean by jammed?

A. I mean it will catch around the shaft under the nut or eye when the brakeman applies the brakes.

Cross. And will it not also catch sometimes after the brake has been applied and when it is attempted to be let off?

A. It will.

Cross. When it so catches the chain will stay stationary, will it not?

A. It will until it works loose or is taken off by the hand in the majority of the cases, I think.

Cross. And when the chain thus stays stationary the wheel or crank on the windlass-staff will also remain stationary, will it not?

A. Yes, sir.

Cross. Are you able to state whether this same kind of "catching," with these same consequences, will take place with what is called the single-acting brake, acting on only one truck?

A. I should judge it would.

Cross. Are you able to state at all definitely how much of a distance the car on which you were hurt, as you have stated, ran after you let go the crank?

A. Well, I should judge two lengths of a train; I think there were six cars in the train, but am not positive.

Cross. Might not this distance be sufficient to allow of a brake chain which had caught working loose while the car was running this distance?

682 (Objected to.)

A. I could not judge.

Cross. In what distance have you known brake-chains which had caught to work loose?

A. I have never observed any, and have no means of knowing.

Cross. You have been asked several questions about the crank or windlass flying round; will you please answer this: After the brake-crank at one end of a centre-lever double-brake car; that is, I mean such brakes as are used on the New Jersey Railroad cars, has been turned so as to put the brake on hard if the brake at the other end is then put on with such force as you would employ to stop a car, and then the crank at this other end is let go, will not such crank at once fly back, provided, of course, the chain does not catch?

A. It will.

Cross. Then if, after this crank is let go, the crank at the other end is let go also, will there be any more flying back of any consequence in the crank you first let go of?

A. Very trifling—not of any consequence.

Direct resumed by M'r Whipple:

Q. Did the chain jam at the time you applied the brake when you were hurt?

A. That I could not tell.

Q. Do you think it did?

(Objected to.)

A. I could not tell.

Q. Is there a pawl and ratchet on the platform and windlass staff of the cars of the New Jersey road at the present time?

A. Most of the passenger-cars, if not all.

Q. How do you account for the non-reaction of the crank the instant you let go of it at the time you were hurt?

683 (Objected to because the witness having stated what occurred, according to his recollection, it is for the court to infer the reason. Question withdrawn.)

W. COULTER.

Subscribed before me this 24th September, 1868.

R. E. STILWELL,
Examiner, &c.

Adjourned to 10½ a. m. the 25th inst.

PHILADELPHIA, *Nov. 17th*, 1846.

DEAR SIR: I sent word last evening by M'r Kester to have the platform-car on which the crates are carried taken out of the train and one that was in good order put in its place, which was not attended to; if you delivered such orders to M'r Talson or Major, at Jersey City, it appears strange that it was not done. Tell one or the other of them this evening that if there is a like occurrence I will endeavor to have men that will obey orders—at least one of as much importance as that. Please see to the delivery of the accompanying letter.

Your friend,

T. L. SMITH.

W'M COULTER, Esq.

Coulter exhibit.

R. E. STILWELL,
Examiner, &c.

ALFRED HURD, called and sworn as a witness on the part of the defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Alfred Hurd; 60 years of age; reside at New Brunswick, New Jersey, and am a locomotive engineer.

684 Q. 2. By what railroad company are you employed as a locomotive engineer?

A. The New Jersey Railroad and Transportation Company.

Q. 3. When did you first commence as locomotive engineer on that road, and to what time did you continue so employed?

A. About the year 1840, and continued till about 1850.

Q. 4. Where then did you go, how were you employed, and to what time were you so employed?

A. I went into the employ of the New York and New Haven Railroad Company as engineer, and continued in their employ till 1865; and since then have been in the employ of the New Jersey Railroad and Transportation Company.

Q. 5. Do you know anything of the application and use of a double-acting brake on a car belonging to the New Jersey Railroad and Transportation Company, during the time you were engineer on that road, from 1840 to 1853?

A. I know of one that was termed a double brake.

Q. 6. When did you, for the first time, see what was "termed a double brake" on that road?

A. I couldn't say exactly. It was in the administration of Joseph F. Talson, master wood-workman of the car department of that road.

Q. 7. How did this brake "termed a double brake" act?

A. It acted on both trucks instead of one, from either end of the car.

Q. 8. May not this brake have been seen by you on a car of the New Jersey Railroad and Transportation Company in the administration of M'r David H. Baker, and not that of M'r Talson who preceded him?

A. Well, that is rather a hard question to answer, as I have seen them in both.

Q. 9. Are you quite sure that you saw this brake "termed a double brake," during the administration of M'r Talson?

A. I am.

Q. 10. What was there about this brake that took your attention and caused you to notice it?

685 A. Well, it was no more than I saw one man could apply the brake to both trucks, and it would answer the place of two men.

Cross-examined by M'r Cozzens, counsel for the complainant:

Cross 11. What kind of a car was it which had on it this double brake?

A. It was a passenger-car; what train it run on or where it run I could not tell.

Cross 12. Did you ever before to day see M'r Sayles, who is now present?

A. Yes, sir.

Cross 13. When and where did you see him?

A. I have seen him at Jersey City. I couldn't tell the time.

Cross 14. State the time to the best of your ability.

A. I have seen the gentleman over there several times, but can't state the time.

Cross 15. Have these several times been within a year past?

A. I think so. I never knew his name. I knew his countenance.

Cross 16. Did M'r Sayles have any conversation with you at these times; and, if so, what was the conversation about?

A. No, sir.

Cross 17. Did you not tell him at least one of those times that you could not recollect anything about when double brakes were put on the cars of the New Jersey Railroad, and did you not tell this in answer to some conversation you had with him about it?

(Objected to, as the witness has said that he has had no conversation with M'r Sayles.)

A. No, sir.

Cross 18. Will you swear positively to this?

A. Yes, sir; for I never had any conversation at all with him about brakes.

686 Cross 19. How came you to see him?

A. He often came into our sitting-room; it is in one corner of the engine-house at Jersey City, and is called the engineer's room.

Cross 20. Do you know what he came there for?

A. No, sir. I had heard him mention something about double brakes, but he had no conversation with me.

Cross 21. Did he talk with anybody there when you were present; and, if so, who?

A. I couldn't say whether he directed his conversation to anybody in particular.

Cross 22. Mention who were present at any one of those times when you were there?

A. Well, I can't tell. Sometimes there were a dozen present, and sometimes a half a dozen.

Cross 23. Are you able to tell how this brake, which you say you saw, was constructed?

A. No, sir.

Direct resumed by M'r Whipple:

Q. 24. Do you mean it was a passenger-car that had this brake on or that it was a car run in a passenger-train?

A. It was a car that run in a passenger-train, as near as I can recollect.

Q. 25. Was it a car for carrying passengers or carrying baggage?

A. It was a car for carrying passengers.

Q. 26. May it not have been a car for carrying baggage?

(Objected to.)

A. It was always my impression that it was on a passenger-car.

Q. 27. And yet may it not have been on a crate or baggage car?

(Objected to.)

687 A. It might; but my best recollection is it was on a passenger-car.

ALFRED HURD.

Subscribed and sworn to before me this 11th September, 1868.

R. E. STILWELL,
Examiner, &c.

Adjourned to 2 p. m., the 12th instant.

Jonathan Edward Cudlipp, called and sworn as a witness on the part of the defendant, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Jonathan E. Cudlipp; 42 years of age next November. I reside between 69th and 70th streets, on 10th avenue, and am a carpenter.

Q. 2. Have you ever been employed by any railroad company? If so, state what company, how you were employed, and from what time to what time you were so employed.

A. I was employed by the New Jersey Railroad and Transportation Company, from April, 1843, until August, 1857. I served an apprenticeship at car-building in the shop, and run as conductor on the road, as extra conductor in case of sickness or absence.

Q. 3. How were you particularly employed in 1850?

A. In the car-shop, at repairing cars.

Q. 4. Are you acquainted with the complainant in this case, M'r Sayles? If so, please state when and how you first became acquainted with him, and the conversation connected with your first acquaintance or meeting, and then state what other meetings you had with him, and the subject-matter of such meetings.

(Objected to.)

A. I am. M'r Sayles visited my house the latter part of August, 688 1867. At his first visit I was on Long Island. My wife told him I would be home the next day (Saturday); M'r Sayles called on me that Saturday evening, about 8 o'clock, and introduced himself as M'r Sayles, and wanted to have a talk with me, to ascertain what knowledge I had of the Batchelder and Thompson brake, of which he said he was the owner. He wanted to get what knowledge I had of the John Tyler car, as fitted up by the Camden and Amboy Company. I told

him I had no knowledge of the John Tyler car fitted up by the Camden and Amboy Company. He further told me that he had some $50,000 to spend in this case, and that he was not going to be mean with it. I told him that I knew nothing of that John Tyler car, and didn't wish to be drawn in this matter at all. M'r Sayles said he understood that I was the only man that could influence M'r Joseph F. Talson. I told him I probably could influence him as much as any other man. He wished me to see M'r Talson in regard to this John Tyler car, and have a conversation with him, and see if I could not whet up my memory a little, and to ascertain about what evidence there was against M'r Sayles and his side of the question. I agreed to see M'r Joseph F. Talson in a day or two. That was about all the conversation we had at that time. I failed to go and see Talson at the time agreed. M'r Sayles called upon me, I think, on the following Tuesday or Wednesday. In a conversation we had at this meeting, M'r Sayles represented the value of this patent right in the neighborhood of somewhere from one to three million dollars, as near I can recollect, providing he gained the case, or gained the suit, that he had pending against railroad companies. M'r Sayles wished me to see M'r Talson, and if I could influence Tolson so far as to hold back what evidence he had collected for the railroad companies, and to go no further with his own evidence than to answer questions as they were put to him, that he would secure me to an income of ten per cent. of the whole income of said brake. Upon these conditions I was to see M'r Talson. I told him I could not go to see M'r Talson till the following Sunday, or I would write to him in the mean time. As M'r Sayles knew M'r Talson's place of business, he proposed my going to see him there. It was agreed that I was to meet M'r Sayles
689 at the Girard House on Monday morning, about 10 o'clock. I
met him at the time and place appointed. We then had a long conversation about the brake and about the evidence that Talson knew and had collected, and he there agreed to go before any lawyer in New York and secure to me this ten per cent. income from the brake which I have already mentioned. He took me down to Vesey street and showed me the office where Talson was employed. I went in (M'r Sayles stopped outside) and inquired for Talson. They told me that he was at that time in Baltimore, and would be home the next day (Saturday). I came out to M'r Sayles and agreed to see Talson on Sunday, and if I could see M'r Sayles on my return in the evening, at the Girard House, I would stop and tell him what my visit amounted to. He said he was going to Albany on Saturday, and would not be back till the following Monday or Tuesday, when I could see him at the Girard House. I went over on Sunday and saw M'r Talson (we being old railroad men together; I served my apprenticeship with him). We had a long conversation. He knew M'r Sayles well, and had known him for some years, and he said that M'r Sayles nor no other man had money enough to induce him to hold back what evidence he had secured, and in particular the evidence he had secured in Long Island; a witness that lived on Long Island. I think he represented that he was lame, or had been lame, injured in repairing a brake, or something like that. I had further conversation with M'r Talson at that time, but found it all amounted to nothing, as he was determined to give in his evidence as he had collected it. He said as far as the promise of the ten per cent. of the whole income from this brake was concerned, he would not give the snap of his fingers for the promise, or the agreement which M'r Sayles was prepared to make, or agreed to make, and I didn't consider it worth my while to go and see M'r Sayles on the Tuesday, as agreed. Further, I

would like to state here, when M'r Sayles said he would agree to give
me this ten per cent., which he thought would amount to the snug little
sum of somewhere about $100,000, that I was at liberty to divide it with
any one, or do as I choose with it. That was all about that. I
690 failed to meet M'r Sayles on Tuesday morning, according to agree-
ment. He came up and was at my shop about 12 o'clock on that
same day. I then told M'r Sayles that from the conversation I had had with M'r Talson, that I didn't think he had handled his case, as far as Talson was concerned, very skillfully, for M'r Talson had no confidence in him, and stated that M'r Sayles had treated him badly from beginning to end, and that I could do nothing whatever with Talson, and couldn't influence him one way or the other. I didn't see him again until the last of October, and our conversation amounted to about nothing at that time. I did not see him again until about midwinter. His whole conversation at that time was concerning this Batchelder and Thompson brake. We had quite a conversation about that brake, for up to that time I had claimed to have no recollection of the precise time when this brake was put upon the New Jersey Railroad. In the course of that conversation it struck me that I was injured pretty seriously while repairing a double-acting brake on a platform-car then running on that road. I told M'r Sayles that I was pretty confident that I was injured while repairing this same Batchelder and Thompson brake. He was anxious to know the time, and I stated it was about four or five weeks before I was married. I could not tell him positively the year I was married in, but stepped to the front window of my house and asked my wife the year we were married. She said it was the 29th of October, 1850; and furthermore she said I was hurt about five weeks before that time. That is the last time I saw M'r Sayles until I saw him here to-day.

(Objected to all that has been said to witness.)

Q. 5. You have said in the foregoing answer, "that we had quite a
long conversation about that brake (referring to the Batchelder and
Thompson brake), for up to that time I had claimed to have no recollec-
tion of the precise time when this brake was put upon the New Jersey
Railroad." Do you mean to be understood that it was the first time a
double brake was put upon said New Jersey road, or that it was the
first time you saw such double brake on said road?
691 (Objected to.)

A. No; I don't claim that it was the first double brake that was put upon the road, but being hurt at that time by repairing the brake, I know it was upon the road. How long that brake had been in use on that car, or road, I am not prepared to say.

Q. 6. What were you doing on said car, which you say had a double-acting brake thereon, and how were you hurt, in what way, and where?

A. The chain that goes on the standard or brake staff was too long. I had to take out three links out of that chain. When I returned from the blacksmiths' shop with the chain I connected it with the lever inside the truck frame, and was in the act of attaching it to the brake standard, when an engine backed up to the car with such force as to jam me between that and the adjoining car, and broke both of my collar bones.

Q. 7. Was this brake from which you took the three links of chain a connected double-acting brake that operated on both trucks of the car at the same time?

A. It was. We had no single-acting brake with an inside lever; that is, with no lever inside the truck frame.

Q. 8. How were the levers in each truck connected between the trucks so as to make a double-acting brake?

A. They were connected by a rod from a lever attached to the body of the car to a lever inside the truck-frame of each truck.

Q. 9. In this brake how were the windlasses connected?

A. They were connected by rods from the lever under the centre of the car.

Q. 10. Do you wish to be understood, then, that the rod with the chain attached, out of which you took three links, connected the windlass or brake-staff with the centre lever under the bottom of the car?

A. I do.

Q. 11. And not directly to the "lever inside the truck-frame," as you have stated?

A. Yes, sir.

692 Q. 12. During the time these meetings and conversations were going on between you and M'r Sayles, in reference to influencing M'r Talson in the course he was pursuing in eliciting evidence in this case, did any other person or persons call upon you to influence you to use your influence with M'r Talson? If so, please state the name of any such person or persons.

A. M'r David H. Baker, foreman of New Jersey Railroad car shop, called at my house on a Sunday afternoon; our conversation was about M'r Sayles and this brake.

Q. 13. What did he say to you in reference to your exercising an influence with M'r Talson?

(Objected to.)

A. M'r Baker said he thought there was some money in it for both of us, and if I could manage M'r Talson we could probably make some little out of it.

Q. 14. Did any other person call upon you on the same business as did M'r Baker?

A. No, sir.

Q. 15. While you were in the employ of the New Jersey Railroad, did you know of the use of a double-acting brake on any car or cars of the Camden and Amboy Railroad? If so, please state what you know, and any circumstances connected with such knowledge.

A. Yes; I know of double-acting brakes on the Camden and Amboy cars; I had to detach one at Rahway one night on account of its being out of order, and that was a double acting brake; but the precise time of that occurrence I am not prepared to state, but think it was in the time of Tolson having charge of the cars; I may be mistaken as to the time; it might have been after Baker came there.

Q. 16. Was it before or after the time when you were hurt in repairing the double brake alluded to in a previous answer?

A. I am not positive, but think it was previous to the time I was hurt.

Adjourned to 10½ the 9th inst.

693 WEDNESDAY, *September 9th*, 1868.

Present counsel and complainant, as before.

Q. 17. In answer to the 11th interrogatory, which reads as follows: "And not directly to the lever in the truck as you have stated," your answer is: "Yes, sir"; do you wish to add anything to this answer for the purpose of making it more explicit?

A. I wish to add that that chain was connected to a rod which was itself connected to a lever under the centre of the car; for I have stated heretofore that we had no single-brake with an inside lever.

Q. 18. In the brake in question, how was the lever on the truck located in reference to the centre lever under the body of the car?

A. Both were set nearest to the centre of the car or farthest from the front side of the truck.

Q. 19. You have testified that M'r Sayles said that he understood that you were the only man that could influence M'r Talson; how does it happen that you should have this supposed influence?

(Objected to.)

A. I suppose in no other way than my being an apprentice to him, and his being my brother-in-law.

(Objected to.)

Q. 20. At your first conversation you told M'r Sayles that you knew nothing about the John Tyler car of the Camden and Amboy road; but notwithstanding this, you say that M'r Sayles wanted you to see M'r Talson about this car; see him about what, in relation to the Tyler car? Please explain.

A. I had mentioned the Tyler car on the New Jersey road fitted up at the time of John Tyler's marriage; probably M'r Talson had that
mixed up with the John Tyler car of the Amboy road; I should
694 have said that M'r Sayles thought that M'r Talson had that car
mixed up with the John Tyler car of the Camden and Amboy
road; and this is what M'r Sayles wanted me to see Talson about at the time.

Q. 21. You have further testified that M'r Sayles wished you to see M'r Talson, and if you could influence him to hold back what evidence he had collected for the railroad companies, and go no farther with his own evidence than to answer questions as they were put to him; please be a little more explicit on this point, and state how he was to answer.

A. Well, from the conversations we had, I suppose he meant Talson to answer yes or no, to the questions put to him, and add nothing farther to them.

(Objected to.)

Q. 22. You have further testified that M'r Talson said as far as the promise of the ten per cent. of the income from this brake was concerned, he would not give the snap of his finger for it, for the promise or the agreement which M'r Sayles was prepared to make or agreed to make. Why this seeming indifference on the part of M'r Talson to the proposed agreement of M'r Sayles? Please explain more fully.

(Objected to.)

A. M'r Talson considered his case helplessly lost from the evidence already given in, and he would not enter into such an arrangement with M'r Sayles or any other man.

(Objected to.)

Q. 23. What do you mean by the Batchelder and Thompson brake spoken of by you in your evidence?

A. A brake rigged with a lever in each truck and connected with a double-acting lever under the centre of the car.

695 Q. 24. Was there such a brake on the car you were repairing at the time you were hurt, alluded to in your foregoing evidence?

A. Yes.

Adjourned to 10½ a. m. the 10th inst.

Rec. 306—23

THURSDAY, *Semtember 10th*, 1868.

Present counsel as before, and complainant in person.

Cross-examined by M'r Cozzens, counsel for the complainant:

Cross 25. You have stated that you are the brother-in-law of Joseph F. Talson; were you aware when you testified here yesterday, and the day before, that the said Talson is at the present time under bail and awaiting an examination on a charge of perjury in this suit?

A. I was aware of it, but I didn't know but it was settled, as I have had no conversation with M'r Talson about it.

Cross 26. From whom, or how, did you hear about it, and when?

A. Shortly after his being brought from Chicago to New York; he came to see me at that time and stated he would probably want me in September as a witness in this perjury case; I have not heard anything from it from that day to this.

Cross 27. Were you aware that this charge of perjury was made at the instance of M'r Sayles, the complainant in this case?

A. So Talson told me at that meeting.

Cross 28. (Without waiving the objections heretofore made.) Were not the matters you have testified to in answer to the 4th direct interrogatory, or some of them, talked of at the time you met M'r Sayles at the Girard House, as you say?

A. Yes, there was a conversation with Sayles and me at the Girard House, and I think they were talked over.

696 Cross 29. Did you meet M'r Sayles at the Girard House on more than one occasion?

A. No, sir.

Cross 30. Was any one present at that conversation at the Girard House besides M'r Sayles and yourself?

A. There was another gentleman that sat alongside of M'r Sayles, and he went with us as far as Vesey street.

Cross 31. Was his name Wandell?

A. That I could not say.

Cross 32. Was there any body else besides that party present?

A. Only a little boy of mine.

Cross 33. In that Girard House conversation did you not say to M'r Sayles in the presence of the gentleman you have mentioned, that when you first went on the road you heard about the old Stanly brake being tried and failed, and being taken off the car, and being put up over head in the loft or chamber of the car repair-shop of the New Jersey Railroad, and that you saw it there a good many times?

A. It is probable I had such a conversation at that time or some other with M'r Sayles about the Stanly brake.

Cross 34. Did you not further say in that conversation that you knew there was no double brake, or that there was no double brake used on that road (the New Jersey road) before Baker put the double brakes on in 1850 or 1851, or you would have seen it, and that you knew you never saw a double brake before Baker put one on?

A. I don't think I had ever repeated anything of the kind, as I always maintained, even with M'r Sayles himself, that there was double-acting brakes on the road during M'r Talson's time; the dates I could not say, nor the particular arrangement of the brake.

Cross 35. Do you mean by the last part of this answer that you wish to say what you said in your direct examination respecting your seeing or knowing of double brakes on the New Jersey Railroad?

A. No, sir.

Cross 36. Did not Sayles say to you in that conversation that
697 he wanted some one to look up the facts with regard to the use of double brakes on the Camden and Amboy Road, and on the New Jersey Road, and to look up witnesses to prove those facts, and that he wanted some one who was smart and acquainted with the men who were on those railroads from 1842 to 1851?

A. I can't recollect exactly about that conversation, he impressed me with the idea of getting facts from Talson.

(This sentence objected to.)

Cross 37. At that conversation did he not show you Talson's testimony given at the Erie trial in 1854, and did he not tell you that he had had no doubt that that testimony was true, and did he not tell you that all he wanted of Talson was to stick to what were the facts as he (Talson) had himself testified to them at said trial, or words to that effect?

A. Yes; M'r Sayles read over, I think, a portion of M'r Talson's testimony at Albany, which I paid very little attention to. He did wish M'r Talson to stick to facts. That was about the amount of our first meeting.

Cross 38. At the Girard House conversation was not what M'r Sayles said to you about the ten per cent. proceeds of the patent this, that he wanted somebody to help him prove the facts in the case, and that if you would help him to look up witnesses to prove these facts, and that if he succeeded in the case he would give you ten per cent. of the nett proceeds of the patent?

A. I think not; as I would not have had anything farther to do with it from that moment. In his conversation about Talson, both at the Girard House and on the way to Talson's office from the Girard House, that he wanted nothing but facts from Talson, and to keep back what evidence he had secured for the railroad companies.

Cross 39. Was this same person who was present at the Girard House when you had the conversation with M'r Sayles with you when you walked to Talson's office?

A. I think not; or he probably walked behind us, as he had some business at the Erie Railroad depot, in Jersey City. It is my impression that he went down Chambers street to the ferry, but it is only a supposition; I can't be positive. 698

Cross 40. You mean, I suppose, that it is your impression that as you were leaving the Girard House to go to Talson's office that that person went down Chambers street to the ferry?

A. Yes, sir.

Cross 41. It is possible then, is it, that he did not do so, but that he accompanied M'r Sayles and yourself to Talson's office?

A. No; because he did not accompany us to his office. He either left us at Chambers street or at Vesey. I am not certain that he followed us; if he did, he was behind us.

Cross 42. In the Girard House conversation did not M'r Sayles say to you that he had all the railroads in the country against him in this case, and that the facts in the case would have to be proved by railroad men, and that these men would probably be afraid to testify to these facts for fear of being discharged by the roads; and did he not tell you that these men would talk to you more freely than to himself, because you were an old railroad man and acquainted with the men who knew the facts, or words to that effect?

A. I think that conversation took place at our first meeting, which was at my house. I did not understand that I was to influence or get any testimony from any man except Talson. We may have had such a conversation as the question enquires of at the Girard House, but am not positive about that part of it.

Cross 43. Did you not, at that Girard House conversation, say to M'r Sayles that if there had been any double brakes on the Camden and Amboy cars which came to Jersey City while you were on the New Jersey Railroad, you would have seen them, and that you were sure that you never had seen one before M'r Baker put the double brake on the New Jersey Road, and that that was some time after you were hurt, which was in 1850?

A. No, sir; as I never spoke to M'r Sayles about my being hurt on the New Jersey road until February, 1868; then in M'r Sayles' conversation he brought to my mind the brake that I was repairing at the time I got hurt. This conversation took place at the coal-office, corner of 70th street and 10th avenue. 699

Cross 44. Did you say the things enquired about in the question other than about your being hurt?

A. At one of our meetings I recollect a conversation when I stated that I had no recollection of the John Tyler car or any double brake on the Camden and Amboy cars during Talson's time.

Cross 45. Is it not possible that you may have said this at the Girard House interview?

A. Yes; it is possible.

Cross 46. Did you not state to M'r Sayles at the Girard House, that if there had been for any length of time any double brakes on the Camden and Amboy cars which came to Jersey City while you were on the New Jersey Railroad you would have seen them?

A. I think it most likely I said so.

Cross 47. Have you any recollection of any double brake on the cars of the New Jersey Railroad, or on any Camden and Amboy cars prior to the time referred to in your direct examination, when you say you were injured?

A. No distinct recollection of the workings or arrangements of double-acting brakes, but there had been double-acting brakes used upon the road of different kinds.

(The last part of this answer objected to.)

Cross 48. Will you look at the sketch now shown you and state whether or not you made it?

(All questions from cross-question 28 up to this question put de bene.)

A. I may have drawn a sketch similar to that, but it was on the blank leaf of a bound novel which lay upon the top of a coal scales. I don't think I drew that.

Cross 49. Did you not make a second sketch for M'r Sayles, and is not this such second one?

700 I think not; I referred to that sketch, and I stated to M'r Sayles that I thought my evidence in the patent-brake case would injure him; would not help his side at all.

(The last part of this answer objected to.)

Cross 50. For what did you draw the sketch which you say was similar to this one now shown you?

A. As the occurrence of my being hurt had just entered my mind, I had not the time to give M'r Sayles any correct draft of it; I wanted to convey some idea to M'r Sayles what that brake was that I was repairing when I was hurt.

Cross 51. When you say a "correct draft," do you mean an artistically executed drawing of it, such as a draftsman would make?

A. No, sir; for I am no draftsman; but one that would fully represent the connections of said brake.

Cross 52. When was it, as near as you can state, that you made for M'r Sayles the sketch similar to this one?

A. It was about the middle of the winter of 1867 and 1868.

(The sketch annexed, marked "Cudlipp's Exhibit," defendant's new proof.)

Cross 53. Will you state what the portion of this sketch underneath the car-body, and next to the words and figures, "February 27, 1868," represents?

A. I suppose it represents the support of the windlass.

Cross 54. You have stated that M'r David H. Baker called upon you; did you not state to him at this call that you had no knowledge of any double brake on the New Jersey Railroad previous to the time of his putting the double brake on said road?

De bene:

701 I made no acknowledgements either one way or the other to M'r Baker, as I did not wish to be brought into this matter at all; I think our whole conversation was upon the present condition and management of railroads; I mean I did not say so to M'r Baker.

Direct resumed by M'r Whipple:

Q. 55. Has this exhibit, marked "Cudlipp's Exhibit," any connection with the brake which you were repairing at the time you were hurt, or not? Please explain.

A. No, sir; as the brake upon which I was at work when I was hurt had a rod running over the top of the truck connecting with the chain from the standard, the other end of the rod was connected to a lever in the centre of the car, or between the trucks.

Q. 56. Do you know anything about this exhibit?

A. I do not.

Q. 57. On the back of said exhibit is marked "Cudlipp's brake;" is that your handwriting?

A. No, sir.

JONATHAN EDWARD CUDLIPP.

Subscribed and sworn to before me this 10th September, 1868.

R. E. STILWELL,
Examiner, &c.

702 In the circuit court of the United States for the northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.

Deposition of witness produced and examined on behalf of respondents, before William Grier Hibler, United States commissioner and examiner, at his office, No. 435 Library street, in the city of Philadelphia, on the 29th day of September, A. D. 1868; M'r S. M. Whipple attending on behalf of respondent and the plaintiff in person, and M'r S. D. Cozzens attending on behalf of complainant.

JOSEPH W. BAMPTON, being produced and duly sworn on behalf of the respondent, deposes and says, in answer to interrogatories (the same objection to the taking of this deposition as was made to the depositions taken in New York; that is, that it is taken after 20th September, 1868, and therefore irregular):

Q. 1. What is your name, age, residence, and occupation?

A. Joseph W. Bampton; aged 37 years; reside at 3154 Frankford road, and am a bookkeeper by occupation, for Camden and Amboy Railroad Company.

Q. 2. Have you charge of the vouchers and pay-rolls of the Camden and Amboy Railroad Company?

A. I have, at the Philadelphia office.

Q. 3. Are all the vouchers and pay-rolls for moneys paid to engineers, firemen, and brakemen sent to the Philadelphia office for payment and preservation?

A. They were all sent previous to 1863; the vouchers on file previous to 1863 are on file at the Philadelphia office.

703 Q. 4. Have you examined all the vouchers for moneys paid by the Camden and Amboy Company for the year 1843?

A. I have; all those that are on file at the Philadelpia office.

Q. 5. Do you find among the vouchers so examined the name of William Quigley?

(Objected to.)

A. There is no such name on the rolls or on any vouchers.

Q. 6. Is there any other depository of vouchers for moneys paid by the Camden and Amboy Company to engineers, firemen, and brakemen than the Philadelphia office?

A. None other previous to 1863.

Q. 7. Have you examined the vouchers and pay-rolls of the Camden and Amboy Railroad Company for the year 1847?

(Objected to.)

A. I have examined the vouchers of the Philadelphia and Trenton Railroad Company, which was run by the Camden and Amboy Company, in the year 1847.

Q. 8. Do you find on the pay-rolls of that company, in the year 1847, the name of William Quigley; if so, how was he employed?

(Objected to.)

A. Yes, I did find his name; he was employed as brakeman.

Q. 9. What time in the year?

(Objected to.)

A. In August; he was there the whole of the month of August.

Q. 10. Do you find him employed as brakeman at any time in the year 1847, prior to the month of August?

704 (Objected to.)

A. I do not.

Q. 11. Was he continued as brakeman on said Philadelphia and Trenton road the remainder of the year 1847?

(Objected to.)

A. He was.

Cross-examined by M'r Cozzens:

Cross 1. How long have you been bookkeeper for the Camden and Amboy Railroad Company?

A. About 10 or 12 years.

Cross 2. Is that all the time you have had charge of the vouchers and pay-rolls you speak of?

A. That is all; I could have had access to them previous to that.

Cross 3. Do you know in whose handwriting are the vouchers and pay-rolls which you say have been in your charge for the last 10 or 12 years?

A. I recognize the handwriting in some of the pay-rolls; in others I do not.

Cross 4. Are there any of them in your handwriting?

A. No.

Cross 5. Do you know of your own knowledge that every voucher and pay-roll for every payment, whether small or great, to every engineer, fireman, and brakeman employed upon the Camden and Amboy Railroad since the year 1843, have been preserved, or do you only suppose so, because such is the design of the company?

(Objected to.)

A. I know that they are all preserved since 1843.

Cross 6. How do you know it?

A. I know that I have access to all the cases; there is a case for all the vouchers for each year.

Cross 7. How do you know that all the vouchers that belong to a particular year or years are in those cases?

705 A. I suppose they are, from the best of my knowledge and belief.

Cross 8. Then is your reason for supposing that they have all been preserved since 1843 this, that cases are kept for the vouchers for each year, and you suppose that all the vouchers belonging to each year are contained in these cases?

A. Yes; that is my reason.

Cross 9. Then you cannot know positively, can you, that every single voucher or pay roll that belonged, for instance, to the years 1843, 1844, 1845, and 1846, which was prior to your having charge of the vouchers and pay-rolls, ever got into or are still in the cases?

A. I cannot say positively; but I suppose that they are in those cases.

(The last clause of the answer objected to.)

Cross 10. Do you know positively that in the years 1843, 1844, 1845, 1846, vouchers for every single payment to every engineer, fireman, and brakeman, were made and kept by the Camden and Amboy Railroad Company?

A. I do not know positively.

Cross 11. When did you go into the employment of the Camden and Amboy Company in any capacity?

A. About the year 1850.

Cross 12. What were your duties when you were first employed by them?

A. Ticket agent.

Cross 13. How long did that continue to be your duty?

A. I think two or three years.

Cross 14. Where was the office where you performed those duties for these two or three years?

A. At Philadelphia; at the same office where I now am.

Cross 15. After those two or three years, what did you next do for the company?

A. I then had charge of what are called the abstract books of the passenger receipts. After that I became bookkeeper.

706 Cross 16. What vouchers and pay-rolls of the Camden and Amboy Company do you now have charge of?

A. I have only charge of the current bills for the month that are paid at the Philadelphia office; then they pass out of my hands.

Cross 17. Do you have to enter in your books the amounts of the vouchers and pay-rolls ?

A. Yes.

Cross 18. After you have so entered them, do the vouchers and pay-rolls pass out of your hands ?

A. They do; I send them monthly to the auditor. They are not afterwards returned to me. This arrangement has been in force since about 1863. Previous to that I had charge of them from the time I commenced being bookkeeper. Since 1863 they have been preserved at Trenton, New Jersey.

Cross 19. While you were ticket agent, and while you had charge of the abstracts of passengers' receipts, I understand you to mean that you did not have any charge of the vouchers and pay-rolls; am I right ?

A. I had no direct charge of them, but had frequent access to them.

Cross 20. I understand you to mean your third cross-answer to apply to the pay-rolls which belonged to the years prior to the last 10 or 12 years, when you commenced to be bookkeeper; am I correct in this ?

A. Yes; I do know some of them, and some of them I do not.

Re-examined:

Q. 12. For the time that you have been in the employ of the Camden and Amboy Railroad Company, what has been the established usage of said company as to the preservation of its vouchers for money paid to any person or persons ?

(Objected to.)

707 A. The established rule is that all vouchers be entered in a book, and then properly endorsed, and then filed away in the case for each year.

Q. 13. Can any person or employee obtain any money from the Camden and Amboy Railroad Company without signing a voucher for the same ?

(Objected to.)

A. Yes; they can. For some of the vouchers we don't take receipts; they are witnessed by some one person for the whole roll; but the names of the employees are in this pay-roll, witnessed by this person.

Q. 14. Must there be a voucher or a witness of the payment of money to obtain it ?

(Objected to.)

A. In all cases there must be a voucher of one or the other of these kinds.

Q. 15. And those vouchers, by a rule of the company, are all preserved, are they ?

(Objected to.)

A. Yes, sir.

Q. 16. Filed away, each in its appropriate year ?

(Objected to.)

A. Yes, sir.

J. W. BAMPTON.

Subscribed and sworn to before me this 29th day of September, A. D. 1868.

W. GRIER HIBLER,
U. S. Commissioner.

708 **Friday**, *September 25th*, 1868.

Present, counsel for the respective parties, and complainant.

Robert C. Burgby, recalled as a witness on the part of the defendants, deposes and says:

Q. 1. Have you been time keeper on the Camden and Amboy road for the last 25 years and more?

A. I have.

Q. 2. Do you know William Quigley, now running a locomotive on the Camden and Amboy road?

A. I do.

Q. 3. How old a man do you take him to be?

(Objected to.)

A. About forty years.

Q. 4. Was he born and brought up in Bordentown?

A. He was.

Q. 5. Did you know him twenty-five years ago—say in the year 1843?

A. I did not; I have no recollection of him.

Q. 6. He has testified in this case that he was employed as fireman for the Camden and Amboy Railroad Company in the years 1844 and 1845; is there any evidence on the engineer's and fireman's time-book kept by you that he was so employed in those years?

A. There is none whatever.

Q. 7. Could any man get pay from the company unless his name was on the time-book?

(Objected to.)

A. Not as engineer or fireman.

Q. 8. Was William Mathews an engineer on the Camden and Amboy road in the years 1844 and 1845?

A. He was not.

709 Q. 9. According to the time-book of the company, when did he first become engineer on that road?

(Objected to.)

A. He first appears as engineer October 11, 1847.

Q. 10. Is there any evidence on the engineer's time-book of his being employed as engineer before that time?

(Objected to.)

A. There is not.

Q. 11. Are the entries there made in your own hand?

A. They are.

Q. 12. Did William Quigley ever fire for W'm Mathews according to the records of time kept by you?

(Objected to.)

A. He did not, as appears by my second Exhibit A 3.

Q. 13. Did he ever fire for Charles Yundt, engineer?

A. Not to my knowledge.

Q. 14. When does William Quigley first appear on your books as fireman for the Camden and Amboy Railroad Company?

(Objected to.)

A. Referring to book Exhibit A 4, January 1st, 1849.

Q. 15. Who did the said Quigley fire for in January, 1849?

(Objected to.)

A. Lewis Holland.

Q. 16. Are the names of Lewis Holland and William Quigley entered in Exhibit A 4 in your own hand as engineer and fireman?

A. They are.

710 Q. 17. Was William Quigley then entered upon the book as regular fireman, reference being had to the book kept by you ?

(Objected to.)

A. He was.

Q. 18. Did he fire every day as regular fireman—that is, when the engine he fired was in use ?

A. He did.

Q. 19. Is there any record that he was fireman for the Camden and Amboy Railroad Company before January, 1849 ?

(Objected to.)

A. There is no record that I can find on any of the books.

Q. 20. From your best recollection was William Quigley brakeman on the Camden and Amboy road in the year 1847 ?

A. He was not.

Q. 21. Was he brakeman for the company in the year 1843 ?

A. Not to my knowledge.

Q. 22. Do you recollect of his being about the shops of the company at Bordentown in the year 1843 ?

A. I don't remember ever seeing him about there; never there to my knowledge.

Q. 23. Did the Camden and Amboy Company employ any boys on this train in the years 1843, 1844, 1845, and 1846 ?

A. With one exception I never knew them to employ a boy; I knew them to employ a boy once; his name was Israel Adams.

Q. 24. Why was he employed ?

A. He was employed at the time we run an engine from Bordentown to Trenton; the distance being but six miles; the boy was employed to take the place of a man; it was not supposed to be worth while to put a man on such a short route. 711

Q. 25. Was he entered in the time-book at the time as a boy ?

A. He was.

Q. 26. Was William Quigley in his minority in the years 1843, 1844, and 1845 ?

(Objected to.)

A. As near as I can ascertain, he was born in 1827; that wouldmake him about of age.

Q. 27. How old would he have been in 1843, if he was born in 1827 ?

A. About 16 years old that would make him.

Q. 28. Then he was in his minority in 1843, 1844, and 1845 ?

A. He was.

Cross-examined, subject to the general objections heretofore noted:

Cross 29. How do you know that he was born in 1827 ?

A. I only know by inquiring of his relations—an uncle of his; I made the inquiry this morning; it is his uncle by marriage; his name is Peter Bloomsburgh.

Cross 30. How do you know he is his uncle by marriage ?

A. I only know from common report, by what other people have told me.

Cross 31. What are the statements you have made here this morning based upon; your own personal knowledge of the facts, or are they made from what you have seen entered in the books ?

(Objected to, as he has stated that he entered the facts in the books himself.)

A. From both my own personal knowledge and the original record in my own handwriting.

712 Cross 32. Which ones of them are made from your own personal knowledge?

A. From my own personal knowledge William Quigley was not a fireman on the road at the time he stated he was. He was not a fireman on the road till 1849?

Cross 33. What others of the statements are on your own personal knowledge?

A. Of my own personal knowledge he was not employed on the road previous to 1849 in any capacity.

Cross 34. Question repeated.

A. I don't know that I can call to my mind any other in particular.

Cross 35. What do you mean when you say that he was not there to your personal knowledge? Do you mean that you did not see him?

A. Yes; if he had been about there I should have seen him; I don't think he could have been about there and I not have seen him—certainly not employed there at that time, or I should have seen him.

R. C. BURGBY.

Subscribed and sworn to before me this 25th September, 1868.

R. E. STILWELL,
Examiner, &c.

FRIDAY, *September* 11, 1868.

NICOLL F. SMITH, recalled on the part of the defendants, deposes and says:

Q. 1. Were you in the employ of the Camden and Amboy Railroad Company in 1859?

A. I was.

Q. 2. Had you a brother who was once in the employ of the said Camden and Amboy Railroad Company? If so, in what capacity was he employed in the year 1859?

A. I had; he was fireman in the car department, under Edwin Lockwood, who had charge of the department, and he, Smith, was so employed in the year 1859.

713 Q. 3. Do you know of your brother going to Canandaigua, New York, as a witness in a brake case tried there in the year 1859?

A. I do.

Q. 4. You will please state the circumstances, if any, connected with his going to attend such trial.

A. A gentleman by the name of Waterman came to Bordentown, to our shop, to see Edwin Lockwood, the boss of our shop. He, Lockwood, not being at home, but being away, he went to my brother, who was foreman of the shop, and wanted him to go. My brother came to me and asked my opinion about his going in the absence of M'r Lockwood. I referred him to M'r Van Rensselaer, superintendent of the road. He told me he would like to go more because M'r Waterman promised to get him passes to go to Niagara and back, and pay his expenses. He did go, and came back again, and visited Niagara and several other places, as he told me.

(Objected to.)

Q. 5. From whom did he get permission to leave the employ of the company for the purpose of attending this trial at Canandaigua?

A. R. S. Van Rensselaer, superintendent of the road.

Q. 6. You say that M'r Edwin Lockwood was absent from Bordentown when Waterman called to see him. About to what place?

A. He had gone to Tarrytown, New York, I think.

Q. 7. Did M'r Waterman leave Bordentown before M'r Lockwood returned to Bordentown?

A. He did; or, at least, I did not see anything of him after that day.

Q. 8. How long, as near as you can recollect, had M'r Waterman been gone when M'r Lockwood returned?

A. Some three or four days.

Q. 9. Do you know that M'r Lockwood was not at the shop of the company in Bordentown on the day on which M'r Waterman called to see him?

714 A. I know that he was not there, and had not been for a day or two.

Q. 10. Is your brother referred to in your deposition living? If not, when did he depart this life?

A. He died, I think, three years ago last April.

Cross-examined by M'r Cozzens:

Cross 11. How do you know that your brother went to Canandaigua?

A. He told me he did.

Cross 12. That is all you know about it, I suppose?

A. Yes, sir.

Cross 13. How do you know it was in 1859?

A. That is as near as I can get at it; I have nothing positive that I can go by. I think it was about eight or nine years ago.

Cross 14. How do you know that M'r Waterman came to Bordentown, to the shop, to see M'r Edwin Lockwood?

A. I saw him, and my brother told me his name was Waterman; I saw him talking with my brother. I didn't hear what he said; my brother told me he asked for Lockwood.

Cross 15. How do you know that he wanted your brother to go to Canandaigua?

A. My brother told me so; he came to ask me whether he had better go or not.

Cross 16. Is that all you know about what M'r Waterman wanted of your brother—what your brother told you?

A. That is all.

Cross 17. How do you know that your brother got permission to go to Canandaigua; and, if he did, how do you know that he got it of M'r Van Renssalaer?

A. He told me so, and showed me the passes that M'r Van Renssalaer gave him to go to New York and return. (The portion about passes objected to.) I know he got permission from M'r Van Renssalaer, because he told me he did.

Cross 18. Is that all you know about it?

A. Yes.

715 Cross 19. Do you know what your brother went to Canandaigua to give testimony about?

A. Concerning some brake or brakes.

Cross 20. Do you know what about them?

A. I don't know any particulars.

Cross 21. What is all the knowledge you have on the subject, whether particulars or not?

A. I don't know any particular part of the brakes or brake he went for, whether it was Tanner's, Hodges', or some other kind of brake.

Cross 22. You mean then, do you, that you don't know anything at all about what he went to testify to concerning either or all those brakes?

A. I don't know anything about it than what he told me—that it was about brakes.

Cross 23. What time of the year was it that M'r Waterman was at Bordentown?

A. It was towards fall pretty well; I can't say whether it was August or September, but somewhere about the first of the fall or latter part of the summer.

Cross 24. How do you know that Lockwood was absent at this time?

A. Because I was there, and I know when he goes away.

Cross 25. How do you know when he goes away?

A. I know whether he is in the shop or not, or around it.

Cross 26. Do you know every time when he goes away?

A. If he is gone any length of time.

Cross 27. On this occasion, in 1859, did you see him leave Bordentown?

A. I did not.

Cross 28. Then your knowledge of his being absent at that time is derived from your not remembering that you saw him about the shop then, is it?

A. Yes; he was not about the shop. I did not see him about the shop for several days; he was not about the shop for several days.

Cross 29. What makes you think Lockwood had gone to Tarrytown at that time?

A. He has been in the habit of going there for several years back every year.

716 Cross 30. Who did he go to Tarrytown to see in 1859?

A. He has relations living there; he was born and brought up there, I think.

Cross 31. Can you mention the names of any of these relations?

A. I cannot mention any of them.

Cross 32. How often did Lockwood go away from Bordentown in 1859, at about that time?

A. He probably used to go to New York once a week and to Philadelphia once a week.

Cross 33. What makes you think that he went to Tarrytown on this particular occasion rather than to New York or Philadelphia or some other place?

A. Because he was gone longer.

Cross 34. Is that all the reason you have?

A. Yes, and my talking with him at particular times about his being there; that was about the time he goes up there.

Cross 35. What month in the year did Lockwood usually go to Tarrytown at that time?

A. The first of the fall or the latter part of the summer.

Cross 36. How long do you think Lockwood had been away at this time when Waterman came to Bordentown?

A. Two or three days.

Cross 37. You say Waterman talked with your brother; did you hear what either of them said?

A. I did not.

(Counsel for complainant gives notice that, upon the hearing this case, he shall move to strike out all of the foregoing deposition respecting information given to the witness by his brother and respecting Lockwood's alleged absence; the cross-examination having shown the same to be hearsay, and inadmissible.)

Direct resumed by M'r Whipple:

Q. 38. As a general thing could M'r Lockwood have been absent from the shop at Bordentown for any length of time without you knowing it?

717 (Objected to.)

A. No, he could not.

Q. 39. May not M'r Lockwood have gone to Tarrytown in 1859 in the forepart of the summer instead of the latter part, as you have stated?

A. He might have gone, but I think it was in the latter.

Q. 40. May it not have been in the forepart of the summer, and not in the latter part, as you have stated, that Waterman came to Bordentown to see Lockwood?

A. It might have been; but I think it was in the latter.

Q. 41. You are not positive, then, whether it was the forepart of the summer or latter, are you?

A. I am positive that it was the latter part when he went to Tarrytown.

Q. 42. What makes you so certain that it was the latter part and not the forepart?

A. I have no particular thing to be positive about it, but it is my opinion.

Q. 43. Then he might have gone in the forepart of the summer?

(Objected to.)

A. Yes, he might have gone.

Q. 44. And that might have been the time, might it not, when Waterman came to Bordentown?

(Objected to.)

A. It might have been.

Cross resumed by M'r Cozzens:

Cross 45. Do you know that the name of the person who came to Bordentown was Waterman, except by what your brother told you?

A. None but that and the description I have had of him since.

718 Cross 46. It is your best recollection, is it not, that it was the latter part of the summer or the first part of the fall that the person was at Bordentown?

A. That is my opinion, although it may have been earlier.

N. F. SMITH.

Subscribed and sworn to before me this 11th September, 1868.

R. E. STILWELL,
Examiner, &c.

TUESDAY, *September 15th*, 1868.

Present, counsel and complainant as before.

ISAAC DRIPPS, called and sworn as a witness on the part of the defendants, deposes and says:

Q. 1. What is your name, age, residence, and occupation?

A. Isaac Dripps; age, 58 years; reside at Fort Wayne, Indiana, and am master-machinist of the Western Division of the Pittsburgh, Fort Wayne and Chicago Railway.

Q. 2. How long have you been so employed?

A. Nine years last February.

Q. 3. How were you employed for several years previous to going to Fort Wayne as master-machinist, as you have stated?

A. I was master-mechanic, or rather superintendent of the Trenton Locomotive Works, at Trenton, New Jersey.

Q. 4. Prior to being so employed, for whom, or by whom, and in what capacity were you employed, and from what time to what time?

A. I was in the employ of the Camden and Amboy Railroad; I was superintendent of machinery there; I went in the employment of the company in 1831, and remained with them till 1852 or 1853, I think 1853; I was superintendent of machinery during the whole of the time I was there.

719 Q. 5. In an exhibit filed in this case, marked "Complainants' Exhibit, Dripps' new proofs," purporting to be a letter written by you to W'm H. Hubbell, of Philadelphia, you say in reply, in regard to double-acting brakes, that "the first you knew of them was when used on the Camden and Amboy Railroad"; please state when you first knew of such use on said Camden and Amboy Railroad.

A. The first I knew of double brakes, that is, brakes that would apply to both trucks, was on a car that was rebuilt by the company's shop at Bordentown, called the "John Tyler car"; the year I can't tell you; I can only fix the date in this way: when President Tyler first crossed the road, after being inaugurated President, he rode in that car, and the car was called the Tyler car afterwards.

Q. 6. Was there a double-acting brake on that car at the time it conveyed the President over the road; and, if so, how did it operate?

(Objected to.)

A. There was a double-acting brake on the car at that time; the brake was applied to the wheels by a brake-shaft at the end of the car; of course, as they wound the shaft up, it applied the brake-blocks against the wheels of the trucks; it applied it against the four outside wheels of each truck, the trucks being six-wheeled.

Q. 7. Are you personally acquainted with W'm H. Hubbell, of Philadelphia, to whom you replied, as represented in the aforesaid exhibit? If so, please state the extent and intimacy of such acquaintance, and whether you have had any personal interviews with him since the date of the aforesaid exhibit, to wit, the 31st January, 1860; if you have had such personal interview, please state when and where, and the subject-matter of such interview.

A. I am acquainted with M'r Hubbell, of Philadelphia; the first I became acquainted with M'r Hubbell was many years ago, when he was a young man; he came to Bordentown to the company's shop with a model or drawing of a spark-arrester for a locomotive which he was very anxious for the company to try; by direction of the superintendent, M'r E. R. Stevens, we had a pipe and spark-arrester 720 made according to M'r Hubbell's plan; we put it on a locomotive-engine and ran it and tried it; the result was, it proved a failure; I kept up the acquaintance with him, and saw him occasionally; he resided at Philadelphia and I in Bordentown; we would occasionally meet in the streets in the city of Philadelphia; the last time I recollect having any business with M'r Hubbell was on an eight-wheel-car case, with Ross Winans, which was tried in Canandaigua, New York; M'r Hubbell, I believe, was engaged as counsel, or had something to do with the case; he was there; I was a witness for the Erie Railroad Company; since that time I have no recollection of any personal interview with M'r Hubbell; I have never had any other than a business acquaintance with M'r Hubbell, nor any business with him farther than I have mentioned; I would like to modify that answer a little; I have no recollection of having any other business acquaintance with him than those I have already stated.

Q. 8. W'm W. Hubbell has testified in this case, in answer to the 21st question, complainants' new printed proofs, page 282, which question read as follows: "After receiving this reply from Dripps, what, if anything, did you do in relation to it?" The witness replies as follows: "I went to see what information I could get. I went to Bordentown, to the shops which were below Bordentown, to see the foreman of the car-shop, M'r Lockwood. I had been there before, and asked him about the double-acting brakes. He could not tell me the time when they were first used; but from the description of the brake having horizontal levers swinging free from the body of the car, I found it was the Hodge brake that was first used, and afterwards the nearest information I could get of the date from M'r Lockwood was about 1851. I was not satisfied about it until I had seen M'r Dripps, and I afterwards saw him in Philadelphia, and learned all the facts about the use of the double brake on the Camden and Amboy Railroad. M'r Dripps himself informed me that there was no double-acting brake used before 1851 and 1852. The information that I obtained was that the Hodge brake was the first double-acting brake used on the Camden and Amboy road, and 721 was used in 1851." And the said Hubbell further testifies, in answer to this question, that "there was no double-acting brake of any kind used before that time on the Camden and Amboy Railroad, and that they had seen the centre lever brake, as it is called, at Wilmington, on the Philadelphia, Wilmington and Baltimore road, which I represented, and they tried that on the Camden and Amboy road in 1852." Did you give the said Hubbell any such information as this answer sets forth? If you did not, please give such evidence in reference to the subject-matter of this answer as you may think proper.

A. I have no recollection of having had any such interview with M'r Hubbell, or giving him any such information whatever, as far as I am concerned. I never went to Wilmington to examine brakes, or any other railroad machinery. I would further say, that as long as I was on the Camden and Amboy Railroad, I never copied after machinery, or arrangements of machinery, of other roads; we generally planned out such arrangement of machinery as suited our purpose ourselves.

Q. 9. Assume that the aforesaid interview did take place between you and the said Hubbell in Philadelphia, as stated by him in the aforesaid answer, did you inform him that there was no double-acting brake used on the Camden and Amboy Railroad before 1851?

(Objected to.)

A. I did not, because I knew better; I knew that this Tyler car had the double brakes on.

Q. 10. Has there any person of late, say within a year, been to see you at Fort Wayne, to ascertain from you what you knew of double-acting brakes on the Camden and Amboy Railroad? If so, please state who the person was, and the subject-matter of conversation between you.

A. There was a gentleman called at my office at Fort Wayne. He commenced talk about railroad matters in general, and finally broached the subject of my former experiments on the Camden and Amboy Railroad, and then asked me what I knew about double brakes for rail- 722 road cars. I told him then (as I wrote to M'r Hubbell) that it had been such a long time since I had been on that road that I could only recollect the general arrangement or plan of the car-brakes; that my recollection of it was, that the arrangement applied to the wheels of both trucks, and that the brakes were applied by brake-shafts at the end of the car; but how the details were arranged I could not recollect; but if he would go to Bordentown, and apply to M'r Lockwood, the master car-builder of the Camden and Amboy Railroad, that he could give him all the information and details about the whole affair. After we got through our conversation, I finally asked his name, and he told me it was Waterman. I think he said Henry Waterman, but am not sure about that.

Q. 11. While you were in the employ of the Camden and Amboy Railroad Company, did that company have an important and somewhat expensive litigation to protect itself against a patent claim made on said company for the use of a certain mechanism invented and put into use by some one connected with said company before the date of the patent or claim on which they were sued? And, if so, please state the case, the result, and probable expense of the litigation.

(Objected to.)

A. The Camden and Amboy Railroad Company were sued for a smoke-pipe and spark-arrester which I invented and got up in the year 1833, and which has been in use on that road from that day to this. Some three or four years after we got it into successful operation, some parties had it patented, and it was a good while afterwards before the company was sued by the patentee for a violation of the patent. It came to trial in Philadelphia. It was a long, protracted trial, and finally the jury gave in a verdict against the company and in favor of the patentee. When the verdict was rendered, the judge granted the company a new trial, which took place in Philadelphia, and was still more protracted than the first trial, and resulted in favor of the company. I have no means of knowing the expense of the trial.
723 I can only judge or give an opinion. The first trial lasted a week, and the second trial still longer, maybe two weeks, and must have cost the company from six to ten thousand dollars to defend the suit. In conversation with the president of the company, M'r Robert L. Stevens, he said it would have been much cheaper and better for the company to have compromised with the patentee than to have defended the suit.

Q. 12. How long did M'r Stevens continue president of said company?

(Objected to.)

A. Up to the time of his death, which, I think, was in 1856 or 1857. I am not sure of the exact time.

Cross-examined by M'r Cozzens, counsel for complainant:

Cross 13. What was the name of the firm or concern which carried on the Trenton Locomotive Works during the time you say you were engaged there?

A. The name was the Trenton Locomotive and Machine Manufacturing Company.

Cross 14. Who were the principal stockholders in this company at this time?

A. M'r Van Cleve, M'r McKean, myself, and Joseph Potts; and there were others. I don't know the names.

Cross 15. Are M'r Van Cleve and M'r McKean now living?

A. M'r Van Cleve is living. M'r McKean is not.

Cross 16. Where does M'r Van Cleve reside?

A. I think he lives at South Amboy, New Jersey. He did live there the last time I heard of him.

Cross 17. What is his first name; and how long was he connected with the Trenton Locomotive Works?

A. A. H. Van Cleve. He was connected with it from the commencement of the works, which was in 1853, until after I left there, which was in 1858.

724 Cross 18. While you were on the Camden and Amboy Railroad as superintendent of machinery, what were your duties?

A. I had the general charge of the machinery of the road, and also the repairs of the steamboats from the Delaware end of the route.

Cross 19. Did you have anything to do with the building or repairing of the passenger-cars?

A. Only so far as getting up the iron work for the cars that were built or repaired at the shops.

Cross 20. Did this iron work include the brake-rigging?

A. It included all the iron work about the cars, wheels and axles; it did include the brake-rigging.

Cross 21. Were you in the habit of making any entries in any books relative to the nature of the iron work done on the cars?

A. I think not.

Cross 22. Do you remember the use on the Camden and Amboy cars of a double-brake styled the Hodge brake, having two cross levers under the car-body, hung so as to swing somewhat backwards and forwards?

A. I do not.

Cross 23. Did you ever know that a considerable number of such brakes were used for a considerable time on said cars?

(Objected to.)

A. I have no recollection of it; I would say that I know that there were brakes on the cars of the road while I was there, where the brakes were applied to the wheels of both trucks, but how the arrangement of rods and levers were fixed, I don't know; I can't recollect.

Cross 24. Do you know what is the construction and operation of the double acting brake which is known as the Hodge brake?

A. Yes; I am acquainted with the Hodge brake; we are using it on our road; it has a swinging lever in the centre, some of them has two, with rods connecting to the lever on the truck-frame, and then 725 rods leading from those levers to the winding shafts on the platforms of the car; the rods that run to the winding-shaft and to the brake-levers run from the ends of the swing-levers; I would also say, in addition, that lately I have paid very little attention to the brakes on the cars on the road on which I am engaged, as the whole of that business is attended to by the master car-builder of the road, and I don't claim to have a perfect knowledge of the detailed arrangements of the different brakes now in use.

Cross 25. Do you mean your descriptions of the rods connecting the swinging-levers with the winding-shaft and the brake-levers to apply to those brakes which you say has one swinging-lever, or to those which have two?

A. I can only answer that in this way, that I am not acquainted with the different modes of applying the brakes, as it is only recently that the Hodge brake has been used on the cars of the Pittsburgh, Fort Wayne and Chicago Railway.

Cross 26. When and where did you first see a brake of the form known as the Hodge brake?

A. The first I knew about the Hodge brake was probably some time during this year; I received orders from our general superintendent, M'r J. N. McCullough, to change the brakes on the cars of the company from the Stevens brake to the Hodge brake; when I received that order I really did not know what the Hodge brake was; I sent the master car-builder to examine the cars that had the Hodge brake on, and to change the brakes on our cars according to the order of M'r McCullough; as he found the Hodge brake he went to see under the cars, so that I paid but little attention to the details, and I left it with him; therefore I cannot explain further than I have done.

Cross 27. You then mean, do you, that you have explained the Hodge brake as fully as you are able to?

A. Yes.

Cross 28. Did you ever know of brakes of the form called the Stevens brake being used on the cars of the Camden and Amboy Railroad?

726 A. No; I did not; I will further say that it is so long since I was on that road, that I cannot recollect the detailed arrangement of any brake on that road; I can only recollect the general arrangement of the brakes being applied to the wheels of both trucks.

Cross 29. Can you describe the construction and operation of the Stevens brake?

A. I can describe it, but very imperfectly, from the fact that the master car-builder of the road attends to all such matters, and I pay no attention to it, unless that there might be orders for a change; then I merely issue the order to the master car-builder to execute the work; the Stevens brake, my recollection of it is, that each truck has two vertical levers, and the levers of each truck are connected together by rods; then another rod from one of the vertical levers of each truck run to the winding-shafts on the platform of the car.

Cross 30. Is that as fully as you can describe it?

A. That is my recollection of it; I can't go beyond that.

Cross 31. Can you describe the construction and operation of what is known as the centre lever or Tanner brake?

A. No; I cannot; I don't know as I ever saw a Tanner brake.

Cross 32. In about what year did the Camden and Amboy and New Jersey Railroad Companies first convey passengers between New York and Philadelphia, without changing cars at New Brunswick?

A. I do not know; I can't imagine the date.

Cross 33. Is your memory good about dates?

A. Well, I suppose about the same as the ordinary run of men; I don't know.

Cross 34. While you were employed on the Camden and Amboy road, did Camden and Amboy cars run through to Jersey City?

A. They did before I left the road.

Cross 35. For how long a time before you left the road?

A. I cannot possibly tell without some data.

Cross 36. About how many of them run through to Jersey City per day on an average?

727 A. Well, they were running two trains I think a day at those times; the Jersey City Company run one train of their cars, and the Camden and Amboy Company run one train; of course, then, the cars of each company made one round trip a day; the number of cars varied according to the number of passengers; they run at times from eight to ten cars; there were Camden and Amboy cars; as superintendent of machinery I had nothing to do with the running of trains; that part belonged to the superintendent of the road; therefore it was not

possible for me to know the exact number of cars run in trains, nor the number of trains running per day.

Cross 37. Did you ever examine the brakes of the Tyler car; if so, state when and where?

A. I cannot state any particular time that I examined the brakes on the Tyler car; but as the car was in the shop, being rebuilt, I, of course, saw all the work put on it as the work progressed.

Cross 38. You say, of course saw; do you remember that you did see it?

A. I cannot specify any particular time that I saw it, except as I have stated, as the car was being rebuilt; I suppose I saw the car in the shop every working day.

Cross 39. Do you now distinctly remember that you saw the brakes of the Tyler car at the time it was being rebuilt, as you say?

A. I distinctly remember when the car was finished, the general plan of the brake, that the brake blocks were applied to the wheels of both trucks, but I cannot recollect the arrangement of the details of levers, and rods, and blocks.

Cross 40. Question repeated?

A. I do; at the time the car was finished.

Cross 41. Do you mean by your 39th answer that you cannot recollect or describe any more of the brakes on the Tyler car than that the brake-blocks were applied to the wheels of both trucks?

A. Nothing more than that, except that the brakes were put on from the platform of the car.

Cross 42. The brakes of all hand-brakes are put on from the platform or body of the car, are they not?

728 A. Yes.

Cross 43. Then this is equally true of what is called the single brake, is it not?

A. Yes.

Cross 44. Are you aware that a good many years ago a great many of the Camden and Amboy passenger-cars had upon them two single-acting brakes, one at each end of the car, and also that some of them had a single-acting brake on only one end of the car?

A. I recollect that all the passenger-cars before the John Tyler car had single brakes, one on one truck of the car only; but I have no recollection of brakes being on each end of the car-truck of the car acting separately, one independent of the other.

Cross 45. Did you never, at any time, see any Camden and Amboy cars with two such single-acting brakes?

A. I have no recollection of ever seeing anything of the kind, neither do I think there ever was such during the time I was on the road; in case the connecting rod between the brakes of the two trucks should break, it would make them single-acting brakes for the time being, until the rods were replaced.

Cross 46. Do you remember seeing on any Camden and Amboy cars any such brakes as those spoken of when the connecting rods were broken?

A. I have no recollection of any on the Camden and Amboy cars.

Cross 47. In a car which had two single-acting brakes, one at each end, the brake-blocks can be applied to the wheels of both trucks, and can be put on from the platforms of the car, can they not?

A. Yes, they can; one from each platform, if arranged for that purpose; I mean if arranged with the winding-shafts on the platforms.

Cross 48. Now, if, as you have said, you are not able to describe any

more of the brake which you say was on the Tyler car than that "the brake-blocks" were applied to the wheels of both trucks, and were "put on from the platform," and if a car with two single-acting brakes, as has just been mentioned, would do the same, do you feel that
729 you are prepared to swear positively after this lapse of time that the Tyler car had brakes different from two single-acting brakes?

A. In answer to that, I can say the brakes were applied to the wheels of both trucks at the same time; but what the mechanism was that was used for that purpose I cannot now recollect.

Cross 49. If it was proved to you beyond doubt that, at and after the time when you say the Tyler car was rebuilt, the Camden and Amboy Company was using on many of its passenger-cars two single-acting brakes, acting independently, one at each end of the car, would you not think it possible that you might have confounded in your memory such a mode of putting brakes upon cars with the mode you thought you remembered on the Tyler car?

A. I answer distinctly, no; and I will give my reasons for so answering. The John Tyler car, when it was first rebuilt, was a very prominent car to us railroad people; we had put on it all the improvements that we had made up to that time; one of the most prominent improvements was this double-acting brake; another improvement was a new journal-box we had just invented, which was a perfectly oil-tight box, and which box is still used on the Camden and Amboy cars to this present day, and is one of the best boxes now in use. All these improvements being put on the car made it very prominent, and is the reason I assign for my remembrance of that particular car. The performance of the brakes on that car was very effective, and was much talked about by those running the trains as being the best brakes then on the road.

Cross 50. Then, do you mean that your way of remembering that the Tyler car had a double brake was because it had a great many improvements on it, and was a prominent car?

A. That in connection with the fact that President Tyler crossed the road in that car, and it was called the Tyler car ever after.

Cross 51. For how many years have you remembered that the Tyler car had a double brake?

730 A. From the time the car was first finished. When Tyler first crossed the road after his inauguration as President of the United States.

Adjourned to 10 a. m. the 16th inst.

WEDNESDAY, *September 16th*, 1868.

Present, counsel and complainant, as before.

At the opening of the examination witness states that he desires to make a correction of his answer, given yesterday, respecting the use of single-acting brakes acting independently of each other upon each truck of Camden and Amboy passenger-cars, and says that he has been thinking the matter over since the testimony given yesterday, and that he now distinctly recollects that the trucks under the tenders of locomotive engines had brakes to each truck, acting separately from each other. The brake on the front trucks of the tenders was under the control of the engineer. The brakes on the hind truck were under the control of the brakeman of the train. He sat on the top of the tender, and I have no doubt but such an arrangement of brakes were in use on the trucks under the passenger-coaches.

Cross 52. You say you have been thinking this matter over since yesterday. Has M'r Whipple or any one else had any conversation with you since your examination yesterday on the subject of these single-acting brakes on the passenger-cars?

A. No; there has not. This morning M'r Whipple called for me at the hotel, and we walked together here. I then told him I had been thinking over the matter since I was here, and I told him that I recollected distinctly of the arrangement of the brakes under the tenders on that road, and asked him if I couldn't have my answer of yesterday altered; and I also told him the reason why I could recollect the 731 brakes on the tenders more distinctly than on the cars was owing to the fact that I had all to do with the locomotives and tenders, and had but very little to do with the passenger-coaches, as the supertendent, M'r E. A. Stevens, kept that matter entirely in his own hands.

Cross 53. Did M'r Whipple say nothing to you at all on the subject until you spoke to him, as you have stated?

A. I think I mentioned the subject to him first.

Cross 54. What did he say when you did speak to him about it?

A. He said I could have my answer amended when we first commenced, or it might be brought in on questions afterwards. That was his reply.

Cross 55. Did he not talk with you about the brakes on the tenders, or on the passenger-cars?

A. No; I did the talking myself, as stated in my former answer.

Cross 56. Are you positive that he did not say a word to you on the subject?

A. Nothing further than I have stated.

Cross 57. You felt very sure, did you not, yesterday, that there were no passenger-cars of the Camden and Amboy road which had two single-acting brakes, acting independently, on each truck?

A. My recollection of my answer given yesterday is, that I had no recollection of any such arrangement of brakes, nor did I believe there was any.

Cross 58. Question repeated.

A. No surer than that answer implies. The questions put to me afterwards during the examination in the afternoon called my mind more particularly to the subject, when I distinctly recollected the arrangement of the brakes under the tenders.

Cross 59. Does not the expression in your answer yesterday, when you were asked if you had never, at any time, seen any Camden and Amboy cars with two such single brakes, viz, "Neither do I think there ever was any such during the time I was on the road," mean that you felt quite sure about it?

A. I meant to say that the impression on my mind then was 732 that there was no such arrangement of brakes on the cars on the road; but, as I have stated before, my mind being called to the subject more particularly from the questions asked me yesterday, in the examination in the afternoon, brought to my mind very clearly the arrangement of the brakes under the tenders.

Cross 60. That impression, when you gave that answer yesterday, was pretty strong, was it not?

A. I can only say that it was as strong as that answer implies.

Cross 61. What were the questions afterwards, on the examination of yesterday, which called your attention to the subject and made you think of the correction?

A. There was no particular question; it was the examination as a whole that called my attention more particularly to the subject.

Cross 62. You spoke of "questions afterwards;" there were but three questions afterwards; what was it in them which led you to have your attention called to the subject?

A. I can only answer that as I did the former question.

Cross 63. How sure do you feel this morning that there were such independent single brakes on the Camden and Amboy passenger cars, while you were on that road?

A. I have no doubt that there were cars with such brakes on them as called for in the question, while I was on that road.

Cross 64. Were not such brakes as these called by the railroad hands double brakes?

A. I have no recollection now of what the hands called them.

Cross 65. You said yesterday that you have remembered that the Tyler car had a double brake from the hour the car was first finished, when Tyler first crossed the road; could you at any time, since that time up to the present time, have told any one who had asked you about it that it had a double brake acting at the same time upon both trucks?

A. Recently—within this last ten years since—I have been out West. I would not like to have given a positive answer to that question 733 without due time for deliberation in thinking over the matter, as the occurrence referred to happened so long ago.

Cross 66. Did you not swear yesterday, in answer to the 9th direct question, in reference to seeing M'r Hubbell, the time referred to in such question being within ten years, and since you have been at the West, that you did not inform him that there was no double-acting brake on the Camden and Amboy Railroad before 1851, because you knew better—you knew that this Tyler car had the double brakes on?

A. In my answer of yesterday, about the interview referred to between M'r Hubbell and myself in Philadelphia, I said I had no recollection of any such interview, nor did I think it was possible that I could have told him that there was no double brakes in use on the Camden and Amboy Railroad up to the time that I left there, as I knew of this double-acting brake on the Tyler car.

Cross 67. Then do you mean that you could have told any one that you "knew of this double-acting brake on the Tyler car?"

A. I can only answer that I could after due thought.

Cross 68. How then can you state so positively that you couldn't have said so to M'r Hubbell, "because you knew that the Tyler car had double brakes on," if you could only state that it had double brakes on "after due thought?"

A. Because my attention has been called to this matter by M'r Blodgett, of Chicago; some time ago he sent for me, and told me that he would have to call on me as a witness in this case, and asked me several questions about it; what I knew about the case, which, of course, I told him all I knew about it; here recently he informed me that he wanted me to come to New York to give evidence in this case; I refused to come without the orders of the general superintendent, who telegraphed me to come, and I came on his order; now, then, since M'r Blodgett informed me that I would probably be called on as a witness in the case, I have given the matter considerable attention.

Cross 69. M'r Blodgett is one of the attorneys in this case, is he not?

A. I don't know.

734 Cross 70. Did he tell you he wanted your testimony in a case he had, or was engaged in?

A. My recollection of what he told me is this: That there was a suit against the Chicago and Northwestern Railway Company about a patent brake, and that they were about going to take testimony by commission in New York for that purpose, and he would want me to come on here and give my testimony; this is as near as I can recollect of the conversation that took place.

Cross 71. Did he show you a printed book of other witnesses about the case?

A. Yes; he showed me a printed book of testimony that had been taken in the case.

Cross 72. After your interview with him, and after, as you say, you had thought the matter over, did you come to the conclusion that the Tyler car had double brakes on when she was finished, "when Tyler first crossed the road?"

A. My recollection of the Tyler car always has been, as I stated above, that it had the double brakes on; but in thinking over the matter and trying to bring the occurrence more clearly to mind, it made the impression on my mind still stronger that such was the case, and the more I think of it the more I am convinced that I am right.

Cross. 73. Then you now mean, do you, that you could at any time have told that the Tyler car had double brakes?

A. Yes; but I would not want to go into any explanation without due thought and deliberation.

Cross. 74. What I want to know is this: Could you, at any time since the Tyler car was finished, as you have said, told this much about it, that when it was so finished, it had on double brakes; I don't ask whether you could have gone into any explanation about it beyond that; I merely ask whether you could have told that much about it?

A. I will answer, yes, I could.

Cross 75. You say a person came to see you within a year who gave his name as Henry Waterman; have you seen that person since?

735 A. I have not seen him, knowing him to be Henry Waterman.

Cross 76. Were you not some time ago more or less acquainted with Henry Waterman, of Hudson, New York, who was at one time master mechanic of the Hudson River Railroad?

A. Some time ago I had a slight acquaintance with a person named Waterman; I dont know whether it was Henry or not; I think he belonged to New York City at the time; I don't know what his occupation was.

Cross 77. Would you know that Henry Waterman again if you should see him?

A. I do not think I would.

Cross 78. You say you have not since seen the person who called on you, knowing him to be Henry Waterman, without reference to the name; have you seen the person since?

A. I think not; I don't know as I have.

Cross 79. What was the conversation between you and this person who called upon you?

A. It is impossible for me to give the whole conversation, as I made no note of it; we were talking about railroad matters in general; one subject we talked about was steam packing for steam cylinders; then he broached the subject of car-brakes; talked about that considerable; about our former experiments on the Camden and Amboy Railroad, and the experiments of the steam packing which were originally tried and had in use there; that was about as near as I can recollect what we were talking about; a kind of general conversation, nothing particular that I was aware of.

Cross 80. Did he ask you what you knew about when double brakes were first used on the Camden and Amboy Railroad?

A. He did.

Cross 81. What did you reply to him?

A. I replied to him as I stated in my former answer, and in a general
way; because I did not care to talk to a perfect stranger about those
things that happened so long ago; but told him that there were
736 double brakes on the John Tyler car; that I only could tell him
of the general plan of the arrangement of the brakes, and referred him to M'r Lockwood, master car-builder of the Camden and Amboy Railroad, for particulars.

Cross 82. Did you tell him that these double brakes acted upon both trucks at the same time?

A. I think I did.

Cross 83. What did he say to you when you told him this?

A. I can't recollect what his reply was, if any, as the conversation was general.

Cross 84. You have stated that you told M'r Blodgett all you knew about this case; what did you tell him about the time when double brakes were first used on the Camden and Amboy road?

A. My information to him was merely in general terms. I don't recollect that he went into particulars, nor do I recollect that I mentioned any time.

Cross 85. Did M'r Sayles, now present, call upon you at any time with reference to the subject of double brakes?

A. I have no recollection of it.

Cross 86. Think the matter over and see if you cannot recollect that he called upon you at Fort Wayne, within a year, or a little more than a year.

A. I can't recollect anything of the kind now.

Cross 87. May it not have been M'r Sayles who called upon you, and not M'r Waterman?

A. He gave his name as Waterman.

Cross 88. Did he resemble M'r Sayles in appearance?

A. No; if it had been M'r Sayles I think I should have recognized him now.

Adjourned to the 17th inst., at 2 p. m.

737 THURSDAY, *September 17th*, 1868.

Present, counsel and complainant, as before.

Witness here states that he desires to amend his answer to the 10th direct question by striking out the following words in that answer, "As I wrote to M'r Hubbell."

Cross 89. Who called your attention to the matter which you have just corrected?

A. M'r Whipple here this morning; he showed me the letter in the printed book in this case, in this office.

Cross 90. Are you this morning able to recollect any better than you could yesterday whether M'r Sayles, now present, has called upon you within a year past, with reference to the subject of double brakes?

A. I have thought of that matter since yesterday, and can only say as I did yesterday, that my impression is the person gave his name as Waterman; still, of that I am not certain, as in our discourse the name of Waterman was mentioned, and I may have got the two names mixed together; and in connection with this, I do say, that I do not hold myself responsible for any talk or answers to questions put to me by strangers calling on me at my place of business or elsewhere, as I am at times very much annoyed and my time taken up by persons calling on me in an unofficial way, and I at times give them any sort of an answer to get clear of their annoyance, and I do not hold myself responsible only for evidence taken under oath before competent parties.

Cross 91. Then, do you now mean that it may have been M'r Sayles that called upon you?

A. It may, or may not have been; but I am still of the impression that had it been M'r Sayles I should have recognized him here.

Cross 92. When was it that the person called upon you?

A. I can't state the time now, as I made no memorandum of it.

738 Cross 93. May it not have been last fall, toward the cool weather?

A. It may have been; but my impression is that it was this spring; this year.

Cross 94. In the interview with that person, did you not say to him that you did not know, or could not tell, when the double brakes was first put on the Camden and Amboy cars, and that you did not think it was until after 1850?

A. I will say positively that I never told him any such thing; and that the year 1850 was not mentioned, to my recollection.

Cross 95. Did you not also tell him that you knew, or remembered the Tyler car, but that you could not tell what kind of a brake was on it, and that you did not know whether there was a double brake on it or not, and that you did not think there was any double brake on it before 1850?

A. In answer to the first part of that question, I would say, I may have told him, and I have no doubt but I did, that my recollection of the Tyler car was that it had the double brakes; brakes to each truck; but that I did not recollect, nor could I recollect the arrangement of levers connecting the brakes of the two trucks. I did not tell him that I did not think there was any double brake on it before 1850, nor have I any recollection of the year 1850 being mentioned in our conversation.

Cross 96. Is that the best answer you can make to this question?

A. It is.

Cross 97. Did you, several years ago, about the year 1858 or 1859, see M'r Henry Waterman, in Trenton, New Jersey, at a time when you were sick, and did he enquire of you respecting the use of double brakes on the Camden and Amboy Railroad, and did you thereupon refer him to M'r Edwin Lockwood for information?

A. I have no recollection of such a transaction whatever.

Cross 98. Did M'r Henry Waterman, or a person calling himself by
that name, ever call upon you in relation to the use of double
739 brakes on the Camden and Amboy Railroad, prior to the past
year, when, as you say, you think you saw M'r Waterman?

A. I have no recollection of him.

Cross 99. Did he not so call upon you at Trenton, at or about the time mentioned, and did he not enquire of you what had been the history of the use of double-acting brakes on the Camden and Amboy Railroad; and did you not tell him that you did not know or remember when double-acting brakes were first used on that road, and that you did not think they were used there prior to 1850 or 1851, and did you not thereupon refer him to M'r Lockwood for information on the subject?

A. I have no recollection of any such conversation whatever.

Cross 100. When did you leave Trenton to go into your employment at Fort Wayne?

A. In the early part of 1859; in January, I think.

Cross 101. Were you back again in Trenton for a short time, soon after first going to Fort Wayne?

A. I was. I think it was in April or May when I moved my family out.

Cross 102. May it have been in the latter part of May or the fore part of June?

A. I think not. I think it was about the first of May I moved out.

Cross 103. When you say this, do you mean that you are positive about it, or that it is now your impression?

A. No; that is my recollection of the matter. I am not positive.

Cross 104. Were you back again in Trenton a short time, soon after moving your family?

A. I think not. I don't think I was in Trenton again for probably a year afterwards.

Cross 105. Have you the original of the letter from M'r Hubbell to you, to which the exhibit marked "Complainants' Exhibit, Dripps' new proofs?"

A. No; I have not.

Cross 106. Do you know where it is?

A. I do not. I do not think it is in existence.

740 Cross 107. Who is the W. A. Dripps by whom that exhibit appears to have been transcribed?

A. He was my draftsman at the time the letter was written.

Cross 108. Did he write the letter by your direction and at your dictation?

A. I do not recollect; I presume that according to the usual course of business he wrote the letter at my dictation.

Direct resumed by M'r Whipple:

Q. 109. Is there anything in your deposition which you wish to modify or explain? If so, please do so.

A. I know of nothing now.

Cross 110. Do you know of any other matter or thing for the benefit of either the complainant or defendant in the trial of this case? If so, please state it.

A. I know of nothing.

ISAAC DRIPPS.

Subscribed and sworn to before me this 17th September, 1868.

R. E. STILWELL,
Examiner, &c.

Edwin Lockwood recalled on the part of the defendants:

(Same objection as to the last witness.)

Q. 1. Henry Waterman has testified in this case (see complainants' new proofs, page 136, and parts of folios 541 and 542) as follows: "I went to Bordentown and saw M'r Lockwood; I think it was some time in the latter part of 1859, a short time previous to the trial at Canandaigua; I told M'r Lockwood my business; that I was defending the railroad against the Hodge patent, and wanted to know his experience 741 with the Hodge and Tanner brakes; he gave me the history of their operations; he said they commenced with double brakes on their road, with the Hodge patent brake; that they purchased the patent; that they had introduced it generally on their passenger-cars."

Please make such response to this testimony as the subject-matter may seem to require.

(Objected to.)

A. I have to say that Henry Waterman never called on me to my knowledge; but I understood a man did call to see me, and I was not in Bordentown; but when I returned either from Tarrytown or Newburgh, I can't say which—I think I was at one of those places, but can't say which—my foreman (M'r Smith) informed me that there had been a person there to see me in reference to car-brakes; my not being present he (Smith) saw M'r Van Renssalaer, and he gave his consent for Smith to go to Canandaigua as a witness on a trial in reference to brakes; M'r Smith's excuse for going was that the party that came after him agreed to pay all his expenses, and take and show him Niagara Falls, of which he reported to me when he came back, he had been and seen the falls; I did not see the party that came after Smith to go to the trial.

Q. 2. In the year 1859, how many cars, including passenger and baggage-cars, did the Camden and Amboy Railroad Company have in their service?

A. I can't say; there was seventy-five cars, I should judge, and there may have been more.

Q. 3. Assume that the said Waterman did call on you, as he has stated, could you have said to him that the Hodge brake was generally used or introduced on the cars of that road at that time?

(Objected to.)

A. No, sir; I could not.

Q. 4. Why not?

742 A. Because I knew they were not generally used; there was two I know, and there may have been a half a dozen; I can't say.

Q. 5. Assume that said Waterman did call, as he has stated, and that he saw you, could you have informed him that you commenced with double brakes on that road with the Hodge patent; if not, why not?

(Objected to.)

A. I could not, for I know that we had the single lever brake on a car in 1843.

Q. 6. Was this single lever brake and the Hodge brake both of them double-acting brakes?

A. They were intended to be, I believe.

Q. 7. Henry Tanner has testified in this case (see complainants' new proofs, page 264, for 1051) as follows: "I went to Bordentown, to the Camden and Amboy shops; I saw a man there that was introduced to me as M'r Lockwood; I never had seen him before; I exhibited the model to him (of a centre lever brake) and told him that I wanted to get the brake on that road, and told him what M'r Baker was doing; we talked a good while about it, and he declined to put it on at the time, and the reason that he gave was, that they were putting on, or were going to put on, the Hodge brake." Will you please make such response to this testimony as the subject-matter seems to require?

(Objected to.)

A. I have no knowledge of any such transaction, either directly or indirectly; furthermore, I don't hold myself responsible for what I may say outside the court-room, for there is hardly a week passes that I am not annoyed by different parties for patents of different things pertaining to cars.

Q. 8. May not M'r Tanner have called on you, and the circumstance have escaped your recollection?

A. He might have called there; I have no knowledge of it.

743 Q. 9. When persons call upon you with enquiries about patents, and the introduction of patents, are you so situated as to be able to talk a good while about such matters?

A. I am not; my duties are very arduous; I have from 100 to 120 men employed to look after.

Q. 10. Do you know William W. Hubbell, of Philadelphia?

A. I have no acquaintance with him. I saw him a number of years ago.

Q. 11. He has testified in this case that he came to Bordentown some time in the year 1860, and that he obtained the information that the Hodge brake was the first double-acting brake used on the Camden and Amboy Railroad, and that it was used in 1832. Please state whether he obtained any such information from you.

(Objected to.)

A. He did not obtain any such information from me.

Q. 12. He has further testified in this case that they (meaning persons in the employ of the Camden and Amboy Company) had seen the centre lever brake, or Tanner brake, as it is called at Wilmington, and that they tried that on the Camden and Amboy road in 1852. Please make such response to that testimony as you may think proper.

(Objected to.)

A. I don't know what others might have seen, but I saw nothing. I never was at Wilmington till 1863, at the time the raid was made at Havre de Grasse, when the rebels burned up the bridge.

Q. 13. According to your best recollection, when did you first see Thomas Sayles, the complainant in this case?

A. My recollection is that I saw him four or six weeks before I was called here as a witness in this case.

Q. 14. At that time, did he show you a copy of a statement that had been made by you in relation to the use of brakes on your road?

744 A. He did not; he said he had seen a statement, but he did not show me a statement.

Q. 15. At that interview did you say to him that you was open to conviction, and that if he could show you that you were wrong in relation to the time and use of double brakes you would own it, but that you was sure you were right in the statements made by you in the paper above referred to?

A. I told him if he would show me where I was wrong I would acknowledge it; but I knew I was right in my statement.

Q. 16. Did you say to him at that meeting that it was possible that you might be mistaken as to the time the double brake was used on your road?

A. No, sir.

Q. 17. Did you say to him that you knew the first brake you ever saw that operated the brakes of all the wheels from either end of the car was the Hodge brake; did you say this to him then or at any other time?

A. I did not.

Q. 18. In a conversation with the complainant in this case, purporting to be in the year 1852, did you say to him that had you seen the Tanner brake before the company had made arrangements for the Hodge brake you would have recommended the company to use the Tanner brake?

A. I did not.

Q. 19. What was the argument used by M'r Hodge or his agent to induce you to make a trial of the Hodge brake?

A. He didn't make any to me whatever. It was first put on by order of M'r Van Renssalaer. M'r Van Renssalaer told me that the reason was that it adjusted itself to the wheels better than the single lever brake

(Objected to.)

Q. 20. What do you mean by the single lever brake?

A. The cross lever under the body of the car that the rods are attached to to couple the brakes of the trucks.

745 Q. 21. Was such brake then in use on the Camden and Amboy road?

A. It was.

Q. 22. Did you know Miles G. Morris, formerly of Springfield, Massachusetts?

A. I do not.

Q. 23. You have stated in your former examination in this case, in answer to the second direct interrogatory, "I have made a great many experiments in car brakes in various forms." I will now present you with a model marked "Lockwood's Exhibit," and ask if it is one of the forms which your experiments assumed, referred to as above?

(Objected to.)

A. It is.

Q. 24. Does the operating lever in this exhibit receive the whole force of the brakeman and distribute it to the two pairs of wheels?

(Objected to.)

A. It does, at eight points.

Q. 25. Do the levers connected to the operating lever draw towards the centre of the car?

A. They do.

Q. 26. Is the operating lever pivoted to a longitudinal timber under the body of the car?

A. It is.

Q. 27. Is the brake on this exhibit susceptible of being operated from either end of the car?

A. It is.

Q. 28. What is necessary to operate it from either end?

A. By another lever and connecting rod, the same as on this end.

Q. 29. Where would you connect the rod to the operating lever now on the exhibit?

746 A. At the lower end, the same as in the model.

Q. 30. To what extent was this exhibit used on the Camden and Amboy road, and when was it used?

(Objected to.)

A. It was applied to two baggage cars from 1841 to 1843; I can't exactly tell; previous to adopting the eight wheel baggage car.

Cross-examined by M'r Cozzens:

Cross 31. Was the thing represented in this exhibit an experiment?

A. No, sir; it was in actual use, and used for many years; it was put on as an experiment.

Cross 32. Was it put on just as is shown in this exhibit?

A. Yes, sir.

Cross 33. Were they four wheel cars or eight wheel cars it was pu down?

A. Four wheel cars.

Cross 34. As it was put on these cars, was there another lever and connecting rod so that it operated from either end?

A. No, sir.

Cross 35. Was one of the objects of this contrivance to enable brake shoes to be applied to each side of the wheels?

A. That was the main object, to clamp the wheels so as to check the train; that was the main car in the train to apply the brake; that car carrying the baggage was loaded very heavy.

Cross 36. Did it cause the wheels to slide?

A. It did slide the wheels.

Cross 37. Except for applying the brake shoes to both sides of the wheels, can you point out any advantage in this contrivance over the usual form of the single brake?

A. We got a multiplicity of leverage over an ordinary brake, because we have got a leverage three to one over an ordinary brake.

747 Cross 38. Does not this cause the wheels to slide even more readily than the usual form of single brakes?

A. It depends altogether upon the power applied to the operating lever.

Cross 39. Has it not the capacity to do this?

A. It has the capacity if you apply the power.

Cross 40. Was it designed when in use that the power should be so applied to it as to slide the wheels?

A. Yes. We slid the wheels, as it was thought at that time that a brake would not hold unless we slid the wheels, but experience has taught us since that it is bad policy to slide the wheels, as it spoils the wheels and rails both.

Cross 41. Do you mean to be understood in what you have said in regard to M'r Waterman, M'r Hubbell, and M'r Sayles that you do not recollect that they had the interviews with you that they have testified to?

A. I do.

Cross 42. You have stated that you saw M'r Hubbell a number of years ago. How came you to see him at that time?

A. I saw him at Bordentown with M'r Dripps. He was there in reference to a spark arrester to a locomotive. I can't tell how long ago it was.

EDWIN LOCKWOOD.

Subscribed before me this 25th September, 1868.

R. E. STILWELL,
Examiner, &c.

Adjourned to September 30th, at 11 a. m.

748 WEDNESDAY, *September 30th*, 1868.

Present, counsel for the respective parties.

Counsel for defendant offers in evidence certified copy of the minutes in the case of Henry Tanner vs. New York and Erie Railroad Company, marked "New York and Erie Exhibit."

(Objected to.)

At a stated term of the circuit court of the United States of America for the northern district of New York, in the second circuit, held at the city hall in Albany, on Tuesday, the twenty-fourth day of October, in the year of our Lord one thousand eight hundred and fifty-four.

Present, the honorable Nathan K. Hall, district judge.

HENRY TANNER
vs.
THE NEW YORK AND ERIE RAILROAD
Company.

Mess'rs C. M. Keller and S. Blatchford appear as plaintiff's counsel.
Mess'rs C. Daniels and T. P. Grosvenor appear as defendant's counsel.

Ordered, On motion of M'r S. Blatchford, of counsel for plaintiff, that a jury be empanelled, and that the trial of this cause do now proceed.

749 Whereupon the following named jurors were duly called and sworn, namely: John Artcher, David McCarty, Henry Swan, Peter Markle, Henry Rector, Alfred Southwick, Abram Buzzee, Garret Walley, William P. Davis, William Boardman, Patrick Cullen, John M. Blessing.

The four last-named jurors are talesmen here summoned and returned by marshal as per order of court now entered.

Plaintiff's counsel opens and reads documentary evidence.

Plaintiff's witnesses, Harvey Waters, James J. Mapes.

Court here took a recess to 3½ p. m.

3½ p. m. Court met. Present, Judge Hall.

SAME
vs.
SAME.

Trial continued.

Plaintiff's witness (Mapes examined) John Clark.

Plaintiff rests.

Damages stipulated at $75.

M'r Daniels here opened the defence.

Defendants read documentary evidence and depositions.

Defendant's witnesses, Henry Gray, Samuel E. Dennis, Joseph F. Talson, Moses Parrett, Bernard Hughes, Frederick Boyes, Nehemiah Hodge.

WEDNESDAY, *October 25th*—9 a. m.

Court met. Present, Judge Hall.

SAME
vs.
SAME.

Trial continued.

Defendant's witnesses (Dennis re-examined), Wilson Eddy, Sarah A. Nicholas, Ferdinand Le Pennes.

Defendant rests.

750 Plaintiff reads depositions.

Plaintiff's witnesses, Lafayette Thompson, Asahel G. Bachelder (Waters re-examined).

Court here took a recess to 3½ p. m.

3½ p. m. Court met. Present, Judge Hall.

Ordered, That jurors not empanelled be discharged to 9 to-morrow morning.

SAME
vs.
SAME.

Trial continued.
Plaintiff's witness (Mapes re-examined).
Depositions read.
Defendant's witness (Hodge re-examined).
Testimony here closed.
M'r Daniels then sums up for defendant.

THURSDAY, *October 26th*—9 o'clock a. m.

Court met. Present, Judge Hall.

SAME
vs.
SAME.

Trial continued.
M'r Keller summed up for plaintiff.
Judge Hall here charged the jury.
Bailiff was sworn and jury retired to consider verdict.
One more bailiff sworn.

SAME
vs.
SAME.

Ordered, Marshal furnish jury out in this case with refreshments.

751 The jury here come into court, and being called, answer and say that they find for the plaintiff a verdict for seventy-five dollars damages.

Ordered, On motion of defendant's counsel, that jury be polled, whereupon each juror answers "This is my verdict."

Ordered, On motion of M'r Farrington, defendant's counsel, that defendant have forty days within which to make a case or bill of exceptions, or both, and that in the mean time all proceedings on the verdict be stayed.

Ordered, That plaintiff have also forty days within which to serve amendments after service of a copy of said bill on case or both.

At a special chambers term of the circuit court of the United States in and for the northern district of New York, in the second circuit, held at the United States court rooms in the city of Buffalo, on Tuesday, the 7th day of August, A. D. 1865, pursuant to the following: "Ordered, That arguments and motions in all equity and admiralty cases, and also in law cases, which can, by the rules and practice of this court, be heard in variations. be put upon the clerk's calendar and heard (as stipulated by and between the counsel and advocates of the respective parties) at the United States court room in Buffalo, before the judges of said court, on the 7th day of August next, at 10 a. m., and succeed-

ing days, until pending cases are disposed of. Dated, July 18, 1855. S. Nelson." And which order was duly filed and entered in said clerk's office on the 19th day of July, 1855.

Present, the honorable Samuel Nelson and Nathan K. Hall, judges.

Ordered, Court was here opened by proclamation.

752 SAME
vs.
SAME.

Ordered, on motion of M'r S. Blatchford, of counsel for plaintiff (M'r Daniels, of counsel for defendant, consenting thereto), that the motion for a new trial in the bill of exceptions be denied.

On motion of M'r S. Blatchford, for plaintiff, M'r C. Daniels, for defendant, consenting, it was ordered that the verdict entered in this cause, October 26th, 1854, be amended by adding thereto the following words: "And that the Stevens brake and the Hodge brake, used by the defendant, are infringements of the plaintiff's patent.

A copy from book of minutes.

Witness my hand and official seal at my office in Utica, in said district, this 6th day of December, A. D. 1866.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY
Company.
In equity.

Testimony taken on the part of the complainant for final hearing by

Joseph Gutman, j'r, examiner, &c., under the 67th rule of the Supreme Court of the United States.

NEW YORK, *February* 18*th*, 1868.

Present, S. D. Cozzens, esquire, of counsel for complainant, and the complainant in person; and S. M. Whipple, esquire, of counsel for defendant.

JAMES E. HUTTON, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

Q. 1. What is your name, age, residence, and occupation?

A. My name is James E. Hutton; I am 46 years of age; I reside at No. 49 Mercer street, in Jersey City, in the State of New Jersey; I am an engineer by occupation.

755 Q. 2. What sort of an engine do you run as an engineer, and where are you at present employed?

A. I run a locomotive, and am at present employed by the New Jersey Railroad and Transportation Company.

Q. 3. How long have you been in the employ of that company? And if you have been in its employ at different times, please state when such times were, mentioning the first of them, and then the others of them in order.

A. I began there on the 1st day of May, 1839, and have been away at different times. I was there the first time from the 1st of May, 1839, till about the middle of August, 1844. I returned to their employ again, I think, in July, 1845, and remained there until January 8th, 1855. I left there January 8th, 1855, and returned to them January 7th, 1856. I remained with them then until May 11th, 1856, then left, and was away until August 11th, 1861. I returned to them August 11th, 1861, and have remained with them ever since.

Q. 4. Are you familiar with the construction and operation of what are called double-acting brakes for railroad cars?

A. Yes, sir.

Q. 5. Will you please state, as nearly as you are able to, in what year double-acting brakes for railroad-cars first commenced to be used on the New Jersey Railroad and Transportation Company's railroad?

A. In 1851.

Q. 6. State, if you know, by whom said double brakes were put upon the cars of said road at that time?

A. By M'r Baker—David H. Baker.

Q. 7. Prior to the time when M'r Baker so put these brakes on said road, was any double brake of any kind ever tried upon said railroad?

A. None that I know of; I never have heard of it.

Q. 8. What were your opportunities of knowing what kinds of brakes were used upon said railroad during the times you have been in its employ?

A. My being around and seeing. I could tell by the way they held the train, and by seeing whether they were using the single or
756 double brake. They had been using the single brake up to 1851.

Q. 9. Are you acquainted with Joseph F. Talson; and, if so, how long have you known him?

A. I am, and have known him since 1839—since I first went to work for the railroad company.

Q. 10. Did you ever know of his trying a double-acting brake on said railroad; and, if so, in what year was it, as near as you can recollect?

A. I heard of his trying one, but I don't know that I have ever seen it. This was between 1841 and 1843 or 1844.

Q. 11. You say you don't know that you ever saw Talson's brake. Could it have been in use any length of time between 1841 and 1843 or 1844, without your knowing it and seeing it?

A. I don't think it could.

Q. 12. Between 1841 and 1843 or 1844 what kind of work were you doing for the New Jersey Railroad Company?

A. I was acting part of the time in the shop and part of the time on the road as extra engineer.

Q. 13. How much of the time were you on the road as extra engineer between 1841 and 1843 or 1844, and what kind of trains were you running?

A. Sometimes I would not be on the road for more than one day in the week; sometimes I would be on for a whole week. It was principally passenger trains I was running; once in a long while, perhaps, a freight-train.

Q. 14. About how frequently during those years were you on the road as engineer for a week at a time?

A. I might have been once a month.

Q. 15. You say you might have been. To your best recollection, how frequently was it?

A. Once a month.

Q. 16. Between what points or places did these passenger-trains you have spoken of run, when you were running them as extra engineer?

757 A. Newark, Elizabeth, Rahway, and New Brunswick. They started from Jersey City and ran to those points.

Q. 17. Do you remember what year it was that Talson left the employment of the New Jersey Railroad Company?

A. In 1849.

Q. 18. At that time what kind of brakes were in use on the cars of the said railroad?

A. Single brakes

Q. 19. You have stated that prior to the time when M'r Baker put double brakes on said railroad no double brakes of any kind were ever tried there that you know of, or ever heard of. Are you able to state positively whether prior to 1851, when M'r Baker put on said brakes, there were or there were not any double brake or double brakes used on said railroad, with the exception of the brake you have spoken of as tried by Talson?

A. I think I can.

Q. 20. Will you then please state whether any double brakes, with the exception of the Talson trial referred to, were used at any time on said road while you were in its employment prior to 1851?

A. There was none.

Q. 21. How positive are you of this?

A. I am well satisfied there was none. I never saw one, so I am satisfied there was none there, for if there had been I should certainly have seen it.

Q. 22. Did you ever know of a car on the Camden and Amboy Railroad called the "John Tyler"?

A. I did.

Q. 23. When did you first know of that car, and for about how long did you continue to know of it?

A. From about the time it was built new until it was abandoned and thrown away. It was built new about the time Tyler took his tour through the country. I could not state at what time it was abandoned precisely. I think it was running at the time I left the road in January, 1855; I never heard of it after I came back.

758 Q. 24. During the time that you knew of this John Tyler car, what kind of a brake did it have? And if it had more than one kind of brake, please state how long, as nearly as you can, it had such different kinds of brakes.

A. When it first came out it had a single brake, and before it was abandoned it had a double brake. It had the single brake until 1851, and the double brake as long as I knew it afterwards.

Q. 25. What, if anything, makes you remember that after 1851 it had a double brake?

A. Having it in the train that I was running, and seeing the double brake on it.

Q. 26. What kind of double brake was on it?

A. What they call a double-lever brake.

Q. 27. Do you know the name that this double-lever brake goes by?

A. Hodge's brake.

Q. 28. What sort of a train was it which you ran which had this John Tyler car in it, and from where to where did such train run?

A. It was a passenger-train, and ran from Jersey City towards Philadelphia.

Q. 29. In what year or years did you run that train with the John Tyler car in it, and for how long a time did you run it?

A. From 1850 to 1855.

Q. 30. Did you have it in any train run by you at any time or times prior to 1850?

A. I think I did.

Q. 31. In what year and how long, as nearly as you can state, and please mention how frequently you had it in trains run by you prior to 1850?

A. I ran it in 1849; I can't tell how long exactly. I think I used to have it in the train run by me prior to 1850, as a regular thing.

Q. 32. How frequently did you have it in trains run by you after 1850?

A. I think the car ran right along with the train, as a regular thing, down to the time when I left in the first part of January, 1855.

759 Q. 33. Did you have it in any train run by you prior to 1849?

A. I don't know as I did, as I did not run a regular train until 1849.

Q. 34. Was there anything peculiar about this Tyler car which leads you to remember it particularly? If so, what?

A. There was; it had a privy on the platform. It was fitted up differently inside; had looking-glasses.

Q. 35. Did you notice the Tyler car often during the times that you were running it in trains, and did you also notice what kind of brake it had?

A. I did. I noticed it more particularly after it got a double brake on it.

Q. 36. You have said that "when it first came out it had a single brake." What time do you refer to when you say "when it first came out"?

A. About the time Tyler took his tour.

Q. 37. You have said that Baker put double brakes on the New Jersey

Railroad in 1851. Did the Tyler car have the Hodge brake on it before or after Baker put these brakes on said road?

A. I think it must be after, because I saw these of Baker's first.

JAMES E. HUTTON.

Subscribed and sworn to before me this 18th day of February, 1868.

JOSEPH GUTMAN, Jr.,
Examiner, &c.

Cross-examination of above witness waived by defendant's counsel.

Edgar Morris, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

760 Q. 1. What is your name, age, residence and occupation?

A. My name is Edgar Morris. I am fifty-eight years of age I reside in the town of Bergen, Hudson County, in the State of New Jersey. I am at present a real estate agent.

Q. 2. Were you ever in the employment of the New Jersey Railroad and Transportation Company; and, if so, how long were you employed by them?

A. I was. I was employed by them about twelve years, from 1837 to 1849. I went with them in the spring, and left in the spring.

Q. 3. In what capacity or capacities were you employed by them during these times?

A. I was employed to work in the car-shop to do general work—build and repair cars; we also had to go out on the road and attend to break-downs.

Q. 4. Are you familiar with the construction and operation of double-acting brakes for railroad cars?

A. Not from practical knowledge. I never saw any before I left the road.

Q. 5. Are you familiar with the construction and operation of single brakes for railroad cars?

A. Yes, sir.

Q. 6. During the time that you were employed on such railroad, from 1837 to 1849, what kind of brakes were used on the cars of said road?

A. There has been two or three kinds. At first we had what was called a cam-brake, with a treadle and rock-shaft; then we adopted the double brake on one truck, outside of the wheels, operated by a wheel.

Q. 7. Were both these kinds single brakes?

A. Yes, sir.

Q. 8. Are you acquainted with Joseph F. Talson; and, if so, how long have you known him?

A. I am. I have known him about 34 years.

Q. 9. Did you ever know or hear of a man by the name of Isaac Newton Stanley?

A. I have seen him and spoken to him.

761 Q. 10. Did you ever know of his trying an experiment on the New Jersey Railroad with a double-acting brake; and, if so, in what year was it?

A. I know of his trying the brake, but I am not positive of the year; I think it was in 1842.

Q. 11. How long did that Stanley experiment last?

A. I think about an hour and a half, when we shoved the car out and it broke and was taken off.

Q. 12. Was any double-acting brake used on that car or any other car on the New Jersey Railroad, down to the time you left the road in 1849?

A. I think not—that is, I never saw one. I never was away over a week or so at a time; it might have been put on when I was not there, and then taken off again.

Q. 13. Was any double brake used regularly on that or on any other car on said road, from the time of the Stanley experiment down to the time when you left the road, or was any double brake kept for use on that car or any other car during that period?

(Objected to.)

A. Not to my knowledge.

Q. 14. Could there have been without your knowing it?

A. I do not think there could.

Q. 15. What were your opportunities of knowing what kind of brakes were used on the cars of said road between the time of the Stanley experiment and the time when you left the road?

A. Most of my business was to attend to the brakes; to put on new brakes and repair old ones; to adjust them, and also to take out bad wheels and put under new ones. I could not do that well without handling the brakes and seeing them.

Q. 16. Did you ever know of a car belonging to the Camden and Amboy Railroad Company called the "John Tyler"?

A. It was generally called the Tyler car—that is the car you allude to.

Q. 16½. In about what year did you know of that car, and for
762 about how long a time did you continue to know of it; and during such time about how frequently did you see it?

A. I think it was somewhere near 1843 that car came on. I saw it about twice a week during the whole time it ran there, until the time when I left the road. I saw it from the time it first came on until I left the road.

Q. 17. During the time from 1843 till 1849 about how often, on an average, did you see it?

A. About twice a week.

Q. 18. In what kind of trains did it run during that period?

A. Generally in the Philadelphia train.

Q. 19. During all the time from 1843 till 1849 state, if you know, what kind of brake it had?

A. To the best of my knowledge it had a single-acting brake.

Q. 20. Could it have had a double-acting brake on it during this period without your knowing it?

A. It could not have been possible for it to have had it on for any length of time.

Q. 21. Why could it not have had it on for any length of time without your knowing it?

A. The first reason is that I should have seen it myself; the next is, I should have heard of it in the shop.

Q. 22. Was there anything peculiar in the construction or fitting up of that Tyler car? If so, what?

A. The main construction was similar to other cars, with the exception of its having a water-closet on the platform. It was fitted up a little different inside, more expensively, and the seats were differently constructed in the backs.

Q. 23. At about the time you first knew of the Tyler car in 1843, was there anything relating to the subject of car-seats that made you take any more particular notice of it than of other cars? If so, what was it?

A. Yes, sir; there was an effort to improve on car-seats. We used
then narrow-backed seats. The arm of the seat was hung from the floor,
and the garments would fall through the back of the seat. I had
763 an idea some time before this of making an improvement, and I
think about a year after that I accomplished it. The seats are
used now universally as improved by me. When we heard in the shop
that the Tyler car was in, I went down and examined it, and found they
had not got the improved seat in it.

Q. 24. About when was this that you so examined it?

A. I think it was the first day it came into Jersey City, in the year 1842 or 1843.

Q. 25. After that car came on the road was it a well-known car, and were the peculiarities of its fitting up and equipment well known on the New Jersey Railroad?

A. It had the reputation of the Tyler car, but I think the fitting up was altered. Its peculiarities were well known at the time.

Q. 26. You say you think the fitting up was altered; in what respect, and when?

A. I could not say when; the water-closet was taken off. It was not altered inside within a year. After my seats were in operation, seats on the same principle were put in; those are the respects in which it was altered.

Q. 27. You have said in one of your answers that you are not practically acquainted with double-acting brakes. Have you ever seen such brakes [illegible] any railroad cars, and are you familiar enough with them to know them when you see them?

A. I have seen them; I think I am familiar enough with them to know them when I do see them.

Q. 28. Have you ever seen the kind of double brakes which are now used most generally on the New Jersey Railroad on passenger trains?

A. Yes, sir.

Q. 29. You have said that part of your business was attending to the brakes. While the Tyler car was running on the Philadelphia trains you have referred to, did your business require you to do anything about said trains, at any time; and, if so, what did you have to do?

A. That I could not positively answer; but at that time I think
764 the men in our shop, myself and others, I think for two or three
years, did some repairs, when necessary, on the Philadelphia
cars.

Q. 30. What two or three years would this be?

A. From the time the Tyler car came in, and from the time they commenced to run the Camden and Amboy cars on the Philadelphia trains.

Q. 31. You speak of doing repairs when necessary on these Philadelphia cars. Did you also, when necessary, repair the Camden and Amboy Company's cars which ran in these Philadelphia trains coming into Jersey City?

A. I think we did. I consider them all to be Philadelphia cars.

And being cross-examined by M'r Whipple, of counsel for defendants, the witness deposes and says:

Cross-q. 1. Do you wish to be understood that you repaired, in the shops of the New Jersey Railroad and Transportation Company, cars belonging to the Camden and Amboy Railroad Company?

A. No, sir.

Cross-q. 2. What led you to observe the kind of brakes in use on the Tyler car?

A. The inspection of cars, looking under them frequently.

Cross-q. 3. Was it your business to inspect the Camden and Amboy cars that came to Jersey City while you were in the employ of said New Jersey Railroad and Transportation Company?

A. No, sir.

Cross-q. 4. If it was not your business, how can you say that there was or was not a double brake on the Tyler car of that road?

A. From being in the depot, repairing cars, and seeing them pass the shop, and from general intercourse with the cars all through the depot.

Cross-q. 5. What cars did you inspect, if not the cars of the Camden and Amboy Company?

A. I inspected none.

765 Cross-q. 6. Have you not stated that it was part of your business to inspect the cars?

A. I think not.

Cross-q. 7. You were asked in the second cross-interrogatory "What led you to observe the kind of brakes in use on the Tyler-car?" You answered, "The inspection of cars, looking under them frequently." Do you swear that you were or were not inspector of cars?

A. My answer was, that I did not say what kind of brakes were on that car. I was not inspector of cars.

Cross-q. 8. Will you now please tell us of your own knowledge what kind of a brake was on the Tyler car from the year 1843 until the time you left the employ of the New Jersey Railroad and Transportation Company, and describe its construction and operation?

A. I cannot.

Cross-q. 9. Then you don't know of your own knowledge what kind of brake was in use on that car?

A. No, sir; not positive.

Cross-q. 10. You say there was introduced into the Tyler car a seat on the principle of your seat. Please describe the seat which was introduced into said car.

A. It was a wide-back seat, hung at the top of the arm-rest; when it turned over it shut down very near on the cushion. It is like that now in common use.

Cross-q. 11. This car-seat, you say, was your invention, do you, and that the seat was put into the Tyler car? If so, at about what time?

A. I claim it as my invention. I think it was put into the Tyler car, for the reason that all the cars were running at the time I left with those seats in. I could not say at what time it was put into that car; it might have been 1846.

Cross-q. 12. Were you ever in the employment of the Camden and Amboy Railroad Company?

A. No, sir.

766 Cross-q. 13. Do you know what brakes were in use on the passenger-cars of that company from 1843 until the time you left the employ of the New Jersey Railroad and Transportation Company in 1849?

A. No, sir.

Cross-q. 14. Are you, or have you been, in the employ of the complainant in this case, Thomas Sayles, to look up evidence for him?

A. I have been requested to call on parties that he spoke of.

Cross-q. 15. What parties have you called on? Please name them in detail, and state what information was communicated to you in reference to the matter of brakes.

A. I called upon M'r Manahan, and he knew nothing about them. I called upon M'r Shafer, and he had no recollection about the double brake, except Stanley's, of which he only saw the gearing. I called on M'r Reed, at Newark—Erastus Reed. He had no recollection of any double brake while he worked for the New Jersey Railroad Company. I so understood him after about half an hour's conversation with him. He said he had put on what he called a double-acting brake on a four-wheel car of the Camden and Amboy Company. I called on Howell Roe, at New Brunswick. He knew nothing about them. I called on Joseph New, of New Brunswick. He knew nothing about them.

Cross q. 16. You say you are acquainted with Joseph F. Talson. Would he be as likely to know what brakes were used on the New Jersey Railroad and Transportation Company's cars as you would?

A. Yes, sir.

Cross-q. 17. What position did he occupy while on that road?

A. He was foreman of the car-shop.

Cross-q. 18. Did he or did he not apply a double brake to a platform-car of that road in the year 1842?

A. Not to my knowledge.

Cross-q. 19. Are you willing to state unqualifiedly that no such brake was applied to a car by said Talson?

A. No, sir.

767 Cross-q. 20. Was the Tyler car frequently in the trains which came to Jersey City, during the time you were in the employ of the New Jersey Railroad and Transportation Company, from 1843 to 1849, or not?

A. It was.

Cross-q. 21. Do you know of your own personal knowledge, and are you willing to stand by the affirmation, that there was no double-acting brake in use on the Tyler car from June, 1843, to the time you left the employ of the New Jersey Railroad and Transportation Company in 1849?

A. No, sir; not positively. I mean to be understood that I am not positive whether there was such a brake or not.

Cross-q. 22. You say you think you are familiar with double-acting brakes. Will you please describe the construction and operation of the one you are most familiar with?

A. All the knowledge that I have of them I have derived from looking at them under the cars. The one I have seen has a connection in the centre, a lever and rod, and chains at the end to wind up on the shaft.

Cross-q. 23. What other double brake are you familiar with?

A. I don't know that I am acquainted with any other double brake.

Cross-q. 24. Do you know the Hodge brake?

A. No more than that it is a double-acting brake; works similar to the one I have seen; I think, perhaps, that is the Hodge brake.

Cross-q. 25. What cars were they in use on, before you left, in 1849?

A. None that I ever saw.

Cross-q. 26. When and where did you ever see it in use?

A. In Jersey City, at the depot, two or three months ago, I think, and since.

Cross-q. 27. What caused you to examine it two or three months ago?

768 A. For my own satisfaction, as I had heard something about some lawsuit a year ago. I think somebody came to my house.

Cross-q. 28. Did Joseph F. Talson ever call upon you in reference to this brake matter? If so, did you or did you not tell him that you knew nothing about it?

A. He did; he asked me if I remembered anything about his putting a brake on the cars. I told him I did not. He said he was getting evidence in the case of Sayles against somebody else. I told him there had been somebody there about it before—about some brake case.

And being re-examined by M'r Cozzens, of counsel for complainant, he deposes and says:

1. Redirect q. You have said on your cross examination that you could not say positively whether there was a double brake on the Tyler car or not; will you state whether there could have been any kind of double brake on the Tyler car, for any length of time, from the year it came out until you left the road, without your knowing it?

A. I do not think there could; it is possible.

And being further cross-examined by M'r Whipple, defendant's counsel, he deposes and says:

1. Recross-q. How does it happen that you are so familiar with the Tyler car as to enable you at this late date to say there could not have been a double brake on said car without your knowing it?

A. I remember the car called the Tyler car, and I remember there were some things quite different about it than in others. I think if there had been a double brake on I should have known that. We had had the Stanley application there just previously, and there was considerable agitation about brakes.

769 2. Recross-q. Have you seen or heard the evidence that has been taken in this case by the defendant in relation to the brake on this Tyler car?

A. I have seen some of it, and heard some of it.

3. Recross-q. Were you informed by the complainant in this case of the particular point or points he wished to prove by you?

A. I don't think I have; he mentioned something about the time he wanted to prove. I am not certain about that; it was general conversation.

4. Recross-q. Have you or not determined your dates in relation to the Tyler car from the evidence already taken by the defendant in this case?

A. No, sir; I don't think I saw any of the evidence on that point. I take it from my own recollection and circumstances.

5. Recross-q. Please state the circumstances which enable you to fix the first time you saw the Tyler car?

A. It was on account of the election of Harrison and Tyler. I think the Tyler car came to Jersey City after Tyler had made his tour, and whether he was taken in that car and it was named after him, I can't say.

EDGAR MORRIS.

Subscribed and sworn to before me this 18th day of February, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

NEW YORK, *February* 19, 1868—11 a. m.

Present, M'r S. D. Cozzens, of counsel for complainant, and the complainant in person; and S. M. Whipple, esq., of counsel for defendant.

Examination adjourned to 1.30 p. m. of this same day.

Examiner, &c.

770 NEW YORK, *February* 19, 1868—1.30 p. m.

Examination further adjourned to February 20, 1868, at 11 a. m.

JOSEPH GUTMAN, J'R,
Examiner, *&c.*

NEW YORK, *February* 20, 1868—11 a. m.

Present, S. D. Cozzens, esquire, of counsel for complainant, and S. M. Whipple, esquire, of counsel for defendant, and the complainant in person.

GEORGE BROWN, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

Q. 1. What is your name, age, residence, and occupation?

A. My name is George Brown. I am 39 years of age. I reside at Harrison, in the State of New Jersey, and am a car-builder by occupation.

Q. 2. Where are you at present employed, and how long have you been employed there, and in what capacity?

A. I am at present employed by the New Jersey Railroad Company at Jersey City. I have been employed there since July 10, 1850. I have had charge of the men, under M'r David H. Baker, as assistant foreman, for about nine years of that time.

Q. 3. Are you assistant foreman to M'r Baker at the present time?

A. Yes, sir.

Q. 4. In what shop is it that you have charge of these men as assistant foreman?

A. In the car-department repair-shop.

Q. 5. Is M'r Baker the head foreman, or superintendent of that repair shop?

771 A. Yes, sir; he is master mechanic of that department.

Q. 6. Previous to the time that you became assistant foreman under M'r Baker, in what capacity were you employed on said New Jersey Railroad?

A. In repairing the cars that were running on the road whenever ordered.

Q. 7. Did these repairs before you became assistant foreman to M'r Baker, and also the repairs done in the car-shop since you have been such assistant foreman, include anything besides repairs to the car bodies; and, if so, what did they include?

A. They included the trucks and everything pertaining to them; the brakes and everything of that kind.

Q. 8. What kind of brakes for the passenger-cars are now in use upon said New Jersey Railroad?

A. They are a double-action brake; they are Sayles' brake, the single centre-lever brake.

Q. 9. State, if you know, when brakes like this were first put into use on said New Jersey Railroad.

A. It was in 1851, the first that I ever saw, or somewhere thereabouts.

Q. 10. By whom, if you know, were such brakes first applied to the cars of said railroad at this time?

A. By M'r D. H. Baker, to the best of my knowledge. I never saw any before.

Q. 11. Did you yourself have anything to do with the work on the first of these brakes, so applied by M'r Baker? If so, what?

A. I helped put up the first one that was put up in the shop there by M'r Baker.

Q. 12. Can you describe the general construction and connections of that first brake?

A. Yes, sir; I think I can.

Q. 13. Please do so.

A. There is a piece of timber bolted up against the body of the car;
then there is a cross-lever that comes crossways of the car, in the centre
of the car, which is attached by a bolt to the floor timbers; then
772 on each end of the centre lever there is about an inch hole; the
rod that runs to the lever that connects the two brake-bars hooks
on to this centre lever; that short rod connects to the centre lever from
one end of the truck and another rod connects to the brake-shaft on the
other end of the car, the opposite end from where that truck is.

Q. 14. You speak of one rod running to the lever that connects the two brake-bars of one truck; what, if anything, connects the centre lever with the lever uniting the two brake-bars of the other truck?

A. The other truck is constructed exactly the same way.

Q. 15. How about the other brake-shaft or windlass?

A. It is precisely the same.

Q. 16. That is the kind of brake, is it, which has since 1851 been in use on the passenger-cars of the New Jersey Railroad?

A. Yes, sir; the only kind I have seen in general use.

Q. 17. Before this kind of brake such as you have described was put on the cars of the New Jersey Railroad by M'r Baker, what kind of brake was in use on the cars of that railroad?

A. The single-action brake, using a crank on a brake-wheel, acting from one truck.

Q. 18. Prior to 1851, and between that time and July 10, 1850—the time when you went into the employ of the New Jersey Railroad—were there any double brakes of any kind in use on the cars of the said railroad?

A. I don't remember ever seeing a double-action brake before this one that M'r Baker put on; but soon after—I could not say how long, but a short time after—I saw the double centre-lever brake.

Q. 19. What cars did you see the double centre-lever brake on?

A. On some of the Camden and Amboy cars.

Q. 20. Do you know what patent name or patentee's name this double center-lever brake goes by?

A. I think it was the Tanner brake, or the Hodge; I don't remember which.

773 Q. 21. Can you describe the general construction and connections of this double centre-lever brake? If yea, please do so.

A. I don't know, really, that I could describe it here.

Q. 22. Was it like the single centre-lever brake you have above described, as applied by M'r Baker in 1851? And if it is different, please state what the difference is.

A. The difference is, one has the two centre levers; and the Sayles' brake—applied by M'r Baker in 1851—has but one centre lever.

Q. 23. Which one had the two centre levers?

A. The one that was on the Camden and Amboy cars.

Q. 24. You say you saw the double centre-lever brake on the Camden and Amboy cars soon after M'r Baker put on the single centre-lever brake; about how soon after was it, as nearly as you can state?

A. It might have been a month, it might have been more; I don't remember.

Q. 25. On about how many of said Camden and Amboy cars did you see such double centre-lever brakes at about that time?

A. To the best of my knowledge, I did not see more than one or two.

Q. 26. In what kind of trains—way trains or through trains—did these Camden and Amboy cars with that double centre-lever brake run?

A. In through trains to Philadelphia.

Q. 27. About how long a time was it after 1851, if at all, before you began to see any more than one or two of said Camden and Amboy cars with such two centre-lever brakes?

A. I could not say; I think they continued to put them on all the time from that time out, for a year or so.

Q. 28. After that year or so, what kind of double-acting brakes did the said Camden and Amboy cars have on?

A. As far as I know, they continued to use that brake until I saw, somewhere about that time, they had a brake that was applied by the engine reversing.

774 Q. 29. As nearly as you can state, in respect of years, how long was it after you first saw the double brake with two centre levers on said Camden and Amboy cars before you began to see that they had a brake that was applied by the engine reversing?

A. It was probably two years; somewhere along in 1853 or 1854. I remember distinctly that one was broken there, and we had to jack up the car; it worked against the two arms that run outside of the bumper.

Q. 30. Did you have anything to do with repairing the car at that time?

A. Yes, sir; I did.

Q. 31. Do you know the name that this brake that was applied by the engine went by?

A. I do not. I have heard that Stephens had a brake, and I think it was the Stephens brake, though I am not positive as to that. I don't know; I only know there was such a brake.

Q. 32. Did they, at and after the time you have mentioned, have this brake which was applied by the engine reversing on a good many of the Camden and Amboy cars, or only a few?

A. On a few.

Q. 33. Can you state about how long they continued to use brake applied by the engine on said Camden and Amboy cars?

A. To the best of my knowledge, they were using them till 1854 or 1855. They still used them at the time of the Burlington disaster.

Q. 34. After July 10, 1850, when you first went to work on the said New Jersey Railroad, did you, in the course of the repairs which you have said you attended to having done on the cars, repair the cars of the Camden and Amboy Company, when they needed it, at the Jersey City end of the route? and, if yea, please state for how long a time you did so.

A. We always did the necessary repairs that were necessary for the time being, so as to make them safe to run; but if there was anything wrong with the trucks and they needed to go to the shop, we would notify the master mechanic of the Camden and Amboy road at Bordentown. We have always done this up to 1866 or 1867.

775 Q. 35. Then where would these repairs necessary to the trucks be done?

A. They would send their men on, and they would do the repairs themselves.

Q. 36. Would they then do themselves all the repairs to the Camden and Amboy Company's cars except what might be called light repairs?

A. They, the Camden and Amboy Company, would, by their men.

Q. 37. What opportunities would these light repairs give you and the men working with you to ascertain whether the cars you repaired had double-acting brakes or single-acting brakes?

A. Whenever a train comes in there is a man who has the looking over of the train, who goes around the cars and under the cars and examines the wheels and sees if everything is right. Whenever there was anything wrong, the men would repair it and fix whatever there was to do. Whenever I was called out to do any repairs, I was compelled to go under the cars to do whatever there was to do, leather brakes and put them up.

Q. 38. Could you then, if these cars had double-acting brakes, fail to notice it?

A. No, sir; I could not.

Q. 39. If there had been any double-action brake in use for any length of time on the New Jersey Railroad at the time you first were employed there, in July, 1850, and down to the time when M'r Baker introduced the single centre-lever brake, could you have failed to know it?

A. No, sir; I think not. The single centre-lever brake was something entirely new to me. When the car was run out of the shop, M'r Baker went with it himself.

Q. 40. When do you mean it was entirely new to you?

A. At the time we first put it on there; when M'r Baker first put it on at the New Jersey repair shop.

Q. 41. Had you ever seen a double-action brake of any kind before this one that M'r Baker introduced in 1851?

A. No, sir; not to my knowledge.

776 Q. 42. While you were on the New Jersey Railroad, before the time that M'r Baker put this brake on, did you see any Camden and Amboy cars come into Jersey City; and, if so, what kind of brakes did they have?

A. I did see them come in. They had brakes on the same as our cars; single brakes, braking from one end of the car.

Q. 43. Did you see a good many of such Camden and Amboy cars; and what trains did they come into Jersey City on?

A. Not a great many; they did not at that time run a great many; they were on Philadelphia trains.

Q. 44. Were there any of them at that time which had double-action brakes?

A. No, sir; I never saw any. I never saw a double-action brake till I saw that one of M'r Baker's.

Q. 45. Could double-action brakes have been used to any extent on these Camden and Amboy cars which you saw come into Jersey City before 1851 without your knowing it?

A. I think not. I think I should have known it if they had.

Q. 46. Before you went into the employ of the New Jersey Railroad where were you employed?

A. At M'r William Cummings', car-builder, Jersey City.

Q. 47. How long were you in M'r Cummings' employ?

A. From the fall of 1844 till July 9, 1850.

Q. 48. In what capacity were you employed by M'r Cummings during this period?

A. Building cars. I served my time with him as apprentice, and did a little of everything.

Q. 49. From 1844 until July, 1850, what kind of brakes, whether double-acting or single-acting, were put by M'r Cummings on the cars built by him?

A. Single-acting brakes. I never saw any other until I saw M'r Baker put it on, to my knowledge.

Q. 50. Was M'r Cummings largely engaged in car-building from 1844 to 1850?

A. All he could do; he never was idle.

777 Q. 51. How far was M'r Cummings' shop from the station and shops of the New Jersey Railroad in Jersey City, from 1844 to 1850?

A. About, probably, 800 feet; the shops were quite close.

Q. 52. While you were in M'r Cummings' employment, did he build cars for the New Jersey Railroad Company; and, if so, to about what extent?

A. Yes, sir; he built about six cars—passenger cars.

Q. 53. While you were in his employment, did he build any cars for the Camden and Amboy Railroad Company; and, if so, about how many, as nearly as you can state?

A. No, sir; he did not, to my knowledge. He built four cars for the Belvidere road, and I do not know whether they were connected with the Camden and Amboy road.

Q. 54. What kind of brakes did these four cars have?

A. They were single-action brakes, to the best of my knowledge. I never saw any other kind until I saw the one M'r Baker put on.

Q. 55. In about what year were these four cars built?

A. As near as I can tell, in about 1847 or 1848.

Q. 56. In about what year were the last of these cars for the New Jersey Railroad built by M'r Cummings?

A. About the last of 1849, as near as I can remember. I worked on them and helped build them.

GEORGE BROWN.

Sworn and subscribed to before me this 20th day of February, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to February 21st, at 11 a. m.

JOSEPH GUTMAN, J'R,
Examiner, &c.

NEW YORK, *February* 21, 1868—11 a. m.

Present, S. D. Cozzens, esquire, of counsel for complainant, and the complainant in person.

778 Counsel for defendant not being present, and having sent a message that he was sick and could not attend before Monday.

The examination was further adjourned to February 24th, 1868, at 11 a. m.

JOSEPH GUTMAN, J'R,
Examiner, &c.

NEW YORK, *February 24th*, 1868—11 a. m.

Present, S. D. Cozzens, esq., of counsel for complainant, and the complainant in person, and S. M. Whipple, esq., of counsel for defendant.

Examination of the witness George Brown continued.

The witness desires to make the following explanation of a portion of his testimony given on 20th February:

In my answer to the 53d question I said that M'r Cummings had "built four cars for the Belvidere road." This was an error. The cars were built for the Burlington and Mount Holly road, and were two in number.

Q. 57. Did M'r Cummings build any cars for the Belvidere and Delaware road after you left his employment? If so, about how long after, and how many of them?

A. Some two or three years after he built three or four cars for that road.

Q. 58. Please state whether your duties, as you have described them, on the New Jersey Railroad, after you entered its employment, required you at any time or times to, yourself, go underneath the Camden and Amboy cars which you have referred to in your examination; and, if so, about how frequently did you have to do so?

A. I was so required. Sometimes I was at the depot looking over
the cars with M'r Ward—Ambrose Ward, the man who was with
779 me. I did this probably once or twice a week, whenever I was
sent there.

Q. 59. Did you, on these occasions, see the brake-rigging of said cars?

A. I did.

And being cross-examined by the counsel for defendant, the said witness deposes and says as follows:

Cross-q. 1. At this late day, are you prepared to state positively of your own knowledge what kind of brakes were on these cars, which you say you examined, belonging to the Camden and Amboy Railroad Company?

A. I am.

Cross-q. 2. Please describe the same.

A. They were the single upright-lever brake, braking on one truck.

Cross-q. 3. Do you know what kind of brakes were in use on the cars of the Camden and Amboy road from the year 1843 to the year 1850?

A. I do not.

Cross-q. 4. Do you know what kind of brakes were on the cars of the said Camden and Amboy road from the 10th day of July, 1850, when you entered the employ of the New Jersey Railroad, to the time when M'r Baker applied a brake to the cars of that road?

A. Of all the cars that I had anything to do with of the Camden and Amboy, I never saw but the single-acting brake on the Camden and Amboy cars during that time.

Cross-q. 5. Do you know what brakes were on the cars of said Camden and Amboy road which did not come under your observation?

A. I do not.

Cross-q. 6. Do you know that there were no double-action brakes in use on the Camden and Amboy road in 1850 and 1851, or do you infer
there were none because you did not see them?
780 A. I do not know. I did not see any, and never saw any, on
the Camden and Amboy cars up to about the time that M'r Baker
put this single centre-lever brake on, to my knowledge.

Cross-q. 7. Do you know of your own personal knowledge, and from the inspection of cars, that there was no double-action brake on any car of the New Jersey Railroad between July 10, 1850, and the time when the brake in question was applied by M'r Baker?

A. I never saw a double-action brake on any of the cars until I saw the one M'r Baker put on.

Cross-q. 8. Do you know there was not from personal inspection?

A. I was not general inspector of cars. I was employed to repair and overhaul cars for the New Jersey Railroad wherever I was sent by M'r Baker, and I never saw a double-action centre-lever brake on any cars belonging to the New Jersey Railroad at that time referred to.

Cross-q. 9. Do you know there was not from personal inspection of all the crate, passenger, and baggage cars of that road?

A. I do.

Cross-q. 10. What led you to personally inspect all the cars?

A. The crate-cars I was at work on almost every week during this time, repairing them, and I think if there had been a brake of this kind on I could not have missed seeing it. It was the same with the passenger and baggage cars. I never saw in my repairing, or assisting to repair them, anything other than the single-action brake, and many of them only had a brake on one end, that is speaking of the crate and baggage cars—freight-cars.

Cross-q. 11. Do you wish to be understood that you know nothing of the kind of brakes in use on the Camden and Amboy and New Jersey Railroads before you entered the employ of the last-named road in July, 1850?

A. I know of nothing that was there previous to that on the Camden and Amboy. I do know before I went there of what was in use 781 on the New Jersey road before I went there, because I helped on some of the trucks of that road before I went there.

Cross-q. 12. Do you know it any farther than that you saw it on those trucks; if so, to what extent?

A. I know that there was no double-action brake attached to the cars which we built for the New Jersey Railroad, built by M'r Cummings at that time.

And being re-examined by M'r Cozzens, counsel for complainant, he deposes and says:

1 Redirect q. What portion of the time you were in the employ of the New Jersey Railroad between July 10, 1850, and the time when M'r Baker applied the double-action brake, do you refer to in the last portion of your answer to the 10th cross-question?

A. I mean all the time up to the time M'r Baker put the double action brake on.

2 Redirect q. You were asked in the 12th cross question if you knew the matter there inquired about, "any farther than that you saw it on those trucks"; will you please answer that question a little more directly and as fully as you may be able to?

A. I knew it by what I saw and by what M'r Cummings built at that time.

GEORGE BROWN.

Subscribed and sworn to before me this 24th day of February, 1868

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to 2 p. m. same day.

JOSEPH GUTMAN, J'R,
Examiner, &c.

FEBRUARY 24, 1868—2 p. m.

782 Present, S. D. Cozzens, esquire, of counsel for complainant, and the complainant in person, and S. M. Whipple, esquire, of counsel for defendant.

DAVID H. BAKER, a witness called on the part of the complainant, having been duly cautioned and sworn, deposes and says as follows:

Q. 1. What is your name, age, residence, and occupation?

A. My name is David H. Baker; I am fifty-six years of age; I reside in Jersey City, in the State of New Jersey; I am a master car-builder, in the employ of the New Jersey Railroad.

Q. 2. Please state how long you have been in the employ of the said company as master car-builder.

A. Since September, 1849.

Q. 3. Please state who was your immediate predecessor on said road as master car-builder.

A. Joseph F. Talson.

Q. 4. What time did Talson leave the employ of said road?

A. In September, 1849, when I came.

Q. 5. Has Talson been in the employ of said company since that time?

A. Not to my knowledge.

Q. 6. What are your duties as master car-builder of said company?

A. To superintend the building and repairing of all the cars.

Q. 7. Have these been your duties ever since you went into the employ of said company in September, 1849?

A. They have.

Q. 8. Please state what kind of brakes were in use on the cars of the said New Jersey Railroad Company when you first went into their employment in September, 1849.

A. What were termed the single-acting brake, which acted on one truck independent of the other.

783 Q. 9. At that time, September, 1849, when you went into their employment, were there any cars or was there any car of said railroad company which had a double-acting brake, acting upon both trucks at the same time from one windlass?

A. I never saw any.

Q. 10. Could there have been any without your seeing them?

A. I do not think there could.

Q. 11. How positive do you feel of this?

A. I am as positive as I could be of anything; if it was on, the car could not have been on the road.

Q. 12. Could it have been on any car which was on the road without your seeing it?

A. Not at that time.

Q. 13. Are you able to state how many cars the New Jersey Railroad Company owned in September, 1849—passenger, crate, and baggage cars?

A. As near as I can recollect, there were thirty-five passenger-cars, four box-cars, and sixteen or eighteen platform-cars; these sixteen or eighteen platform-cars include all the crate-cars there were, the crate-cars being platform-cars; I had the passenger-cars numbered after I got there, and they numbered up to thirty-five; this includes all the freight-cars and all the cars of any kind on the road; we were not a freight-road at that time.

Q. 14. How many of these freight-cars, if any, ran in the passenger trains at that time?

A. There were not more than four.

Q. 15. Did any of these four have a double-acting brake at that time?

A. They did not.

Q. 16. State, if you know, when double-acting brakes, acting upon both trucks of the cars at the same time from one windlass, were first put in use upon the cars of the said New Jersey Railroad Company, and by whom they were so first applied.

A. They were first put in use in September, 1851, by me.

Q. 17. State what form of such double-acting brake it was that you so applied at that time.

784 A. It was what is called the Tanner brake, I believe—a cross-centre lever under the centre of the car, a rod from each truck to that lever, a rod and chain from each end of that lever to the brake-shafts.

Q. 18. Was there more than one centre lever under the car?

A. There was not.

Q. 19. Why did you introduce this double-action brake upon that road at that time? Please state fully.

A. On account of their applying a double-acting brake on the Camden and Amboy road at that time there was considerable of an agitation with regard to brakes, and I wanted to keep up with the rest; when I saw this brake I found that it was different from the Camden and Amboy brake, and I did not know at the time I commenced putting it on that there was a patent on it at that time, and I considered it less complicated than the other, so I applied it.

Q. 20. You mean by "this brake" the onercentre-lever brake which you applied on the Jersey road?

A. Yes, sir.

Q. 21. Will you describe the construction of the double-acting brake which you say was put at that time on the Camden and Amboy road?

A. It was a brake that was known as the Hodge brake; it had a rod under the centre of the car, with a cross-lever at each end of the rod, hung by two straps or stirrups under the centre of the car; rods attached from these levers to the trucks of the cars, and from these levers to the brake standards at the ends.

Q. 22. Before putting the Tanner form of double-acting brake on the New Jersey Railroad cars, had you seen brakes like it anywhere; and, if so, where?

A. I saw one on the New York and Erie road at Piermont; I also saw one, I think, on the Rensselaer and Saratoga or Schenectady and Saratoga road, but I did not examine it at that time; I examined it closely
when I saw it on the New York and Erie road. The first time I
785 ever saw such a brake was when I saw it on the Rensselaer and
Saratoga or Schenectady and Saratoga road.

Q. 23. In September, 1849, was the said Tanner form of double brake with one centre lever under the car, in use upon any of the cars of the Camden and Amboy Railroad?

A. I never saw any.

Q. 24. At that time did any cars of the Camden and Amboy road come into Jersey City; and, if so, in what trains and how frequently?

A. They came in there two or three times a day on the Philadelphia trains. Every other train was the Camden and Amboy cars.

Q. 25. Where was the car-shop of which you had charge at that time, and where has it been since you have had charge of the car-shop of the New Jersey Railroad Company?

A. In Jersey City, and has been there ever since. They also had a car-shop at East Newark for a me, but they always had a shop at Jersey City.

Q. 26. About when was it that you saw the Tanner form of double brake on the Rensselaer and Saratoga or Schenectady and Saratoga road, and when was it that you saw it on the New York and Erie road?

A. I saw it on the Saratoga road, as near as I can recollect, some time in 1848 or 1849, and on the New York and Erie road in 1850 or 1851.

Q. 27. What kind of brake was on these Camden and Amboy cars which you say above came into Jersey City two or three times a day when you first went into the employ of the New Jersey Railroad Company?

A. The only brake that I ever saw on them was a single-acting brake.

Q. 28. What opportunities did you have at that time of knowing what kind of brakes was on these Camden and Amboy cars?

A. I repaired them when they required it; that is, if they broke down
at our end of the road, we had to repair them and fix them up so
786 that they could go home. If the brakes got out of order, a bolt
broke, or anything of that kind, we repaired them; all incidental
repairing; we had to look over the cars every time they came in.

Q. 29. About how often, as near as you can state, did they require such repairs as these?

A. Sometimes it might not be once a week; sometimes it would be every day; I could not tell exactly.

Q. 30. About how many of these Camden and Amboy cars came into Jersey City daily between September, 1849, and the time when you applied the Tanner brake, in September, 1851?

A. I should judge there was from six to a dozen every day; these were passenger cars and platform crate cars; two full trains.

Q. 31. Did you repair, in the manner you have stated, all these cars, as they required it, during this period?

A. I did whenever they were so that they could not be sent home without being repaired. Once in a while we sent to them to come over and do repairs—wheels and such things.

Q. 32. Could any of these Camden and Amboy cars have had the Tanner form of double action brakes on them for any length of time during the period between September, 1849, and September, 1861, without your knowing it?

A. I should think not; not any of those that came into Jersey City.

Q. 33. You say you applied the Tanner brake on account of the Camden and Amboy road applying the Hodge brake. About how long before you applied the Tanner brake was the Hodge brake applied on the Camden and Amboy road?

A. I can't exactly say. I should judge it was some time in 1850 or 1851.

Q. 34. You say there was considerable of an agitation with regard to brakes at the time you applied the Tanner brake. What was the agitation? Please state fully.

A. There were several brakes then brought into notice, and we
787 tried to keep up with the times. I had no orders about it at the
time, and I applied this brake on my own responsibility.

Q. 35. About how rapidly did you get the Tanner brake into use on the cars of the New Jersey Railroad after first applying it?

A. I should think it took near two years before we got it on all the cars. As fast as we overhauled the cars we put on these other brakes.

Q. 36. After you first saw the Hodge brake on the Camden and Amboy cars, how fast did said brake go into use on said cars?

A. I cannot exactly say; I saw it on several cars. I cannot say how many. I saw the brake before it was applied on the Camden and Amboy cars.

Q. 37. Did you ever see the Tanner form of double brake on the Camden and Amboy cars; and, if so, about when first?

A. I cannot tell exactly when I first saw it. As near as I can remember, I saw it first in 1852, when they put on the brake that operated from the engine.

Q. 38. State, if you know, the name of this brake which operated from the engine.

A. I do not know the name; I have heard it called the McLaughlin brake.

Q. 39. Do you mean that the McLaughlin brake was put on in 1852, or that it was when the McLaughlin brake was put on that you first saw the Tanner form of double-acting brake on the Camden and Amboy cars?

A. I can't recollect the exact date; but the first I recollect of the Tanner brake is, when that McLaughlin brake was put on the Camden and Amboy cars.

Q. 40. Do you remember whether the McLaughlin brake was put on a good many of the Camden and Amboy cars?

A. It was on one train. How many more it was on I do not know.

Q. 41. About how many cars with it on were there in that train?

A. From four to six.

788 Q. 43. Did these cars come into Jersey City; if so, for about how long a time; and how frequently during such time?

A. They did come in there; for how long a time I cannot say; but during the time they did come in, they came in every day, I should think, for a year.

Q. 44. Do you know Henry Tanner, of Buffalo, the patentee of the Tanner patent?

A. I think I have seen him. I do not know whether I should know him now or not if I should see him.

Q. 45. Did he ever come to you at the New Jersey Railroad for the purpose of getting you to introduce upon that road any double-action brake?

A. If I recollect the man right, he came twice, with two different brakes.

Q. 46. About what year was the first time, and what brake was it, or by what name was the brake known, that he wished you to introduce at that time?

A. The first time he came was in 1849. I forget the name of the brake, but it was a brake to operate from the bumpers of the cars.

Q. 47. Was it the Turner brake?

A. I believe that is the name.

Q. 48. Did that Turner brake have a centre lever in it?

A. The thing was so complicated that I can't describe it at this time. There were plenty of levers in it.

Q. 49. What passed between you and him at that time with reference to the introduction of that brake on said railroad?

A. I cannot say what passed. The model of the brake was given to me by the vice-president of the road, he requiring my opinion in regard to the feasibility of using the brake on the road; I pointed out so many objections that he could not answer satisfactorily to the board, that the board refused to have anything to do with it. I gave my objections in writing to the board.

Q. 50. That brake did not go into use on that road, did it?

A. No, sir.

789 Q. 51. About what year was the second time that said Tanner came to you, and what brake did he wish you to introduce at that time?

A. He came to me about the time I was busy in putting the double-acting brake on two cars in the shop in 1851. He claimed that brake that I was putting on.

Q. 52. Did he have with him at that time any model of that brake?

A. I do not think he did.

Q. 53. What conversation or conversations did you have with him at that time in reference to that brake, or the introduction of it on the New Jersey Railroad?

A. I cannot recollect altogether. He wanted that I should put it on a full train of cars, and if it did not work to satisfy us, he would pay for the brake, and pay for putting it on and taking it off. I had the brake partly made when he came there, and had commenced putting it on the cars of the company. I explained the brake that I was putting on, and he claimed it and said it was his brake, and that he had abandoned the other brake.

Q. 54. Was there any more conversation between you, or did he then go away?

A. He might have gone away at that time. There must have been some more conversation, but I cannot recollect altogether what it was; I saw him several times afterwards, and he always talked on that subject when he came there.

And being cross-examined by M'r Whipple, of counsel for defendant, he deposes and says as follows.

Cross-q. 1. Do you know what brakes were in use on the crate, baggage, and passenger cars of the Camden and Amboy Railroad for the six years prior to your entering the employ of the New Jersey Railroad Company in 1849?

A. I do not.

D. H. BAKER.

Subscribed and sworn to before me this 24th day of February, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

790 Further examination adjourned to February 25, 1868, at 11 a. m.

NEW YORK, *February 25th*, 1868—11 a. m.

Present, S. D. Cozzens, esquire, of counsel for complainant, and the complainant in person; and S. M. Whipple, esquire, of counsel for defendant.

SILAS H. BROWN, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows

Q. 1. What is your name, age, residence and occupation?

A. My name is Silas H. Brown. I am thirty-seven years of age. I reside in Jersey City, in the State of New Jersey. I am a blacksmith.

Q. 2. Where are you at present employed?

A. I am not doing anything at present.

Q. 3. Where was your last employment in blacksmithing, and how long did it continue?

A. At the establishment of William Cummings & Son, in Jersey City. They are car-builders. I commenced there in November, 1848, and continued there until the last of June of the year 1867.

Q. 4. Within a few years after November, 1848, when you went into M'r Cummings' employment, did said Cummings build any passenger cars for the Camden and Amboy Railroad, or for the New Jersey Railroad? and, if so, state when and how many cars.

A. We built some cars for the New Jersey Railroad Company, and for the Camden and Amboy Railroad—for both of the roads—between 1849 and 1852, or 1853. I think there were four or five built for the
Camden and Amboy road. I don't recollect the number we built
791 for the New Jersey Railroad. I think it was four, but would not
be positive.

Q. 5. During the time inquired about, did M'r Cummings build any passenger cars for any other railroads in New Jersey; and, if so, what ones and how many cars?

A. We built some cars for the Belvidere and Delaware road; there were cars built there, also, about the same time, for the Mount Holly road; I don't recollect how many; these cars were built much about the same time, 1849 or 1850. I think there were four or five cars built for the Belvidere and Delaware road.

Q. 6. Do you know what kind of brakes were put by M'r Cummings upon these cars? If so, what kind?

A. I do. They were single brakes, to brake from one end of the car.

Q. 7. Did you do any part of the work on any of these single brakes for these cars? If so, what part?

A. I did. I took part in all the work—levers, brake-rods, trucks, and everything that belonged to such work; that is, I mean the Camden and Amboy cars.

Q. 8. You say you mean the Camden and Amboy cars. Did you do any part of the work on the single brakes for the cars built by M'r Cummings during the time inquired of for the other roads you have mentioned—the New Jersey Railroad, the Belvidere and Delaware road, and the Mount Holly road?

A. Yes; I did.

Q. 9. What parts did you do?

A. I worked pretty much at all the work that belongs to the truck—all the brake work that is used on the truck.

Q. 10. Between 1848 and 1853, and after that time, was M'r Cummings quite largely engaged in car-building?

A. Yes; he was.

And being cross-examined by M'r Whipple, of counsel for defendant, the witness deposes and says:

Cross q. 1. By whom was your attention first called to the matter of brakes of which you have testified?

A. By M'r Sayles.

792 Cross-q. 2. What did M'r Sayles say that he wanted to prove
by you; or, in other words, what did he say to you when he called
upon you?

A. He wanted to see some of M'r Cummings' old hands, some who had worked there from along 1849 or 1850, or about that time, to 1853, and whether I recollected anything about some cars that we built for the Camden and Amboy Company. I told him that I did, and about what time they were built. I told him I thought they were built between 1849 and 1853. He wanted to know if I recollected what kind of brakes were used on those cars—whether they were a single brake or a double-acting brake. I told him that I thought they were a single brake, braked only from one end of the car. I told him that I was positive about that, that they were single brakes, because I never saw any other kind of brake but the single brake on any cars that we built in the shop up to that time.

Cross-q. 3. Do you know what brakes were in use on other cars of the Camden and Amboy road from the year 1848 to the year 1853?

A. No, sir; I do not.

Cross-q. 4. Do you know what brakes are in use on the cars of that road at the present time?

A. I do not.

SILAS H. BROWN.

Subscribed and sworn to before me this 25th day of February, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

David T. Jefferies, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

Q. 1. What is your name, age, residence, and occupation?

793 A. David T. Jefferies. I am thirty-nine years of age. I reside at New Brunswick, State of New Jersey. I am a conductor on the Camden and Amboy road.

Q. 2. Have you any other business than conductor? If so, what?

A. I have. I am recorder of the city of New Brunswick.

Q. 3. How long have you been conductor on the Camden and Amboy Railroad?

A. I have been a regular conductor since 1854 to the present time, with the exception of 1857 and 1858. I ran as extra conductor from about 1851 to 1854, and was employed on the road otherwise from about 1846 to 1850. I first commenced work on the road in about 1845 or 1846. I was first employed working for them at Camden, Amboy, Hoboken, Bordentown, Tacony, and Philadelphia, as painter at all these places, having charge of the men at work on the company's work for my father.

Q. 4. Do you remember excursion trains being run at any time on the Camden and Amboy Railroad? If so, when was it?

A. I do; it was about the year 1845 and 1846, or 1846 and 1847.

Q. 5. Did you ever ride upon those excursion trains; and, if so, how came you to ride upon them, and how often did you do so?

A. I did. I rode on them to assist M'r Forbes, the conductor of those trains, in the discharge of his duties. I rode on them quite a number of times. I can't say how often.

Q. 6. State, as nearly as you can, about how often, on an average, you rode upon these excursion trains during the two years you speak of, 1845 and 1846, or 1846 and 1847.

A. I used to ride on them twice a week during the season they were running them.

Q. 7. How long did the season they were running them last?

A. Two and a half to three months.

794 Q. 8. Do you remember a car on the Camden and Amboy Railroad known as the "Tyler car," or the "John Tyler"?

A. I do.

Q. 9. As nearly as you can state, when did you first know of that car?

A. We used to run it on the excursion trains during the years mentioned.

Q. 10. How much of the time, as nearly as you can recollect, was it run on these excursion trains during the years mentioned?

A. To the best of my recollection, that car was on the trains during the largest portion of the time.

Q. 11. Are you able to state what kind of brakes the Tyler car had while it was so run in these excursion trains, as you have said; and, if so, what kind.

A. It had on a single-action brake, that acted on each truck.

Q. 12. Could that brake act on both trucks of the car at the same time from one windlass?

A. No, sir.

Q. 13. Did you frequently notice this Tyler car while it was running in these excursion trains; and, if yea, what led you to do so?

A. I did. I was led to do so from the car's being a much easier riding car than any other on the road, in my judgment, at that time. I, being something of a mechanical turn of mind, used to examine the running-gear of all the cars I came in contact with.

Q. 14. Did you use to examine the running gear of this Tyler car; and, if yea, about how often did you do so?

A. I used to look at it almost every time I came where it was.

Q. 15. What led you to look at it so often?

A. It being an easy riding car, and all the railroad men, when they met together, would talk about it, and we would get together and look at the gear, the springs, and the construction of the car, that we might observe what new improvements were being made.

795 Q. 16. What were the subjects connected with it that the men talked about at these times?

A. The springs and the running gears, the way it was set on the trucks, and such like matters.

Q. 17. What were some of the peculiarities of the Tyler car, if you remember?

A. I don't know that I can say anything special as to any peculiarities about it, only what I have stated.

Q. 18. Do you remember about its having a water-closet on the platform?

A. I do, sir.

Q. 19. At the times mentioned was there any difference between the brakes on this Tyler car and the other brakes then in general use on the cars of the Camden and Amboy Railroad?

A. Not at that time.

Q. 20. Are you able to say about how long that Tyler car continued to run, either in excursion trains or any other trains, with single brakes, acting on only one truck at a time?

A. It used to run on the way-lines to Tacony, up to the fall of 1849, with a single brake; then I lost sight of the road for about a year, and when my attention was next called to it, which must have been about 1851 or 1852, it had on the double-lever brake, with a lever on each truck, connected together with rods, which made the brake-wheel on one end operate the brake on both trucks.

Q. 21. What called your attention to it in 1851 or 1852?

A. Riding on the car one morning from Trenton to Tacony, I went on the platform to apply the brakes at the sound of the whistle, and when

I came to wind up the wheel with the handle I found that the most of the pressure was taken off, and spoke about it on our arrival at Tacony, and was informed that the brakeman had applied it at the other end, and I asked the reason of it, and was told that a double brake was on the car. The engineer and the brakeman and superintendent at the depot and myself got down and examined it, and I was shown brakes as described, with two levers, one over each truck. They 796 were cross-levers, hung from the bottom of the car, crosswise of the car.

Q. 22. Do you know the patent name or patentee's name by which this brake, just described, goes?

A. I do not, sir.

Q. 23. Do you know whether the name it goes by is the "Hodge brake"?

A. I did not know it then by that name, but it is about the same as the running gear shown here in this office, which is called the Hodge brake.

Q. 24. At the time you applied the brake on the Tyler car, as you have just stated, in 1851 or in 1852, were you conductor?

A. I was not, sir.

Q. 25. What led you to go out on the platform to put on the brake at that time?

A. I used to ride down by the way-line from Trenton, where I resided, three or four mornings a week, with colors and material for the men to work with at Tacony, and being around the trains so much tried to help them make quick stops by applying the brake of the car in which I rode.

Q. 26. Was this helping on the trains your usual habit at the times referred to, or was it only on the morning you have mentioned?

A. It was my usual custom at that time, when I was at work for the road, to do such things.

Q. 27. You say the Tyler car used to run on the way-line to Tacony up to the fall of 1849, with a single brake. How frequently did you notice it and the brake it had while it was so running on these way-lines?

A. I can't say how frequently—very frequently—say once or twice a week, when I happened to be on it, or when I came where the car was.

Q. 28. Was it running in the Trenton and Tacony way-line on the morning when you applied the brake on it, as you have stated?

A. It was.

797 Q. 29. Was that the first you had ever known of its having a double brake upon it?

A. It was.

Q. 30. You say you ran as extra conductor from about 1851 to 1854. About what time in 1851, as nearly as you can remember, did you first commence as such extra conductor?

A. I could not tell. I followed my business, only occasionally running as extra conductor.

Q. 31. About how long was it after you commenced running as extra conductor that you first saw this double-action brake, with a cross-lever on each truck, on the Tyler car?

A. It was somewhere in the fall of 1851, while I was at work in my business, that I first saw the double brake on that car—I mean while I was painting.

Q. 32. Were you originally a painter by trade?

A. I was.

Q. 33. At about the time you first saw this double-action brake on the

A. I do.

Q. 9. As nearly as you can state, when did you first know of that car?

A. We used to run it on the excursion trains during the years mentioned.

Q. 10. How much of the time, as nearly as you can recollect, was it run on these excursion trains during the years mentioned?

A. To the best of my recollection, that car was on the trains during the largest portion of the time.

Q. 11. Are you able to state what kind of brakes the Tyler car had while it was so run in these excursion trains, as you have said; and, if so, what kind.

A. It had on a single action brake, that acted on each truck.

Q. 12. Could that brake act on both trucks of the car at the same time from one windlass?

A. No, sir.

Q. 13. Did you frequently notice this Tyler car while it was running in these excursion trains; and, if yea, what led you to do so?

A. I did. I was led to do so from the car's being a much easier riding car than any other on the road, in my judgment, at that time. I, being something of a mechanical turn of mind, used to examine the running-gear of all the cars I came in contact with.

Q. 14. Did you use to examine the running gear of this Tyler car; and, if yea, about how often did you do so?

A. I used to look at it almost every time I came where it was.

Q. 15. What led you to look at it so often?

A. It being an easy riding car, and all the railroad men, when they met together, would talk about it, and we would get together and look at the gear, the springs, and the construction of the car, that we might observe what new improvements were being made.

795 Q. 16. What were the subjects connected with it that the men talked about at these times?

A. The springs and the running gears, the way it was set on the trucks, and such like matters.

Q. 17. What were some of the peculiarities of the Tyler car, if you remember?

A. I don't know that I can say anything special as to any peculiarities about it, only what I have stated.

Q. 18. Do you remember about its having a water-closet on the platform?

A. I do, sir.

Q. 19. At the times mentioned was there any difference between the brakes on this Tyler car and the other brakes then in general use on the cars of the Camden and Amboy Railroad?

A. Not at that time.

Q. 20. Are you able to say about how long that Tyler car continued to run, either in excursion trains or any other trains, with single brakes, acting on only one truck at a time?

A. It used to run on the way-lines to Tacony, up to the fall of 1849, with a single brake; then I lost sight of the road for about a year, and when my attention was next called to it, which must have been about 1851 or 1852, it had on the double-lever brake, with a lever on each truck, connected together with rods, which made the brake-wheel on one end operate the brake on both trucks.

Q. 21. What called your attention to it in 1851 or 1852?

A. Riding on the car one morning from Trenton to Tacony, I went on the platform to apply the brakes at the sound of the whistle, and when

I came to wind up the wheel with the handle I found that the most of the pressure was taken off, and spoke about it on our arrival at Tacony, and was informed that the brakeman had applied it at the other end, and I asked the reason of it, and was told that a double brake was on the car. The engineer and the brakeman and superintendent at the depot and myself got down and examined it, and I was shown brakes as described, with two levers, one over each truck. They 796 were cross-levers, hung from the bottom of the car, crosswise of the car.

Q. 22. Do you know the patent name or patentee's name by which this brake, just described, goes?

A. I do not, sir.

Q. 23. Do you know whether the name it goes by is the "Hodge brake"?

A. I did not know it then by that name, but it is about the same as the running gear shown here in this office, which is called the Hodge brake.

Q. 24. At the time you applied the brake on the Tyler car, as you have just stated, in 1851 or in 1852, were you conductor?

A. I was not, sir.

Q. 25. What led you to go out on the platform to put on the brake at that time?

A. I used to ride down by the way-line from Trenton, where I resided, three or four mornings a week, with colors and material for the men to work with at Tacony, and being around the trains so much tried to help them make quick stops by applying the brake of the car in which I rode.

Q. 26. Was this helping on the trains your usual habit at the times referred to, or was it only on the morning you have mentioned?

A. It was my usual custom at that time, when I was at work for the road, to do such things.

Q. 27. You say the Tyler car used to run on the way-line to Tacony up to the fall of 1849, with a single brake. How frequently did you notice it and the brake it had while it was so running on these way-lines?

A. I can't say how frequently—very frequently—say once or twice a week, when I happened to be on it, or when I came where the car was.

Q. 28. Was it running in the Trenton and Tacony way-line on the morning when you applied the brake on it, as you have stated?

A. It was.

797 Q. 29. Was that the first you had ever known of its having a double brake upon it?

A. It was.

Q. 30. You say you ran as extra conductor from about 1851 to 1854. About what time in 1851, as nearly as you can remember, did you first commence as such extra conductor?

A. I could not tell. I followed my business, only occasionally running as extra conductor.

Q. 31. About how long was it after you commenced running as extra conductor that you first saw this double-action brake, with a cross-lever on each truck, on the Tyler car?

A. It was somewhere in the fall of 1851, while I was at work in my business, that I first saw the double brake on that car—I mean while I was painting.

Q. 32. Were you originally a painter by trade?

A. I was.

Q. 33. At about the time you first saw this double-action brake on the

Tyler car in 1851, was there any talk about it on the Camden and Amboy road, which you heard? If so, what?

A. There was. The engineers used to talk about its being much better than the single-acting brake, enabling them to stop quicker.

Q. 34. For how long a time, if you know, did the Tyler car continue to run with this two lever double-action brake on it?

A. I am unable to say.

Q. 35. Do you know whether it so ran for some time?

A. I think it ran for two or three years.

Q. 36. During any part of the time while you knew of the Tyler car, did it run into Jersey City in any trains?

A. It used to run through to Jersey City as an extra car on my train in 1854.

Q. 37. What kind of brake did it have on at this time?

A. It had on a double brake that operated on both trucks.

798 Q. 38. Can you describe in a general way the construction of this brake?

A. There were two cross-levers; it was an exact fac-simile of the Hodge brake shown me at this office last week when I was here; it was a drawing from the Patent-Office that was shown me.

Q. 39. What, if any, difference was there between this Hodge brake with the cross-levers which you saw on the Tyler car in 1854 and the brake with the two cross-levers which you saw on said car in the fall of 1851?

A. I did not observe any difference; they were about the same.

Q. 40. Did you ever see that Tyler car with a double brake of any other construction on it; and, if so, when and what was the construction of such other double brake?

A. I cannot say that I noticed the Tyler car with any other construction of brake on it more than other cars which ran on the road about that time, 1853 and 1854—the time the single lever brake was applied. This single lever brake was placed in the centre of the car, and operated upon both trucks, the same as the double lever.

Q. 41. Was that single lever double-action brake which was so applied in 1853 or 1854 the same as the brake which is now in general use on the Camden and Amboy and New Jersey Railroads?

A. It was.

Q. 42. Did the Tyler car have this single lever double-action brake on it in 1853 or 1854?

A. I think that it did.

Q. 43. At this time, 1853 or 1854, were there a considerable number of cars of the Camden and Amboy road with these single lever double-action brakes?

A. There was quite a number of the Camden and Amboy and New Jersey Railroad cars that ran on our passenger trains that had the single lever double-action brake on.

Q. 44. On these Camden and Amboy cars which had the single centre lever double-action brake on them in 1853 or 1854, by what means was the power applied to brake-up on the trucks?

799 A. By a wheel fixed on the platform, and attaching to the rods with chains.

Q. 45. Was there, in 1853 or 1854, or at any time after those years, any of these Camden and Amboy cars having single lever double-action brakes, in which the brakes were worked in any other way?

A. There was placed on six or eight cars of the Camden and Amboy Railroad a double brake, which, I heard at that time, Mess'rs Van Rensselaer and Stevens had bought of some man—the McLaughlin brake—and applied it to said cars; these cars were run for a few trips on the Amboy road, and then were placed over on the line which ran from Camden to Jersey City; whether they ran them on the Camden and Amboy road, also, I cannot say; this brake was applied by means of two levers projecting out from each side of the platform at both ends of the car, and two levers attached to the engine tender, so that when the engine shut off and came back against the cars it applied the brakes. This brake was used about a year or a year and a half on the road, and was found to be impracticable on account of the brakes sticking when applied, so that sometimes it caused considerable delay to the trains in unloosing the brakes. These brakes were all taken off, and the single lever double-acting brake was applied in their place.

Q. 46. Did these levers which projected out from the platform act as bumpers?

A. They did.

Q. 47. Were there any of these single lever double-action brakes used on the Camden and Amboy cars before this McLaughlin brake was applied to said cars?

A. There was.

Q. 48. Please state about how long before, and when?

A. I think about a year or a year and a half before, along there somewhere; between 1852 and 1853.

Q. 49. Upon how many cars?

A. I am unable to say.

800 Q. 50. What is your best recollection of the year when this McLaughlin brake was first applied on the Camden and Amboy cars?

A. Somewhere about 1854; the first I saw of it was in the fall of 1854, soon after the Burlington accident.

Q. 51. During the interval between the time when you first saw the two cross lever double-action brake, which you have called the Hodge brake, on the Tyler car, and the time when you first saw the McLaughlin brake on the Camden and Amboy cars, about how many of the cars of said Camden and Amboy Company were running with said two cross-lever brake on them?

A. I am unable to say.

Q. 52. Do you know what railroad company operated the Burlington and Mount Holly Railroad and the Delaware and Belvidere Railroad in 1848 and 1849, and subsequently; and if so, what company, and how long has it operated said road?

A. The Burlington and Mount Holly Agricultural Railroad Company, composed principally of the directors of the Camden and Amboy Railroad Company, was operated under the direction and management of a superintendent appointed by the said Camden and Amboy Railroad Company; it was so operated from the commencement of the running of the cars on the road to the present time. The same answer will apply to the Delaware and Belvidere road, with the exception that the directors were different; it was also managed under a superintendent appointed by the said Camden and Amboy Railroad Company; it was so operated from the time of the commencement of the running of the road to the present time.

Q. 53. Do you know what company owned the cars which were used on the said Burlington and Mount Holly road, and said Delaware and Belvidere road, in 1848, 1849, and subsequently?

A. These roads were branches of the Camden and Amboy road, and

the rolling-stock and equipments of both roads were charged to the
road. The superintendents of these roads would order rolling-
801 stock and equipments as needed, and when the receipts of those
roads were not sufficient to pay for them, the means would be
furnished by the Camden and Amboy road.

Q. 54. You have said in your answer to the 33d question that the engineers used to talk about the two cross lever double-action brake which was on the Tyler car in 1851 being much better than the single-acting brake. Was the subject of this brake talked of at that time among any others on that road; and, if so, what was the talk?

A. It was. The talk was on the subject of the double-acting brake on the Tyler car and on some New Jersey Railroad cars. It was commented on by the employees of the road generally, more particularly by the engineers, who decided in favor of the double-acting brake on account of its superiority over the single-acting brake.

And being cross-examined by M'r Whipple, of counsel for defendant, the witness deposes and says as follows:

Cross-q. 1. You say you are conductor on the Camden and Amboy road. Conductor on what kind of a train; by whom employed and paid?

A. I am conductor on the Adams Express freight train from New York to Philadelphia, and the 12 o'clock midnight passenger train from Philadelphia to New York. I am employed and paid by the Camden and Amboy Railroad Company.

Cross-q. 2. On what trains did you run as extra conductor from 1851 to 1854?

A. I ran on the way-lines from Trenton to Tacony, on the way-lines from Kensington to New Brunswick, and on the way-line from Trenton to New Brunswick.

Cross-q. 3. Do you know of your own knowledge that excursion trains alluded to in your answer to the 4th direct interrogatory were run in the years 1846 and 1847?

A. To the best of my recollection, they did about that time.

Cross-q. 4. Do you know they did or did not?

802 A. I know that they did run at about that time, from 1845 to
1847.

Cross-q. 5. What do you mean by the word "about"?

A. Somewhere in these years; in the summers of these years, as I recollect.

Cross-q. 6. What other man, if any, was conductor on those excursion trains besides Mr. Forbes?

A. Andrew Forbes, his brother, Andrew Heath, and Edward Muschamp. Andrew Heath and Andrew Forbes are now living.

Cross-q. 7. Who were engineers and who brakemen on those trains?

A. I am unable to say at present. The only one I recollect is Charles Yundt.

Cross-q. 8. Do you know positively that you rode on said excursion trains in 1846 and 1847?

A. To the best of my recollection I did. If I recollect, those excursion trains only ran two years, and it was either 1845 and 1846, or 1846 and 1847, I can't tell which.

Cross-q. 9. Do you know that the Tyler car ran in said excursion trains in 1846?

A. I do.

Cross-q. 10. How old was you in 1846?

A. Seventeen years old.

Cross-q. 11. Were there a pawl and ratchet on the brake-staffs of the Tyler car?

A. I would not swear positively to there being such at that time; they were placed there soon afterwards.

Cross-q. 12. How soon after?

A. I do not know that I can bring to my mind the time exactly.

Cross-q. 13. Was there in five years from that time?

A. Yes, there was in four.

Cross. q. 14. In answer to the 13th direct interrogatory you say that you being somewhat of a mechanical turn of mind you used to examine the running-gear of all the cars you came in contact with; please describe the running-gear of the Tyler car; state the kind of trucks 803 it had, the way they were connected with the body of the car, and describe the springs used on the trucks of said car.

A. It has now been so long since I have first examined the Tyler car that I do not know that I can describe it minutely. It was a four-wheel truck, with a centre-bearing on and between the wheels, upon which rested a spring, enclosed in iron, of a spiral shape, one end attached to the truck and the other bearing on this iron centre-bearing; the body rested on a bed of spiral springs and connected in the usual way with the centre-bolt, pinned fast to the centre-bearing of the truck. This, to my recollection, composed the running-gear of the Tyler car.

Cross-q. 15. What you say of the brakes on the Tyler car at this time, is it from you recollection merely?

A. From my own recollection.

Cross-q. 16. Do you know Edwin Lockwood, superintendent of the car department of the Camden and Amboy Railroad?

A. Yes, sir, very well.

Cross-q. 17. Do you know William Coulter, conductor on the New Jersey Railroad?

A. I do, sir.

Cross-q. 18. Do you know Benjamin L. Wolcott, at present conductor or ticket collector on the Camden and Amboy Railroad?

A. I do.

Cross-q. 19. Do you think Edwin Lockwood and Benjamin L. Wolcott would be as likely to know what brakes were in use on the Tyler car when run in said excursion trains as you would?

A. M'r Lockwood would be likely to know as well as I what brakes were on the cars; as to M'r Wolcott, I can't say.

Cross-q. 20. Would Charles Yundt, the engineer on said excursion train, be as likely to know what brake was on the Tyler car as you would?

A. Possibly he might.

Cross-q. 21. Speaking of the double-lever brake, which you say 804 was on the Tyler car in 1851 or 1852, you say you went upon the platform of this car, and that when you came to wind up the brake you found that most of the pressure was taken off; do you mean off from the wheels of the car?

A. Off from the brake-wheel, which I had hold of.

Cross-q. 22. Is there any doubt in your mind as to whether this circumstance of taking off the power from the brake-wheel staff took place when you applied the brake?

A. There is none at all, sir.

Cross-q. 23. Was this taking off consequent upon the application of the brake at the other end of the car at the time you were operating at the other end?

A. I take it so.

Cross-q. 24. Assume that ten credible witnesses have testified under oath that a double-acting centre-lever brake was in use on the Tyler car for more than five years prior to 1850, and that these witnesses are or have been employés of the Camden and Amboy road, will you stand up in this court and say that no such brake was in use on said Tyler car during that time?

A. I say, to the best of my knowledge, there was not.

And being re-examined by Mr. Cozzens, of counsel for complainant, he deposes and says:

1. Redirect q. Do you feel positive that there was not?

A. I do, sir.

2. Redirect q. Have you had your attention called to the subject of the trucks of the Tyler car, whether they were four-wheel trucks or six-wheel trucks, so that you mean to be understood that you can now recollect whether they were four-wheeled or six-wheeled?

(Objected to by M'r Whipple as being instructive to the witness.)

805 A. I have not had my attention called to it from that time to the present, and upon M'r Whipple's asking the question it occurred to me that we were using at that time four-wheel trucks, but I would not say positively.

D. T. JEFFERIES.

Subscribed and sworn to before me, this 25th day of February, 1868.

JOSEPH GUTMAN, JR.,
Examiner, &c.

Examination further adjourned to February 26, 1868, at 11 a. m.

NEW YORK, *February* 26, 1868—11 a. m.

Present, S. D. Cozzens, esquire, of counsel for complainant, and the complainant in person; and S. M. Whipple, esquire, of counsel for defendant.

ERASTUS REID, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

Q. 1. What is your name, age, residence, and occupation?

A. My name is Erastus Reid; I am fifty-nine years of age; I reside at Newark, New Jersey; my occupation at present is pattern-making.

Q. 2. Were you ever in the employment of the New Jersey Railroad and Transportation Company; and, if so, at what time did you go into their employment, and how long did you continue in it, and in what capacity were you employed by that company?

A. I was. I first entered their employment in December, 1836, and continued with them until August, 1849. I was employed by them in the car department making cars, and repairing in the repairing-shop.

Q. 3. Were you in the car department during the whole time you were employed on the road?

A. Yes, sir.

806 Q. 4. Are you familiar with the construction of what are called single brakes for railroad-cars?

A. Yes, sir.

Q. 5. When you went into the employment of said New Jersey Railroad and Transportation Company in December, 1836, what kind of brakes were in use on the passenger-cars of said company?

A. At that period we had short cars, and used a single triangle brake, operating on only one pair of wheels. At that time the cars were four-wheel cars; they had no truck-cars.

Q. 6. How long, as nearly as you can state, was it before they commenced to use truck-cars on said road?

A. I think about the next summer some time, 1837; it was very soon after I came on the road.

Q. 7. What kind of brakes did they use on these truck-cars?

A. There was a brake with a drop-lever acting on a cam; the clogs were between the wheels under the trucks at that time.

Q. 8. Upon how many wheels did this kind of brake act?

A. Upon four.

Q. 9. These four wheels were in one truck, were they?

A. Yes.

Q. 10. How long did they continue to use this kind of brake?

A. It might have been as long as two years; it was about two years. Those brakes might have been used on some of those cars two or three years after that.

Q. 11. After the drop-lever brake, what was the next one that was used on the cars of said company?

A. They used a crank to wind up and rods to connect; a chain was wound up around the brake-staff to bring the brakes up.

Q. How long, as far as you know, did they continue to use such a brake as this?

A. All the rest of the while that I was on the road.

807 Q. 13. Upon how many trucks in the car did this brake, with the crank to wind up, act?

A. Upon one.

Q. 14. At the time you left the employment of said railroad company in August, 1849, what kind of brakes were in use on the passenger-cars of said road?

A. Such as I have here last described.

Q. 15. Do you know what crate-cars are?

A. Yes, sir.

Q. 16. At the time you left the employment of the said railroad company in August, 1849, what kind of brakes were in use on the crate-cars used on said road, and what kind of brakes were used on the platform-cars of said road?

A. The same as were used on the passenger-cars.

Q. 17. In August, 1849, when you left the employment of said company, were there any other kind of brakes in use upon any of the cars of said company besides single brakes acting on only one truck?

A. Not to my knowledge.

Q. 18. If there had been, would you have known it?

A. I think I should.

Q. 19. How positive do you feel that you would have known it?

A. I feel very positive about it.

Q. 20. During any part of the time while you were in the employment of said company, were there any kind of brakes in use on said road which acted upon more than four wheels at a time?

A. No, sir.

Q. 21. Do you know Joseph F. Talson, formerly superintendent of car-building and car-repairs of said railroad? If so, how long have you been acquainted with him?

A. I do know him, and have been acquainted with him since 1836.

Q. 22. Were you, while you were on said railroad, employed in any capacity under said Talson; and if so, in what capacity and how long?

808 A. I was. After the first two or three years that I was there I had charge of all the work in the shop under him until I left the road; I acted as foreman under him.

Q. 23. While you were so employed, in what shop did they do the brake-work for the cars of the said company; and state whether you had anything to do with such work?

A. The work was done in the car-shop of the company, where I was employed. I did that work with the other work that was done in the shop.

Q. 24. Did that give you full opportunities of knowing what kind of brakes were used on the cars of said railroad while you were in its employment?

A. I think it did.

Q. 25. During any portion of the time while you were employed by said railroad did any of the cars of the Camden and Amboy Railroad Company come into Jersey City? If so, for what portion of such time, and about how frequently did such cars so come to Jersey City?

A. They did. There were two trains of cars a day, with about five cars in each train—ten cars a day in the two trains. I judge they commenced along in 1840 and continued to come there until I left, in 1849; it might have been earlier than 1840 that they commenced coming into Jersey City.

Q. 26. Do you know what kind of brakes were in use upon these Camden and Amboy cars during this period; and, if so, what kind?

A. I do. It was what we call the single-acting brake; it acted on one truck.

Q. 27. How often did you see these Camden and Amboy cars during this period?

A. I saw them every day, I suppose, during week days.

Q. 28. Did you during said period have occasion to do any repairs to said Camden and Amboy cars? If so, what kind of repairs?

A. I did. They were some small repairs, such as a bolt being loose; trifling repairs.

Q. 29. Who had charge of these repairs to these cars?

809 A. They were done by the men that looked after the cars in the depot.

Q. 30. During any part of the time when these Camden and Amboy cars were coming into Jersey City between 1840, or thereabouts, and 1849, when you left the New Jersey Railroad, did any of said cars have upon them any double-acting brakes, acting upon more than one truck at a time?

A. No, sir.

Q. 31. Among said Camden and Amboy cars were there any platform crate-cars during said period?

A. There was one such car in a train; sometimes there were two, but not often.

Q. 32. During said period did any of these crate-cars have upon them any double-acting brakes, acting upon more than one truck at a time?

A. Not to my knowledge.

Q. 33. Could there have been any such brake acting upon more than one truck at a time used upon any of these crate-cars for any length of time without your knowing it?

A. I think not.

Q. 34. How positive do you feel about it?

A. I feel pretty certain about it.

Q. 35. Do you remember any car upon the Camden and Amboy Railroad which was distinguished from the other cars of said railroad by having different kinds of seats in it?

A. Yes, sir.

Q. 36. Were there any other peculiarities about the car besides the seats? If so, what?

A. I don't recollect of any.

Q. 37. Do you remember anything about the springs of the car?

A. No, sir.

Q. 38. Do you recollect what kind of brakes were in use on this car with the different kinds of seats in it? If so, what sort of brakes were they?

810 A. I do. I believe they were the same kind of brakes—common single brakes. I don't recollect of any other kind; single brakes, acting on one truck.

Q. 39. What time, as nearly as you can state, did this car first come out on the road?

A. Somewhere along between 1840 and 1845; I can't say the date of it.

Q. 40. You say you believe this car had the common single brakes. How positive do you feel about it?

A. I have no recollection at all of any other kind; I feel very positive in my own mind about it.

Q. 41. Have you at any time had any conversation with the before-named Joseph F. Talson in regard to a law-suit about double-acting brakes; and, if so, when was the conversation, and what was it, as nearly as you can state?

A. I had a conversation with him last winter some time; I can't recollect the date; he stated to me there had been a law-suit about them; I think he said in Albany; I think that is all he stated about it.

Q. 42. Did he ask you anything about what you knew of the use of double-acting brakes on the New Jersey Railroad while you were employed on it? If so, what did he say?

A. He talked about it, and I did not recollect anything about any other kind of brakes than the common brakes; he talked considerable, telling me many things that I did not know anything about that had occurred after I had left the road. By common brakes I mean the ones in common use at that period, acting on one truck.

Q. 43. Did you tell said Talson that you would testify that Stanley put the brake (meaning a double-acting brake) on the New Jersey Railroad, and that he, Talson, strengthened it, and that it ran on the road? and, if you said anything about this, please state what you said.

A. There was a gentleman came there one time to the New Jersey Railroad shop, of the name of Stanley, I believe, who undertook to make a brake there that acted on both trucks; when he had got it done, as he thought, the car was shoved out of the shop, and as it was on the track the brake was applied, and it all broke to pieces, and that 811 was about the end of it; I have no recollection of the brake's being applied to the cars after that. I never told Talson what is inquired about in the question.

Q. 44. So far as you recollect, did Talson, while he was on said railroad, strengthen said Stanley brake, and did said brake run for any length of time on the New Jersey Railroad?

A. I have no recollection of it.

Q. 45. Could it have run there for any length of time without your knowing of it?

A. I think not.

Q. 46. How positive do you feel of this?

A. I feel very certain of it in my own mind.

And being cross-examined by M'r Whipple, of counsel for defendant, the witness deposes and says as follows:

1. Cross-q. Do you know what brakes were in use on the cars of the Camden and Amboy Railroad from 1843 to the time you left the New Jersey Railroad in 1849?

A. To the best of my knowledge, the single-acting brake, acting on one truck.

2. Cross-q. Had you during that time inspected the cars of said Camden and Amboy road to ascertain what brakes were in use on the cars of that road?

A. We came in contact with them often, and I have no recollection of any other kind of brake than the one acting on one truck; I did not examine them every day, and probably not once a week or month, because that was other men's business directly; by contact, I mean, I noticed them and looked at them.

3. Cross-q. Do you know from personal inspection that there was no double-acting brake on any car or cars of said Camden and Amboy road up to the time of your leaving the New Jersey Railroad in 1849?

A. I never went to inspect those brakes directly myself, because that was the business of others. I have no recollection of anything whatever but the single brake on those cars.

812 4. Cross-q. Then you never inspected the cars of the Camden and Amboy road to ascertain what brakes were or were not on the cars of said road?

A. I never went to do it directly; it was not my business; I did not inspect them any more than general observation of them.

5. Cross-q. Then it is from general observation that you testify, is it?

A. Yes, sir; my being acquainted with them.

6. Cross-q. Were the cars of the Camden and Amboy road taken into the shops of the New Jersey road for repairs when they needed it?

A. No, sir; not while I was there.

7. Cross-q. You not being inspector of cars, what led you to go out of the shop to ascertain what brakes were or were not on the Camden and Amboy cars?

A. I had duties in the depot where they were stationed, and the men reported to me often when there was anything out of order about them, and I had an opportunity to see them.

8. Cross-q. Was it necessary that the men should report to you if a bolt was gone or there was a brake-rod down, or could they go on and repair it?

A. No; they had general orders to make those repairs themselves; they used to talk to me about it and to M'r Talson.

Defendant's counsel now offers in evidence a paper marked "Exhibit 1," which reads as follows:

"Answer to first interrogatory. My name is Erastus Reid; age 58 years; reside 117 Union street, Newark, New Jersey, and my occupation is a pattern-maker.

"Second interrogatory. Were you ever in the employ of the New Jersey Railroad and Transportation Company? If so, when and in what capacity were you so employed?

"Answer. I was, from December, 1836, to the middle of August, 1849; I was during this time employed in the car-shop of that company, 813 and in the absence of M'r Talson, superintendent of the car department, acted as foreman in his place.

"Third interrogatory. While so employed, did you know of a brake being applied to a car of that road by Isaac Newton Stanley? If so, what kind of a brake was it? Please describe it.

"Answer. I did, and will describe it as follows: It was a double brake, with two centre levers, connected with the brakes of both trucks, and with the windlass at both ends of the car, and operated by both windlasses; a model shown me, marked 'Exhibit B,' is a good likeness of the brake applied by said Stanley.

"Fourth interrogatory. How do you fix the date of the application of this brake to a car of said New Jersey Railroad and Transportation Company?

"Answer. I fix it by the fact that M'r Stanley applied to me to build for him a pair of trucks, and, according to the books of that company, the work on these trucks was done in the fall of the year 1842; at this time the brake was applied.

"Fifth interrogatory. Do you know of a modification of this Stanley brake by M'r Talson soon after it was applied by said Stanley? If so, what did the modification consist of? Please explain. And was it used on said railroad?

"Answer. I do, and it had one lever under the body of the car in the place of the two cross levers of the brake Stanley put on, and it was made in a substantial manner, and used on that road so long as I was in the employ of said New Jersey Railroad Company. The brake so modified may be seen on a model shown me, marked 'Exhibit C.'

"Sixth interrogatory. What was the difficulty with the Stanley brake that it was not used on that road after he applied it to the car as stated in your answer to the third interrogatory?

"Answer. The work was too weak; when he applied the brake it broke to pieces, and he went off and left the car, and the brake was 814 taken off and another was put on, as I have described in my answer to the fifth interrogatory."

Signed, Erastus Reid; dated Newark, New Jersey, February 27, 1867.

The witness is now presented with the paper, and his attention is called to the signature, and he is asked:

9. Cross-q. Is that your signature?

(Objected to, unless the paper referred to is annexed to the depositions in this case.)

A. Yes, sir.

And being re-examined by M'r Cozzens, of counsel for complainant, he deposes and says:

1. Redirect q. Do you know in whose handwriting the alleged questions and answers in this paper are?

A. I do not know the handwriting; a paper like this M'r Whipple wrote out in Newark one time.

2. Redirect q. Do you mean M'r Whipple, the gentleman now present?

A. Yes, sir.

3. Redirect q. Are the answers purporting to be contained in this paper what were given to M'r Whipple by you, or were they dictated by you? and if not, state who furnished the language of said answers.

A. M'r Whipple asked questions, and there was considerable conversation going on at the same time; I suppose I answered the questions as they were put.

4. Redirect q. Do you mean that you dictated them just as they were put in that paper?

A. No, sir; I did not understand them as they read now; the answers were generally written out and they were read over, and I was asked if I approved of them or not. I did not understand it, or I could never have said what the paper says I did.

815 5. Redirect q. After the paper was written out as you have stated, did you read it over yourself before signing it?

A. No, sir.

6. Redirect q. Was Talson present at the time the paper was written out?

A. Yes, sir.

7. Redirect q. Did he make suggestions about the wording of the answers?

A. I don't recollect as he did; he talked some there, but I think M'r Whipple wrote out the questions and the answers before I heard anything about them, and then they were read to me singly, each question and each answer.

8. Redirect q. Was that the first time that you had seen M'r Whipple and Talson in relation to this matter?

A. The first time I saw them together.

9. Redirect q. Was anything said to you at that time, or at any time, by either of them, about wanting you as a witness to testify in any case in relation to this brake on the New Jersey Railroad?

A. I think they spoke about it at that time when this paper was written out. They said they would let me know when they wanted me.

10. Redirect q. Did you tell them at the time this paper was written out, as you say, that you did not recollect that this Stanley brake was strengthened and put on by Talson after Stantley tried it?

A. I don't recollect whether I did or not; if there was anything said about it, I did.

11. Redirect q. Did you tell them that you had no recollection of said brake being run on the road, after Stanley tried it?

A. I don't recollect of any such conversation taking place there.

12. Redirect q. Was what purports to be interrogatory 5 in said paper and the answer thereto read over to you before you signed that paper? Please read said question and answer carefully before you answer the question, and please direct your attention to the fact of the
816 manner in which the words "I do, and" at the commencement of said answer are interlined in the answer, and to the fact that the capital "I" which appears to have originally commenced the word "it," following immediately after said word "and," has been scratched out and a small "i" written in its place?

A. I have no recollection. I presume they were. I don't know. I will state that I have no recollection of any modification of the Stanley brake being put on any of the cars of the New Jersey Railroad.

13. Redirect q. Was anything said to you at the time that paper was written about any modification of the Stanley brake being made by Talson after it was applied by Stanley?

A. I don't recollect that there was.

14. Redirect q. What were the models which were shown you at the time that paper was written, and how many of them were there?

A. I think there were no models shown at that time.

15. Redirect q. The paper refers to two models—those are the ones I mean. What were those?

A. M'r Talson was there, previous to the writing of the paper, with the models; at one time he had three, I think; at another time he had two.

16. Redirect q. How sure do you feel that there were no models shown to you at the time the paper was written?

A. I am very certain about it. I think I should recollect if there had been, for I have a distinct recollection of the models shown me at the other times.

17. Redirect q. What were the models which Talson had with him previous to the writing of the paper, and how long previous to the writing of the paper was it?

A. One of the models was a cam-brake—a single brake; and another was the one that they used on the road when I left there, a single brake also, what we call the crank-brake; and the other one was the double-acting brake. This might have been two or three months previous to the writing of the paper, something like that time.

817 18. Redirect q. State, generally, what was the construction of the model of this double-acting brake shown you by Talson?

A. It was a lever in the centre of the car, connected with the two ends by connecting-rods so that they should be operated by the cranks or windlasses of the platforms.

19. Redirect q. Did you say anything to Talson about this brake with a lever in the centre of the car, illustrated by that model?

A. We had some conversation. I don't know what it was.

20. Redirect q. Were you at any time brought over to any office in New York for the purpose of testifying in this suit, or for any other purpose?

A. I was requested to come over by M'r Talson, and came over, as I suppose, to give evidence in a brake case, regarding this double action brake.

21. Redirect q. Where was it you came?

A. To the commissioner's office in Chambers street; I think the commissioner's name was Stilwell.

22. Redirect q. At that time was any model shown you by M'r Talson, or by any person?

A. M'r Talson had a model there that I saw, called the Tyler car, the platform of it and the trucks attached.

23. Redirect q. Was there a brake on that model? and if so, state generally its construction.

A. There was a brake on it; it was what is called the double-acting brake; there was a cross lever in the centre of the car body connected to the ends of the cranks with rods somewhere so that it could be operated; it braked both trucks.

24. Redirect q. Did you have any conversation with Talson about that model, or did he say anything to you about it, and, if so, what?

A. There was some conversation; I don't recollect the particulars about it. I told him I did not recollect about connecting the double brake when I was on the road; the other part of the brake was the same as they used before—the single brake; I told him that I did not
818 recollect anything about those rods connecting to the two ends to
be operated by one windlass. I told him, further, that I had never seen a double brake, only when it was applied to those models; that I had never seen the double brake on the cars up to that time when I was in the office here in Chambers street.

sation going on at the same time; I suppose I answered the questions as they were put.

4. Redirect q. Do you mean that you dictated them just as they were put in that paper?

A. No, sir; I did not understand them as they read now; the answers were generally written out and they were read over, and I was asked if I approved of them or not. I did not understand it, or I could never have said what the paper says I did.

815 5. Redirect q. After the paper was written out as you have stated, did you read it over yourself before signing it?

A. No, sir.

6. Redirect q. Was Talson present at the time the paper was written out?

A. Yes, sir.

7. Redirect q. Did he make suggestions about the wording of the answers?

A. I don't recollect as he did; he talked some there, but I think M'r Whipple wrote out the questions and the answers before I heard anything about them, and then they were read to me singly, each question and each answer.

8. Redirect q. Was that the first time that you had seen M'r Whipple and Talson in relation to this matter?

A. The first time I saw them together.

9. Redirect q. Was anything said to you at that time, or at any time, by either of them, about wanting you as a witness to testify in any case in relation to this brake on the New Jersey Railroad?

A. I think they spoke about it at that time when this paper was written out. They said they would let me know when they wanted me.

10. Redirect q. Did you tell them at the time this paper was written out, as you say, that you did not recollect that this Stanley brake was strengthened and put on by Talson after Stantley tried it?

A. I don't recollect whether I did or not; if there was anything said about it, I did.

11. Redirect q. Did you tell them that you had no recollection of said brake being run on the road, after Stanley tried it?

A. I don't recollect of any such conversation taking place there.

12. Redirect q. Was what purports to be interrogatory 5 in said paper and the answer thereto read over to you before you signed that paper? Please read said question and answer carefully before you answer
the question, and please direct your attention to the fact of the
816 manner in which the words "I do, and" at the commencement of
said answer are interlined in the answer, and to the fact that the capital "I" which appears to have originally commenced the word "it," following immediately after said word "and," has been scratched out and a small "i" written in its place?

A. I have no recollection. I presume they were. I don't know. I will state that I have no recollection of any modification of the Stanley brake being put on any of the cars of the New Jersey Railroad.

13. Redirect q. Was anything said to you at the time that paper was written about any modification of the Stanley brake being made by Talson after it was applied by Stanley?

A. I don't recollect that there was.

14. Redirect q. What were the models which were shown you at the time that paper was written, and how many of them were there?

A. I think there were no models shown at that time.

15. Redirect q. The paper refers to two models—those are the ones I mean. What were those?

A. M'r Talson was there, previous to the writing of the paper, with the models; at one time he had three, I think; at another time he had two.

16. Redirect q. How sure do you feel that there were no models shown to you at the time the paper was written?

A. I am very certain about it. I think I should recollect if there had been, for I have a distinct recollection of the models shown me at the other times.

17. Redirect q. What were the models which Talson had with him previous to the writing of the paper, and how long previous to the writing of the paper was it?

A. One of the models was a cam-brake—a single brake; and another was the one that they used on the road when I left there, a single brake also, what we call the crank-brake; and the other one was the double-acting brake. This might have been two or three months previous to the writing of the paper, something like that time.

817 18. Redirect q. State, generally, what was the construction of the model of this double-acting brake shown you by Talson?

A. It was a lever in the centre of the car, connected with the two ends by connecting-rods so that they should be operated by the cranks or windlasses of the platforms.

19. Redirect q. Did you say anything to Talson about this brake with a lever in the centre of the car, illustrated by that model?

A. We had some conversation. I don't know what it was.

20. Redirect q. Were you at any time brought over to any office in New York for the purpose of testifying in this suit, or for any other purpose?

A. I was requested to come over by M'r Talson, and came over, as I suppose, to give evidence in a brake case, regarding this double action brake.

21. Redirect q. Where was it you came?

A. To the commissioner's office in Chambers street; I think the commissioner's name was Stilwell.

22. Redirect q. At that time was any model shown you by M'r Talson, or by any person?

A. M'r Talson had a model there that I saw, called the Tyler car, the platform of it and the trucks attached.

23. Redirect q. Was there a brake on that model? and if so, state generally its construction.

A. There was a brake on it; it was what is called the double-acting brake; there was a cross lever in the centre of the car body connected to the ends of the cranks with rods somewhere so that it could be operated; it braked both trucks.

24. Redirect q. Did you have any conversation with Talson about that model, or did he say anything to you about it, and, if so, what?

A. There was some conversation; I don't recollect the particulars about it. I told him I did not recollect about connecting the double brake when I was on the road; the other part of the brake was the same as they used before—the single brake; I told him that I did not
818 recollect anything about those rods connecting to the two ends to
be operated by one windlass. I told him, further, that I had never seen a double brake, only when it was applied to those models; that I had never seen the double brake on the cars up to that time when I was in the office here in Chambers street.

25. Redirect q. Did Talson, at that time, say anything to you about whether you would be wanted as a witness in this case; if so, what?

A. I don't know that he did; that is what I came there for.

26. Redirect q. Did he say that you would be wanted?

A. I don't recollect that he did.

27. Redirect q. At that time did M'r Whipple say anything to you about whether you would be wanted as a witness in the case; if so, what?

A. M'r Whipple talked to me a minute or two about the evidence, and I told him that I had never seen such a brake on the New Jersey Railroad as that represented on the Tyler car shown in the office.

28. Redirect q. Did M'r Whipple then say anything about your being wanted as a witness; if so, what?

A. He made one or two remarks, and said that he guessed he would not want me, and then he went away; I talked to M'r Talson a few moments and then went home.

29. Redirect q. At the time that paper was written, if you had understood that there was anything in any of the answers which you were expected to sign or approve of about the Stanley brake being modified by Talson and about that modification being used on the New Jersey Railroad, what would you have said?

A. I would have said that I would not sign the paper, if I had understood the meaning of the paper as I do now.

And being further cross-examined by M'r Whipple, he deposes and says as follows:

1. Recross-q. Where was this paper in question written out and signed?

A. In Newark, at the office of M'r Cyrus Currier.

819 2. Recross-q. Was or was not the subject-matter of the paper fully talked over and explained by models before the questions and answers were written?

A. There was a kind of a general conversation there before the writing commenced; I have no recollection about the models being presented there on that day.

3. Recross-q. Do you swear positively that M'r Whipple presented to you no models before writing this paper?

A. I have not the slightest recollection of them; I do not know how to answer the question any stronger than that.

4. Recross-q. At the time of preparing this paper were models purporting to represent the Stanley brake, marked "Exhibit B," and the Talson brake, marked "Exhibit C," in said paper shown to you before any questions or answers were written or not? If not, please account for their appearing as exhibits in said paper.

A. I don't recollect anything about them or about any models being there at the time that paper was written; I saw models at two different times before.

5. Recross-q. You say you came to the office of M'r Stilwell, in Chambers street, to give evidence for defendant in this case. After returning from dinner, with the expectation of being called upon as a witness, did you complain to M'r Whipple or not that you were sick and wished to be excused for the day, and did he or not, upon this representation, excuse you?

A. I came there with that expectation, of being examined; there was a witness on the stand that occupied the time till 3 o'clock; there was an adjournment of half an hour, and then we met there again; I did not make my plea of being sick to M'r Whipple, because he left before I felt sick; I told M'r Talson that I was sick, and went out-doors.

6. Recross-q. Were you excused on the ground of sickness?

A. No, sir; M'r Whipple left before I felt bad.

7. Recross-q. Did you or not go to and return from dinner with M'r Whipple; and do you swear that you did not meet him in the hall leading to M'r Stilwell's office, and state to him that you were sick and unable to go on as a witness in this case?

820 A. I went with him and took dinner and came back again; when we got in the hall of the building there was some conversation there a moment or two, but I did not tell M'r Whipple that I was sick and wanted to be excused. He left me, as I have stated, before I was taken sick; I am subject to those fainting spells.

8. Recross-q. Did you go home before the court adjourned?

A. I did; M'r Whipple told me he did not want me.

9. Recross-q. Did you or not at the time of preparing this paper aid M'r Whipple what you could to express what you wished to be understood would be your evidence if called upon to be a witness in this case?

A. The subject was talked over there; I could not recollect the words that were said; I did not dictate the article at all; it was written and read to me.

10. Recross-q. Was there a question written or an answer made in that paper the subject of which was not talked over before the writing, or not?

A. There was a general conversation about it, and the article was written out and the questions too, and they were read to me.

11. Recross-q. Did you assent to the answers as being correct?

A. I did; as I understood them at that time.

12. Recross-q. Did you or not tell M'r Whipple at that time that you would testify to the facts set forth in this paper if called upon to do so?

A. I did not.

13. Recross-q. Had M'r Talson talked with you previous to M'r Whipple's calling upon you to reduce your evidence to writing; if so, did he explain to you by model the Stanley and Talson brakes?

A. He did; he called twice with the models which I spoke of before.

ERASTUS REID.

Subscribed and sworn to before me this 26th day of February, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

821 Examination further adjourned to February 29, 1868, at 11 a. m.

NEW YORK, *March* 2, 1868.

Present, S. D. Cozzens, esq., of counsel for complainant, and the complainant in person, and S. M. Whipple, esq., of counsel for defendant.

AMBROSE WARD, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says, as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is Ambrose Ward; my age is 56 years; I reside at Altoona, Pennsylvania; I am occupied at present as assistant general overseer and inspector in the car department of the Pennsylvania Central Railroad.

2. Q. How long have you been engaged on the Pennsylvania Railroad, and in what capacity or capacities?

A. I commenced with them on the 13th day of January, 1853, as foreman of their car-shop at Pittsburg. I was there until the 1st of June, 1858, when I went to Altoona and acted there as general foreman in their car department. I acted in that capacity for about seven years, and since then I have been with them as assistant general overseer and inspector of their car-department.

3. Q. Were you engaged on any railroad before 1853; if yea, on what road?

A. I was. I was on the New Jersey Railroad and Transportation Company for about twelve years. At two different times I was on as an extra hand before I went on as a regular employee. It was either in the winter of 1838 and 1839 or 1839 and 1840 that I went as an extra hand for about three months. I was called afterwards again as an extra
hand for a few weeks. The third time that I went on I did so
822 also as an extra hand, and they continued me straight along as
a steady employee. This last time that I went on and continued
was, I think, in the fall of 1841; it might have been 1842.

4. Q. Please state what your particular business was while employed on said New Jersey Railroad and Transportation Company's railroad.

A. It was to make any repairs that might be necessary, mostly about the running gear of all cars, to see that it was in order and keep it up. All cars that came to that depot—the depot at Jersey City.

5. Q. Whom did you work under—I mean who was superintendent of car-repairs and car-building on the said New Jersey Railroad and Transportation Company's road while you were so employed on that road?

A. M'r Joseph F. Talson was superintendent for about nine years; after that M'r David H. Baker came on as superintendent, and I worked under him for about three years.

6. Q. You speak of seeing to the repair of cars that came into the Jersey City depot; was it or not a part of your business while so employed on the said New Jersey Railroad, to examine the passenger trains when they came into the Jersey City depot to see that all the machinery of said cars was in good running order before they left the depot?

A. Yes, sir, that was the general work that I was engaged at.

7. Q. Please state, if you know, what kind of brakes were used on the cars of the New Jersey Railroad and Transportation Company while you were employed on that road.

A. Some cars had a brake only at one end, and some had a brake at each end, though not connected for some years after I commenced with them. There was a brake with a centre lever, put on, which acted on both trucks from either end of the car by having the brakes properly adjusted on each truck. It operated on all the wheels from either end
of the car.

823 8. Q. Please state, if you know, who put this centre-lever brake
that applied the brake to all the wheels from either end on the
New Jersey Railroad cars?

A. To the best of my recollection, M'r David H. Baker put it on, speaking from what I can call up to mind from circumstances.

9. Q. About what year was it as nearly as you can describe, that M'r Baker put on this centre-lever brake?

A. I think it was about 1850. I cannot be positive.

10. Q. May it have been somewhat later than 1850?

A. Well, it may have been 1851; I made no notes of it.

11. Q. Did you ever see a double brake acting on all the wheels of the car from either end, before the time when M'r Baker put on this centre-lever brake?

A. There was a great deal of talk about double brakes about that time, and the Hodge brake came up about then I think. I have not a distinct recollection as to when the Hodge brake was first applied, but my opinion at the time was that Baker's was the best arrangement. I could not state whether it was before or after Baker's brake was applied that I heard of the Hodge brake. I recollect that it was my opinion that the one applied by Baker was the best one I had ever seen. I mean my answer to the question to be that I do not remember whether I saw the Hodge brake before Baker applied his brake or not. It was about that time.

12. Q. Did you ever see a double brake like the one Baker put on before the time when he put it on?

A. No, sir.

13. Q. Was that form of brake which Baker put on, new to you at the time when he put it on?

A. Yes, sir.

14. Q. You have said that it was your business to make any repairs which might be necessary upon all the cars that came to the Jersey City depot; do you include among the cars you so refer to, the cars of the Camden and Amboy Railroad which came to Jersey City?

A. Yes, sir, all cars, to see that they were safe to run, and do what repairs were necessary.

824 15. Q. What kind of brakes were used upon the Camden and Amboy cars that came into Jersey City, prior to about 1850, or prior to the time when Baker applied his brakes?

A. They were single brakes until about 1850; I think about 1850 they began to look for a double brake, as nearly as I can recollect; I don't recollect at what time they commenced using the double connection; the Hodge brake was the only double connection brake that I remember on the Camden and Amboy cars or any cars except the one applied by Baker; anything before that I do not remember.

16. Q. Did the duties which you had to perform in the repairing of these cars require you to know what kind of brakes they had?

A. Not specially so, but if any repairs were necessary, to make those repairs in order to make them safe to run.

17. Q. If the brakes on these cars were out of order did you have to repair them?

A. Yes, any light repairs that were necessary to make them efficient. If badly broken the cars were sent home for repairs; that is the best of my recollection.

18. Q. Do you remember a car on the Camden and Amboy Railroad which had a water-closet on the platform?

A. I do remember a car of that kind; I noticed that particularly because it was so novel.

19. Q. Did that car come into Jersey City often while you were on the New Jersey Railroad?

A. It was there a great many times; I can't say how often it came; I think it was considered an extra car for a while, to run on special occasions.

20. Q. Did you see it pretty frequently during the time it ran to Jersey City?

A. I saw it a great many times; I must have seen it most every time it came there, because I was one of the chief men about the depot. That was my general work, to help about those cars, to keep them in repair.

825 21. Q. What kind of a brake did that car have prior to about 1850, or prior to the time when Baker applied his brake?

A. I cannot state. I have no recollection about that particular car's brake.

22. Q. Did it have a single or a double brake during this time?

(Objected to, for the reason that the witness has stated that he has no recollection of what brake was on said car.)

A. I have no recollection about what brake was on that particular car.

And being cross-examined by M'r Whipple, of counsel for defendant, he deposes and says:

1. Cross-q. While you were in the employ of the New Jersey Railroad and Transportation Company, to wit, in 1842, do you know of one Isaac Newton Stanley applying a double-acting brake to a platform crate car of that road? If yea, state what you know about it.

A. I remember that M'r Stanley had put something on a car that I never saw. I saw nothing but the staples, where something had been put on and taken off. I never saw it. This was put on between times that I was on the road, I think.

2. Cross-q. Did or did not Joseph F. Talson, superintendent of the car department of that road, apply a centre-lever brake to a crate car of that road about the year 1842 or 1843?

A. Not that I have any recollection of.

3. Cross-q. Do you know James S. Gamble, former conductor of that road?

A. Yes, sir.

4. Cross-q. Do you know William Coulter, conductor on that road for the last twenty years?

A. Yes, sir.

826 5. Cross-q. Do you know John H. Jobes, brakeman on that road during the years 1843, 1844, 1845, and 1846?

A. I do.

6. Cross-q. Did you know George W. Fielder, in the employ of the road about 1845 and 1846?

A. Yes, sir.

7. Cross-q. Do you believe the above-named persons to be credible witnesses in any matter or thing in which they may be supposed to have a personal knowledge?

A. I do.

8. Cross-q. Do you know what brakes were in use on the baggage, crate, and passenger cars of the Camden and Amboy road before the year 1850?

A. I do not recollect distinctly.

And being re-examined by M'r Cozzens, the witness deposes and says:

1. Redirect q. If the centre-lever-brake, applied by Talson to a crate-car on the New Jersey Railroad in 1842 or 1843, had been run on the road for any length of time, would you have known it?

A. I think I must have known it.

And being further cross-examined by M'r Whipple, of counsel for defendant, he says:

1. Recross-q. Do you swear positively and unequivocally that Joseph F. Talson did not put a double-acting centre-lever-brake on a crate-car of the New Jersey Railroad in the fall of the year 1842?

A. I could not so swear, although I have no recollection of it.

AMBROSE WARD.

Subscribed and sworn to before me this 2d day of March, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

827 **JORDAN FERNALD**, a witness produced on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is Jordan Fernald; I am fifty-seven years of age; reside at Waverly, New Jersey; I am at present not engaged in business. I have been latterly employed in grading and paving, which I have been compelled to suspend owing to the extreme cold weather.

2. Q. Were you ever in the employment of the New Jersey Railroad and Transportation Company; and, if so, in what capacity and from what time to what time?

A. I was. I commenced there in January, 1835, and I left there in the fore part of 1863. I was employed the first two years as car-driver between Jersey City and Newark while they were using horse-cars. After that as conductor all the rest of the time, except when I was taken off for some purpose.

3. Q. Were you so taken off often?

A. No, sir; not very often; what I mean by being taken off, was when the Hackensack bridge was burnt; I was taken off for about a month while they were building it to superintend the men. I was conductor all the time, and received conductor's wages. I was taken off at another time to act in getting timber to build a bridge.

4. Q. With the exception of such temporary employments as these, were you conductor substantially all the time between 1837 and 1863?

A. Yes, sir.

5. Q. Do you understand the construction and operation of double-action brakes for railroad cars?

A. I think I do.

6. Q. Will you please state at what time, or about what time, double-acting brakes acting on both trucks from either end of the car were applied on the cars of the New Jersey Railroad and Transportation Company?

828 A. The first that I ever saw was beteen 1849 and 1852, except an experiment that M'r Talson tried previous to this time and afterwards abandoned.

7. Q. By whom was the double-acting brake, which you first saw between 1849 and 1852, applied?

A. One of them was applied by M'r Baker, the foreman of the shop at Jersey City.

8. Q. You say "one of them"; how many of them were there, and by whom applied?

A. There was one applied by the Camden and Amboy folks, I suppose. I don't know by whom; it was on one of their cars.

9. Q. Was this brake on one of the Camden and Amboy cars like the brake applied by Baker; if not, what was the difference?

A. The one on the Camden and Amboy cars had two cross-levers under the car-body, and the one applied by Baker had but one.

10. Q. As near as you can state, what year was it when the one put on by Baker was applied?

A. I could not state exactly, but I think in 1851.

11. Q. How near to this time was it that the one applied by the Camden and Amboy road was put on?

A. They both apparently came out together—I cannot say which came out first.

12. Q. Was there any talk or discussion among the railroad hands at the time about this brake of Baker's and the one on the Camden and Amboy road; and, if so, what was the talk?

A. There was. As far as I heard it, the men were discussing which was the best.

13. Q. Prior to the time when Baker applied his brake on the New Jersey Railroad, what kind of brakes were in use on the cars of said railroad during the time you were there and after the company gave up using horse-cars?

A. There were two or three kinds of brakes used. There was one kind with an upright shaft or a crank, another kind with a wheel instead of a crank, and another kind that worked between the wheels by a rock-shaft instead of outside by a rock-shaft and cams.

829 14. Q. Upon how many trucks did these three kinds of brakes act at one time, from one crank or wheel?

A. Upon but one.

15. Q. Do you remember a brake experiment which was tried on the New Jersey Railroad by Isaac Newton Stanley in 1842?

A. I don't remember it by that name.

16. Q. I mean the brake first applied by Stanley as an experiment, and afterwards put on a car by Talson of whom you have spoken?

A. I never knew M'r Stanley in the case. The brake that I mean was put on by M'r Talson.

17. Q. How long did that brake put on by Talson run on the road?

A. I could not say how long it was run on the road. I ran it but once on my train and found it broken when I came into Jersey City. I reported it at the shop, and threatened to report it at the office if it was not altered so that we could depend upon it. I never had it afterwards.

18. Q. What was the trouble with it?

A. It appeared to be light, so that it would break. I could not explain any great trouble, because I never ran it but once.

19. Q. Where did your train run to at the time you had this Talson brake on it?

A. To Kensington.

20. Q. From where to Kensington?

A. Jersey City.

21. Q. Was it one of the regular Philadelphia trains?

A. Yes, sir.

22. Q. What kind of a car was it on in the train at this time?

A. On a flat car—some term it a crate car.

23. Q. After that Talson brake ran that once in your train, was it run for any length of time on the New Jersey Railroad?

A. I never knew it to be run any; it might have been run without my knowledge.

830 24. Q. Could it have been run for any length of time without your knowing it?

A. It might have been, as I never had it on my train at all.

25 Q. I asked you if it could have been run for any length of time without your knowing it, and you say it might have been, as you never had it on your train. Please state what you mean when you say it might have run for a length of time without your knowing it.

A. There were two other trains that ran to Philadelphia that had the same kind of cars on that mine did; I heard them speak of taking off the Talson brake. I mean it might have been run in that situation; might have been fixed and other brakes put on; I understood that it had been abandoned and other brakes put on at the time I reported it.

26. Q. Do you remember a car on the Camden and Amboy Railroad called the "Tyler car"?

A. Yes, sir.

27. Q. About how many years ago did you know of that car?

A. I could not say how many; I should think nine or ten years.

28. Q. What years were those?

A. I think between 1853 or 1854 and 1860; I might have known of it before that; I don't know that I ever saw it before that.

And being cross-examined by counsel for defendant, the witness deposes and says:

1. Cross-q. In the sixth direct interrogatory you say that M'r Joseph F. Talson applied a double-acting brake on a car of the New Jersey road. Will you please describe the said Talson brake?

A. I cannot describe it.

2. Cross-q. Did it have a centre lever under the body of the car, to which were connected the brakes on each truck and the brake-shafts at each end of the car by which the power of the brakeman was applied to the wheels of both trucks from either end? 831

A. I could not say. I never saw it but once, and did not see the brake then; it was in the night.

3. Cross-q. Was it a double-acting brake? If so, what do you mean by a double-acting brake?

A. I could not say whether it was or not.

4. Cross-q. What do you mean, then, by saying that M'r Talson applied a double-acting brake to the car?

A. I didn't mean to have said that.

5. Cross-q. In answer to the sixth direct interrogatory, you say, "the first (alluding to a double-acting brake) that I ever saw was between 1849 and 1852, except an experiment that M'r Talson tried previous to this time and afterwards abandoned." Now what brake did M'r Talson apply and abandon? Was it or was it not a double brake, or was it a single brake?

A. The one that M'r Talson applied was said to be a double-acting brake. I could not say it was myself, for I never saw the part of the brake under the car.

6. Cross-q. Then you know nothing from personal knowledge of what you have testified in reference to the Talson brake?

A. It came in with me one night broken; I know that of my personal knowledge.

7. Cross-q. Do you know William Coulter, James S. Gamble, John H. Jobes, Bernard Hughes, George W. Fielder and Joseph F. Talson?

A. Yes, sir.

8. Cross-q. Please state how they were employed by the New Jersey Railroad and Transportation Company, if they were, prior to 1849.

A. William Coulter was conductor, James S. Gamble was conductor, John H. Jobes was a brakeman a very short time; he was what they termed their greaser, to assist in oiling the cars; Bernard Hughes was depot master; George W. Fielder was track master, and Joseph F. Talson was foreman of the car-shop.

832 9. Cross-q. Do you believe these men to be credible witnesses in any matter or thing of which they may be supposed to have a personal knowledge?

A. I should think they were.

10. Cross-q. Is there any doubt on your mind as to the credibility of any testimony these men might give under oath?

A. No, sir.

11. Cross-q. Do you know what brakes were in use on the cars of the Camden and Amboy road prior to the year 1849?

A. The cars that were sent over the New Jersey road that we had to use had a single-acting brake on each truck.

12. Cross-q. Do you know of your own personal knowledge from personal inspection of cars, that no cars of the Camden and Amboy road came to Jersey City prior to the year 1849, with double-acting brakes on one or more cars?

A. I do not.

JORDAN FERNALD.

Subscribed and sworn to before me this 2d day of March, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination adjourned to March 3, 1868, at 3 p. m.

NEW YORK, *March* 3, 1868.

Present S. D. Cozzens, esquire, of counsel for complainant, and the complainant in person, and S. M. Whipple, esquire, of counsel for defendant.

THOMAS O'MAHONY, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

833 Q. 1. What is your name, age, residence, and occupation?

A. My name is Thomas O'Mahony; I am about 58 years of age; I reside at Piermont, New York. I am a car-builder by occupation.

Q. 2. By whom are you at present employed, and how long have you been so employed?

A. By the New York and Erie Railway Company. I have been employed by that company for about two years.

Q. 3. Are you acquainted with double-acting brakes and single-acting brakes for railroad cars?

A. Yes, sir.

Q. 4. Were you ever in the employment of the New Jersey Railroad and Transportation Company; and, if so, when did you enter their employment, and how long did you remain with them?

A. I have been in their employment. I went into their employment in 1846, and left them about seven years ago.

Q. 5. What sort of work did you do for them while you were with them?

A. Car work and building baggage-crates, and whatever there was to do in the shop with regard to cars.

Q. 6. Did this car work which you did include the repairs of cars?

A. Yes, sir.

Q. 7. At the time you went into the employ of the New Jersey Railroad Company, in 1846, what kind of brakes were in use on the cars of said road?

A. Single brakes, if any. Whereever there was a brake put on, it was a single brake.

Q. 8. About how much of the time while you were in their employ since 1846 did they continue to use the single brakes on their cars?

A. I was there three years, and I saw nothing else but single brakes during those three years on that road. I could say that I was on that road four years before I saw anything else but a single brake.

Q. 9. At the end of the time you have mentioned, what kind of brakes did you see there?

834 A. Baker—David H. Baker—came to the shop as foreman, and after he had been there about eighteen months or two years, about 1851, we had a double brake put on.

Q. 10. Do you remember about what year Baker came there?

A. About 1849.

Q. 11. What kind of brake was it that Baker put on in 1851?

A. It was a double brake, that braked on the two trucks.

Q. 12. While you were on said road, and previous to the year when Baker put this brake on, did you have occasion to see all the cars of the New Jersey Railroad from time to time?

A. Yes, sir; I had to work on them all the time. We had but few cars, and we had to work on them regularly.

Q. 13. Do you remember the platform crate-cars which were run in the Philadelphia trains over the New Jersey Railroad between 1846 and 1851?

A. Yes, sir.

Q. 14. Did you at any time have to do any work upon the baggage-crates which were carried on those cars?

A. I built the baggage-crates altogether, and kept them in repair, too; not all the time. I commenced building them in 1848.

Q. 15. What kind of brakes were used on those platform crate-cars between 1846 and 1851?

A. If there was any they were single brakes, I should think.

Q. 16. How positive do you feel of this?

A. When we adopted the double brake there was none on the road before, and if there had been any we should have had them on these cars. I never saw any double brake before 1851, and if there had been any we should have had them on the cars.

Q. 17. You say there were none on the road before; before what, do you mean?

A. Before we put on the one in our shop that Baker put on.

Q. 18. Do you feel sure of this?

835 A. I can't be positive about this; I know there was none on the road before on our cars, and that I never saw one before that one was put on there.

Q. 19. My question was: Do you feel sure that there was no double brake on the cars belonging to the New Jersey Railroad before the time when Baker put his brake on? Please answer this.

A. I am satisfied there was not.

Q. 20. While you were on the New Jersey Railroad, did the cars of the Camden and Amboy Railroad come into Jersey City?

A. Yes, sir.

Q. 21. What kind of brakes were used on those Camden and Amboy cars between 1846 and 1849?

A. As far as I know, single brakes. I have not examined those cars, but I am certain that we should have adopted them before 1851 if there had been double brakes on them.

Q. 22. Adopted what, do you mean?

A. Double brakes.

Q. 23. Were light repairs on these Camden and Amboy cars sometimes done by the men of the New Jersey Railroad?

A. There were repairs done by the men of the New Jersey Railroad, but I had nothing to do with them.

Q. 24. Did you have occasion often to see those Camden and Amboy cars that came into Jersey City between 1846 and 1851 ?

A. I saw them every day.

Q. 25. Could there have been any double brakes on those Camden and Amboy cars which came into Jersey City, between 1846 and 1851, without your knowing it ?

A. There might be; but I do know that if there had been double brakes on those Camden and Amboy cars we would have had them on our cars before 1851, as we should have had to adopt any improvement they had.

Q. 26. At the time Baker put a double brake on the New Jersey Railroad cars in 1851, was the brake he put on a new thing to you, or had you ever heard of such a brake ?

A. It was a new thing.

836 Q. 27. Before Baker put this brake on in 1851, was there, during any of the time while you were in the employ of the New Jersey Railroad, any double brake on any car whatever belonging to said New Jersey Railroad ?

A. I never saw any.

And being cross-examined by M'r Whipple, he deposes and says:

Cross-q. 1. Do you know there was no double brake on a crate-car of the New Jersey Railroad in the year' 1842, 1843, 1844, or 1845 ?

A. I was not at work in the shop in either of those years, and consequently I could not know.

Cross-q. 2. Will you swear positively that there was no double brake on a crate-car of the New Jersey Railroad in the year 1846 ?

A. I should think not. I should think I could swear positively, because there was no double brake on any car of the New Jersey Railroad in 1846, and not until 1851, that I have ever seen, either on a crate-car or on any other kind of a car.

Cross-q. 3. Do you know what brakes were on the baggage, crate, and passenger cars of the Camden and Amboy Railroad before 1849 ?

A. No, sir.

Cross-q. 4. What is your authority for saying that when there was an improvement on the cars of the Camden and Amboy road it would have to be adopted on the cars of the New Jersey road ?

A. Anything pertaining to an improvement. The foreman in the Camden and Amboy shop would come down and give directions about it, and they would be adopted on the New Jersey road. I saw him there two or three times.

Cross-q. 5. Then the New Jersey Railroad at that time was managed by the Camden and Amboy road, was it ?

A. No, sir; there was a kind of influence.

Cross-q. 6. Influence exercised by whom ?

837 A. By the foreman of the Camden and Amboy shop, in regard to improvements. Edwin Lockwood was his name.

Cross-q. 7. Then M'r Lockwood used to come up occasionally to the shops of the New Jersey Railroad and dictate to M'r Talson what improvements he should put on his cars, did he ?

A. No, sir; he used to suggest what improvements would be necessary for the cars. That was our opinion in seeing them and seeing him speak with him.

Cross-q. 8. Is what you have testified to in relation to the use of brakes on the New Jersey Railroad, and the Camden and Amboy Railroad, from recollection or from positive knowledge?

A. From positive knowledge in regard to a double brake and a single brake on the New Jersey road, and in regard to the Camden and Amboy cars from recollection.

Cross-q. 9. May or may not your recollection be at fault in relation to what was in use on all the cars of the Camden and Amboy road?

A. It might in regard to the cars of the Camden and Amboy road, but not of the New Jersey road.

Cross-q. 10. Do you know Joseph F. Talson, James S. Gamble, John H. Jobes, Bernard Hughes, George W. Fielder?

A. I know all of them except Gamble.

Cross-q. 11. Do you believe the four remaining persons to be credible witnesses in any case in which they may be supposed to have personal knowledge?

A. I never knew anything wrong about any of them; that is, so far as Hughes, Jobes, and Fielder are concerned. I should think they were good, honest men. I could say no reason why they should not be credible witnesses.

And being re-examined by M'r Cozzens, the witness deposes and says:

1. Redirect-q. Would anything which Talson, Gamble, Hughes, or Fielder might say about the brakes on the cars of the New Jersey Railroad, between 1846 and 1851, alter your mind about it as you have testified here?

A. No, sir.

838 2. Redirect-q. You said in your third cross-answer that you did not know what brakes were on the baggage, crate, and passenger cars of the Camden and Amboy cars, before 1849. How did you mean to be understood when you said you did not know?

A. Not working at them, or looking at them.

3. Redirect-q. Do you mean not looking at the cars, or not looking at the brakes?

A. I mean not looking at the trucks, taking particular notice of them; the brakes are on the trucks.

4. Redirect-q. You say you saw the Camden and Amboy cars every day; could such a brake as Baker put on the New Jersey cars, in 1851, have been used for any long time on the Camden and Amboy cars which came into Jersey City, between 1846 and 1851, without your knowing it?

A. I should think not, because we should have adopted it right away. It was a new thing when we put it on in 1851, and everybody praised it; and I should have heard of it before if it had been on.

And being further cross-examined by M'r Whipple, of counsel for defendant, he deposes and says:

1. Recross-q. You say that you did not work on or look at the Camden and Amboy cars; how then can you say what was or what was not on said cars in the way of brakes, before 1849?

A. I can't say anything about it.

2. Recross-q. Then you don't know of your own knowledge what kind of brakes were in use on those cars before 1849?

A. I do not.

THO'S O'MAHONY.

Subscribed and sworn to before me this 3d day of March, 1868.

JOSEPH GUTMAN, JR., *Examiner.*

Examination further adjourned to March 6, 1868, at 11 a. m.

839 **NEW YORK,** ***March*** **6, 1868—11 a. m.**

Present, M'r Sayles, complainant, in person, and M'r Whipple, of counsel for defendant.

Examination further adjourned to March 7, 1868, at 11 a. m.

Present, M'r Sayles, complainant, in person, and S. M. Whipple, of counsel for defendant.

Examination further adjourned to March 9, 1868, at 11 a. m.

JOSEPH GUTMAN, JR.,
Examiner, &c.

NEW YORK, ***March*** **9, 1868—11 a. m.**

Present, M'r Sayles, complainant, in person, and M'r Whipple, of counsel for defendant.

ABRAHAM C. CONDIT, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, and occupation?

A. My name is Abraham C. Condit. I am 45 years of age. I reside at Newark, New Jersey. I am a machinist.

2. Q. Were you ever engaged on a railroad? If so, what road, when, and in what capacity?

A. I was. I was engaged on the New Jersey Raiload and Transportation Company from 1841 to 1851. I went there under instruction two years in the machine shop, and the balance of the time I was on the road as engineer. 840

3. Q. During the time you were engineer on said New Jersey road, do you know what brakes were used on the passenger and crate cars of that road?

A. I do. When I first commenced running they used a great many foot brakes, that were applied by the foot; others worked with a crank and windlass.

4. Q. Do you recollect of any other kind of brakes being used on these cars before you left in 1851? If so, what kind of brakes were they?

A. I recollect just before I left for California, on the 25th day of October, 1851, that there was a double-acting brake put on in September by M'r Baker, and I was the first man to try it, that is, to pull the car with my engine. I was the first engineer that ran the car. And I recollect also of a car known as the Tyler car having Hodge's double-acting brake with two levers in the centre, about three or four months previous to September, 1851.

5. Q. What kind of brakes, single brakes or double brakes, were used on the New Jersey Railroad and Transportation Company's cars during the time you were engineer on that road, up to the time you say M'r Baker put this double-acting brake on in September, 1851?

A. They were all single brakes. There were no double brakes until 1851.

6. Q. Did you often notice particularly the different kinds of machinery on the cars?

A. Yes, sir. I would always notice all the new improvements. I always took a great deal of pains to do so.

7. Q. Please state how this double brake you say Baker put on in September, 1851, was constructed.

A. There was a centre lever near about the centre of the car, and it connected with rods at square angles, on opposite corners, that would always throw the brake-wheel on the right side of the car; it operated upon both trucks from either windlass.

8. Q. You speak of the Tyler car; what company did that car belong to and how long did you know the car?

841 A. It belonged to the Camden and Amboy Company. I was well acquainted with it from 1843 until I went away in 1851.

9. Q. About how often, as near as you can recollect, did you see the Tyler car from 1843 to 1851?

A. I saw it perhaps twice a week, perhaps four or five times a month, perhaps oftener. It would be a common occurrence.

10. Q. What trains were you engineer on during this time, from 1843 to 1851?

A. A part of the time on the Philadelphia trains; a part of the time on way-trains between Jersey City and New Brunswick.

11. Q. What train or trains was this Tyler car in when you saw it?

A. It was in the Philadelphia trains; sometimes it would go out at night for one week, and the next week in the morning.

12. Q. Was there anything peculiar about this Tyler car which caused you to notice it particularly? If so, what?

A. It was a very nice car. It was the first car that I ever saw having twelve wheels under it. It had spiral and elliptic springs; I noticed it on account of people saying it was such an easy riding car, and I examined the springs. There were looking-glasses—four glasses—inside of the car at each end, and it was considered a very nice car at that time, and people talked about it a great deal and made one notice it and see what there was about it. There was a privy on the platform of the car.

13. Q. Do you know of your own knowledge what kind of brakes were used on said Tyler car from the time you first saw it in 1843 up to the time you saw the Hodge brake, or two centre-lever brake, on it in 1851?

A. I do; it was the single lever brake, one on each end of the car. They operated independently of one another.

14. Q. Did this single lever brake on each end of the car operate the brakes on both trucks from one windlass, or on only one truck?

A. Only on one truck.

842 15. Q. Did this Tyler car run in your trains? If yea, about how often, as near as you can recollect, between 1843 and 1851?

A. It did. It might have been every other day for a spell, and it might have been four or five times a month—as much as that; it might have been oftener.

16. Q. During this time between 1843 and 1851, did you or did you not notice particularly the brakes on the Tyler car?

A. I noticed the brakes very particularly when they put on the double-acting brakes, which was in 1851. I got the brakeman to put it on while I was down under the car looking at it. The brakeman was either John Barney or Randall Hagerman. I cannot recall for a certainty which one it was. I may be mistaken in either one, but it was one of the brakemen. I do not think before that there was anything peculiar about the brakes. I am positive there was not. I should certainly have noticed it if there had been. There was nothing but the single-acting brakes on the car until 1851.

17. Q. Please state, if you know, what kind of brakes were used on

the other cars belonging to the Camden and Amboy road between 1843 and the time you first saw this two-centre-lever brake on the Tyler car in 1851. I mean the cars that came into Jersey City.

A. They were the ordinary single-lever brakes. Some had a brake on one end, and some had a brake on each end of the car, but acting independently of each other.

18. Q. When you first saw this double brake on the Tyler car in 1851, did you or did you not hear anything said about it? If so, what did you hear said and by whom?

A. Yes. There was a general talk about among the employees that we would have two brakes put on instead of one, and have the same number of brakemen.

19. Q. What opportunities did you have of seeing other cars of the Camden and Amboy Company besides the Tyler car?

843 A. They have furnished half of the cars that ran on the trains between Philadelphia and Jersey City, and I used to pull their train every other week.

20. Q. Did you or did you not notice the brakes used on said Camden and Amboy cars that came into Jersey City during the time between 1843 and 1851; and if so, what kind of brakes were they—double brakes or single brakes?

A. Yes, sir; I noticed them, and I am positive they had nothing but single brakes until 1851.

And being cross-examined by Mr. Whipple, of counsel for defendant, he deposes and says:

1. Cross-q. Were you ever in the employ of the Camden and Amboy Railroad Company?

A. No, sir.

2. Cross-q. Do you know from personal inspection what brakes were on all the passenger, crate, and baggage cars of the Camden and Amboy road from 1843 to 1851?

A. My knowledge is limited to the cars that came into Jersey City.

3. Cross-q. Did you personally inspect all the cars of the Camden and Amboy road which came into Jersey City with special reference to the brakes on said cars?

A. I used often to look at them because the leather would wear off and the brakes would not hold, and I used to go and look at the brakes myself to see if the shoeing was off. I have often done this for my own benefit.

4. Cross-q. Then you examined the brake-shoeing particularly, did you, and not the mechanism by which the brakes were operated?

A. I examined the brakes all through. It was a second nature to me. If there had been anything new I should have seen it. I examined the brakes all through often.

5. Cross-q. That is by personal inspection daily during all this time, did you?

A. I did not inspect them daily. It might be twice a month.

844 Whenever the brakes did not hold as they should I went to look at them—whenever we drilled our train after we pulled it out of the pit.

6. Cross-q. Then you inspected them twice a month during all this time, did you?

A. As often as that; perhaps oftener.

7. Cross-q. The Tyler car among the rest?

A. Yes, sir, when we had it.

8. Cross-q. The Tyler car ran regularly in the Philadelphia train, did it not, from 1843 to 1851?

A. I don't think it did run as regularly as the other cars.

9. Cross-q. How often did it run?

A. I have had it a week at a time in my train.

10. Cross-q. Has the Tyler car and its peculiarities been fresh in your recollection ever since you first knew it, as you say, in 1843 to 1851?

A. I have not thought anything of it within the last six years until M'r Sayles spoke to me about it last week; then I recollected it very well.

11. Cross-q. Did M'r Sayles state to you the peculiarities of the Tyler car?

A. M'r Sayles did not. He asked me if I recollected the Tyler car, and what was peculiar about it.

12. Cross-q. What did you say to him?

A. I told him I recollected the car. He wanted to know what was peculiar about it. I told him that it was a very nice car—that it was a very nice riding car; had four looking-glasses in it. He asked me if I recollected of a privy being on the platform, and I told him I did. He asked me if I knew anything about the brakes on it, and if I was acquainted with the Hodge brake, and I told him yes. He then asked me it I had ever noticed the Hodge brake on that car. I said I would have to think about it a bit; that I had left railroading and would have to sleep over it; that I knew there was a double brake on the car in 1851. I told him that I noticed it was a twelve-wheel car, and had spiral and
elliptic springs. There were different kinds of seats in the car,
845 some of one kind and some of another. It was beautifully fitted
up for those times—the nicest car there then was in the country.

13. Cross-q. All this, then, you told M'r Sayles without any prompting on his part, did you?

A. Yes, sir; M'r Sayles was a perfect stranger to me.

14. Cross-q. Have you seen or heard read the evidence which has been taken in this case by defendant, much of which relates to the Tyler car?

A. I heard a portion of it read after I had told him about it; and he then said, "That corresponds with one of my witnesses." I have not seen any evidence or heard any read which was taken for the defendant. I thought you meant the prosecutor.

15. Cross-q. Has M'r Sayles, the complainant in this case, informed you what point or points he wished to prove by you?

A. No, sir.

16. Cross-q. Have you sworn by Thomas Sayles, the complainant in this case, or by Abraham C. Condit, the witness?

A. I don't understand that. I should like to have it explained.

17. Cross-q. Question repeated.

A. I would like to have the gentleman explain what he means by that. I don't understand it.

And being re-examined by Mr. Sayles, the witness deposes and says:

1. Redirect q. In the last cross-interrogatory you are asked if you have sworn by Thomas Sayles, the complainant in this case, or by Abraham C. Condit, the witness. Please state whether you have sworn from information derived from any one or from your own personal knowledge as to the facts in the case.

A. I know the nature of an oath. I have sworn to the facts from my personal knowledge and observation. I have no interest to do any other way.

846 And being further cross-examined by M'r Whipple, he deposes and says:

1. Recross-q. Then you have not been biased at all in your testimony by the complainant in this case, have you?

A. I have not.

A. C. CONDIT.

Subscribed and sworn to before me this 9th day of March, 1868.

JOSEPH GUTMAN, Jr.,
Examiner, &c.

Examination further adjourned to March 10, 1868, at 11 a. m.

New York, *March* 10, 1868—11 a. m.

Present, M'r Sayles, the complainant, in person.

John Leach, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is John Leach; I am sixty years of age. I reside at Taunton, Massachusetts. I am a machinist and engineer.

2. Q. What is your business at the present time?

A. My business now is to take out locomotives and deliver them to any part of the country for the Taunton Locomotive Manufacturing Company, and put such locomotives in running order. I have been so employed over thirteen years. When I am not employed in this branch of the business, I work as a machinist in their shop.

847 3. Q. Were you ever employed on the Long Island Railroad? If so, when and in what capacity?

A. I was employed by the Long Island Railroad Company at the commencement, in 1836, as master mechanic, and in 1844 I was appointed to superintend the running of the trains, and also had charge of the entire mechanical department of the road. I made out all the time-tables, and the rules and regulations, and the instructions to run by. I continued with the road in that capacity until the 31st of August, 1847, at which time I left the road.

4. Q. Do you know what kind of brakes were used on the cars of that road during the time you were on it?

A. Yes, sir. The brakes that we were using were single brakes, that braked on one truck.

5. Q. Are you acquainted with the construction and operation of what is known as the double-acting car-brake? If so, please describe it.

A. I am. The brake connects a lever in each truck to a lever in the centre, by screwing up on one windlass, and operates the brakes on both ends of the car. It has the same effect on both trucks by screwing up on one windlass of either end of the car.

6. Q. Please state where and when you first saw the double-acting brake, which you have just described, with a lever under the centre of the car.

A. I first saw such a brake some time after I left the Long Island road. I cannot tell the exact date. I first saw it either on the Boston and Providence road, or on the Harlem Railroad. I think it was on the Boston and Providence road.

7. Q. Do you or do you not know, of your own knowledge, whether there were any double-acting brakes, operating the brakes on both trucks from a windlass on either end of the car, in use on any of the cars of the Long Island road while you were employed on said road?

A. I know there was not.

8. Q. What opportunities did you have of knowing what kind of brakes were used on the cars of the Long Island road while you were on it?

848 A. By my having charge of the mechanical department of the road, giving directions for alterations or improvements, and by riding over some portions of the road most every day—I residing at Jamaica, and going to Brooklyn most every day to see the president for instructions. If there were any general repairs to be done to the cars, I would examine them to see what was to be done.

9. Q. How positive are you that there was no double-acting brake used on the cars of that road while you were employed there?

A. I am very positive, because the president and I had consultations for the adoption of some plan to stop the train more quickly, we having adopted a very high rate of speed in 1844, when we opened the road through to Greenport, at which time we commenced to run the Boston trains. Somewhere between 1843 and 1845 or 1846 we had had two applications that I recollect more particularly, for brakes to stop the trains more quickly. One of them was a brake with the ordinary shoe and levers, with a chain that ran from under the platform of one car to under the platform of another car and connected the two levers from the truck of each car with chains and pulleys, in such a manner that by winding up on the truck of the one car it wound up on the truck of the other. Another feature of it was that if, by accident, one car became uncoupled from another the chain would throw the whole momentum on the brake of the other car. This brake did not connect the brakes between the two trucks of the same car, but only from one truck of one car to the nearest truck of the next car. We tried this, but it did not give satisfaction, and the man took it off and took it away. The man that brought us this brake was named Skinner. The other brake was a truck, built expressly to try this brake. That was a sort of a clutch, that let down upon the rail, and, by some apparatus, held on to the rail. We tried this brake with an engine, and when we let down the clutch on the rail it threw the truck off the track, and that was the end of that. We adopted the plan of having extra brakemen, so that
849 there would be one brakeman to each car who could apply the brakes on the two adjacent platforms of two cars, each car having a single-acting brake on each end of the car.

10. Q. Do you know Uriah Van Voorhis; and, if so, when did you know him and where?

A. I do know him. I knew him between 1844 and 1847, at the Long Island Railroad depot, in Brooklyn.

11. Q. What was his business there?

A. His business was the making up of the trains and making some slight repairs to the cars, to see that they were oiled and in condition to go out with the trains.

12. Q. How often did you see this Van Voorhis?

A. Nearly every day. Van Voorhis, with all others in the mechanical department and connected with the running of the trains, were under my control and supervision until two or three months before I left.

13. Q. Who was president of said Long Island road between 1844 and August, 1847?

A. George B. Fisk was president until the spring or early summer of 1847, until the election for officers of the road of that year. M'r Weeks then became president of the road.

14. Q. About how often did you see the president of said Long Island road between 1844 and the time you left?

A. Nearly every day except Sundays, and sometimes Sundays we had a Sunday train.

15. Q. In case any improvement was to be tried on any of the cars of that road from 1844 to the time you left in August, 1847, who would be applied to with regard to the trying of such improvement?

A. Application would be made to the president or to me, or to both of us. If the president were applied to, he would refer it to me, as a matter of course. No improvement could be put on the cars without my directing it.

16. Q. During this time, from 1844 to the time you left the road, whom did you have as foreman of the car-shop?

A. John Areson.

850 17. Q. In case any improvements on the cars were to be made, whose business would it be to put them on the cars of that road during that time?

A. I gave my orders in regard to those things to M'r Areson, who was my foreman in the carpenter department, and he would have them done according to my directions.

18. Q. During this time, between 1844 and the time you left the road, the 31st of August, 1847, did Uriah Van Voorhis have charge of the repairs of cars of that road? If so, please state to what extent.

A. It was a part of his duty to see to such slight repairs as would be needed daily; any general repairs or alterations had to be done at the general repair shop at Jamaica; if there was a bolt out or a brake wanted leathering or anything of that kind, he had authority to have it done; anything further than that, he would report to me, and I would have the cars sent to the general repair shop at Jamaica.

19. Q. Could any double-acting brake have been applied to a car of that road, at the depot at Boooklyn, by Uriah Van Voorhis, between 1844 and 1847, when you left the road, without your knowledge?

A. It could not.

20. Q. Why could it not?

A. Because it would have been impossible to have had a brake of that kind applied when we were so much in need of one, without my knowing it. All improvements, alterations, or patents that were applied to the road while I was there had to be done by my directions.

21. Q. During the time you were on said road what kind of brakes were used on the eight-wheeled freight cars of that road?

A. The single-acting brake on one end of the car.

22. Q. When was your attention first called to this double-acting brake matter recently, and by whom?

A. Some time during last summer, in July or August, by a gentleman whose name I have since ascertained to be Whipple. I have learned that he was the agent of the association of the railroads to look
851 up testimony to defend them against the claims of the owners of
patent rights. He had drawings of a double-acting brake with a centre lever which he showed to me and asked me if a brake like that had been applied on the Long Island road while I was there, and I gave him to understand that there had not. M'r Whipple told me that he had been referred to me by M'r Talson, of New Jersey.

J. LEACH.

Subscribed and sworn to before me this 10th day of March, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Edward T. Moore, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is Edward T. Moore; I am 53 years of age; I reside at Elizabethport, New Jersey; I am an engineer.

2. Q. Were you ever employed on the New Jersey Railroad and Transportation Company's road? If so, when, for how long a time, and in what capacity?

A. I was engineer on that road; I went there in 1846, and continued there until April, 1851, as engineer.

3. Q. Do you know what kind of brakes were used on the passenger and crate cars of that road while you were so engaged there?

A. I do know.

4. Q. Please state what kind of brakes were used on their cars from 1846 to 1851, when you left.

A. We used to have wooden clogs with leather on; single-acting brakes, operating on only one truck.

5. Q. Are you acquainted with what is known as the double-acting broke? If so, please state how they are constructed and operated.

852 A. Yes, sir; they have a lever in the centre of the car that connects the brakes from each truck, and they are operated on both trucks from either end of the car. I also know of a double-acting brake that has two levers under the centre of the car.

6. Q. Please state when and where you first saw a double-acting brake operating the brakes on both trucks from a windlass at either end of the car.

A. I first saw it on the Central road of New Jersey in about 1853.

7. Q. While you were on the New Jersey road, what opportunities had you for knowing what kind of brakes were used on the cars of that road?

A. I was engineer, and had to see that the brakes were in order, as our stopping powers depended upon them. I used to look to see them when they did not operate right.

8. Q. Could there have been double-acting brakes used on any of the passenger or crate cars of the said New Jersey Railroad while you were employed on that road, and you not know it?

A. No, sir; there could not.

9. Q. What trains did you run on while you were on that road?

A. I ran the mail train on the Philadelphia trains as far as New Brunswick.

10. Q. While you were running on this road, did you have any of the Camden and Amboy Company's cars in your trains? If so, about how often?

A. Yes, sir; generally every other day.

11. Q. Please state, if you know, what kind of brakes were used on those Camden and Amboy cars which were in your trains.

A. Single-acting brakes.

12. Q. While you were so engaged on the New Jersey road from 1846 to 1851, did or did you not know of a car belonging to the Camden and Amboy Railroad Company called the "John Tyler car"?

A. I did.

13. Q. How long did you know that car?

852 A. About three years.

14. Q. During this time did you have this Tyler car in your train? If so, about how frequently as near as you can state?

A. I did. I cannot say how often; it was a great many times.

15. Q. Do you know, of your own knowledge, what kind of a brake was used on this Tyler car during the three years you knew the car?

A. I do.

16. Q. Please state what brake it had on, and how you know.

A. It had a single-acting brake. It never had anything else but a single-acting brake on it while I knew it. I noticed the car particularly, as it was different from the other cars. I think there was a privy on the platform, and it had different varieties of seats in it; it had six-wheel trucks; the handles of the car were silver-plated. I saw the brakes on the car quite often.

17. Q. During the time you were on the New Jersey road from 1846 to 1851, about how many of the Camden and Amboy Company's cars were run in the trains that you were on?

A. About five of their cars in a train; they were not always the same cars, they would sometimes be changed; I mean the cars in the train made up of the cars of the Camden and Amboy Company.

18. Q. During the time you were on the New Jersey road, from 1846 to 1851, could there have been any double-acting brakes used on any of the Camden and Amboy Company's cars that were in your trains for any length of time and you not have known it?

A. No, sir; there could not.

EDWARD T. MOORE.

Subscribed and sworn to before me this 10th day of March, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

854 Further examination adjourned to March 12th, 1868, at 11 a. m.

NEW YORK, *March* 12, 1868—11 a. m.

Present, M'r Sayles, complainant in person, and M'r Whipple, of counsel for defendant.

JOHN T. ARESON, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is John T. Areson; I am 57 years of age; I reside in Brooklyn, New York; I am superintendent of car-repairs on the Brooklyn City Railroad.

2. Q. Were you ever employed by the Long Island Railroad Company; if so, when, for how long a time, and in what capacity?

A. I was; from 1840 to 1861, as foreman of car-repairs.

3. Q. Do you know John Leach; if so, when did you know him first, and where?

A. I do. I knew him first along about 1841 or 1842, on the Long Island Railroad, when I went there; he was there when I went there.

4. Q. About how long did he remain there, and what was his business?

A. Until 1847, if I mistake not; he was part of the time acting as general superintendent; the forepart of the time he did not have as much power as in the latter part.

5. Q. Do you know what kind of brakes were on the cars of the Long Island Railroad during the time said Leach was on the road?

A. Yes, sir; a single brake, that braked from one end of the car.

6. Q. Please state what your opportunities were for knowing what kind of brakes were on the cars of that road during the time inquired of.

855 A. Because I had charge of the car-repairs; they came into the shop that I had charge of for general repairs.

7. Q. Are you acquainted with the construction and operation of the double-acting car brake? If so, please describe it.

A. I am; you take hold of a lever and operate on both trucks from one end—they are connected by rods from a centre lever and then rods to the brake; that is the way they are connected in a horse-car. In a steam-car it is different. In a steam-car there is a rod connected to a centre lever and then to a lever on the brake on the inside of the truck; the connections are both alike from each end, connecting both trucks alike.

8. Q. When did you first see a double-acting brake on a car, and where was it?

A. The first one I saw was one on the Long Island Railroad, which I had put on myself. I should think it was in 1848, as near as my memory serves me.

9. Q. Was it before or after M'r Leach left that road, in 1847?

A. It was after Leach left the road.

10. Q. Please state what kind of a car you attached the double-acting brake to that you spoke of.

A. A baggage-car.

11. Q. Please state how it was attached to the car and how it operated.

A. It had a centre lever and a chain attached to it that came up through the baggage-car over a roller on to a shaft, and a wheel on the end of the shaft that turned it up and braked the car. It was operated on the inside of the car, and operated on all eight wheels.

12. Q. If there had been double-acting brakes used on any of the cars of that road before you put this brake on the baggage-car in 1848, as you state, would you have known it?

A. I should.

13. Q. Did you know Uriah Van Voorhis while on that road; if so, for how long a time did you know him, and what was his occupation while on that road?

856 A. I did know him. I cannot say for how long a time I knew him. He had charge of the cars that ran down to the South Ferry, to do slight repairs and see that they were properly oiled when they went out in the trains.

14. Q. Where were the cars repaired that belonged to that road?

A. The general repairs were done at Jamaica, about eleven miles from Brooklyn. Any small slight repairs he did down at the ferry.

15. Q. In case any new improvements were to be applied to the cars of that road, who would have been applied to with reference to putting them on?

A. I should think the man who had charge of the general repair shop.

16. Q. Who had charge of the general repair shop between 1844 and 1847?

A. I was there as foreman under Leach.

17. Q. Could Uriah Van Voorhis have applied a double-acting car brake, with a cross-lever under the centre of car, and such car have been run on that road for any length of time between 1844 and 1848 and you not to have known it?

A. There never was one applied until I applied it.

18. Q. Did you know a man named Patrick Mitchell on the Long

Island Railroad; if so, what was his business and where was he employed from about 1844 to 1848?

A. I knew him. He came there as helper in the blacksmith shop at Jamaica, and from there he went to the ferry, the railroad-yard at the South Ferry, Atlantic street, Brooklyn, the same yard where Van Voorhis was. He went there, I think, as blacksmith.

JOHN T. ARESON.

Subscribed and sworn to before me this 12th day of March, 1868.

JOSEPH GUTMAN, Jr.,
Examiner, &c.

Cross-examination waived by defendant's counsel.

857 John D. Chapman, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is John D. Chapman; I am 46 years of age; I reside at Brooklyn, New York; I work in the repair shop of the Brooklyn City Horse Railroad.

2. Q. Were you ever employed on the Long Island Railroad; if so, for how long a time and in what capacity?

A. I was. I went there first somewhere about 1846, and went to work at the Jamaica shop, in the carpenter's department, under M'r Areson. I remained there in the neighborhood of a year or a year and a half, and then was discharged and remained out one day, and then went back again and stayed there at work several years.

3. Q. Please state if you know what kind of brakes were used on the cars of that road when you went there.

A. They were single brakes, on four wheels—one truck.

4. Q. Please state, if you know, about how long they continued to use this single brake on all of the cars?

A. I cannot tell exactly; they ran some time. It may be two years, or a year and a half.

5. Q. Are you acquainted with the construction and operation of double-acting car brakes? If so, please describe them.

A. Yes, sir. It is a brake that operates upon the whole eight wheels from either end of the car.

6. Q. Please state, if you know, when and where you first saw a double-acting car brake on a car.

A. On the Long Island Railroad. I cannot tell distinctly when, but it must have been between the time I first came there in 1846 and along in 1848 or 1850.

7. Q. Please state, if you know, who had the first double-acting brake you ever saw attached to a car.

A. M'r John Areson.

8. Q. What kind of a car?

858 A. It was called a baggage car.

9. Q. What opportunities did you have of knowing what kind of brakes were used on the cars of the Long Island Railroad up to the time M'r Areson put this double brake on that baggage car?

A. I had a hand in almost every car that was repaired there.

10. Q. Did you know M'r John Leach, the general superintendent of that road?

A. Yes, sir; I knew him as general superintendent.

11. Q. Do you know about what time he left that road?

A. I stood near him when his discharge came to him, but I could not say what year it was in. I was in the employ of the road at the time. I can't tell you what date it was.

12. Q. Do you recollect whether it was before or after he, M'r Leach, left that road that M'r Areson put this double brake on the baggage-car you have spoken of?

A. It was after.

13. Q. Could there have been any double-acting brakes used on any of the passenger or baggage cars of that road for any length of time from the time you went there, in 1846, to the time M'r Areson put this double brake on the baggage car, and you not have known it?

A. No, sir.

14. Q. What kind of brakes were used on the freight cars of the Long Island road previous to the time M'r Areson put the first double brake on the baggage-car you have spoken of?

A. Single-acting brakes on one end of the car only.

15. Q. What kind of brakes were continued in use on the freight cars while you were employed on that road?

A. Single-acting brakes.

JOHN D. CHAPMAN.

Subscribed and sworn to before me this 12th day of March, 1868.

JOSEPH GUTMAN, JR.,
Examiner, &c.

Cross-examination waived by defendant's counsel.

859 WILLIAM FREDERICKSON, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows?

1. Q. What is your name, age, residence, and occupation?

A. My name is William Frederickson; I am 42 years of age; I reside at Williamsburgh, New York; I am a blacksmith.

2. Q. Were you ever employed by the Long Island Railroad Company? If so, when, and in what capacity?

A. I was; first as a helper in the blacksmith's shop in 1845. I worked as a helper just a year and eleven months in the machinists' blacksmithing, and then M'r Leach put me in the shop with the carpenters to do the car-work—the blacksmithing for the car-work. I remained on the road until about 1861.

3. Q. Please state, if you know, what kind of brakes were used on the cars of that road when you first commenced there.

A. The single brake.

4. Q. Was the single brake used on all of their passenger and baggage cars?

A. Yes, sir.

5. Q. Do you understand the difference in the operation of the single-acting brake and what is called a double-acting brake?

A. I have made the iron-work of both.

6. Q. Where and when did you first see a double-acting brake attached to a car?

A. On the Long Island road; I should think about the latter part of 1847 or 1848.

7. Q. By whom was the first double-acting brake you ever saw attached to a car, if you know?

A. By M'r John T. Areson.

8. Q. What kind of a car was it to which M'r Areson attached this brake?

A. A baggage car, I think.

9. Q. Please state how this brake operated.

860 A. There were two levers to each truck, the front lever under the platform attached by rods. When you screw up the brake on the inside of the car, it drew from the forward lever, and the back lever had another rod connected to it to the front of the truck, if I remember right. All that I saw of it was that I made the rods and levers, and when it was on I went out and looked at it.

10. Q. Do you recollect whether there was or was not a long cross-lever under the centre of the car?

A. I don't remember of any such lever.

11. Q. Were there any double brakes attached to passenger-cars while you were on the Long Island Railroad? If so, when first, if you know, and how were they constructed?

A. There were new cars came there with them on. I don't think I could tell the year they came in—about 1851 or 1852. They were attached by long rods running from truck to truck. There were two levers to each truck; the forward lever was very crooked; the back levers were straight. If I remember right the long rods had a sort of swivel with a hook so that they could be hooked in the levers.

12. Q. Were these double brakes that came there on the passenger-cars differently constructed from the one M'r Areson put on the baggage-car?

A. Yes, sir.

13. Q. State, if you know, what name this double brake that came on the passenger-cars was known by.

A. I never heard it called by any name, not to my knowledge.

14. Q. Please state the difference, if you can, between the operation of a double-acting brake and a single-acting brake.

A. One takes effect on four wheels and the other on eight wheels, don't it?

15. Q. Do you know of your own knowledge whether one applies the brakes to only four wheels from one windlass and the other to eight wheels?

861 (Question objected to as assuming to instruct the witness.)

A. I believe it does; the double-acting brake must apply the brake to eight wheels from one end; I am certain it does; I have tried it often enough.

16. Q. How positive are you that the double brake M'r Areson put on the baggage-car you have spoken of was the first double-acting brake you ever saw on a car?

A. I often had to go out and jack up the cars, overhaul the trucks, and put in new brasses; then I had a chance to see whether there was a double brake or not. I am positive that the brake I saw M'r Areson rig up on this baggage-car was the first I ever saw. I never saw one before, except a grappling-brake.

17. Q. Are you or are you not able to describe all the peculiarities of the brake that M'r Areson attached to the baggage-car you have spoken of?

A. It is a great while ago since I made the iron, but I think I can come pretty close to it if I think of it. There was a brake-wheel inside of the body of the car, with a shaft attached to it; a chain ran down through the box from the shaft to the bottom of the car, and a chain attached that passed through the eye of the chain that came from the shaft, and then the chain attached to the rods and the rods to the lever. There was no centre lever under the body of the car; I am sure of it.

18. Q. You say there was no centre lever. Please state how that applied the brakes to both trucks without a centre lever.

A. I think I made a mistake, when I come to think it over; there was but one lever in a truck, instead of two; the forward lever hung by the forward brakes attached by a jaw, and from the bottom of the lever to the back brake-beam a rod was attached, and four springs in a truck to throw the brake-shoes off. From the top of these levers that hung to the front brake there was a rod passed within about three feet of the box, with an eye in it, and the same from the other end of the car, and then there was a chain from the shaft with a ring in the end of it, 862 and the chains that connected the lever in each truck were made fast to this ring in the chain, and passed through to the other lever in the other truck, so that by winding up the windlass it operated the brakes on both trucks without a centre lever.

19. Q Could there have been in use on any of the passenger or baggage cars of the Long Island road double-acting brakes operating on the brakes of both trucks from one windlass, for any length of time, from the time M'r Leach sent you into the shop to do the blacksmith work for the carpenter shop, up to the time M'r Areson put this double brake on the baggage-car, and you not have known it?

A. No, sir.

W. FREDERICKSON.

Subscribed and sworn to before me this 12th day of March, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Cross-examination waived by defendant's counsel.

Examination further adjourned to March 13, 1868, at 11 a. m.

NEW YORK, *March* 13, 1868—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

Examination adjourned by consent to 3 p. m. of same day.

863 3 p. m., same day.

Present, the complainant and his counsel.

Examination further adjourned to March 14, 1868, at 11 a. m.

NEW YORK, *March 14th*, 1868—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

JOHN T. ARESON, recalled as a witness on the part of the complainant, and having been duly cautioned and sworn, deposes and says as follows:

19. Q. You stated in your deposition the other day that you applied a double-acting brake on a car on the Long Island Railroad in 1848, and you described that brake as having a centre-lever; did you about this same time put upon the Long Island road any other kind of double brake?

A. Yes; I used a chain.

20. Q. Will you please look at the drawing now shown you and marked "Complainant's Exhibit 1, New Proofs," and state what it represents?

A. That is the same thing as that which I put on with the chain.

21. Q. What kind of a car did you put this brake, shown in the drawing, on?

A. A baggage-car.

864 22. Q. About how near together in point of time was the brake with the centre-lever which you described the other day as applied by you in 1848, and the brake represented in the drawing, put on?

A. It was not a great way apart. I cannot say exactly.

23. Q. Can you state about how many months apart?

A. Some two, three, or four months.

JOHN T. ARESON.

Subscribed and sworn to before me this 14th day of March, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Cross-examination waived by defendant's counsel.

PATRICK MITCHELL, a witness called on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is Patrick Mitchell. I am 38 years of age. I reside at Hunter's Point, Long Island, New York. I am foreman over a gang of men at the round-house of the Long Island Railroad.

2. Q. When did you first go into the employment of the Long Island Railroad Company?

A. In the neighborhood of 1845.

3. Q. Did you know John T. Areson, who was formerly employed on the Long Island Railroad?

A. Yes, sir.

4. Q. Did you also know John Leach, who was employed on that road?

A. Yes, sir.

5. Q. When you first went into the employment of the Long Island Railroad Company, what kind of brakes were in use on the passenger-cars of said company?

A. Single brakes.

865 6. Q. And what kind on the freight-cars of said company?

A. At that time they were single brakes.

7. Q. When did you first see any double-acting brakes acting on eight wheels of a car from one windlass?

A. In about 1848.

8. Q. What railroad was it on?

A. The Long Island Railroad.

9. Q. What kind of a double-acting brake was it? Please describe it.

A. It braked with two levers on the inside of the car, connected by a chain. The levers were on the inside part of the truck, one lever in each truck. There was a chain leading from the top part of the levers to the bottom of the car, to the chain that went to the windlass up inside of the car. There was a rod from those levers to the outside of the trucks.

10. Q. Please look at the drawing shown you, marked "Complainant's Exhibit 1, New Proofs," and state what it represents.

A. That is the brake that I have been describing, only these levers are on the outside of the truck in the drawing. There was also a brake put on the road which had the levers on the outside of the truck as in that drawing.

11. Q. Was there any other kind of brake acting on eight wheels put on the Long Island road in 1848, or about 1848, besides the kind you have described?

A. Yes, sir; there was a brake acted with the levers with a cross-lever underneath the car. That cross-lever was connected from the lever of the trucks, and also by a chain with the windlass that went up in the inside of the car.

12. Q. Who put on these kinds of brakes which you have described, so far as you know?

A. I suppose by M'r John T. Areson. They were put on in Jamaica.

13. Q. What kinds of cars were these kinds of brakes that you have described put upon?

A. We call it a baggage-car.

866 14. Q. Were these kinds of brakes you have described as put on by M'r Areson the first double-acting brake of any kind which were put on the cars of the Long Island Railroad while you were in their employment?

A. They were the first I saw on the road.

15. Q. Could any double brakes have been on the road before these kinds you have described, without your knowing it and seeing them after you went there?

A. No, sir.

16. Q. When did you first see on said Long Island Railroad any double brakes acting on eight wheels of a car from a windlass at either end of the car?

A. It must have been along in 1851 or 1852 somewhere.

17. Q. What cars were these brakes on which you saw in 1851 or 1852?

A. Passenger-cars.

18. Q. Do you know whether those cars were built by the Long Island Railroad Company, or were they built elsewhere?

A. They bought them new, already built.

19. Q. Were the double brakes on them when they came on to the road?

A. Yes, sir.

20. Q. Please state how you know that there were no other double brakes acting on eight wheels from a windlass at either end of the car on the Long Island road before these cars came on in 1851 or 1852?

A. I worked in their employ, and worked on the cars, and they could not have been on unknown to me.

21. Q. Do you remember an accident on the Long Island Railroad? And, if you do, state about when such accident was, and whether, after such accident, you received any particular instructions from the president of said road, and, if yes, state what such instructions were.

A. There was an accident. There is a grade where they run the cars into the depot in Brooklyn. When they cut loose the train, it was run in by the brakeman, and the chains of the brakes broke, and the cars struck the other cars in the depot, and mashed them up, and
867 they came near running into the river. This was some time between 1849 and 1850. I received instructions from the president to go and examine the brakes every day, and see that they were in running order.

22. Q. For about how long a time did you continue to examine the brakes every day under these instructions of the president?

A. While I remained at the South Ferry; until we left it in about 1861.

23. Q. Do you know a man named Uriah Van Voorhis, who was formerly employed on the Long Island Railroad?

A. Yes, sir.

24. Q. When did you first get acquainted with him?

A. I have been acquainted with him since 1847 or 1848.

25. Q. Were you acquainted with him at the time he came back to the Long Island road, in about 1847, after having been away from there some time?

A. Yes, sir.

26. Q. Where was Van Voorhis employed after he so came back in 1847, and what sort of work did he do?

A. He was employed at the South Ferry as yard master, in seeing over the cars.

27. Q. Did he have charge of repairs of cars, and, if so, of what kind of repairs?

A. He had charge of the cars for the repairs that were done there, very light, as to the running gear, and making up trains to see that they were right. The general repairs were done at Jamaica.

28. Q. Were any double-acting brakes put on any of the Long Island Railroad cars at South Ferry, Brooklyn, after Van Voorhis went back there in 1847, and between that time and 1851 or 1852?

A. None.

29. Q. Were there any put on any cars anywhere on the road between 1847 and 1851 or 1852?

A. Those that I have spoken of on the baggage-cars; no other.

30. Q. Who did the blacksmithing for the Long Island
868 road at South Ferry, from the time when Van Voorhis went back
there in 1847, up to 1851 or 1852?

A. I did. A part of the time I had another man employed with me.

31. Q. If any double brakes had been put on the Long Island Railroad cars at South Ferry, after Van Voorhis went back there in 1847, and up to 1851 or 1852, who would have done the blacksmithing-work on such brakes?

A. I would.

PATRICK MITCHELL.

Subscribed and sworn to before me this 14th day of March, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Cross-examination waived by defendant's counsel.

Examination further adjourned to March 16th, 1868, at 11 a. m.

NEW YORK, *March 16th*, 1868—11 a. m.

Present, M'r Sayles, complainant, in person, and M'r Whipple, of counsel for defendant.

JOHN D. CHAPMAN recalled as a witness on the part of the complainant, and having been duly cautioned and sworn, he deposes and says as follows:

16. Q. Please look at the drawing now shown you marked "Complainant's Exhibit 1, New Proofs," and state what it represents.

A. That represents the first double-acting brake that I ever saw work on the Long Island road.

17. Q. Was there any other kind of a double-acting brake used on a car of that road about the same time you first saw one like said exhibit? If so, please describe it.

869 A. There was an alteration. The brake hung in a little different form, some time within a few months of this in the exhibit. The difference in the other one was that there was a center cross-lever, single lever, and double levers, finally, but it was some time after. I can't say exactly the day or the month. There were improvements came up later.

18. Q. Where was the centre cross-lever attached to the car?

A. Hanging to the bottom timbers about the centre of the car.

19. Q. Please state what your business was on the Long Island road, and where you were located between 1847 and 1852.

A. I was stationed at Greenport. It was along in the next spring after Leach had left—about six months after M'r Leach left—that I went there. I remained there four years. My business there was to see that the running parts of the freight, baggage, and passenger cars were in order. In fact, during the time quite every car that they owned came there, and locomotives also.

20. Q. During the four years you were at Greenport, what kind of brakes were used on all the cars, passenger, baggage, and freight, that came to Greenport?

A. Single brakes.

21. Q. Were there any double-acting brakes used on any of the cars of that road during the four years you were at Greenport? If so, on what cars?

A. I can't remember of seeing any brake rigged to work on all eight wheels—that is, to brake on the eight wheels—during the time that I was there.

22. Q. You speak, in answer to question 17, about a brake like Exhibit 1, and another brake with a cross-lever under the centre of the car; please state what kind of cars they were on.

A. The first that I can recollect was a car called the mail-car and to carry the baggage, that was called the baggage-car. The next one was also a baggage-car. The first I saw was with two levers under the body of the car, that I can remember.

870 23. Q. Please state as near as you can what year it was when you first saw these double brakes on these baggage-cars.

A. It must have been along from 1850 to 1853; if I could remember the date when I first went there, I could tell the time. It can't be far from the years I speak of.

JOHN D. CHAPMAN.

Subscribed and sworn to before me this 16th day of March, 1868.

JOSEPH GUTMAN, J'R.,
Examiner, &c.

Cross-examination waived by defendant's counsel.

Examination further adjourned to March 17th, 1868, at 11 a. m.

NEW YORK, *March 17th*, 1868—11 a. m.

Present, M'r Sayles, complainant in person, and M'r Whipple, of counsel for defendant.

Examination further adjourned to March 18th, 1868, at 11 a. m.

NEW YORK, *March* 18, 1868—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

THOMAS SAYLES, complainant, called as a witness on his own behalf, and having been first duly cautioned and sworn, deposes and says as follows:

1. Q. Are you the complainant in this case?

A. I am.

871 2. Q. Did you about the time when you acquired an interest in the patent upon which this suit is brought, have occasion to visit the Camden and Amboy Railroad for any purpose; and, if so, about when did you go there, and whom did you see, and for what purpose did you go?

A. In the month of July, 1852, I made arrangements with M'r Henry Tanner to try to introduce his patent brake, for which I was to have a certain portion of the proceeds. In the latter part of that month I started from Buffalo, New York, where I was living at that time, and came to New York by way of Dunkirk on the Erie Railroad. I saw the Erie Railroad Company first. I then went to Jersey City and saw M'r David H. Baker, who had charge of the car department of the New Jersey Railroad and Transportation Company, and saw some of the Tanner brakes on their cars. From there I went to Bordentown, New Jersey, and saw M'r Edwin Lockwood, the superintendent of car-repairs of the Camden and Amboy Railroad. My object in going there was to introduce the Tanner car-brake on that road. This was about the last of July or first of August, 1852.

3. Q. Please state fully what conversation, if any, took place between you and said Lockwood at this time.

A. I showed M'r Lockwood at this time the letters patent for the Tanner patent. He told me that he had seen a model of the same thing some time before this, shown to him by a man who said his name was Tanner, but who was a stranger to him, but that their company had made arrangements with Hodge to use his patent brake. He did not know whether they had paid him for his patent or not, but he had had orders to put the Hodge brake on their cars. He was at this time putting the Hodge brake on some two or three cars, and I saw the Hodge brake at that time on one or two of their cars on the track. I told him that M'r Baker was putting the Tanner brake on the New Jersey Railroad cars. We had quite a long argument at this time as to which of the two brakes, the Tanner brake or the Hodge brake, was the best.
He thought the Hodge brake had some advantages over the
872 Tanner, and that the Tanner had some advantages over the
Hodge. He said that if he had seen the Tanner brake before they had made arrangements for the Hodge, he thought he should have recommended their company to use the Tanner brake. He said he had seen the Tanner brake on the New Jersey cars that Baker had put on, and the principal reason of his liking the Tanner brake was that it did not require the taking up of so much slack when they applied the brake by the windlass; for in the Hodge, he said, they had to take up the slack of both ends before the brakes could be brought to bear on the wheels, while in the brake Baker put on, the cross-lever being fastened in the centre of the car, they would only have the slack of one end to take up before the brakes could be brought to bear on the wheels. I contended that the Hodge brake infringed the Tanner patent, and that if they used the Hodge brake they would have to pay for the Tanner

patent also. He said he could not see how that could be, when the Hodge patent was granted first. He admitted that if the Tanner patent dated back of the Hodge patent, that the Hodge patent would infringe the Tanner patent. This is the substance of the talk I had with him at this first interview. There was a great deal more said at this time.

4. Q. You say there was a great deal more said at this time. Please state what it was.

A. We had a long talk about the advantages of using the double brake, of the saving of one-half of the brakemen at least, stopping the trains more quickly, saving of wheels from their not being so liable to slide them, etc. This in fact was the first railroad party that I had had a very long talk with, as it was the first road that I had called on where they were not using the Tanner brake. The New York and Erie Railroad Company were using the Tanner brake, and also the New Jersey Railroad Company, which were the only two that I had visited since I had undertaken to introduce the patent, my object being at this time to get the brakes in use or tried on the roads, not to try to sell the right. I should think that I spent with M'r Lockwood at this time from
873 an hour to an hour and a half, and as he seemed to be very friendly and willing to talk, and it being rather new business to me, I was anxious to get all the information that I could get with reference to car-brakes. I cannot state all that was said between us. I cannot recollect it. I have given the substance of all the conversation that I had with him.

5. Q. Did you at this interview solicit Lockwood to apply and try the Tanner brake, that is, the form of double brake having a single centre-lever under the car-body?

A. I did.

6. Q. Did he say anything to you about such a form of double brake with a single centre-lever under the car-body having been in use on the Camden and Amboy cars?

A. He did not. All he said about such single centre-lever brake, or about his seeing it before, was that he saw some that Baker had put on the New Jersey cars and a model that had been shown to him some time before by Tanner, of the same thing.

7. Q. Did you afterwards have occasion to see Lockwood again; and, if so, when, and for what purpose? and state the conversation, if any, which took place.

A. I did have occasion to see Lockwood again; I think it was in the latter part of 1853. It was soon after an amended answer was filed, or notice of special matter, in the case of Henry Tanner against the New York and Erie Railroad Company on the same patent concerned in this suit, where they set up the Isaac Newton Stanley brake as being used on the New Jersey Railroad and Transportation Company. I called on M'r Lockwood at this time to ascertain, if I could, whether that Stanley brake had been used for any length of time between Jersey City and Philadelphia. I was told in Jersey City that it was a brake that had a cross-lever, or levers, under the centre of the car, and that it had run through to Philadelphia, but could not find any one in Jersey City that knew much about it, and thought that if it had run for any length of time over the Camden and Amboy road that I would be likely to learn something about it from Lockwood. M'r Lockwood told me that
874 he thought it could not have run long on the road, or he should have seen it or heard something about it. I told him it was said to have been put on in 1842. He said he never had heard or seen anything of it or of any other double-acting brake until Hodge came there

with a model of his brake some two or three years before this, when they went to work and put the Hodge brake on some of their cars, and they liked it and had bought the right to use it.

8. Q. Did Lockwood, at this second interview, say anything about his having seen a model of the Tanner form of double brake; that is, with a single centre-lever? If so, what did he say?

A. He did; he said, about the time he saw this brake with a centre-lever, that Baker put on the New Jersey Railroad and Transportation Company's cars, he saw a model that Tanner brought there to show him, which had a cross-lever on the centre of the car, the same as Baker had put on the cars.

9. Q. Did Lockwood, at this second interview, say anything to you about double brakes with single centre-levers having ever been used on the cars of the Camden and Amboy Railroad?

A. He did not.

10. Q. Did you, either at the time of this second interview of yours with Lockwood or at the time of the first interview with him that you have spoken of, see many of the Camden and Amboy cars? And, if you did, what kind of brakes were on them?

A. I did, at both interviews, see quite a large number of their cars—passenger and baggage cars, or crate cars. The first time that I was there, in 1852, all the cars I saw had the single brake on, except, I think, two cars I saw with the Hodge brake on, and they had two or three cars, passenger cars, in the shop on which they were putting the Hodge brake at that time. The second time I was there I saw the Hodge brake on quite a number of cars, and I saw the Stevens-brake on one car. All the other cars that I saw had on the single-acting
875 **brake, operating on one truck only. I mean the passenger and baggage cars; I did not examine the freight cars that I recollect of**

11. Q. And you saw no single centre-lever double-brakes on any of their cars at any time?

A. I did not.

12. Q. Did you, after this second interview, again see Lockwood or anybody connected with the Camden and Amboy Railroad; and, if so, when was it, and how came you to be there?

A. I did see Lockwood a number of times after that, and also the superintendent, M'r Van Rensselaer, and the president of the road, M'r Stevens. The first time I saw them after this was soon after the trial with the New York and Erie Railroad on this same patent, which was tried in October, 1854; and at this time I saw on some of their cars this single centre-lever Tanner double-acting brake, in connection with another brake they called the McLaughlin brake, which they applied by slacking the engine. This was in November or December, 1854. My object in going there at this time was to satisfy them that they were infringing the Tanner patent by the use of the Hodge, and to get a settlement with them.

13. Q. What took place between you and any of the officers of the Camden and Amboy Railroad, in respect to a settlement with you? State fully.

A. M'r Van Rensselaer, the superintendent, refused to settle with me, because he said he had understood that the New York and Erie Railroad Company had appealed the case, but that if that case was finally decided in my favor he thought they would settle with me. He said he could not understand how the Tanner patent could be valid when the Hodge and Stevens patents were both issued for substantially the same

thing as the Tanner before the Tanner patent; but he said that he would submit the matter to their board of directors. I saw M'r Edwin Lockwood at this time, and showed him the decision in the Erie case, and showed him where the Hodge brake was decided to be an infringement, and the Stevens also, and told him that now I had seen that they had put the Tanner brake on their cars with the McLaughlin.
876 He said they had put the centre-lever brake on because they could not apply the McLaughlin brake so well with the Hodge brake. Some time after this, I think in the spring of 1855, I saw M'r Stevens, the president of the Camden and Amboy road, with regard to a settlement with their company. He told me he had heard something about the affair, and that he would make inquiries, and if they were using my patent, or infringing it, they would pay me. He said he would have the matter submitted to their board of directors, and asked me to call on them again. I did call on them again, and was told that they had forgotten to submit it to their directors, but would do so at the next meeting, and when I called the next time they again told me that they had forgotten to submit it to their directors. I finally called there about the middle of November, 1855, when I was told by M'r Van Rensselaer that it had been submitted to their directors, and he was authorized to settle with me, and he did settle with me for the right to use the Tanner patent car-brake.

14. Q. How much did the Camden and Amboy company pay you for this right to use the Tanner patent?

A. They paid me $1,350.

15. Q. Did you give them a license in writing; and, if so, have you a copy of it which you can annex?

A. I did give them a license in writing, but I did not keep a copy of it, and have no copy.

16. Q. Have you, since the present further proofs in this suit were commenced to be taken, caused a request to be made, through M'r Van Rensselaer, of the Camden and Amboy Railroad Company, to produce this license, or a copy of it, to be annexed to the record in this case? If yea, have they produced it?

A. I have caused such a request to be made of M'r Van Rensselaer, and it has not been produced.

17. Q. At any time, while your negotiations for this settlement were going on with the Camden and Amboy Railroad Company, was anything said to you by any person whatever employed by said company or connected with it, or did you hear anything in any way what-
877 ever about the use of a single centre-lever double brake on the John Tyler car, or upon any other car on said railroad?

A. I did not hear anything about any such centre-lever brake being used on the Camden and Amboy Railroad at the time I was trying to settle with them, or at any other time until last spring, when this case was opened to let in further proofs, except what I heard about the Stanley brake being used and run over their road in 1842. The first I had heard of the single centre-lever brakes being used on the Camden and Amboy cars was when I saw it on their cars with the McLaughlin brake in the latter part of 1854. I never heard of the John Tyler car before last spring; I mean this last spring when the case was opened for further proofs, was the first I ever heard that the single centre-lever double-acting brake was ever used on any of the Camden and Amboy cars before 1854, and the first I heard of the Tyler car.

18. Q. Have you a memorandum of the sum you received for the

license to the Camden and Amboy Railroad Company, so that you are positive as to the amount and time when it was paid?

A. I have such a memorandum, and am positive as to the amount, and it was paid on the 16th day of November, 1855, and was so put down in my account-book at the time.

19. Q. At any time while your negotiations for this settlement by the Camden and Amboy Railroad Company for their infringement of your patent were going on, was any objection made by them to settling on account of any prior use by them, or within their knowledge, of a double-acting brake?

A. There was not; except that they first contended that the Hodge brake was prior to the Tanner patent.

20. Q. Then, except this matter of the Hodge brake, was there any claim made to you by anybody connected with the Camden and Amboy Railroad during the negotiations for the settlement, or at the time of the settlement, of any prior use by them, or within their knowledge, of a double-acting brake?

878 A. There was not.

21. Q. During these negotiations for a settlement did Edwin Lockwood take part in the conversations relating to them, and did he converse with you about the subject of them?

A. M'r Lockwood did converse with me on the subject on several occasions while I was negotiating with them, and told me that he had advised them to settle with me if the Tanner invention dated back of the Hodge.

22. Q. You say if the Tanner invention dated back of the Hodge; what claim, if any, did Lockwood make about this, or what did he say about it?

A. He said he could not understand how the Tanner patent could be valid when Hodge's patent was granted first, and was for substantially the same thing.

23. Q. Was that all he said in opposition to your claim for a settlement of the company's infringement?

A. It was.

24. Q. With the exception of this claim that the Hodge patent was granted first, and that therefore the Tanner patent was invalid, was anything said to you by anybody connected with the Camden and Amboy road in opposition to your demand for the settlement of the infringement?

A. I think M'r Van Rensselaer at one time mentioned about the Stevens patent also being granted before the Tanner patent; nothing else.

25. Q. M'r Van Rensselaer has testified in this case, in speaking of the settlement made with you in 1855, that M'r Lockwood objected to settling for the Tanner patent on the ground that the brake was in use by the company. Except this claim that because the Hodge patent was granted first, the Tanner patent was not valid, and excepting what M'r Van Rensselaer said about the Stevens patent, was anything whatever told you during the settlement negotiation by Lockwood or Van Rensselaer or by anybody else connected with the company, about the use by the company of the Tanner brake?

A. There was not.

879 26. Q. State whether you informed the Camden and Amboy Company in connection with your demand for settlement that you would sue them if they did not settle.

A. I did tell them, after they had neglected to lay it before their board of directors, as they had agreed, that I wanted their decision in the matter; for if they were not going to settle I should commence suit at once.

27. Q. Did Lockwood, at any time when conversing with you about the Hodge brake, state to you that the Hodge brake was put on the Camden and Amboy cars under his (Lockwood's) protest, or anything to that effect?

A. He never did.

28. Q. Did M'r Lockwood know your name at the time you called on him in 1852 and 1853, and did he know it at the time you were negotiating with the road for the settlement?

A. When I first called on him in 1852 I gave him my name, and when I saw him after that at different times until the settlement was made, he appeared to know me, and I supposed that he did.

29. Q. Did you see said Lockwood from four to six weeks before the 31st day of July, 1867?

A. I did see him in the latter part of June, 1867.

30. Q. What did you go to see him for on that occasion?

A. To learn something about this John Tyler car and the brake that was said to have been used on it.

31. Q. Did you have more than one interview with Lockwood about this time, the last of June, 1867, or within a few weeks of that time? If so, about how many interviews?

A. I had but this one spoken of, except when he was on the stand as a witness in this case.

32. Q. Please state fully the conversation between you and Lockwood at that interview.

A. I found Lockwood in his office at Bordentown. I spoke to him about a new invention for lubricating car-journals, and then inquired of him about a certain statement that purported to have been made by him about a car on the Camden and Amboy road called the John Tyler 880 car, with the centre-lever double acting brake. I showed him a copy of the statement that he had made and asked him if he had made that statement. He told me he had made a statement something like that and gave it to M'r Whipple. I asked him if the statement was true, and he said he thought it was. I asked him if he was not mistaken in regard to the time that brake was put on the Tyler car, and he said he knew the Tyler car was rebuilt in 1843, and that Tyler rode on they car when it was new in June, 1843, and he thought that brake was put on it the time it was rebuilt. He said the car was destroyed some two or three years before this, and he knew that brake was on it when it was destroyed, and had been on for a great while. I asked him why they settled with me in 1855 for the Tanner patent if they had used that brake since 1843. He said their folks would rather pay two or three hundred dollars than to be bothered with a lawsuit. I asked him if he could not recollect better, in 1853, when the brake was put on the Tyler car, than he could then. He said he should think he could. I asked him, then, if he did not recollect telling me at one time when I called on him in 1853, about a brake being put on the New Jersey Railroad and Transportation Company's car in 1842, called the Isaac Newton Stanley brake, and that the first he ever saw anything of a centre-lever brake was about the time Baker put one on a car on the New Jersey road in 1851, and Tanner called there with a model about that same time, and that the first double-acting brake that he ever saw or ever put on a Camden and Amboy car was the Hodge brake. He hesitated some time, and said: "I think I do not recollect that." He said he thought he recollected something about my inquiring of him if he knew anything about this Stanley brake being used on the New Jersey cars. This was the substance of the conversation.

33. Q. Did he seem to remember you at this interview ?

A. When I first met him I mentioned my name to him and told him it had been a long time since I had seen him. He spoke to me in a very friendly manner. I supposed at the time that he did recollect
881 me. I judged, from his manner and friendly way of speaking all through the interview, that he knew me.

34. Q. Did he tell you in that interview that he had no recollection of you, and that he did not know you ?

A. He did not.

35. Q. He has testified that you asked him if he did not recollect your coming to Bordentown with a brake, and that through his recommendation M'r Van Rensselaer had a brake put on the car, and that through his recommendation it was put on. Did you say that to him ?

A. I did not.

36. Q. Did he tell you in that interview that nothing of this kind had transpired—that is, the matter inquired about in the 35th question ?

A. He did not.

37. Q. Did you then in that interview tell him that he must be mistaken, and that you wished to know if you couldn't do something for him to say that he was mistaken as to date, and did you tell him that if he could, that would leave a doubt as to the date of putting the brake on the car, and did you tell him that it was worth hundreds of thousands of dollars to you, and that you had a suit pending at Chicago for forty thousand dollars, and that had it not been for the model called the John Tyler it would have been decided in your favor ?

A. I did tell him that I thought he must be mistaken as to the time the brake was put on the Tyler car. There was nothing else said between us as inquired of in the question.

38. Q. Did he at that interview say to you that he was open to conviction, and that if you could show him he was wrong he would own it, but that he was sure he was right ?

A. He did not say that. He said it was a good while ago, and it was possible that he might be mistaken as to the time. He said when he made that statement to M'r Whipple he thought it was correct.

39. Q. You have stated that Lockwood told you, in the interview which you had with him in 1853, that the first double-acting brake that he ever saw or put on a Camden and Amboy car was the Hodge
882 brake. Are you positive of this, and was the statement which Lockwood made respecting it clear and distinct ?

A. I am positive, and M'r Lockwood seemed at the time to be sure, that the Stanley brake had not been used on the New Jersey car, for he said that if it had been used there for any length of time on the Philadelphia trains he must have seen it, and he knew that the first brake he ever saw that operated the brakes of all the wheels from either end of the car was the Hodge brake, and I recollect that I was well satisfied at the time that the Stanley brake could not have been used very long on the New Jersey road, for if it had, Lockwood would have been likely to have seen it, and then he would not have been so sure that the Hodge brake was the first double-acting brake he had seen. He was very clear and distinct in the statement of the Hodge brake being the first double brake that he ever saw or put on their cars.

40. Q. Do you know Joseph F. Talson, who has testified in this case ?

A. I do.

41. Q. Was he a witness on behalf of the railroad company, defendant in the suit of Henry Tanner against the New York and Erie Railroad Company, tried at Albany, in October, 1854?

A. He was.

42. Q. Were you present during the whole of that trial, and did you hear said Talson's testimony at that trial?

A. I was present during the whole of that trial, and did hear all of Talson's testimony.

43. Q. State what Talson testified to at that trial.

A. Talson stated on that trial that one Isaac Newton Stanley applied a brake to a car of the New Jersey Railroad and Transportation Company in 1842. He said that the brake that Stanley applied was tied up with strings, and that brake failed and did not go into use. He said that he afterwards took that brake off the car and strengthened the rods and applied it to a car mechanically like a certain model which they produced on that trial. He said that brake, as he applied it, ran
883 from Jersey City to Philadelphia, or opposite to Philadelphia, two or three times—it might have been more and it might have been less than three times. He stated that after this brake had run a week it was changed to a single foot-brake, and after he altered this brake to a single foot-brake, there were no double-acting brakes on their cars until he left the road that were acted on by a windlass from either end; that he left the road in the last of August, 1849. He said that the brake he put on had a lever in the centre and each windlass operated both the trucks at the same time. He said the brakes were operated by a rock-shaft and cams between the wheels; that they never were changed to the outside of the wheels. He said that brake would work on a curve, but would not work on a curve so well as the Tanner brake. He said that the one Stanley put on had three or four levers; that when he changed it and put his brake on, he added one transverse lever the same as the model that was shown there. He said that if you take out the arrangement of the brake he put on within the trucks, and put Tanner's arrangement in, you would have the Tanner brake. He said that there was a brake put on the tenders that could not be operated from both ends; that the brake on the tenders did not have an intermediate lever and only a single connecting-rod. He also stated that, after that trial of that brake, they continued to use the single-acting brake on all of their cars.

44. Q. In stating what he testified at that trial, have you made any use of notes; and, if so, for what purpose have you used such notes?

A. I have made use of the notes that were written down at the trial by Samuel Blatchford, esq., one of the counsel for the complainant in the case, for the purpose of refreshing my recollection. I have had these notes in my possession most of the time since the trial.

45. Q. Did Talson ever state to you this: that the only double brake operated from both ends of the car that he knew of up to the time he left the New Jersey Railroad, in 1849, was the brake tried on the New Jersey Railroad in 1842, and abandoned?

884 A. He has told me this a number of times since the trial of 1854.

46. Q. Talson has testified in this case that he told you that it was not the fact that the brake on the New Jersey road was only an experiment, and that it amounted to nothing, and that the facts in the case were decidedly against your patent, and that if he went to Chicago he should so state. Did he ever tell you so?

A. He never told me anything of the kind.

47. Q. Did you, at a time about two years previous to November, 1867, or at any other time, request Talson to go to Chicago to testify in a suit for you; and, if so, in what suit was it, and what did you want him to tesoify to in it?

A. I think it was something over two years ago I called on Talson, and told him I thought I might want him to go to Chicago to testify in regard to the saving of the wheels of the car by the use of the Tanner brake over the old single brake. He told me he was engaged somewhere in Pennsylvania—he told me where—and if I wanted him, telegraph him or write him; that his business was such there that he could leave at any time, and would do so. It was in this same suit against the Chicago and Northwestern Railroad Company that I thought I might want him.

48. Q. Was this after the decision in your favor had been made in the suit, and was the case at the time before the master to take the account?

A. It was.

49. Q. Did Talson make any objection to going in case you should want him?

A. He did not.

50. Q. Did Talson ever at any time tell you what he has testified to in his deposition in this case about the brake on the Tyler car, and about the continuance of the use of the double-acting brake on the New Jersey Railroad which he has spoken of?

A. No; he never told me anything about the Tyler car, or the brakes being continued on the car of the New Jersey road, until since we commenced taking these further proofs.

885 51. Q. Will you state fully what investigations you made prior to the trial in the New York and Erie case, tried in 1854, relative to the alleged facts set forth in the various notices of special matter served in that case, and state whether, in any of these investigations, you heard, or were led to suspect, anything of the existence of a double brake on the Tyler car on the Camden and Amboy Railroad in 1843 and afterwards, or on any other cars on that road, prior to the use of the Hodge or Baker brakes there of which you have spoken, and whether you heard, or were led to suspect, anything concerning the so-called Stanley-Talson brake on the New Jersey road, except what was proved at said New York and Erie trial in relation to it? Also state whether, after that trial, and down to the time of the opening of the interlocutory decree in this case, you ever heard anything of the matters inquired about.

A. I spent considerable time during 1853 and 1854 up to the time of the trial in investigating the different matters set up in the notices of special matter by the defendant in that case. Among the matters that I investigated was a brake said to have been put on cars at Springfield, Massachusetts, about 1843; another was a brake, said to have been put on the New Haven, Hartford and Springfield cars in 1846 or 1847, and in regard to the Isaac Newton Stanley brake, said to have been used in 1842, and I think some other brakes mentioned in the notices of special matter in that case, all of which I investigated very thoroughly at the time. I did not learn anything about the Tyler car on the Camden and Amboy road, and never heard of any double-acting brake ever being used on that road before 1851. And I never heard of any double-acting brake being used on the New Jersey Railroad and Transportation Company's cars before 1851, except the trial of 1842, as proved in the suit with the Erie road in 1854.

I never heard anything of the kind inquired about in the latter part of the question, until about the time that the case was opened for further proofs last spring.

And being cross-examined by M'r Whipple, the witness deposes and says:

886 1. Cross-q. Over how many miles of road did the license, or licenses, which you say you delivered to the Camden and Amboy Railroad Company in November, 1855, convey the right to use the Tanner brake?

A. I cannot tell the number of miles.

2. Cross-q. State as nearly as you can.

A. I do not remember that I ever knew the number of miles. I recollect that at the time I settled with M'r Van Rensselaer, I settled with him at a very low price, for I was very much in want of money at the time, and was compelled to take what I could get. I don't think we reckoned by the mile, and I think there were three licenses given, two for roads that were represented to be branches of the Camden and Amboy road, or belonged to that company, that did not amount to much, as I was told there were but very few passenger cars used on them, and I have no idea now how many miles of road the licenses covered. We lumped it off and he paid me very much less than what I asked him in the first place.

3. Cross-q. Was or was not over two hundred miles of road expressed in said licenses?

A. I cannot tell whether the number of miles of road was mentioned in the license at all. I think not.

4. Cross-q. Was or was there not a larger sum named in said licenses than the amount of money received by you from said company?

A. I do not remember now what sum was mentioned in the licenses.

THO'S SAYLES.

Subscribed and sworn to before me this 18th day of March, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to March 24, 1868, at 11 a. m.

887 NEW YORK, *March 24th*, 1868—11 a. m.

Examination further adjourned to 2 p. m. of same day.

MARCH 24, 1868—2 p. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

THOMAS SAYLES, the complainant, recalled on his own behalf, and having been duly cautioned and sworn, he did depose and say:

1. Redirect q. Will you state whether after the commencement of the taking by the defendant of further proofs in this case you had any conversation with Joseph F. Talson; and, if so, state about when it was, and what the conversation was.

A. I had a conversation with him last fall, after we had commenced taking testimony, with regard to a double brake being used on the Long Island road. M'r Talson said to me at that time that he was sorry I had not employed him in my brake matter before M'r Whipple saw him; if I had, he said, I would have had none of this trouble with this testimony in regard to the brakes being used on these three different roads, the New Jersey road, the Camden and Amboy road, and the Long

Island road. He said that he was the only one that knew anything about it at that time. He said when M'r Whipple called on him he was out of business, and M'r Whipple offered him $5 per day and his expenses if he would go to work and look up testimony to defeat the Tanner patent, and he went to work for M'r Whipple at that time. He said he first went to see M'r Edwin Lockwood, at Bordentown, and when he first spoke to him about the double-centre lever brakes being used on that road, M'r Lockwood did not remember anything about its being used there at so early a date as he afterwards stated. Talson said
888 that he spoke to him about the Tyler car having that break on it, but he said that Lockwood could not recollect anything about it the first time he saw him, and after he had explained to him about the brakes being on the Tyler car, Lockwood wanted a while to think the matter over, and Talson said he told him he would call again, and when he called on Lockwood a few weeks after, Lockwood recollected about the Tyler car having the double brake on it.

And being further cross-examined by M'r Whipple, of counsel for defendant, he says:

1 Recross-q. You speak of the Tanner patent. Please state who is the owner of the said Tanner centre-lever brake patent, granted to Henry Tanner, assignee, July 6th, 1852.

A. I am.

2. Recross-q. When did you come into possession of said patent?

A. I bought a portion of it in July, 1854. At that time some of the territory was reserved, and since that time, at different times, I have purchased the balance of it. I believe I have purchased the patent for all of the territory of the United States. There may be some railroads reserved.

3. Recross q. Who is the complainant in this case?

A. I am.

THO'S SAYLES.

Subscribed and sworn to before me this 24th day of March, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Henry Waterman, a witness produced on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

889 1. Q. What is your name, age, residence, and occupation?

A. My name is Henry Waterman; I am fifty years of age; I reside at Hudson, in the State of New York; I am a mechanical engineer.

2. Q. Are you acquainted with Edwin Lockwood, superintendent of the car department of the Camden and Amboy Railroad?

A. I know M'r Lockwood.

3. Q. State whether you ever had occasion to see said Lockwood in reference to the subject of car brakes; and if you did, please state in what year it was, how you came to see him, and what conversations, if any, took place between you. Answer fully.

A. In the year 1859 I was employed by the Central and New York and Erie Railways, to work up a defence against the Hodge patent. The principal point of our defence consisted in proving the non-utility of the Hodge patent, or that it was no better than the Tanner brake or single-centre lever double brake, which antedated it. It was important that I should find some railroad that had used both comparatively, and the Camden and Amboy was the only one that I found that answered my purpose.

I had learned that they had commenced with the Hodge patent and had removed that kind of brake, and had substituted the Tanner or single-lever brake. I went to Bordentown and saw M'r Lockwood. I think it was some time in the latter part of 1859, a short time previous to the trial at Canandaigua. I told M'r Lockwood my business, that I was defending the railroad against the Hodge patent, and wanted to know his experience with the Hodge and the Tanner brakes. He gave me the history of their operations. He said they commenced with double brakes on their road, with the Hodge patent brake; that they purchased the patent; that they had introduced it generally on their passenger cars. That they had their attention called to a train brake, called the McLaughlin brake, that was a brake actuated by the bumping of the engine and the cars together. To apply this brake, he could not use the
890 Hodge arrangement; that it was necessary to have a centre lever permanent, and that he took off the Hodge arrangement, and applied the centre lever, and found it worked more satisfactorily than the Hodge arrangement. After reciting to him the objections to the Tanner patent made by the plaintiff in that suit, that the brakes could not be shod evenly, and generally act evenly on the wheels, he said he found no such difficulty. I told him that was very important testimony for us, and requested him to go to Canandaigua. He said he could not leave his business at that time, and introduced me to his foreman, M'r Smith. M'r Smith agreed with M'r Lockwood in his opinion of the brakes, and consented to go to Canandaigua. M'r Smith went to Canandaigua and testified in substance as I have stated—that is, that they commenced with the Hodge as a double brake on their road, and that they had since substituted the Tanner, and that it worked in all respects more satisfactorily than the Hodge. I think that is all.

4. Q. Was Lockwood's statement to you that they commenced with double brakes on the Camden and Amboy Railroad, with the Hodge brake, clear and distinct?

A. That was the distinct impression made upon me. It was as distinct as any part of his statement to me.

5. Q. Is your recollection clear and distinct of the conversation which occurred at this interview with Lockwood?

A. I think it is as clear as though it had occurred yesterday—the whole interview, and all that was said. It was a case that I took a great deal of interest in, and I recollect minutely all the circumstances in it.

6. Q. Did you hear Smith testify at the trial at Canandaigua of the case against the Central Railroad you have referred to?

A. I did.

And being cross-examined by M'r Whipple, of counsel for defendant, he deposes and says:

1. Cross-q. You say you learned that they had commenced with the Hodge brake on the Camden and Amboy road. From whom did you learn this?

891 A. I think it was M'r Baker who informed me, at Jersey City.

2. Cross-q. When did the trial of Hodge against the Central Railroad take place at Canandaigua?

A. I think it was in the latter part of 1859—some time in the autumn.

3. Cross-q. Is your recollection as distinct in relation to the time of said trial as the interview which you have just related with said Lockwood, on matters connected with said trial?

A. No; I think it is not.

4. Cross-q. Have you a distinct recollection when said trial took place?

A. No, sir.

5. Cross-q. Yet you have a distinct recollection of certain conversations in relation to matters connected with said trial, have you?

A. I recollect distinctly almost everything that was said bearing upon that case. The peculiarity of my memory is such that I recollect distinctly mechanical points and mechanical ideas that have occurred almost entirely through my life, yet have very little recollection of dates.

6. Cross-q. Have you seen Edwin Lockwood since that time or the time referred to in your direct examination?

A. I saw him once.

7. Cross-q. Please state when.

A. I think a year after it; I called to see M'r Dougherty, and passed into M'r Lockwood's shop and saw him.

8. Cross-q. Did you or not form a favorable or unfavorable impression of said Lockwood at this first and second interview, as to his veracity in matters of which he may be supposed to have a personal knowledge?

A. I will say that my impressions were favorable of M'r Lockwood.

9. Cross-q. Do you believe M'r Lockwood to be a credible witness in matters of which he may be supposed to have a personal knowledge?

A. I know of nothing unfavorable to M'r Lockwood; my acquaintance with him was brief.

892 10. Cross-q. Had you a case in hand, and M'r Lockwood was supposed to be acquainted with certain facts connected with it, would you deem him a credible witness in such case?

A. I know nothing of my own knowledge against M'r Lockwood.

11. Cross-q. Is it inferred, then, that you would deem him a credible witness, as called for in the above question?

A. I make it a point to consider every one credible until they are proved otherwise.

12. Cross-q. Has M'r Lockwood proved himself otherwise to your knowledge?

A. He has not to my knowledge.

And being re-examined by M'r Cozzens, of counsel for complainant, he deposes and says:

1. Redirect q. May the trial at Canandaigua have taken place at the June term held there?

A. I now recollect standing at an open window, looking out of our room, and think it was earlier than the time I stated.

2. Redirect q. I omitted, before closing the direct examination, to ask you one question, which I will ask now. Did you, when you saw Lockwood in 1859, as you have stated, learn from him anything about a single centre-lever double brake, like the Tanner brake, having been used on the cars of the Camden and Amboy Railroad, in the year 1843 and afterwards?

A. I heard nothing at all.

And being further cross-examined by M'r Whipple, of counsel for defendant, he says:

1. Recross-q. Have you been employed by any party or parties connected with this centre-lever Tanner brake patent to look up and investigate evidence in relation thereto, or in any cases connected therewith?

893 A. I have.

2. Recross-q. By whom?

A. By M'r Cozzens.

3. Recross-q. Please state what you have done for M'r Cozzens in relation to this matter.

A. M'r Cozzens informed me last summer that a defence was to be made in that case by the defendants, upon the ground that some three or four brakes ante-dated the Tanner patent, and stated specially the brake alleged to have been made by M'r Lockwood. He requested me to get at the history of M'r Lockwood's operations, and I went on to New Jersey two or three times on that business.

4. Recross-q. Did you see M'r Lockwood at this time?

A. I did not; I did not go to Bordentown.

5. Recross-q. If this matter was so fresh in your mind, which you have stated in your direct examination, why did you not go direct to M'r Lockwood, and revive the matter in his mind, as it was your business to look after this matter of brakes on the Camden and Amboy road, under the instructions of your employer, M'r Cozzens?

A. It was not considered desirable to go there, as no good could come of it to my employers.

6. Recross-q. What relation do you understand M'r Cozzens to hold in this Tanner centre-lever controversy?

A. Attorney for the proprietors of the patent.

7. Recross-q. Who do you understand to be the proprietors?

A. The heirs of Batchelder & Thompson I have always understood to be the proprietors. I have no positive information, only what I have learned from M'r Cozzens on that point.

8. Recross-q. Do you understand M'r Thomas Sayles, complainant in this case, to have an interest in this patent?

A. I have never had such an understanding; I have understood that he was interested only in the old, unextended patent.

9. Recross-q. Do you understand that M'r Sayles has any interest in the extended term of said patent?

894 A. I have only understood that he had not any interest in the extended patent.

10. Recross-q. Did you have anything to do for any party or parties in obtaining the extension of the said Tanner patent?

A. I had. I made a deposition in regard to its operations and its value.

11. Recross-q. Did you render any further service before or after giving your deposition? If so, what was it? Please state fully.

A. I made two affidavits for M'r Cozzens, in two suits, I think.

12. Recross-q. What suits?

A. Suits brought by M'r Cozzens against two railroads.

13. Recross-q. Please name them; and in whose name were they brought?

A. I think it was the New York and Erie and the Susquehanna roads. I am not positive about it; nor do I recollect the names of the parties. I think it was the trustee of the patent. I was called in very hastily, on my way through the city, and paid but little attention to the details of the case; did nothing to charge my memory.

14. Recross-q. Please state the name of said trustee.

A. James D. Mowry I understood to be the trustee.

15. Recross-q. Have you performed any further service in relation to this matter? If so, please state to what extent.

A. I don't recollect doing anything further. I asked M'r Cozzens to let me off from anything more, and I understood I was let off.

16. Recross-q. Are you in attendance here on subpœna? If so, by whom?

A. I am not subpœnaed by anybody. I stopped to consult M'r Cozzens in relation to some business I have at the Patent Office, upon which I am going to Washington to-night, and I was informed to-day, for the first, by M'r Sayles, that he wanted to examine me.

895 17. Recross-q. Was this the first you had communicated to any party or parties the subject matter of this examination?

A. It is not the first. I had some conversation, three or four months ago, with M'r Cozzens in regard to it. I at the same time urgently requested that I should not be made a witness in the case.

18. Recross-q. Did M'r Cozzens at that time state to you that he should want you as a witness?

A. I don't recollect; it was very indefinite.

19. Recross-q. Did you not expect to be a witness until you came here to-day to consult M'r Cozzens about matters in Washington?

A. I expected that if I appeared here when you were taking testimony, he would probably call me; but I got the impression so much time had elapsed it would be over with.

20. Recross-q. Then you have regarded this matter to which you have testified of so little importance that you would not be called upon to testify unless you incidentally dropped into M'r Cozzens' office?

A. The fact is I have tried to avoid it. I had some business with M'r Cozzens that I ought to have done last week, and I staid away partly on this account.

21. Recross-q. But neither M'r Cozzens nor M'r Sayles have requested you to testify in this case, only as you have incidentally come into the office where the evidence in this case is being taken?

A. There has nothing been said, except what was said to me incidentally when I came here on other business.

And being further examined by M'r Cozzens, of counsel for complainant, he says:

3. Redirect q. You say you have not a distinct recollection when the trial at Canandaigua took place; and you have also said that your interview with Lockwood was shortly before the trial. Whenever that trial occurred, are you sure that your interview with Lockwood was a short time previous to it?

896 A. I should think it was not more than a week before; it was at most a short time before. M'r Smith followed me right up to Canandaigua.

And being further cross-examined by M'r Whipple, of counsel for defendant, he says:

22. Recross-q. Where does the said Smith, who you say testified at Canandaigua, now reside?

A. I do not know. I have not seen him since.

23. Recross q. Do you know whether he is living or dead?

A. I do not.

HENRY WATERMAN.

Subscribed and sworn to before me this 24th day of March, 1868.

JOSEPH GUTMAN, J'r,
Examiner, &c.

Examination further adjourned to March 28th, 1868, at 11 a. m.

Examination further adjourned to April 2d, 1868, at 11 a. m.

897 NEW YORK, *April* 2, 1868—11 a. m.

Present, M'r Sayles, complainant in person, and M'r Whipple, of counsel for defendant.

JAMES MCFARLAND, a witness produced on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is James McFarland; I am fifty years of age; I reside at Jersey City, New Jersey; I am a dispatcher of locomotives, in the employ of the New Jersey Railroad and Transportation Company.

2. Q. Please state how long you have been in the employ of the said New Jersey Railroad and Transportation Company; in what capacity or capacities?

A. In the neighborhood of twenty-six or twenty-seven years. For the first seven years I was a machinist, working at journey work in their shop, from 1840 to 1849, except for about a year that I was absent during that time. From May, 1849, to September, 1861, I was master-mechanic of that road. From September, 1861, to the present time, I have been dispatcher.

3. Q. Please state, if you know, what kind of brakes were used on the New Jersey Railroad and Transportation Company's cars from the time you first went on the road up to 1850.

A. The single brake was the brake in use on the New Jersey Railroad until 1851.

4. Q. Are you able to state, of your own knowledge, whether there were any double-acting brakes used on the said New Jersey Railroad and Transportation Company's passenger or crate cars, for any length of time, from 1841 to 1851?

A. There were none, to my knowledge.

5. Q. Could there have been any double-acting brakes, operating the brakes on all eight wheels, from a windlass at either end of the car, on any of their cars during this time, for any length of time, and you not have known it? 898

A. No, sir; there could not.

6. Q. Are you acquainted with the construction and operation of the double-acting brakes now in use on the said New Jersey Railroad and Transportation Company's cars; and, if so, when did you first see such brake on a car?

A. I am. I first saw such a brake when M'r Baker put it on the cars in 1851—in the fall.

7. Q. When you saw the double-acting brake that M'r Baker put on a car in the fall of 1851, was it new to you at that time?

A. It was the first one that I ever saw in operation.

8. Q. Please describe that brake that Baker put on in 1851.

A. The brake is connected with a single lever under the centre of the car. It connects with a chain and rod; there is a rod that connects the brake from one truck to the other. It operates from a shaft that stands vertically on the platform, by a wheel or crank. The chain that connects to the vertical shaft hooks on the lever. It is connected so that you brake on both trucks from one end of the car or from either end.

9. Q. Has that same kind of brake been continued on the cars of that road up to the present time?

A. Yes, sir.

10. Q. Do you recollect of an experiment with what was called a double-acting brake being tried on the said New Jersey Railroad by one Isaac Newton Stanley or Joseph F. Talson about 1842; if so, what do you know about it?

A. My recollection of that brake is very little. I can't say that I know much about it, only there was a brake of some kind tried, but I never saw it in operation.

11. Q. Was this brake enquired about, of 1842, continued in use on that road?

A. No, sir; it was not.

12. Q. Please state what opportunities you had for knowing
899 what kind of brakes were used on said New Jersey Railroad and
Transportation Company's cars from 1841 to the time M'r Baker
put the double brake on in 1851.

A. The opportunities that I had were as follows: From 1841 to 1849, seeing the cars pass and repass daily, and often when they would run off the track to assist in putting them on. I often used to notice the difference between the New Jersey Railroad cars and the Camden and Amboy cars, in the construction of their trucks. When I was master mechanic I used to draw my attention to any improvements, and if I saw any I examined them closely.

13. Q. When you were first master mechanic on the said New Jersey Railroad, was it or was it not your custom to examine cars belonging to other roads for the purpose of seeing any improvements that might be on them?

(Objected to as leading.)

A. Yes, sir; I used to make it my business to examine cars of other roads to see any improvements there might be on them, as well to the running gears as to the inside of the cars.

14. Q. Did any of the Camden and Amboy Railroad Company's cars come into Jersey City between 1842 and 1851? If so, about how many daily?

A. They did. There were two trains; the number of cars to each train would average from seven to nine; sometimes there would be less, sometimes more.

15. Q. Did you have occasion to examine the Camden and Amboy cars that came into Jersey City between 1842 and 1851? If so, are you able to state what kind of brakes were used on such cars prior to 1851?

A. I have had occasion to examine the cars. The brake that was in use on the Camden and Amboy cars was the single brake.

16. Q. Did you ever see any double acting brake with a single cross-lever under the centre of the car on any of the Camden and Amboy cars that came to Jersey City prior to 1851?

A. No, sir; I did not.

900 17. Q. Could there have been such a double-acting brake used
on any of the Camden and Amboy cars which you examined,
that came into Jersey City between 1843 and 1851, and you not have
known it?

A. It could not have been used for any length of time without my knowing it.

And being cross-examined by M'r Whipple, of counsel for defendant, he deposes and says:

1. Cross-q. Assume that twenty-eight witnesses, mostly from the Camden and Amboy road, have already testified in this case that one or more cars of said road had in use on the same a cross-lever double-acting brake from 1843 to 1851, are you prepared to swear in this court that such is not the fact?

A. Yes, sir; I swear as to those cars that came to Jersey City?

2. Cross-q. Do you know from personal inspection from day to day, month to month, of cars of the Camden and Amboy road from 1843 to 1851, that no car came over the New Jersey Railroad to Jersey City with a double-acting cross-lever brake on the car?

A. I did not inspect those cars from day to day.

3. Cross-q. Then may not, during days when you did not inspect said cars, a car or cars come over said New Jersey road with said double brake thereon?

A. There might have been a possibility, but not as a usual thing.

4. Cross-q. Do you know that no car on the Camden and Amboy road with a double-acting brake thereon never came over the road from 1843 to 1851?

A. No; I can't say positively that none ever came over; I only know that they were not in general use on the cars that came to Jersey City.

5. Cross-q. Then the substance of your evidence in this case is that you have not seen a car or cars of said Camden and Amboy road with said cross-lever double brake on it from 1843 to 1851?

901 A. Yes, sir.

6. Cross-q. Then you don't know positively what brakes were on all the cars of the Camden and Amboy road from 1842 to 1851.

A. I have no knowledge of the brakes that they used on the lower road; that is, in the lower part of the State.

7. Cross-q. Do you know James S. Gamble, Bernard Hughes, John H. Jobes, George Fielder, and Joseph F. Talson?

A. Yes, sir.

8. Cross-q. Do you believe these men to be credible witnesses in what they may be supposed to have personal knowledge of?

A. Yes, sir.

9. Cross-q. Assume that these men have testified that a cross-lever double-acting brake was put on a crate-car of the New Jersey Railroad Company in the fall of 1842, and used thereon indefinitely, may you not be mistaken, in view of your being a machinist, and not particularly connected with the cars, when you say that there was no such brake on a car of said road?

A. There was no brake used on that road to run regularly, according to my best recollection.

10. Cross-q. Do you or do you not swear positively that there was not, or is it merely from your best recollection?

A. I swear positively that there was no double-acting brake in general use during that time on any car.

11. Cross-q. What you know of the application of the Stanley and Talson brake, referred to by you in your direct examination, is from hearsay, is it, and not from personal knowledge?

A. I don't know much about it.

12. Cross-q. Then there may or may not have been such a brake put on a single car of that road without you knowing it?

A. Yes; there might have been; all I know is what I heard; I know they abandoned it.

902 13. Cross-q. Do you know that thereafter M'r Joseph F. Talson did put on a crate-car a double-acting cross-lever brake?

A. I don't recollect.

And being re-examined by M'r Sayles, the witness deposes and says:

1. Redirect q. Could any Camden and Amboy car with the double-acting cross-lever brake on it have run to Jersey City for any length of time between 1843 and 1851 without you knowing it?

A. No, sir; I don't think it could.

2. Redirect q. Could M'r Talson, or anybody else, have put the double-acting cross-lever brake on a crate-car, or any other car on the said New Jersey Railroad in 1842, and the same have run on that road for any length of time after you went back on the road in 1843, and you not have known it?

A. No, sir; it could not have been done.

3. Redirect q. Did you ever know any double-acting brake to have been used on any of the Camden and Amboy cars? If so, what kind of double-acting brake did you first see on their cars?

A. I saw the double brake with two cross-levers under the centre of the car.

4. Redirect q. About when did you first see the double brake with two cross levers on the Camden and Amboy cars?

A. It was after Baker put the double brake in operation. I can't say just what time. It was about the time the Hackensack bridge was burned, which was in September, 1851.

5. Redirect q. Was that the first double-acting brake you ever saw on any of the Camden and Amboy cars?

A. Yes, sir; the two cross-lever brake.

6. Redirect q. In the discharge of your duties as master mechanic on the said New Jersey road, were you led to examine the cars of that road sufficiently to enable you to know whether there were any double brakes used on any of the cars of that road for any length of time 903 between 1849 and the time M'r Baker put the double brake on a car in 1851?

A. Yes, sir. If there had been anything put on during the time I was master mechanic, I would have known it.

7. Redirect q. If there had been anything used during that time, would you have known it?

A. Yes, sir; I would have known it.

And being further cross-examined by M'r Whipple, he deposes and says:

1. Recross-q. Did you inspect all the cars of the Camden and Amboy road, from day to day, that came to Jersey City from 1843 to 1851, to see what brakes were in use on said Camden and Amboy cars?

A. No, sir; I did not.

2. Recross-q. Do you know from your own personal knowledge that no double acting brake was in use on any car of the Camden and Amboy road prior to the time of your seeing the two cross-lever brakes, as you say, on a car of said road?

A. None that ran to Jersey City, that I knew; there might have been on the other part of the road.

3. Recross-q. Do you know that no car of said Camden and Amboy

road ever came to Jersey City with a double-acting brake on it, from 1843 to 1851?

A. There was no car ran there regularly with it. I never saw one.

4. Recross-q. Do you know there never was a car came to that depot of the New Jersey Railroad with said double brake on said car?

A. I can't say positively whether there was or not. There is a possibility that one came there, but not as a general thing.

5. Recross-q. Then there might have one or more come without your knowing it?

A. There might have been.

904 6. Recross-q. Since you came into this office, has M'r Sayles, complainant in this case, shown you a model of the two cross-lever brakes and the centre-lever brake, or models or drawings of any of these or other brakes?

A. He showed me a drawing of a double-lever brake, of which I took no notice. I saw no models.

7. Recross-q. Did he present this to you in order to refresh your recollection with regard to his statement that no double-acting brake was in use on the Camden and Amboy road until this double-lever brake was applied?

A. I cannot say that he did.

8. Recross-q. Did he state to you that such was the fact?

A. I do not know that he did. He did not state anything of that kind to me.

9. Recross-q. Who first called your attention to the matter of testifying in this case?

A. M'r Sayles.

10. Recross-q. Did he state to you what he wanted you to testify to?

A. Nothing more than what knowledge I had of the brake, and when it was put in use.

11. Recross-q. Did he say anything to refresh your recollection?

A. Nothing. I considered about it and refreshed my own recollection about it.

12. Recross-q. Had you thought anything about this matter of brakes until your recollection was refreshed by M'r Sayles?

A. I don't know that I did. M'r Sayles did not refresh my recollection a bit about it; that is, from any information I got from him.

And being further re-examined by M'r Sayles, he deposes and says:

8. Redirect-q. Do you mean in your answer to the 5th recross-question to be understood that any car or cars of the Camden and Amboy road,
905 having the double-acting brake on, could have come into the Jersey City depot for any length of time and you not have known it?

A. No, sir; there could not, without my knowing it. My answer meant that as a general thing there could not without my knowing it.

And being further cross-examined by M'r Whipple, he deposes and says:

13. Recross-q. Could said Camden and Amboy cars, with said double-brake thereon, have come to Jersey City for a limited time, and you not know it?

A. If you limit it to one or two trips, it might be so. But as a general thing they could not come without my knowledge.

14. Recross-q. Then your attention through all these years, from 1842 to 1851, was particularly directed to brakes, was it?

A. Not altogether. No, sir.

15. Recross-q. Then you have special knowledge as to the brakes

in use on the cars of the Camden and Amboy road prior to 1851, have you?

A. As to the cars that ran on the line into Jersey City.

16. Recross-q. And all this special knowledge comes to you as a machinist, does it, and not as inspector of cars or repairer of cars?

A. It comes to me as a machinist, having a knowledge of the brakes that were used on the cars.

17. Recross-q. Was it not a little out of your line of duty as a machinist to be exceedingly familiar with brakes, as your evidence would seem to indicate?

A. No, sir. We used a brake on all our tenders, and they all came under my jurisdiction.

JAMES McFARLAND.

Subscribed and sworn to before me this 2d day of April, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

906 Examination adjourned to April 4th, 1868, at 11 a. m.

APRIL 4, 1868—11 a. m.

Present, counsel for both parties.

Examination further adjourned to April 7th, 1868, at 11 a. m.

NEW YORK, *April 7th*, 1868—11 a. m.

Present, M'r Sayles, complainant in person, and M'r Whipple, of counsel for defendant.

Examination further adjourned to April 8, 1868, at 11 a. m.

APRIL 8, 1868—11 a. m.

Present, M'r Sayles, complainant in person, and M'r Whipple, of counsel for defendant.

Examination further adjourned to 3 p. m. of same day, at chambers of district judge of the United States district court, in the city of New York.

Same day, 3 p. m.

At chambers of district judge of United States district court.

Present, M'r Cozzens, of counsel for complainant, and M'r Whipple, of counsel for defendant.

SAMUEL BLATCHFORD, judge of the district court of the United 907 States for the southern district of New York, a witness produced on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. Were you one of the counsel who tried on the part of the plaintiff at Albany, in October, 1854, the action at law of Henry Tanner vs. The New York and Erie Railroad Company upon the Tanner patent, so called, for improvements in railroad car brakes?

A. I was. I suppose you refer to the patent issued to Tanner, as assignee, on the invention of Batchelder and Thompson, July 6, 1852.

2. Q. Before whom was that case tried?

A. Before Judge Hall and a jury in the circuit court of the United States for the northern district of New York.

3. Q. Have you examined any notes of the testimony given at said trial; and, if so, please state by whom the notes so examined by you were taken, and in whose handwriting they are?

A. I took notes myself of the testimony of all the witnesses examined orally on the stand at the trial. I have such notes now before me and have recently examined them. They are in my own handwriting.

4. Q. Will you state whether it appears by said notes that Joseph F. Talson and Bernard Hughes were examined orally at said trial?

A. It does appear that both of them were so examined as witnesses on the part of the defendants.

5. Q. Will you state what was the testimony given by said Joseph F. Talson on said trial?

A. On his direct examination he testified as follows, as my notes of his testimony show:

"I reside at Bergen, Hudson County, N. J. For fourteen years before the last three years I resided in Jersey City. I was during that fourteen years superintendent of the car-department on the New Jersey Railroad and Transportation Company.

(Jersey model shown.)

908 "That model exhibits a double-action brake with lever in centre; each windlass acts on both brakes at the same time; brakes between wheels worked by cam on rock-shaft, never changed to outside of the wheels. The brake was put on like that New Jersey model. A double-acting brake was first put by Isaac Newton Stanley on the New Jersey Railroad. Stanley put one on in 1842. The brake he put on never went into use; it was so light and imperfect that it never answered the purpose. I threw all his gearing off and applied it mechanically like the Jersey model. I took his brake and strengthened the rods and connections. Stanley's differed from the Jersey model in the levers; he had three or four levers in the middle. When I put on the brake, I added one transverse lever the same as model. I operated the brake like this Jersey model. That brake ran on a car to Philadelphia or opposite to it; it ran two or three times—might have run more, might have run less than three times. This was Jersey model. I put this brake on in 1842; I am sure of this. Timothy L. Smith followed me in superintending that road. This brake was not put on any other car. Smith came on in 1844, and was opposed to this brake. Before that he was superintendent of motive power. Smith wanted to put in Griggs' brake, from Baltimore, to act by bumper. I can make a drawing of a car and build it. This Jersey brake would act on a curve. I never saw it in operation on a curve. This brake would not act so well on a curve as plaintiff's. The mode of forming the connection between the brakes of the two sets of trucks is substantially the same in the Jersey model as in plaintiff's brake. If you take out the arrangement of the Jersey model within the trucks, and put in Tanner's within the trucks, you will have Tanner's brake. M'r Boyce had charge of the company's books at the time the Jersey model brake was made. I reported to Boyce what charges to make."

On his cross-examination he testified as follows:

909 "Stanley's brake broke the first time it was tried. It was put together with rods, they came apart and we tied them with strings. I last saw Stanley two and a half or three years after this brake was applied. He said he had given up his brake and was not going on with it. From September, 1842, till January, 1843, we had no superintendent. After the brake ran a week it was changed to a single foot brake. I left the road in the last of August, 1849. Smith left in June or July, 1849. From the time I altered this to a single-foot brake there were no double-acting brakes on the cars till I left the road that were acted on by a windlass at either end. There were double-acting

brakes on the tenders, but they were not operated on by a windlass at either end. The self-acting brake of Griggs was never put on. Within the trucks the Jersey brake was different from Tanner's."

On redirect examination he testified as follows:

"The brakes on the tenders could not be operated from both ends. The brakes on the tenders did not have the intermediate lever, and only a single connecting rod.

"Stanley's two experiments cost between two hundred and three hundred dollars. One failed; the other ran to Jersey City. The brake I made was paid for by the company."

Subsequently, on the trial, M'r Talson was recalled as a witness and testified as follows:

"After the trial of this brake we continued to use the single-acting brakes on all the cars."

6. Q. Will you state what was the testimony given by said Bernard Hughes on said trial?

A. On his direct examination he testified as follows, as my notes show:

"I resided in Jersey City in 1841-'2; I worked under Talson on
910 New Jersey Railroad. I recollect about brake in Jersey model,
put on in 1842. I cannot say how long after. I have examined the Jersey model; this is like the brake. There may have been two levers at the centre. I remember the brake being put on one of the cars. I don't know that it ran afterwards. I know it was tried, because I helped push it myself by hand; I speak of the one Stanley put on. Stanley was a shoemaker. I know of Talson putting on a brake like the Jersey model. That was applied to a passenger car. That car was used. I think it made three trips to Camden with this upon it; it operated. The construction of it was not satisfactory to keep it on the road to place any reliance upon it. I can't recollect for why. My business was to watch the cars."

7. Q. Will you please state which one of the several defences of the defendants in that action was regarded by the plaintiff's counsel as most important.

A. My recollection is that the only brake put in evidence on the question of novelty, which the plaintiff's counsel regarded as amounting to anything in the evidence, was a brake said to have been invented by a M'r Willard I. Nichols, and put on a car on the New Haven, Hartford and Springfield Railroad, in the spring of 1847; the principal witness as to which was a man by the name of Lepennes, M'r Nichols, I think, being dead at the time of the trial. Among these notes are notes of the testimony of M'r Lepennes and of M'r's Nichols, the wife of M'r Nichols. They were both examined orally at the trial.

And being cross-examined by M'r Whipple, of counsel for the defendant, the witness deposes and says as follows:

1. Cross-q. What, if any, was the result of that trial?

A. There was a verdict for the plaintiff.

2. Cross-q. What was the amount of that verdict?

A. I do not now remember.

3. Cross-q. Was it not the verdict of the jury that the Hodge brake and the Stevens brake were infringements of the said Batchelder and Thompson or Tanner centre lever-brake patent?

911 A. It was; as I recollect.

4 Cross-q. Was it not rather by stipulation of counsel afterwards than by verdict of the jury that the Hodge and Stevens brakes were declared infringements of the said Tanner patent?

A. Not that I recollect. My recollection is that the jury came into court with a verdict for the plaintiff generally, for so many dollars damages; the amount I now see from a certified copy of the verdict was $75. My recollection is quite clear that when the jury rendered that general verdict, counsel for the plaintiff suggested to the court that it was proper in their judgment for the jury to indicate which of the alleged infringing brakes, one or both, they found to be infringements; and that the jury stated that they found both the Hodge and Stevens brakes to be infringements; and that the court then and there, before the discharge of the jury, directed a statement to that effect to be incorporated in the verdict, which was done.

SAMUEL BLATCHFORD.

Subscribed and sworn to before me this 8th day of April, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to April 10th, 1868, at 11 a. m.

NEW YORK, *April* 10, 1868—11 a. m.

Present, M'r Sayles, complainant, in person, and M'r Whipple, of counsel for defendant.

WILLIAM QUIGLEY, a witness produced on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

912 A. My name is William Quigley; I am forty-three years old; I reside at Philadelphia, in the State of Pennsylvania; I am a locomotive engineer.

2. Q. Have you ever been employed on the Camden and Amboy Railroad; if so, for how long a time, and in what capacity or capacities?

A. I have been employed on that road from 1843 to the present time, and am so now. In the beginning I was brakeman; I then worked as fireman, and then I went back to braking again for a while, then I went to firing again for a while, and then ran on the road as engineer. I am still engineer on the road.

3. Q. Do you, or do you not, recollect the circumstance of President Tyler taking a trip through New Jersey, in June, 1843?

A. I do.

4. Q. Were you employed on the Camden and Amboy road at that time?

A. I was.

5. Q. Do you recollect of a car being got up on the Camden and Amboy road to convey President Tyler over that road at that time?

A. I do.

6. Q. Please describe the car generally?

A. The car was rebuilt and got up on very stylish plans for that purpose; it had looking-glasses in both ends; a saloon on one end, a privy, I mean; it was on the platform; the seats were of different patterns; the car was painted a very light color; it was a very nice car; it had six-wheel trucks under it, and elliptic and spiral springs under it.

7. Q. Please state, if you know, what kind of brakes were put on that car at the time it was rebuilt in 1843.

A. They were brakes on each end of the car applied separately to each truck.

8. Q. Please state, if you know, how long such brake as you have described was continued in use on the Tyler car.

A. It was continued there until 1851, or thereabouts.

913 9. Q. You say this brake was continued till 1851. What brake, if any, was used on the car after about 1851?

A. After 1851 there was used a double brake.

10. Q. Please describe the double brake that was put on in 1851.

A. It was a single lever-brake, connected with a lever in the centre of the car to the body of the car.

11. Q. Do you recollect of a double brake being used on the New Jersey Railroad and Transportation Company's cars; if so, when did you first see it?

A. I do. I first saw it in 1851.

12. Q. Was that brake the same or different from the double brake you say was put on the Tyler car at about that time?

A. They were both the same.

13. Q. Did you know of any double brakes with two cross-levers under the bodies of the cars put on any of the Camden and Amboy cars about that time?

A. There was a double-lever brake used there just before the time the one was put on the New Jersey Railroad.

14. Q. Please state when you first recollect of seeing a brake used on a car called a double-acting brake, or that operated the brake on both trucks from either end of the car.

A. It was in 1851.

15. Q. Do you recollect what car you first saw such double brake on?

A. The first car that I saw that double brake on was a car called the Tyler car.

16. Q. Do you recollect ever seeing the Tyler car with a brake on with two cross-levers under the body of the car?

A. I do.

17. Q. Please state as nearly as you can when you first saw such two-lever brakes on the Tyler car.

A. That was put on in the same year, in 1851.

18. Q. Was it before or after you first saw the centre single-lever brake?

A. It was before.

914 19. Q. Do you mean to be understood that the said Tyler car had the two cross lever double brake on it first, and afterwards had the single cross-lever double-acting brake on?

(Objected to as instructing the witness.)

A. I do.

20. Q. What kind of brakes, if you know, were used on the passenger and crate or baggage cars of the Camden and Amboy road from 1843 to 1851?

A. A single brake, applied on one truck at a time.

21. Q. During the time from 1843 to 1851, if there had been any double-acting brakes operating on the wheels of both trucks from either end of the car, on any of the passenger or crate cars of the Camden and Amboy road, would you have known it?

A. I would.

22. Q. What was your business in the spring of 1843, when the Tyler car was rebuilt?

A. Brakeman.

23. Q. Did you or did you not have occasion to examine the Tyler car

particularly at the time it was rebuilt; and, if so, what caused you to examine it?

A. I did; it was the first car that had a six-wheel truck under it; it was one of the nicest fitted-up cars at that time on the road. I had occasion to oil it at different times, and my mechanical ideas were so great that I took particular pains to examine the car and see what improvements they had put on it.

24. Q. Do you recollect particularly about the brakes that were put on at the time it was rebuilt in 1843?

A. I do, sir.

25. Q. Do you distinctly recollect of noticing the brakes on the Tyler car at different times between 1843 and the time you first saw the double brake on with two cross-levers under the body of the car in 1851?

915 A. I distinctly recollect the brakes from the time the car was rebuilt in 1843 to the time when the double brake was put on it in 1851.

26. Q. About what time did you commence running as engineer on that road?

A. In 1852.

27. Q. What kind of brakes were used on the passenger and crate cars when you first commenced running as engineer?

A. Some were double brakes and some were single.

28. Q. What kind of double brakes were on the passenger-cars at that time?

A. There was the single-lever brake in 1852, applied on both trucks at the same time.

29. Q. What portions of the Camden and Amboy Railroad were you on from 1843 to 1851?

A. I was on the whole, from Camden to Amboy, on some trains; from Bristol to New Brunswick, and from Tacony to New Brunswick on others.

30. Q. About how many of the New Jersey Railroad and Transportation Company's cars did you have occasion to see from 1843 to 1851 daily?

A. From about ten to eleven cars, as a general thing two trains.

31. Q. Were these New Jersey cars you speak of in the trains that you were on between Jersey City and Philadelphia?

A. They were.

32. Q. Could the double-acting brake have been used on any of these cars that were in the trains you were on for any length of time, and you not have known it?

A. No, sir.

33. Q. Were you either brakeman, fireman, or engineer on said Camden and Amboy road during all this time, between 1843 and the present time?

A. I was brakeman, fireman, or engineer during the whole of that time.

34. Q. At the time the double brakes were first put on the Camden and Amboy road and the New Jersey Railroad and Transportation Company's road, as you say, in 1851, was there much talk about the double brakes? If so, what was said, and by whom? 916

A. There was, by the brakemen and engineers. They said that they could stop and hold the train at so much shorter a distance than could be done with the single brake. One brakeman on those would hold as much as two on the single brakes.

And being cross-examined by M'r Whipple, of counsel for defendant, he deposes and says:

1. Cross-q. You say you were first brakeman, in the employ of the Camden and Amboy Railroad, in 1843; brakeman on what kind of a train, and between what points did said train run ?

A. On passenger trains between Camden and Amboy, and between Tacony and Jersey City.

2. Cross-q. This was the in the year 1843, was it ?

A. Yes, sir.

3. Cross-q. Did you ever run as brakeman on freight trains during that year ?

A. No, sir.

4. Cross-q. Who was conductor of the passenger-train in that year, of which you ran as brakeman, and who was engineer ?

A. Isaac Van Doren was conductor, Wilson Brown and Edward Wilsey were engineers.

5. Cross-q. You say you were thereafter fireman. On what trains, who was conductor, who engineer, and who brakeman, and from what point to what point did said trains run ?

A. On the trains from Camden to Amboy and back, passenger-trains. I know the name of the conductor quite well, but cannot just now think of it. I now recollect it. It was Andrew Forbes. Charles Yundt was the engineer, also William Matthews. John Barney was brakeman.

6. Cross-q. Were these wholly passenger trains, or what are called mixed trains, passenger and freight, and in what year did they run in which you were fireman ?

917 A. They were passenger trains. It was in 1844 and 1845. I was not on those trains all that time.

7. Cross-q. You then say you went back to the brake again, in what year ?

A. In 1847.

8. Cross-q. While fireman, did you know of excursion trains being run on the Camden and Amboy road ? If so, in what years did they run ?

A. I did. They ran while I was firing and before I commenced firing. They ran in 1844 and 1845, while I was firing.

9. Cross-q. Do you know Charles Yundt ?

A. I do.

10. Cross-q. When he swears in this case that there was a double brake on a car of said Camden and Amboy road run in one of said excursion trains in the year 1845, such a double brake as you say was put upon that road in 1851, does he swear falsely or truly ?

A. That is not for me to say whether he swears falsely or truly.

11. Cross-q. Assume that he has thus sworn, has he testified the truth ?

A. It is not my place to answer whether he has sworn to a lie or the truth.

12. Cross-q. Do you regard Charles Yundt a creditable witness in a matter of which he may be supposed to have a personal knowledge ?

A. Not knowing, I cannot say.

13. Cross-q. Do you know Edwin Lockwood ?

A. I do, sir.

14. Cross-q. Do you regard him a creditable witness in any matter of which he may be supposed to have a personal knowledge ?

A. Not knowing, I cannot say.

15. Cross-q. Do you think he would be likely to know what brakes

were put upon the car which conveyed John Tyler over the road in 1843?

A. I don't know.

918 16. Cross q. What was his position then and what is it now on the Camden and Amboy road?

A. He was boss of the wood-work shop; he is the same yet.

17. Cross-q. In view of such position, would he or not be likely to know what brakes were put upon the Tyler car in 1843?

A. I do not know.

18. Cross q. Whose advantages, in your estimation, were best, yours or his, in relation to what was put upon the cars of said road from time to time?

A. I do not know what advantage it was to him at all.

19. Cross-q. Do you know Joseph Head?

A. I do.

20. Cross-q. What was his position on that road in 1845?

A. Station agent.

21. Cross-q. Do you think he would be likely to know what brakes were on the Tyler car in 1845 as well as you?

A. I don't know.

22. Cross-q. Do you know Letchworth Cox?

A. I do.

23. Cross-q. What was his position on that road in 1843, 1844, and 1845?

A. He worked in the car shop.

24. Cross-q. Do you think he would be likely to know what kind of brakes were on the Tyler car during that time?

A. I don't know.

25. Cross-q. Have your advantages been superior to all other men on that road, from 1843 to 1851, in relation to the brakes on certain cars of that road?

A. I don't know.

26. Cross-q. Have they been sufficient to warrant you in standing up in this court and contradicting the testimony of twenty-eight witnesses, mostly from the Camden and Amboy road, who have testified in this case that one or more double brakes, such as you have described, were in use on one or more cars of said road from 1843 to 1852?

919 A. I say no further than I know myself. I know nothing about the other witnesses. As to saying anything against those men, I have nothing to do with it.

27. Cross-q. You say that a single brake was used on the Tyler car from 1843 to 1851, and when you are asked to describe the double brake used thereafter you say it was a single lever brake, connected with a lever in the centre of the car to the body of the car. Was this the first double brake you ever saw?

A. No, sir.

28. Cross-q. If this is not the first, please describe the one you did first see. On what car and where?

A. The first double brake I ever saw was the Hodge brake, a double lever brake. That brake was put on the Tyler car in the first place; about the date I cannot be positive. In 1851 that brake was put on, in the spring.

29. Cross q. Was the Hodge brake taken off from the Tyler car in 1851, and some other double brake put on?

A. I would not be positive in 1851; it may have been a later date than that. Just before the Burlington accident the McLaughlin brake was put on; it worked from the bumpers of the car. At that time they disconnected the double lever brake, making a single lever brake of it.

30. Cross-q. After answering the 13th direct interrogatory did you have occasion to leave the witness stand and go into room adjoining? If so, for what purpose?

A. I did. I went in there to wash the blood off from my nose; I had bleeding at the nose.

31. Cross-q. Did M'r Sayles, the complainant in this case, follow you into that room?

A. He walked into that room and turned the water on for me.

32. Cross-q. While so doing did he whisper to you?

A. No, sir.

33. Cross-q. Did he or did he not say that the Hodge brake was put on the Tyler car before the centre lever brake, or words that conveyed this idea?

A. He did not to me.

34. Cross-q. You are quite sure, are you, that the Hodge brake was put on the Tyler car in 1851?

920 - - A. I am.

35. Cross-q. You think there is no chance of your being mistaken, do you?

A. I say that I am certain that the Hodge brake was put on the Tyler car about the spring of 1851?

36. Cross q. And you are just as sure, are you, that thereafter a single centre lever was put on the Tyler car?

A. I am just as sure that it was, after the McLaughlin brake was put upon the car that worked from the bumpers, then a single lever brake was connected to it.

37. Cross-q. Then the McLaughlin brake was put upon the Tyler car, was it?

A. I say the McLaughlin brake was put on the cars; I did not say on the Tyler car.

38. Cross-q. Was the McLaughlin brake put on the Tyler car?

A. I don't think the McLaughlin brake was put on the Tyler car; I am satisfied that it was not on the Tyler car.

39. Cross-q. Was it necessary to change the Hodge brake to the centre lever brake, in order to apply the McLaughlin brake?

A. It was.

40. Cross-q. Was the change made in the Tyler car from the Hodge to the centre lever brake, as you say, that the McLaughin brake might be applied?

A. I did not say that it was.

41. Cross q. You said it was changed from the Hodge to the centre lever brake, did you not?

A. I did not say that it was on the Tyler car. I said the Hodge brake was on the Tyler car, but I did not say it was changed to the centre lever brake.

Cross q. 42. Was the Hodge brake ever taken off from the Tyler car? If so, what brake was put on in its place?

A. It was taken off the Tyler car. A single lever brake was put on the Tyler car some time afterwards.

43. Cross-q. How long afterwards?

A. I could not be right positive as to the length of time; some year or two.

921 44. Cross q. To what extent was the Hodge brake applied to the

cars of the Camden and Amboy road? Were they in general use or not?

A. I have known them to be on five, six, or seven cars myself; they might have been on more for aught that I know.

45. Cross-q. Then they never went into general use on that road?

A. What do you call general use? There was quite a number had them on.

46. Cross-q. Is the Hodge brake in use on that road now?

A. Nowhere on that road that I know of; not on the main line of the road.

47. Cross-q. You said there could not have been a double acting brake on the cars of said road without your knowing it. Did you take particular pains, through all these years, to inspect the cars with reference to the brakes that might be on them?

A. I did in regard to all that there was any improvement put on. I have gone so far as to take the drawings of the brakes that were put on at the time, and I have those drawings at home now.

48. Cross-q. Will you produce these drawings and annex them to your deposition?

A. I don't know that I am compelled to produce a drawing of anything I have made a drawing of.

49. Cross-q. Will you produce copies of these drawings?

A. I could do it if it should become necessary that I should do it.

50. Cross-q. Will you do so by defendant's counsel paying the expense of making copies?

A. I did not come here to be paid for telling what I know; I came here to tell the truth, and all I do, I do without being paid for.

51. Cross-q. Will you produce the copies of said drawings without pay?

A. Not unless I am compelled to produce them.

922 52. Cross-q. What trains do you run on as engineer on the Camden and Amboy road, at the present time?

A. Some days the Cincinnati express, some days the accommodation, some days the Washington through line, sometimes, nights, the Adams Express.

53. Cross-q. Do you know David T. Jeffries?

A. I do, sir.

54. Cross-q. Is he conductor on any of the trains run by you as engineer; if so, what trains?

A. He is at different times, on the Adams Express from New York, Adams Express from Philadelphia back. He is conductor on the train as conductor regularly. I do not run that train regularly, but only a week at a time.

55. Cross-q. Are you employed wholly by the Camden and Amboy road?

A. I am.

56. Cross-q. And do you receive pay wholly from that company?

A. If I did not I should not work for them for nothing.

57. Cross-q. Do you receive any pay from the Adams Express Company?

A. I do not suppose that you would want to pay me if I did not work for you. I never worked a day for the Adams Express Company, and I certainly should receive no pay for what I did not work for.

58. Cross-q. Who first called your attention to testifying in this case?

A. I was subpœnaed to do so.

59. Cross-q. By whom?

A. By the prosecutor.

60. Cross-q. Who is the prosecutor?

A. This gentleman who sits here at the corner of the table; I do not remember his name.

61. Cross-q. Did M'r Sayles, who sits at the corner of this table, serve the subpœna upon you; if not, who did it?

A. He sent it to me by mail.

62. Cross-q. Have you had conversation with regard to your evidence in this case with any person or persons before you came into this room?

923 A. Nothing further than on the road among our own men about the different brakes, how they worked, &c., &c.

63. Cross-q. Have you had any conversation with David T. Jeffries in relation to your evidence in this case?

A. No, sir.

64. Cross-q. Have you with M'r Sayles, complainant in this case?

A. No, sir.

65. Cross-q. With whom have you had conversation? Name the party or parties.

A. With no one about this case.

66. Cross-q. Have you had any conversation with any party or parties in relation to brakes, lately?

A. No, sir.

And being re-examined by M'r Sayles, he deposes and says:

1. Redirect q. In your answer to the last cross-question do you mean that you have had no conversation about brakes lately, previous to today?

A. Not with any parties concerned in this suit. Nothing further than with our own employees on the road. I have had talk with our own men about brakes, about how they held and how they did not—not in regard to being pried into to know what I knew or anything of that kind. I have never previous to to-day had conversation with anybody, except our own men about brakes. I have had to-day.

2. Redirect q. Was the said Tyler car run in the trains that you were on, often between 1843 and when it first came out and 1851?

A. It was.

3. Redirect q. In the 17th direct question you are asked to state as nearly as you can when you first saw such two-lever brake on the Tyler car. Your answer is, "That was put on in the same year, in 1851." Do you mean to be understood that the centre-lever double-acting brake was put on the Tyler car in 1851, or do you mean that it was

924 after the McLaughlin brake was put on the Camden and Amboy cars? Please explain.

A. The Hodge brake was put on in the spring of 1851, somewhere thereabouts, and then some time after that—I can't say how long the McLaughlin brake was put on. Then they put the single centre brake on after the McLaughlin brake. The McLaughlin brake used to jam, and we could not get it released from the wheels. They connected that single-lever brake to that McLaughlin brake and tried to make it work. They likewise put a spring under the car to try to make that McLaughlin brake free itself. They then dispensed with all the McLaughlin brakes and left on the single-lever brake. We frequently had to go under the cars and free that McLaughlin brake by prying it off of the wheels.

4. Redirect q. How sure are you that you did not see the single centre-lever double-acting brake on the Tyler car or any other cars belonging

to the Camden and Amboy Company before they commenced putting the McLaughlin brake on their cars?

A. I am sure I did not.

5. Redirect q. In your answer to the 41st cross-question you say, "I did not say that it was on the Tyler car." What do you mean by "it was not on the Tyler car"?

A. I mean the McLaughlin brake was not on the Tyler car.

6. Redirect q. You also say in answer to the 41st cross-question, "I said the Hodge brake was on the Tyler car, but I did not say that it was changed to the centre-lever brake." Did you mean that the Hodge brake was not changed on the Tyler car and the centre-lever brake put on in its place? Please explain.

A. I meant to say that it was not changed to the McLaughlin brake. It was changed from the Hodge brake to the centre-lever brake.

7. Redirect q. In your answer to the 3d redirect question you say "the McLaughlin brake was put on." What did you mean it was put on?

925 A. On the cars. It was put on a flat car in the first place.

And being further cross examined by M'r Whipple, he deposes and says:

1. Recross-q. Do you wish to be understood that you knew nothing of what you were expected to testify to in this case until you came into this room to give your evidence?

A. I knew before I started that I came here to testify about these brakes.

2. Recross q. Did you know what you were to testify to?

A. I was to testify to what I knew about those brakes on those cars.

3. Recross-q. Who notified you to testify to what you knew about those brakes on those cars?

A. Knowing that that was what I was subpœnaed for to come here.

4. Recross-q. Have you the subpœna with you?

A. No, sir.

5. Recross-q. Where is it?

A. The last I saw of it it lay in the tool-chest in the locomotive.

6. Recross-q. Then you had no knowledge before coming here of what you were to testify to, except that it was about brakes?

A. These double-acting brakes.

WILLIAM QUIGLEY.

Subscribed and sworn to before me this 10th day of April, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to April 11th, at 10 a. m.

926 APRIL 11TH, 1868—10 a. m.

Present, M'r Sayles, complainant, in person, and M'r Whipple, of counse for defendant.

Examination further adjourned to same day, at 2 p. m.

2 P. M. SAME DAY.

Present, M'r Sayles and M'r Whipple, as before.

Examination further adjourned to 13th April, 1868, at 1 p. m.

NEW YORK, *April 13th*, 1868—1 p. m.

Examination further adjourned to April 14th, 1868, at 11 a. m.

NEW YORK, *April 14th*, 1868—11 a. m.

Present, M'r Whipple, of counsel for defendant.

Examination further adjourned to April 15th, 1868, at 11 a. m.

APRIL 15TH, 1868—11 a. m.

Present, M'r Sayles, complainant, in person, and M'r Cozzens, of counsel for plaintiff, and M'r Whipple, of counsel for defendant.

927 CHARLES M. KELLER, a witness produced on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A My name is Charles M. Keller; my age is 57 years; I reside in the city of New York, and am a lawyer.

2. Q. Are you acquainted with Thomas Sayles, the complainant in this case, and have you for some time past acted as counsel for him at different times in relation to the so-called Tanner patent for an improved car-brake? If so, for about how long a time have you been his counsel in such matter?

A. I have been acquainted with M'r Sayles certainly since as early as 1852, and have acted as counsel for him in suits under the Tanner patent for a double-acting car-brake—at first about 1852, when suits were brought in the name of Tanner, Sayles being interested with Tanner, and subsequently when suits were in his name.

3. Q. Do you remember an action at law brought on the said patent by said Henry Tanner against the New York and Erie Railroad Company, and tried before Judge Hall and a jury, at Albany, in 1854; and were you engaged in that action as senior counsel on the part of the plaintiff?

A. I remember that suit, and was engaged as senior counsel in it. I examined the witnesses and summed up the case when tried in Albany at the October term of 1854. The present judge of the district court, Judge Blatchford, was associated with me at that time as counsel in the case.

4. Q. Will you please state anything which may be within your knowledge respecting any investigations made prior to that trial on the part of the plaintiff in that suit in regard to the alleged defences set up by the notices of special matter served in the case?

A. There were several matters which were investigated called up by the notices of special matter. One was an alleged prior invention by Nichols, in Connecticut, and the other was a brake alleged to have been previously used on the New Jersey Railroad and Transportation
928 Company's cars, alleged to have been invented by a man of the name of Stanley.

5. Q. Did you before said trial see and converse with a man by the name of Joseph F. Talson in reference to one of the defences set up in said notices; and, if so, what defence was such conversation about, and what did said Talson say about it?

A. Either M'r Sayles or M'r Tanner, or both, informed me that Talson had full knowledge of every kind of brake that had been used on the New Jersey Railroad and Transportation Company's road. He was brought to me, and I had full and careful conversations with him in reference to the kinds of brakes that had been used on the cars of that railroad company during the whole period of time that he was the superintendent of cars for that company at Jersey City. I asked him, particularly, in reference to the alleged prior invention of Stanley, and on that subject examined him very carefully, as I am in the habit of doing, with the view of ascertaining whether his testimony would be material to the plaintiff in establishing that that alleged prior Stanley invention would or would not invalidate the Tanner patent; and after a careful consideration of his statement of his knowledge upon that subject, I advised my clients that, in my belief, that defence would fail to impeach the validity of the Tanner patent.

6. Q. Will you state, to the best of your recollection, what said Talson said to you about the Stanley brake in these conversations?

A. In substance, his statement was that a double-acting brake was applied on one of the cars at Jersey City by Stanley, somewhere, if I remember right, in the year 1842 or 1843, whilst he was superintendent of cars on that road; that it broke the first or second time that it was tried, and it was tried twice or three times, and it was so defective that he himself took it off and changed it back to a single-acting foot-brake; and that some two or three years afterwards he met Stanley, who told him that he had abandoned the prosecution of that brake; that
929 during the whole time that he was superintendent of cars on that
road there were no double-acting brakes on any of the cars except this one trial by Stanley; that there were some double-acting brakes on the tenders, but that they could not be operated by the windlass at either end of the car, and could only be operated from one end; and that he was thoroughly acquainted with every kind of brake used on the cars of that road up to the time he ceased to be superintendent, some time in the year 1849.

7. Q. State whether, in any of these conversations, Talson said anything to you about whether that Stanley brake was the only double brake, operated from both ends of the car, that he knew of up to 1849; and, if so, what did he say?

(Question objected to.)

A. In those conversations he not only told me that the Stanley experiment was the only double-acting brake that could be operated from both ends of the car that was on any of the cars of that road up to the time he left in 1849, but so testified on the trial in Albany. He stated in these conversations that it was the only brake operated from both ends of the car which, to his knowledge, had been on any of the cars of that road up to the time he left in 1849, and that it was the only double-acting brake operated from both ends of the car of which he had any knowledge up to the time of his leaving in 1849.

8. Q. Did he at any time before, or during, or after said trial, say anything to you or intimate in any way anything about the use on a car called the Tyler car, belonging to the Camden and Amboy Railroad Company, or upon any car or cars belonging to said Camden and Amboy Company, of a double-acting brake operating from both ends of the car?

A. In our conversations I have no recollection that any car called the Tyler car was ever mentioned, and he never said to me at any time that he had any knowledge of any double-acting brake operated from
930 both ends of the car, on any car of the Camden and Amboy Rail-
road Company.

9. Q. You have said that Talson testified at the trial which has been mentioned. Can you state the substance of the testimony which he gave there?

A. The substance of his testimony at the trial of Tanner vs. The Erie Railroad Company, at Albany, in 1854, corresponds with my statement of his conversations with me as given by me in my answers to the 6th and 7th questions.

10. Q. Talson has testified in this present suit that in his testimony at the trial in Albany he stated that he had no recollection of the brake put upon the New Jersey Railroad car ever being taken off, and that he would have gone into more of an explanation at Albany, but he was stopped by the counsel for M'r Sayles; and he has also testified in this suit that when at the Albany trial he "would begin to advance anything in explanation of the model he made" (of the New Jersey Railroad brake) "the counsel on M'r Sayles' side would say to him that he didn't want him to talk about that, he wanted him to talk about some other part of the model," and he has also testified that you were the counsel who told him that you did not want him to explain the Jersey brake. Are these statements of Talson's, or any of them, true?

A. They are not true.

11. Q. Did he at said trial testify anything whatever about having no recollection of the Stanley brake ever having been taken off?

A. He testified distinctly at the trial that he took off the Stanley gear and made the brake a single-acting foot-brake.

12. Q. Did he in any conversation with you at any time before or during or after said trial, say or intimate any such thing?

A. No.

13. Q. Talson has also testified in the present suit that the counsel for the railroad company, at the Albany trial, "did not sustain him," in
the matter of his examination. Will you state what you may know
931 of your own knowledge respecting whether the Erie Railroad Company and their counsel in that suit opposed the plaintiff zealously or not?

A. I thought at the time, and have always remained of the same impression since, that the counsel for the Erie Railroad defended that suit with all their ability. A suit had been simultaneously or about the same time commenced against the Hudson River Railroad. The solicitor for the Erie Railroad entered into an agreement to abide by the result of the suit against the Hudson River Railroad. The solicitor of the Hudson River Railroad Company, after investigating the matter, came to me and informed me that after ample consideration counsel had come to the conclusion that they had no defence in that matter, and paid me the costs of the suit and the amount charged for a license. I communicated that result to the attorney of the Erie Railroad and demanded a settlement on the part of that railroad, in compliance with my understanding of the terms of the agreement. He declined to settle, contending that the agreement merely bound the road to settle after the result of a trial of the case against the Hudson River Railroad, and as there had been no trial in that case, the Erie Railroad Company would defend. At the June term of the circuit court for the northern district of New York, they obtained a continuance to the following October term at Albany, on the ground that there was a strike on the Erie Railroad which would prevent them from producing their witnesses in time; notwithstanding, on the first day of the term, on the calling of the calendar, they had answered ready for trial, and the cause had been set down for trial for the following week. The notice of special matter in the case indicated zeal in the preparation of the cause on the part of the defence and I was then, and have been ever since, under the belief that the case was defended with zeal.

14. Q. Did they have to pay any costs for the continuance from the

June term to the October term? And, if so, about how large a sum, if you remember?

932 A. They had stipulated with me to be ready for trial at the June term. On the call of the calendar they answered that they were ready, and in conformity with the wishes of both parties the court set down the case for trial for the following week, and when, afterwards, they asked for a continuance, for the reasons previously stated the court refused on the ground that by their stipulation and agreement they were bound, and that he could not relieve them. They then stated that, under the circumstances, unless I would consent they would have to let the case go by default, as it was impossible for them to have their witnesses in time. I finally consented to a continuance to the October term if they would pay the expenses that my clients had been put to in making preparation and bringing their counsel and witnesses twice to Canandaigua, in accordance with the stipulation, and they paid between $1,300 and $1,400, the clerk of the court having been assigned by court to state the account of the expenses, according to the consent.

15. Q. Was there any collusion whatever, between the plaintiff and the defendants in that suit?

A. None whatever, that ever came to my knowledge, or ever excited my suspicion.

16. Q. Was the suit fairly and fully tried, so far as you know, on both sides?

A. I believe it was.

And being cross-examined by M'r Whipple, of counsel for defendant, he deposes and says:

1. Cross-q. Are you at the present time counsel for complainant in this case?

A. I am not.

2. Cross-q. Are you retained as counsel by any party or parties interested in the extended term of the said Tanner centre lever brake patent?

A. I am.

3. Cross-q. By whom?

933 A. I received a retainer from M'r Mowry, who, as I was informed, is the trustee of the owners of the extended term of the patent.

CHA'S M. KELLER.

Subscribed and sworn to before me this 15th day of April, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

THOMAS SAYLES, complainant, being recalled as a witness on his own behalf, and having been duly cautioned and sworn, deposes and says, as follows:

1. Q. Will you please state whether there was in any respect, whatever, any collusion before or during the trial between the plaintiff and the defendants in the trial between Tanner and the New York and Erie Railroad Company at Albany, in 1854, or was there any material fact to your knowledge, kept back on either side at that trial?

A. There was not any collusion between the plaintiff and defendants in that case to my knowledge. I was really the plaintiff in the case myself, having purchased the patent previous to that trial, and took the chances of the trial myself. There was no material fact kept back on either side to my knowledge.

2. Q. Talson, in his cross-examination in this case, has stated as follows: "I testified at Albany under peculiar circumstances. M'r Sayles came to me before the trial came on and said to me, 'M'r Talson, I know that you hold in your hand sufficient evidence to seriously injure my patent or to kill it, but if you will not advance anything on this trial, and I win the suit, I will make you a very handsome present.'" Is that statement true in any particular?

A. It is not.

And being cross-examined by M'r Whipple, he deposes and says as follows:

934 1. Cross-q. You were plaintiff in the case alluded to in the first question in your present recall, were you?

A. I was not plaintiff in bringing the suit, but after the suit was brought I purchased the patent of Tanner, and was to try the suit at my own expense, and take the chances of the result.

2. Cross-q. You were an interested party, were you?

A. I was interested.

3. Cross-q. To what extent?

A. I was the owner of the patent, except for some two or three States, I think.

4. Cross-q. Are you interested in any way, directly or indirectly, in the extended term of the so-called Tanner patent, of which you own, as you say, the first term of said patent?

A. I don't know whether I am or not.

5. Cross-q. Do you expect to be in any way, directly or indirectly, interested in said extended term, consequent upon any circumstance or circumstances that have arisen or may hereafter arise?

A. I cannot tell what may arise, or whether I shall ever be interested in it or not.

6. Cross-q. Question repeated, and a responsive answer required.

A. I cannot tell what circumstances may arise, and I do not know, neither can I tell, what may transpire hereafter with regard to the extended term of the patent.

7. Cross-q. Have you any agreement, verbal or otherwise, with any party or parties interested in said extended term, as counsel or otherwise, that you shall have an interest in said extended term?

A. No such agreement exists.

8. Cross-q. Neither tacitly or implied?

A. I have no agreement with any one connected with the extension for any interest therein.

9. Cross-q. Directly or indirectly?

A. Nothing definitely.

10. Cross-q. Then you do expect an interest, do you?

A. I hope I may have an interest.

935 11. Cross-q. Do you expect an interest?

A. I hardly know whether I do or not.

12. Cross-q. Does any party or parties, whether of counsel or otherwise, connected with the extended term party, pay or agree to pay any expenses connected with the trial of this case, in which you are complainant?

A. I don't know that they have paid any. There has been some talk about their paying something, that is all.

13. Cross-q. Does M'r S. D. Cozzens, counsel in this case, receive his pay from you or some other party?

A. He has not presented his bill to me yet.

14. Cross-q. Do you expect he will?

A. I do not know; I have never had a word with him on the subject.

15. Cross-q. Have you had a word with any other person or persons on the subject?

A. I have, and I expect the defendants in this case will be compelled to pay M'r Cozzens his bill, and have so talked with other parties.

16. Cross-q. When do you expect defendants are going to pay M'r Cozzens?

A. When we get through with this suit.

17. Cross-q. What do you mean by when we get through with this suit?

A. I mean when this suit is ended, closed up.

18. Cross-q. When do you think it will be ended and closed up?

A. I cannot tell when; I hope some time during my life.

19. Cross-q. What is the prospect of its being closed up in your life?

A. I think it is pretty good, that is, if I should live a reasonable length of time; and I am enjoying very good health now. I know the counsel for the defendants has stated to me that it would be a long time before this suit would be ended, and that it would cost me more than I would get out of it, even if I gained the case.

20. Cross-q. Who made that statement to you?

936 A. Stephen M. Whipple, in substance, for one, and M'r Blodgett, of Chicago, in substance, for another, about the time of the commencement of the suit, a short time before. I mean M'r Blodgett made the statement when I was commencing the suit.

21. Cross-q. When did Stephen M. Whipple make the statement in substance, and what was the substance in detail? Please state fully.

A. I cannot tell the time when. One time I recollect was in the Tremont House in Chicago before the case of Emigh against The Chicago, Burlington and Quincy Railroad Company was decided. I think some three or four years ago M'r Whipple and I were talking about that case. M'r Whipple said to me that he was very sure that the railroad company would gain that case; that the evidence clearly warranted such a belief. And then speaking of my case, he said that it would be a long time before we got through with the case, and if we ever did and I gained the case that it would cost me more than I would get. That is about what was said, as nearly as I can recollect.

22. Cross-q. Did you before taking the new proofs in this case have a conversation at the Girard House in this city, in relation to the extended term of this patent and the proofs in this case, with said Stephen M. Whipple?

A. I think there was something said about it between us.

23. Cross-q. Did you during that interview make the statement in substance that you could kill the extended term of the Tanner brake patent?

A. I think I said at that interview that I thought I could have prevented the patent's being extended. I did not say that I could kill the extended patent.

24. Cross-q. Did you or not say that you could put the extended term of said patent in such a light in substance that it could be purchased for a very small sum?

A. I do not recollect saying anything of that kind.

25. Cross-q. Did you or not state at that interview that you could refute the new proofs about to be taken in this case, and propose to tell me wherein you could do so, provided I would consent not to take them?

937 A. No, sir.

26. Cross-q. Did you or not say there could be a half million of dollars made out of this Tanner brake patent if these proofs were withheld, and did you not offer the said Stephen M. Whipple an interest therein if he would be a party to the withholding of said proofs, or in substance to this effect?

A. I have never heard anything about the withholding of any proofs in the case until now. I did not say that there could be a half million of dollars made out of the patent. I think I did tell M'r Whipple at that conversation that I was sure of gaining the case, after talking about the Camden and Amboy, or Tyler car brake, and if I did gain it, that the railroad companies would have to pay for the patent and extension not less than a million dollars. I did not offer M'r Whipple an interest in the patent. M'r Whipple said at the time that he was well aware of the value of the patent, if sustained, and that he knew they would have to pay a very large amount. He said at the same time that I had nearly all the railroad companies in the United States to fight, and that he was representing the most of them in defending this suit.

27. Cross-q. Did you or not, directly or indirectly, expressed or implied, offer the said Stephen M. Whipple a pecuniary interest in the proceeds of sales from the said Tanner patent, if he would consent to withhold the evidence from the Camden and Amboy road in this case?

A. I did not wish to have the evidence of the Camden and Amboy brake suppressed.

28. Cross-q. Did you or not in any way, directly or indirectly, attempt to influence the said Stephen M. Whipple, from pecuniary motives, not to proceed in taking the aforesaid evidence from the Camden and Amboy road?

A. I did not. On the contrary, I urged him to not delay the matter, but to put in the evidence at the earliest possible moment, for I was in a great hurry to get back to Chicago to attend to another patent suit that I had in progress there, and Stephen M. Whipple is the last man that I would attempt to make any arrangement with, of the
938 kind suggested by him. I do recollect of telling him at this
time that, no matter what he proved about the Tyler car brake or the Talson brake, I was very sure of gaining the case.

29. Cross-q. Did or did not the said Stephen M. Whipple say to you that he was not at liberty to enter into any such arrangement as you proposed, and as has already been indicated in the foregoing interrogatories?

A. I know nothing about it. Unless he means about hurrying up the case, or putting in the new testimony in the earliest possible moment, as I desired. I think he said that he had the responsibility of the case on him, and that he was not employed by the Chicago and Northwestern Railway Company alone, but by most of the railroad companies in the country, and that they were all interested in this suit or in the result of it, and he should take his own course and should not hurry the case any farther than was for the interest of those who employed him. He should look to their interest and not mine.

30. Cross-q. Did or not the said Stephen M. Whipple say to you, after you had laid your plans before him, that he was not at liberty to make any terms with you in relation to keeping back or not taking in full the evidence from the Camden and Amboy road, or matter to this effect?

A. I never heard anything about keeping anything back of the Camden and Amboy road before.

31. Cross-q. Did he or not say that he was not at liberty to compromise this matter between you and the railroad companies, or subject-matter to this effect?

A. I have never had any talk with M'r Whipple about a compromise of this case in any shape or manner whatever. I have never offered to compromise it with any party whatever since I commenced the suit.

32. Cross-q. Have you offered any inducement or inducements to any party or parties to withhold their evidence or modify it to suit your interests, directly or indirectly?

A. I have not.

939 33. Cross q. And do you swear the foregoing evidence upon your oath as a man and conscience before God?

A. I have sworn to the above facts, as is shown in the testimony.

34. Cross-q. As true, so help you God?

A. I have sworn to them.

35 Cross-q. And do you call God to witness that you have sworn truly?

A. I believe I understand the nature of an oath, and the consequence of swearing falsely, and I have testified to the facts as stated in this deposition.

36. Cross-q. Will you answer, yea or nay, to the last question; "and do you call God to witness that you have sworn truly?"

A. I have testified in this case to the facts that I have been questioned on as I knew them to be, and as I recollected them.

37. Cross-q. Dare you call God to witness that you have sworn truly?

A. I would dare do so, were it necessary.

38. Cross-q. And have you sworn to the truth, so help you God?

A. I believe the oath was administered to me by the examiner in similar form to the question, at the commencement of this deposition.

39. Cross-q. Question repeated. And have you sworn truly in this case, so help you God?

A. I have sworn truly.

THOS. SAYLES.

Subscribed and sworn to before me this 15th day of April, 1868.

JOSEPH GUTMAN, Jr.,
Examiner, &c.

Examination adjourned to April 16th, 1868, at 10 a. m.

New York, *April 16th*, 1868—11 a. m.

940 Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

Thomas M. North, a witness produced on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is Thomas M. North; I am forty-three years of age; I reside in the city of New York, and am a lawyer.

2. Q. Will you please state whether you were formerly secretary and attorney of the Hudson River Railroad Company; and, if so, in about what year did that connection commence, and in what year did it terminate?

A. I was. I acted as counsel from 1850 to 1866; as attorney and secretary during most of that time. I was attorney of record in most of their suits from 1851 or 1852 to 1866.

3. Q. Do you remember a suit brought, in or about 1853, by Henry Tanner against the Hudson River Railroad Company for an infringement of the so-called Tanner double-acting car-brake patent; and, if so, did you take part in that suit as attorney and counsel for the defendant?

A. I remember the suit. I was attorney for the defendant and one of the defendant's counsel; the one who had the active charge of preparing the suit for trial.

4. Q. Will you please state whether, in the preparation of that case on the part of the defendant, any investigations were made in different parts of the country relative to double-acting car-brakes; and, if so, will you state what was the object of those investigations, and what was their character, whether full or otherwise? Please answer fully.

941 A. Such investigations were made by me and under my direction. Their object was to ascertain whether the invention claimed in the Tanner patent had not been previously made by others, and to ascertain the precise nature of the brakes which had previously been in use, and the character of their use. The investigation was as full, complete, and thorough as I had the ability to make it. So far as I know, I thoroughly examined every invention bearing upon the case.

5. Q. Will you please mention some of the places or railroads to which these investigations extended, and some of the persons who aided, under your direction, in making these investigations?

A. At this lapse of time I can only state the principal ones. There were many investigations at different places and from different persons, which resulted in nothing, and have passed from my mind. I remember that I was aided by M'r Gifford, M'r W. W. Hubbell, and John H. Reynolds as my counsel, and consulted with the counsel of various other railroads as to matters of law. As to matters of fact, I had some help from them, but more from the officers of the Hudson River Railroad, and M'r Stevens, M'r Nehemiah Hodge, and others whose names I do not now recall. My attention was finally directed mainly to two inventions, one, I think, at Springfield, certainly upon one of the New England roads, and the other upon a New Jersey road.

6. Q. Will you look at the copies of notices of special matter in the action at law of Tanner against the Erie Railroad Company, printed in the defendant's proofs in this case, and state whether such notices refresh your recollection in respect to any places other than those which you have mentioned, at which investigations were made in the suit referred to against the Hudson River Railroad?

(Defendant's counsel objects to the witness referring to the matter referred to in the question.)

942 A. They do not materially. I have a general knowledge of all the matters and of all the persons mentioned in those notices, but cannot now recall where or under what circumstances I investigated each of them. My impression is that, as to some of them, I relied upon the investigation of M'r Eaton, counsel for the Erie Railroad, but not as to the ones I have before mentioned. I also remember what is not stated in that notice or recalled to my mind by it, that I went to Boston and there investigated the matter with reference to several of the roads leading out of Boston.

7. Q. Were M'r Stevens and M'r Hodge employed on behalf of the Hudson River Railroad in that suit to make investigations relative to double-acting brakes?

A. I do not think that they were employed in the sense of being paid specially for that purpose. They did, in point of fact, make such investigations, and consulted with me in reference thereto repeatedly, M'r Stevens quite frequently. I understood that they were acting in reference to their own interests as patentees of an invention which the Tanner patent claimed to supersede, they both having sold the Hudson River Road rights under their respective patents.

8. Q. You have spoken of having had your attention in these investigations called mainly to a road in New Jersey and to a New England railroad. Will you state what was the matter to which your attention was so called in reference to the New Jersey Railroad?

A. A M'r Talson who had been employed upon that road and whom I saw on several occasions made me statements in regard to the use of a double-acting brake upon that road, and made me drawings, and gave me explanations of the mechanism employed.

9. Q. State if you know what position this M'r Talson had formerly occupied on said New Jersey Railroad?

A. He had some charge of some department or shop. My impression is master-mechanic or duties corresponding to that office.

943 10 Q. Please state to the best of your recollection what was the substance of the statements referred to by you, made by him in reference to said brake on said New Jersey Road?

A. The substance was that he had put upon one of the cars of that road a brake which he called the Stanley brake; the name was Isaac Newton Stanley; that it had been run over the road several trips. I think as many as three or four on one occasion; that it had been repaired or adjusted and tried again on more than one occasion; but I cannot now recall exactly how many. I cannot say with certainty the number of trips which he told me the car had made with that brake upon it. It was a small number, and its use had been discontinued from that period, which was some years previous to my interview with him, and had not been subsequently used; my recollection is that it was a baggage-truck upon which that brake was applied—a truck upon which they carried the crates.

11. Q. Did he say anything more to you on this subject than you have above stated in substance?

A. He said a great deal more in words. I talked with him for hours in all at different times. I think I have stated substantially all that was material to my investigation. My object was to ascertain the date of the invention, its nature, and the character of its use. The date was prior to the invention of Thompson and Batchelder, patented by Tanner; the nature I could not now state in the absence of drawings or means of illustrating; the character of the use was substantially as I have stated.

12. Q. Did he, in any of his interviews with you, say anything to you about what double-acting car brakes, operated from either end of the car, he had known about in his experience; and if so, what did he say?

A. We talked about the various inventions which I was investigating, and from which or some of which I hoped to make a defence to the action. My impression is that the Turner brake and the Springfield brake were discussed between us, and other brakes as compared with the Stanley brake, which he informed me about. I don't remember that he had had experience of any of them except the Stanley brake. 944 He certainly did not speak of any other brake in the same way that he did of the Stanley brake, as having been applied by him or under such circumstances that he had any special interest in it, or special knowledge about it.

13. Q. Did he say anything to you in any of these interviews about

whether he knew of any double-acting brake operated from both ends of the car, other than the Stanley brake, before he left the New Jersey Railroad; if so, what did he say?

A. The only one which he spoke of was the Stanley brake. He did not inform me of any other. He said that the Stanley brake was the first invention of a double-acting brake, and claimed that his right was superior to all rights under other inventions.

14. Q. Did he say anything to you in any of those conversations, or intimate in any way anything about the use on any car or cars belonging to the Camden and Amboy Railroad, of a double-acting car brake?

A. Nothing except as I have above stated.

15. Q. How active a part did said Talson take at this time, in reference to these investigations regarding said brake on the New Jersey Railroad?

A. He had several interviews with me and talked very freely and with much apparent interest, and appeared to be very desirous of defeating Tanner and of substantiating the priority of the Stanley brake. I understood that he claimed an interest in that invention.

16. Q. After the investigations of which you have above spoken were completed, including this in reference to the Stanley brake, what conclusion did you come to in respect to being able to make out a defense in Tanner's suit against the Hudson River road?

A. The case was called for trial in the fall of 1853 at Albany. I had, previous to that time, exhausted all the means for information which I could obtain, and on consultation with M'r Gifford and M'r Hubbell, we came to the unanimous conclusion that we had no defense to the action and no clue which gave us any reasonable hope of discovering any.

945 17. Q. What was therefore done in the suit?

A. A negotiation with M'r Tanner followed which resulted in the defendant's paying $1,000 and the costs of the suit, and the suit was therefore discontinued.

18. Q. Was there, at any time or in any respect, any collusion in reference to said suit between the railroad company and the plaintiff, or any one on his behalf?

A. There was not.

And being cross-examined by M'r Whipple, of counsel for defendant, he deposes and says:

1. Cross q. Was it known before the payment of $1,000 that the case could be settled for that amount, or rather before the discontinuance of the suit?

A. The agreement to pay $1,000 was made before that amount was actually paid or the suit discontinued.

2. Cross-q. Was it deemed by you, as counsel for the Hudson River Railroad Company, for the interests of said company, to pay the sum of $1,000 rather than to be to the expense of contesting the suit?

A. I was not acting with reference to the expense of defending the suit, which had been mainly already incurred, so much as from apprehension of the damages which the plaintiff would recover if the cause was tried.

3. Cross-q. At the time of bringing this suit, was the plaintiff, Henry Tanner, in any way or capacity in the employ of the Hudson River Railroad Company?

A. No, sir.

4. Cross-q. Was he ever in their employ?

A. He never was before that time. He some time after adjusted some claims made against the company, for personal injuries at Rochester and elsewhere. Never in any other way was employed by them.

5. Cross-q. Was this sum paid before or after the trial of said Tanner against the New York and Erie Railroad in which this Batchelder and Thompson patent was in issue?

946 A. It was in the latter part of 1853 before the Erie Railroad suit was tried, I think.

6. Cross-q. Had the suit against the New York and Erie road been commenced before this suit with the Hudson River road was settled?

A. It must have been actually commenced, or have been threatened and been expected.

7. Cross-q. Do you wish to be understood that the said Talson claimed that the Stanley brake was the first double-acting brake he had ever seen or known, and that he claimed that this brake had priority of right over all other inventions of this kind?

A. Yes, sir; that was very strongly impressed upon my understanding.

And being re-examined by M'r Cozzens, of counsel for complainant, he deposes and says:

1. Redirect q. You have stated that Talson claimed that the Stanley brake was the first double-acting brake he had ever seen or known. Did he say anything about this Stanley brake as tried on the New Jersey Railroad, as you have said he told you, being the only double brake operated from both ends of the car which he had ever known of, up to the time he left the New Jersey Railroad; if so, what did he say about it?

A. There is nothing in my mind about the time of his leaving that road which would enable me to answer with reference to that date. He did not speak of any double-acting car-brake other than the Stanley brake as being known to him except the Turner, Tanner, and other brakes with which I had been before familiar; certainly not of any other upon the New Jersey road, so far as I remember.

THOMAS M. NORTH.

Subscribed and sworn to before me this 16th day of April, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

947 Examination further adjourned to April 17, 1868, at 2 p. m.

APRIL 17, 1868—2 p. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

MILES G. MOIES, a witness produced on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is Miles G. Moies; I am fifty years of age; reside in the city of New York; I am at present a real-estate broker.

2. Q. Were you formerly engaged upon a railroad; and if so, upon what railroad and in what capacity?

A. I was formerly engaged on the Western Railroad of Massachusetts, at the Albany end. In 1844 I went from there on the Connecticut River Railroad, at Northampton. In 1844 I acted in the capacity of master-mechanic and general superintendent of that road. That is, I had the general superintendence of everything on the road. I was there from 1844 to 1850 in that capacity.

3. Q. About what time, in 1850, did you leave the Connecticut River road?

A. In December, 1849, or January, 1850.

4. Q. Were you acquainted with the late Nehemiah Hodge, patentee of the so-called Hodge car-brake; and if so, how long did you know him?

A. I was personally acquainted with him, and quite intimate with him from 1849 or 1850, until his death, some two or three years ago.

948 5. Q. Were you ever connected with the said Hodge in the matter of introducing the said Hodge brake upon railroads?

A. I was connected with him as agent, and had part of the proceeds.

6. Q. Did you, in the course of this agency, or connection with the said Hodge, go to the Camden and Amboy Railroad?

A. I did.

7. Q. About when did you go there?

A. I think it was in 1851.

8. Q. For what purpose did you go there at that time?

A. To introduce the Hodge brake on that railroad.

9. Q. Please state what place on that road you went to at this time, and what person or persons you saw there.

A. To Bordentown, and saw the two head men, the master-mechanic and the superintendent of repairs of cars.

10. Q. Did you have any conversation at this time with these men, or either of them? And if so, state the substance of such conversation.

A. I spent nearly the day with the superintendent of the repairs of the cars, and conversed with him on double brakes, and explained to him wherein I thought the Hodge brake was superior to any other brake, and the grounds that I took were that the Hodge brake gave twice the power to those that he was then using, and he told me that if what I explained to him was true he would do all in his power to introduce it on the road. He then requested me to call on M'r Stevens in New York. I made the effort, but did not see him.

11. Q. What kind of brakes was he then using?

A. I saw nothing but the common brakes to each truck; that is, one that braked only on four wheels.

12. Q. You say that he told you that if what you explained to him was true; please state fully what you did explain to him.

A. I explained to him what he did not understand at first, that by taking four Salter's balances and attaching them to two levers

949 with a connection, he could demonstrate that what I said was true; that he could get twice the power that he could with any other brake, less one-sixteenth for friction; that this would save the advantage of one man on a car, being double the power of any other brake. After explaining it to him in that way he then began to see it as I did, and requested me to call on M'r Stevens with my models which I had in New York.

13. Q. You said in the 10th answer that he told you if what you explained was true he would do all that was in his power to introduce "it" on the road; state what it was that he said he would do all in his power to introduce.

A. The Hodge brake.

14. Q. What was it which, if true, he would do all in his power to introduce the Hodge brake on the road?

A. The saving of one half the help on the train to produce the same result.

15. Q. What kind of help?

A. Brakemen.

16. Q. At the time of this visit of yours to Bordentown, had the Hodge brake been introduced on said Camden and Amboy road?

A. It had not.

17. Q. You say you made the effort to see M'r Stevens on this subject; did any one go with you to see him; if so, who?

A. M'r Hodge, Nehemiah Hodge, the patentee of the Hodge brake.

18. Q. Who was M'r Stevens whom you and Hodge thus tried to see?

A. I believe he was president of the road.

19. Q. Did you yourself, after this effort to see M'r Stevens, do anything else to endeavor to introduce this Hodge brake on the said Camden and Amboy road? If you did not, state why not.

A. I did not. I was obliged to leave the city.

20. Q. Who, if any one, then took charge of the introduction of it on said road, or of trying to get it introduced?

A. M'r Nehemiah Hodge.

950 21. Q. Did you at this visit to Bordentown to which you have referred hear anything said by either the superintendent of the repairs of cars or the master mechanic whom you saw there about their having used on the Camden and Amboy road double-acting brakes operating on all the wheels of the car from either windlass?

A. All they said was they did not believe much in double brakes. They said nothing to me about their having used such brakes on that road.

And being cross-examined by M'r Whipple, of counsel for defendant, he says:

1. Cross-q. You say you left the Connecticut River road in December, 1849, or January, 1850. Please state how you were employed for the remainder of the year 1850.

A. Traveling all over the country. I was furnishing railroads with material from one end of the country to the other, from New Orleans to Penobscot.

2. Cross-q. Did this kind of service use up the whole of 1850?

A. I continued doing this for three years.

3. Cross-q. What did you do for M'r Hodge in introducing brakes in 1850, and to what roads did you go for that purpose?

A. There was hardly a road in the country where I did not talk about it. I could name almost any road that went out of Boston. In the State of New York I talked with the Central Railroad, and with the Erie. I called upon the Reading road, in Pennsylvania.

4. Cross-q. What other roads do you recollect calling upon in 1850?

A. The roads that run south from Washington.

5. Cross-q. Did you call upon any roads in the State of New Jersey in 1850?

A. The Camden and Amboy, which I have spoken about.

6. Cross-q. What time in the year 1850?

A. I could not state the time.

951 7. Cross-q. State as near as you can.

A. I could give it to you nearer if you would give me the date of the first year of the World's Fair.

8. Cross-q. Was it in the middle or latter part of the year 1850?

A. I think it was in the middle.

9. Cross-q. Did you call there more than once about the Hodge brake

A. I did call there several times. Every time I went I talked about the Hodge brake.

10. Cross-q. You have stated in answer to the 7th interrogatory that you thought it was in 1851. Was that the time when you called about the Hodge brake?

A. I called so many times that I do not know exactly how to answer it. I was calling there for three years, about once every two months.

11. Cross-q. Are you positive that you called on the Camden and Amboy road for the purpose of introducing the Hodge brake in the year 1850?

A. I would like to explain to you all. I am not positive whether it was in 1849 or 1850 that I left the Connecticut River road. It was within a year after I left that road.

12. Cross-q. Are you positive that you called on the Camden and Amboy road for the purpose of introducing the Hodge brake in the year 1851?

A. I feel sure I did.

13. Cross-q. Was a settlement effected with the said Camden and Amboy road for the use of said Hodge brake on that road while you were agent for M'r Hodge?

A. All I know is what Hodge told me. He told me he had introduced it there.

14. Cross-q. Did you go more than once to the Camden and Amboy road for the purpose of introducing the said Hodge brake on that road?

A. Only once exclusively for that.

15. Cross-q. And this was in 1851, was it?

A. I think it was.

16. Cross-q. What time in that year, should you judge?

A. Some time in the middle of the year.

952 17. Cross-q. After this time, to wit, in the middle of the year 1851, did the said Camden and Amboy road conclude to apply the Hodge brake to a car of that road?

A. All I remember is what M'r Hodge told me, that they had concluded to apply it.

18. Cross-q. Had there been an application of the said Hodge brake to a car or cars of that road before you called there in the middle of the year 1851?

A. None had been introduced there previous to my calling there to introduce it for the first time.

19. Cross-q. And this first time was in the middle of 1851, was it?

A. To the best of my recollection.

20. Cross-q. Are you quite sure of it?

A. As I said before, I could not swear positively whether it was 1850 or 1851.

21. Cross-q. Do you know what brakes were in use on the cars of the Camden and Amboy Railroad at the time you called on said company to introduce the Hodge brake in 1851?

A. All I saw was the brake applied to a single truck, two pair of wheels.

22. Cross-q. Do you know of your own knowledge that there was no double-acting single centre-lever brake in use on the cars of that road at the time you called to introduce the Hodge brake?

A. I saw none, nor heard of any.

23. Cross-q. Do you know there was none?

A. I do not.

24. Cross-q. Are you familiar with the construction and operation of the Tanner centre-lever brake and the Hodge double-lever brake ?

A. I was and am.

25. Cross-q. Please describe the distinguishing features of the two brakes, wherein they differ in construction and operation.

A. The Tanner brake has a single lever in the middle of the car; chains or rods ran to it from the windlasses at each end of the
953 car, and if a man put on a hundred-pound pressure at one end he
would divide it between the two trucks. The Hodge brake had two levers, a movable fulcrum. If a man put on a hundred pounds on one end of the car he had a hundred pounds on both trucks, less about one-sixteenth for friction.

26. Cross-q. Do you wish to be understood that the Hodge brake gave twice the power to each truck that the Tanner or centre-lever brake did ?

A. I do.

27. Cross-q. Was that the particular point that you urged upon the attention of the Camden and Amboy Company when you went to introduce the Hodge brake ?

A. That was my leading point.

28. Cross-q. Was that the prominent reason given to induce the Camden and Amboy Company to make a trial of the Hodge brake ?

A. The prominent reason was that it saved half the help.

29. Cross-q. Was there in addition to this the other reason that it communicated double the power to each truck ?

A. It communicated twice the power to the car of any other brake.

30. Cross-q. Did you, while at the Camden and Amboy road to introduce the said Hodge brake, discuss the merits of the centre-lever brake and the Hodge brake in comparison ?

A. We discussed everything in the brake line.

31. Cross-q. Was the centre-lever brake named in the discussion ?

A. I don't remember any particular one.

32. Cross-q. You say every brake was discussed; was the centre-lever brake included in the number ?

A. Our discussion was very general on brakes.

33. Cross-q. Will you please give an answer responsive to the question ?

A. I can't say that any particular brake was mentioned.

34. Cross-q. Did you explain to said company the distinguishing feature of the Hodge brake over the centre-lever brake ?

954 A. I did not.

35. Cross-q. Did you over any other brake ?

A. Not that I remember.

36. Cross-q. What significance do you then attach to this matter of explanation, if there was no other brake brought in comparison with the Hodge brake ?

A. The great saving of help and of damages on roads.

37. Cross-q. Were you aware of the existence of the centre lever brake when you went to the Camden and Amboy road to introduce the Hodge brake ?

A. I was, for I had experimented with one myself.

38. Cross-q. Did you name this centre-lever brake while on the Camden and Amboy road, for the purpose of introducing the Hodge brake ?

A. I don't remember that I did.

39. Cross-q. Do you think you did ?

A. I might have done it.

40. Cross-q. Do you think the Hodge brake has superior advantages over the Tanner Brake?

A. I do.

41. Cross q. Do you think you named these advantages while discussing the merits of brakes while on the Camden and Amboy road to introduce the Hodge brake?

A. I don't remember of saying anything about the Tanner brake, and don't renember of knowing it at that time, or of ever hearing of it.

42. Cross-q. Have you not just said that before you went on the Camden and Amboy road to introduce the Hodge brake that you did know of the centre lever or Tanner brake?

A. I never knew of the Tanner brake; I knew of a centre-lever brake. I will explain to you all. I experimented in the application of brakes of different kinds, two levers and one lever, and with pulleys, and found them all a failure until I got to the Hodge brake.

43. Cross-q. While on the Connecticut River road did you know of the use of a centre lever brake on the Hartford and Springfield road, running in connection with the Connecticut River road, applied to
955 the cars of the said Hartford and Springfield road by one Willard J. Nichols, about the year 1847, and used on the cars of said road thereafter for a number of years?

(Objected to, because it has been specially decided already in this case by the court that this Nichols brake was not put on any car of the Hartford and Springfield road until the spring of 1848.)

A. I have no knowledge of what they used on the Hartford road.

44. Cross-q. Do you swear positively that you never knew of the use of the centre lever brake on the Hartford and Springfield road prior to the time of your going to the Camden and Amboy road to introduce the said Hodge brake?

A. I cannot. I mean to convey that I have no knowledge of such a brake being on that road, and I don't know that I ever had.

45. Cross-q. While you were in the employ of Nehemiah Hodge as agent in introducing his brake, did you ever hear him speak of a centre-lever double brake?

A. I don't remember of hearing him talk about it.

46. Cross q. Then you wish to be understood, do you, that while you were acting as agent for Nehemiah Hodge in introducing his brake, to wit, in the years 1850 and 1851, as you say, you heard and knew nothing of the use of a centre-lever double-acting car brake?

(Objected to because the witness has not stated any such thing.)

A. No, sir. I do not wish to be understood so. I did know of a centre lever brake, and tried it myself.

47. Cross-q. Please describe the centre-lever double brake that you did know about.

A. The lever was attached to the centre of the car underneath, and a chain or rod ran from the windlass to the lever, and the same to the brake on the truck.

956 48. Cross-q. Was it the same as is now known as the centre-lever double acting brake?

A. I do not know what is called now the centre lever double acting brake.

49. Cross-q. Did the brake you know of have a centre-lever attached to the body of the car, said lever having four connecting rods, one to the brake lever in each truck, and one to each windlass at the end of the car? If it was not such a brake as the question has described, please tell wherein it differs.

A. It was such a brake as you describe.

50. Cross-q. Then did you know of the use of such a brake as above described when you went to the Camden and Amboy road to introduce the Hodge brake?

A. Have I not answered that question three or four times already, that I did know of such a centre lever brake?

51. Cross-q. And yet you made no mention of this brake while introducing the Hodge brake on the Camden and Amboy road, did you, or did you not?

A. I don't remember of talking over any particular brake, but we talked over the merits and demerits of brakes generally.

52. Cross-q. The centre level brake among the rest, or not?

A. I cannot say.

53. Cross q. Will you swear positively that you said nothing about a centre-lever brake at the time you were trying to introduce the Hodge brake on the Camden and Amboy road?

A. I cannot.

54. Cross-q. Will you swear positively that no other person with whom you conversed said anything about it, while introducing the said Hodge brake as aforesaid?

A. I cannot.

And being re-examined by Mr. Cozzens, of counsel for complainant, he deposes and says:

957 1. Redirect q. How do you mean to be understood about the year when you went to introduce the Hodge brake on the Camden and Amboy road, respecting whether it was in 1850 or 1851?

A. It was about a year after I left the Connecticut River Railroad, and I cannot say positively when I left the Connecticut River Railroad. I am sure it was either in 1850 or 1851 that I went to the Camden and Amboy road to introduce the Hodge brake. I am not positive in which of those two years it was.

2. Redirect q. You have said in your 34th and 35th cross-answers that you did not explain to the Camden and Amboy company the distinguishing feature of the Hodge brake over the centre-lever brake, nor, as you remember, over any other brake. How do you mean to be understood in this?

A. I mean to be understood that the leading point I made with the Hodge brake was its saving of expense in brakemen and its great features in stopping a train so that it would be less liable to accidents. I mean to be understood that the Hodge brake had superior advantages to the brake that applied only on four wheels. By the 34th and 35th cross-answers I mean to be understood that I compared the Hodge brake with the brakes in general use, applied to a single truck—four wheels.

3. Redirect q. To make this matter entirely clear, I will ask you this: In explaining the Hodge brake to the master mechanic and superintendent of car repairs of the Camden and Amboy road, at the visit to Bordentown, of which you have spoken, what kind of brake was spoken of by you in connection with the Hodge brake?

(Objected to.)

A. The brakes that they were generally using—a single brake that applied to one truck—the only brake that I saw at the depot at Bordentown.

958 4. Redirect q. Did that master mechanic and superintendent of car repairs say anything to you at that visit about any other kind of brake than those which you saw at the depot, applying to one truck, having ever been used on the Camden and Amboy road?

A. Not to my knowledge.

5. Redirect q. You have said in your cross-examination that you tried yourself a centre-lever brake. Please state about when you tried it, and where and what was the object of the trial?

A. The first knowledge that I had of it was on the Western Railroad, at the Albany end, in 1844, and afterwards on the Connecticut River Railroad, up to the time that we introduced the Hodge brake, from 1844 to 1849—not all the time between those two years. I could not say how much of that time, we tried so many different kinds; when we would fail we would try something else. The object of the trial was to improve on the old single brake.

6. Redirect q. What was the character of these attempts, experimental or otherwise?

A. Experimental and bad.

And being further cross-examined by M'r Whipple, of counsel for defendant, he says:

1. Recross-q. Among these experiments you have spoken of, was the centre-lever double brake tried, such as you have already described in your deposition?

A. Yes.

2. Recross-q. The same as is now known as the centre-lever brake, and in use on some roads?

A. I do not know what they are using now; I have paid no attention to it for ten years.

3. Recross-q. Was it such a brake as was in use during the time you were agent and travelled in various parts of the country, as alluded to in the fore part of your deposition, to wit, in 1852, 1853, and 1854?

A. Agent for whom?

3½. Recross-q. Railroad agent.

A. I often saw such a brake in use.

959 4. Recross-q. Are you positive that you called upon the Camden and Amboy road to introduce the Hodge brake about a year after you left the Connecticut River Railroad?

A. It was in 1850 or 1851.

5. Recross-q. Which year do you think it was?

A. I think it was in the spring of 1851.

6. Recross-q. Please state the name, if you know, of the person upon whom you called at Bordentown, with the view of introducing the Hodge brake, and who you say was superintendent of the repairs of the cars of that road?

A. I don't remember.

7. Recross-q. Was the name Edwin Lockwood upon whom you called on this business?

A. I do not remember.

8. Recross-q. Do you know that he was superintendent of repairs of cars, or have you good reason to believe he was?

A. He told me he was.

9. Recross-q. Do you wish to be understood that M'r Hodge, patentee of the Hodge brake, informed you that he had settled with the Camden and Amboy road for the use of his brake, after you had called upon the company for the purpose of introducing it?

A. I do not. He did not tell me that he had settled for the use of it, but that they were going to introduce it and apply it on their road.

And being further re-examined by M'r Cozzens, of counsel for complainant, he deposes and says:

7. Redirect q. You spoke in you first recross-answer of trying a cen

tre-lever double brake; was that brake used for any length of time, or was it an experiment?

A. I believe it was abandoned in full before 1849.

8. Redirect q. At the time you made the visit to Bordentown, did you know of any brake by the name of the Tanner brake?

A. I had not heard of it at that time.

960 And being further cross-examined by M'r Whipple, he deposes and says:

10. Recross-q. Was the brake alluded to as tried by you, to wit, a double-acting centre-lever brake, the same as went into use more or less thereafter?

A. It was similar to the one that is called the Tanner brake?

11. Recross-q. Wherein was it different from the Tanner brake?

A. I don't know of any difference.

12. Recross-q. Then it was in all essential particulars the same as the Tanner brake, was it?

A. I don't remember of any difference.

And being further re-examined by M'r Cozzens, of counsel for complainant, he says:

9. Redirect q. Will you look at the book now shown you, which is a printed copy of the first proofs taken by the defendants in this case, and state whether you are the person named at pages 38, 39, and 41 of said book as Miles G. Morse, and at page 43 thereof as Miles G. Morse and Miles G. Marses, and at page 45 as Miles G. Morse?

I presume I am; I never heard anything about it.

MILES G. MOIES.

Subscribed and sworn to before me this 17th day of April, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to April 18th, 1868, at 11 a. m.

961 United States circuit court, northern district of Illinois.

THOMAS SAYLES
versus
THE CHICAGO AND NORTHWESTERN RAILWAY COMPANY.
} In equity.

Testimony taken on behalf of the above-named complainant, at Chicago, in the northern district of Illinois, before Philip A. Hoyne, esq., examiner, &c., under and in pursuance of notice in writing duly served upon Mess'rs Blodget & Winston, solicitors for the defendants, as follows:

CHICAGO, *May 1st*, 1869.

Deposition of Ryniear Van Syckel.

Int. 1. What is your name, age, residence, and occupation?

A. My name is Ryniear Van Syckel; my age 57; I reside near Rockford, Illinois; I am a farmer.

Int. 2. How long have you been farming?

A. Eight years.

Int. 3. What was your business for 20 years previous to 1860?

A. I was fireman and engineer on railroads.

Int. 4. When, and on what railroad did you commence as engineer?

A. On the Camden and Amboy Railroad; I commenced some time between 1840 and 1842, I think.

5. How long did you continue as engineer on the Camden and Amboy Railroad?

962 A. During and until 1846.

6. What did you do after '46?

A. I went on the Paterson Railroad, from Jersey City to Paterson, as engineer; I was there between 4 and 5 years; do not know exactly the time.

7. What did you do after that?

A. I went on the Burlington and Mount Holly Road, a branch of the Camden and Amboy Road, as engineer; I remained there till the year 1851; from there I went back to the New Jersey Railroad, and remained on the Jersey road till the spring of 1860—it was the Paterson and Jersey road, from Paterson to Jersey City; after running on there about two years I then went to the New Jersey Railroad and Transportation Company's road.

8. Do you recollect of John Tyler passing through New Jersey, while he was President of the United States? if yea, when was it?

A. I do recollect; it was in 1843.

9. Do you recollect the car that he rode on while passing through New Jersey at that time? If so, describe it.

A. I do. It was on a six-wheel truck car. Car got up very nicely. It was fitted up with different kind of seats. Privy on the platform. Looking-glasses at each end. It was one of the first six-wheel trucks that was used. Elliptic springs and spiral springs.

10. Who got up that car, and about when?

A. The Camden and Amboy company. It was a car overhauled by the company, from the Trenton and Philadelphia road. It was some time between 1842 and 1843 and got up expressly for carrying Mr. Tyler on that road. It was fitted up expressly for this purpose.

11. Do you know what kind of brakes were put on that car when it was rebuilt in 1842 or 1843, as you say?

A. I do.

12. What kind of brakes were they?

A. They were single-acting brakes on each truck.

13. How did they operate?

963 A. They operated with a crank at each end of the platform. They wound up with a windlass at each end, and operated on one truck at each end.

14. State, if you know, how long that single brake was continued on that car?

A. It was on the car when I left the road in 1851.

15. Do you know what brakes were used on the other cars belonging to the Camden and Amboy road? I mean passenger and baggage, or crate cars, between 1842 and the time you say you left the road in 1851? If so, please state.

A. I do. The brakes used were similar to the brakes on the Tyler car. They were single-acting brakes, operating on one truck at a time on each end of the car. They also used some foot brakes, used with the foot, and some were used by the crank.

16. Could there have been any double-acting brakes, operating on both trucks from either end of the car, used on any of the Camden and Amboy cars before you left the road, in 1846, for any length of time, and you not have known it?

A. No, sir.

17. What was this car called that Tyler rode on?

A. It was called the Tyler car.

18. While this Tyler car was being rebuilt, did you have occasion to notice the car frequently while it was being built as you say?

A. I did.

19. Why did you frequently notice it?

A. Well, the car was getting up in good style, different from any being built.

20. Did or did not said Tyler car run in any of the trains of which you were engineer? If so, state about how often, as near as you can recollect.

A. Yes, sir. It run daily between Trenton and New York; that is—go one day and come back the next day. Sometimes it would run on the Camden and Amboy road from Camden to Amboy. Sometimes on other routes to Jersey City.

964 21. While you say you were on the Paterson road running from Paterson to Jersey City, did you ever see this Tyler car and other cars of the Camden and Amboy road? If so, where, and about how often?

A. I used to see them almost daily at the Jersey City depot, or on the road; I saw the Tyler car occasionally, perhaps once in two weeks, and perhaps oftener.

22. While you were on the Burlington and M't Holly road, the branch of the Camden and Amboy road, as you say, did you or did you not see the cars of the Camden and Amboy road, running from Camden to Jersey City, and from Camden to Amboy? If so, about how often?

A. I run to meet those trains every day twice a day, except Sundays.

23. Did you occasionally see the Tyler car in those trains?

A. I did. I frequently saw it, but cannot state how frequently.

24. Are you acquainted with the construction and operation of the centre-lever double-acting brake, called the "Tanner brake"?

A. I am.

25. When and where did you first see such a brake on a car?

A. On the New Jersey Railroad and Transportation Company cars or car. It was about the time the Hackensack bridge was burnt down. It was somewhere about 1851 or 1852.

26. State, if you know, who put that brake on the car?

A. It was a M'r Baker (David H. Baker). He was a car-builder for the New Jersey Railroad and Transportation Company.

27. Did you ever see any double-acting brakes on any of the Camden and Amboy cars? If so, when first?

A. I never saw any until after the one on the New Jersey road, which Baker put on, as I have stated. A short time after this I saw one on the Tyler car.

965 28. Was it the same, or different, from the one Baker put on?

A. It was different—it was what was called the Hodge brake—it had two cross-levers under the body of the car; the one that Baker put on had only one cross-lever under the body of the car.

29. Was that the first double brake you ever saw on any of the Camden and Amboy cars?

A. Yes, sir.

30. While you were engineer on railroads, were you or were you not in the habit of noticing improvements that were put on the cars run in your trains?

A. Yes, sir.

31. What if anything was said about double brakes, in your hearing, about the time you say you first saw them on the cars?

(Question objected to by counsel for defence.)

A. There were different opinions expressed. Some were in favor of one brake and some in favor of the other. That is, some were in favor of the Hodge brake, and some in favor of the Tanner brake.

Cross-examined by H. W. Blodget:

1. Cross. Who have you conversed with lately on the subject of this deposition?

A. M'r Sayles.

2. Cross. When did you first see and talk with him?

A. Last Wednesday.

3. Cross. Who introduced him to you?

A. He introduced himself, at my house, last Wednesday afternoon.

4. Cross. How long did he remain and talk with you on the subject?

A. Only a short time, about half an hour, hardly that, not more I do not think.

966 5. Cross. Did he bring any letter of introduction to you?

A. No, sir.

6. Cross. Who did he tell you had sent or referred him to you?

A. George Moore and others.

7. Cross. When, prior to said interview with M'r Sayles, had you thought over, or had your attention called to this brake matter?

A. I received a letter from M'r Sayles the 25th of March, I think; at any rate, the letter lay in the office until about that time. I did not think any more about the letter; it laid there. I did not answer the letter. The letter called my attention to it, and I thought of it between the time of the letter and seeing M'r Sayles. I had not thought of it previous to that. I was out of railroading, and had no occasion to think of it.

8. Cross. You say the Tyler car had six-wheel trucks, and spiral and elliptic springs. Where, in said trucks, were the spiral, and where the elliptic springs? Describe how they were put into the truck.

A. The spiral springs were put in over the box; that is, over the journal; and the elliptic springs was put on the centre, under the frame, on the equalizing bar.

9. Cross. How were the brakes worked?

A. They were worked by a crank on each end of the platform of the car.

10. Cross. Was there a pawl and ratchet to hold the brakes when set?

A. No, sir.

11. Cross. How were they held?

A. They was held by the hand on the lever or crank.

12. Cross. Did you, at the time the Tyler car was being built, or at any other time before you left the Camden and Amboy road, in 1846, hear the subject of a double brake discussed or mentioned? If yea, by whom?

A. I did not. I have no recollection.

13. Cross. Why was your attention particularly called to the brakes on the Tyler car?

967 A. Well, it was a nice got-up car, and we all paid more attention to that car, being a nice car—being a six-wheel truck car, and different to any of the rest—they being four-wheel trucks. This was the first six-wheel truck car.

14. Cross. Then you noticed the brakes particularly because the car

was a nice one, and had more wheels in its trucks than the others, did you?

A. Yes, sir.

15. Cross. What were you doing at the time the Tyler car was being rebuilt?

A. I was running a locomotive on the road, as engineer.

16. Cross. Where did you reside at that time?

A. At Bordentown, New Jersey.

17. Cross. What was your route?

A. We did not run on particular routes them days; the rule was, first in first out. Sometimes we had a freight and sometimes a passenger train.

18. Cross. Who had charge of the work in rebuilding the Tyler car?

A. M'r Lockwood.

19. Cross. Who worked on said car in rebuilding it?

A. I could not say. Letchworth Cox was one. There were others I cannot name.

20. Cross. Had you anything to do while on the Camden and Amboy road with the construction or repair of cars, or the brakes on the cars?

A. No, sir; not on the cars. I had on the tenders, which is the same thing as the cars.

21. Cross. Was there not a double brake put upon the tender on said Camden and Amboy road while you were there, between 1843 and 1846?

A. Not that I recollect of. The brakes operated from each end of the tender. There was a brake for each truck. There was a man, in those days, rode on the back part of the tender, and tended the brake at that end. The fireman tended the forward brake.

22. Cross. Then you never heard of a double-acting brake while you were on the Camden and Amboy road, from 1842 to 1846, and never heard the subject discussed among the men?

968 A. No, sir; I think not.

23. Cross. And that is why you are sure there was no such brake there, is it not?

A. It is.

24. Cross. When you say, then, that the Tyler car had single brakes on it, you simply mean that you never heard of its having a double brake, do you not?

A. No, sir; I never heard of its having a double brake. Understand me; I mean that a single brake acts only on one truck; a double brake acts on both trucks, from either end.

25. Cross. When did you first hear of a double brake; and who from?

A. One on the New Jersey road, about the time Hackensack Bridge was burnt, about 1851 or 1852. I saw it and heard of it there from the engineers on the New Jersey road. We went and examined the car, or the brakes, at the same time.

26. Cross. Who was reputed to be the inventor of that brake?

A. It was called the Tanner brake.

27. Cross. Who called it the Tanner brake?

A. M'r Baker.

28. Cross. When did you first hear of the Hodge brake; was it before or after you saw the Tanner brake?

A. It was after; it was a short time after. I could not state the time exactly.

29. Cross. Where did you first see the Hodge brake on a car?

A. In the Jersey City depot, on the Tyler car.

30. Cross. Was this the first time you had ever heard of the Hodge brake?

A. Yes, sir.

31. Cross. Did you hear or have much discussion among men engaged in operating railroad trains as to the advantages and disadvantages between single and double brakes, at and about the time you say you first saw the Tanner and Hodge brakes?

A. Yes, sir.

969 32. Cross. Did the brakemen and others all agree that a double brake was preferable to a single brake for holding a train?

A. They did; that a double brake would hold up a train quicker.

33. Cross. In what respect was it claimed that a double brake would hold up a train quicker?

A. One man could attend to two cars or the brakes.

34. Cross. Then it took less men to apply the double than the single brakes?

A. Yes, sir.

35. Cross. If the single brakes were all set, would they not hold the train as well as the double ones?

A. Yes; but it would take double the amount of men to do it, which they never had on railroads at that time; they had two brakemen on a train only.

36. Cross. Do you know Edwin Lockwood, master car-builder on the Camden and Amboy Railroad?

A. I do.

37. Cross. You say the Tyler car was built or rebuilt under his supervision. Would he not know better than yourself what kind of brakes were put on said car?

A. I do not know that he would. I saw it when it came out of the shop, and saw it afterwards.

38. Cross. When did you first hear it claimed or asserted that the Tyler car had a double brake; at the time it came out?

A. I do not recollect that I ever heard of it. I knew when it came out that it had a single brake on each end of the car. I rode on it from the shop to Bordentown, about a mile, when it came out of the shop.

39. Cross. Then you think that you know better what kind of brakes were on the car than M'r Lockwood does, do you?

A. Well, I say that when it came out it had only a single operating brake, that operated at each end of the platform.

40. Cross. Did not M'r Sayles inform you, or give you to understand, before you were called upon to testify here, that some person or persons had sworn that the Tyler car had a double brake when it came out? 970

A. No, sir.

41. Cross. Then the question as to what kind of brakes the Tyler car had at the time it came out, had never been discussed between yourself and M'r Sayles, or between yourself and any other person, up to the time you sat down here to give this deposition?

(Objected to, as the witness has not said anything of the kind.)

A. Well, M'r Sayles came to my house Wednesday, and asked me if I knew or recollected (recollected, I think it was) if I knew the Tyler car. I told him I did. He then asked if I knew what kind of brakes were on. I told him it was a single-operating brake, which operated from each end of the platform. Then he asked me if I knew what time the brakes was changed. I said they were not changed while I was on the road, up to 1846. That was all that passed between us concerning the brakes.

42. Cross. When do you say the Tyler car came out of the shop?

A. It was in 1843; I could not state the day.

43. Cross. Can you state the month?

A. Well, I can come pretty near to it. The car came out just before the Bunker Hill Monument celebration, a few days before, and carried M'r Tyler over the road to that celebration.

44. Cross. And your attention as to what kind of brakes it had at that time has never been particularly called until your conversation with M'r Sayles last Wednesday?

A. Not since I left the road. It was to our benefit to look after the brakes, while I was on the road.

45. Cross. Was the brakes upon the Tyler car a frequent subject of discussion while you remained on that road?

971 A. Not any more than any of the rest of the cars; it was taken more notice of being a nice car, and a six-wheel truck, and noticed more than any other car.

46. Cross. By whom was it noticed more than any other car?

A. By the men on the road, by its having this six-wheel truck—to see whether it wore any more on the road by having the six-wheel truck.

RYNIEAR VANSYCKELL.

Deposition of Aaron H. Palmer.

A. H. PALMER, the next witness, introduced, cautioned and sworn, deposeth and saith:

Int. 1. What is your name, age, residence, and occupation?

A. My name is Aaron H. Palmer; my age is 47 years; Chicago, Ill.; I am in the insurance business.

2. Were you ever employed on the Long Island Railroad? If so, at what time?

A. I was, from 1851 to 1860, with an interval of six months.

3. In what capacity were you so employed?

A. In various capacities; conductor on freight-train; then assistant superintendent, or engaged in the office of the superintendent; then for a year in the president's room, attending to his business for him; then general agent of the road, or acting superintendent, whichever you choose.

4. Do you know what kind of brakes were in use on the cars on that road when you first went there in 1851? If so, please state.

A. I do not know the name of the brake; it was the common brake used to brake up the cars.

972 5. Please state if you know how the brakes that were on the passenger cars of that road operated; whether the brakes were applied on all the wheels of the car from either end or not.

A. They were operated the same as any other brake by winding up; but they did not work at both ends at the same time. They were single-acting and applied to one set of trucks; a double-acting brake applies to both trucks at the same time.

6. Please state, if you know, what kind of brakes were in use on the baggage-cars on that road at the time you went there, whether double-acting or single-acting brakes.

A. My impression is that they were single-acting, except two of the cars; two of them were double-acting. The double-acting brake was applied from the inside of the car by a wheel, the chain coming up and revolving; this acted on both trucks at the same time under the car.

7. Please state, if you know, what kind of brakes were used on the eight-wheel freight-cars on that road.

A. Single-acting; generally applied to but one truck.

8. Is there any circumstance that occurred while you were on the road by which you particularly recollect about the brakes that were used on that road? If so, please state it.

A. There is, which was: I saw the inconvenience which the passengers were often subjected to from the brakemen running through the car to apply the brake upon the other end, and being in the baggage car with M'r Conklin when the double-acting brake was applied, I desired to know why they were not applied to the passenger-cars; his reply was that they would soon have them on them. M'r Conklin was the general agent of the road, or superintendent, at this time; it was in the year 1851 or the first of 1852.

Cross-examination:

1. Cross. Please describe a double-acting baggage-car brake, which you have referred to; and who was its inventor, if you know?

973 A. I did not examine it sufficiently to give a mechanical description of its working; I only know that it set its brakes on both trucks from one windlass on the inside of the car. I do not know the inventor of it.

A. H. PALMER.

Deposition of Francis A. Stevens.

Francis A. Stevens, the next witness, of lawful age, being first cautioned and sworn, deposeth and saith and follows:

Int. 1. What is your name, age, residence, and occupation?

A. My name is Francis A. Stevens; my age is 43 years; I reside in Chicago, Ill.; real-estate operator, and in patent rights.

2. Are you the inventor and patentee of what is known as the Stevens double-acting or equalizing car-brake?

A. I am.

3. Have you at any time had occasion to look up testimony for the purpose of defeating what is known as the Tanner patent for double-acting car brakes, and the Hodge patent for car brakes; if so, when?

A. I have; it was previous to 1854. I made a good deal of inquiry; principally between 1852 and 1854.

4. Do you know Joseph F. Talson, of New Jersey?

A. I did.

5. Have you seen him with regard to double brakes; if so, when, and what did he say to you with regard to double-acting car-brakes?

(Objected to by H. W. Blodget for defence.)

A. I have seen him during the year 1852 or previous to 1854—between the years 1852 and 1854. He said that he had applied a double brake on the New Jersey Railroad and Transportation Company about, I should think, in 1842 or 1843; at any rate it was several years 974 prior to Hodge or Tanner's patent. I think he was not quite clear about the construction of the brake, but finally decided that it was substantially the same as the Tanner brake; it was, or he applied it to one car; that car got broken up, or the brake got broken up, I cannot state which, and was only used for one or two trips. That was all the information I got from him about double brakes.

6. Did you ever visit the Camden and Amboy Railroad with regard to double brakes; if so, when?

A. I did, during the time of the spring of 1852, and up to 1854, several times.

7. Did you see the officers of that road? If so, whom?

A. I did see them. M'r Van Rensselaer, the superintendent, and M'r Lockwood, the foreman of the car department.

8. What was your object in calling upon them the different times you speak of?

A. It was principally to introduce and sell to them my patent brake; that is, the first interviews. I cannot state that I went to them exclusively to ascertain about the prior use of what was called the Tanner brake, but I did make it almost exclusive business at one time to ascertain if there had been at any time a double brake used prior to the Tanner and Hodge patent; this inquiry was general of all the railroad men in that section of the country. I did not find that any double-acting brake had been used, except this one Talson applied, and one that was applied by Ross Winans on some tenders which were then in use on the New York and Erie Railroad.

9. Whom did you talk with about these double brakes on the Camden and Amboy road, and when was it?

A. I talked with M'r Lockwood and M'r Van Rensselaer, at Bordentown, New Jersey.

10. Was there any suit pending at this time for which you was making inquiries about the prior use of the double brakes? If so, what suit?

975 A. There was. Tanner against the Hudson River Railroad.

11. Were you, or were you not, requested by the officers of the said Hudson River Railroad Company to look up testimony in that case; and, if so, by whom, and for what purpose?

A. I was, by M'r North, then secretary of the Hudson River Railroad Company, for the purpose of defeating the Tanner patent.

12. Did you inform M'r Van Rensselaer and M'r Lockwood, of the Camden and Amboy Railroad, of your object in making inquiries of the prior use of the double-acting brake?

(Objected to by counsel for defence.)

A. My inquiry was general. I cannot state the conversation particularly, in reference to that, with those parties. I had a great deal of conversation with M'r Lockwood, and if the double brake had been used I should certainly have known it.

(Objected to as irresponsive, and no foundation laid for the answer.)

Why I answered in that way. I had a great many conversations with railroad men about that time in regard to the prior use of the double brake, but I cannot fix in my mind any particular conversation with these gentlemen.

13. What, if anything, did you learn from M'r Van Rensselaer, or M'r Lockwood, about the use of double brakes on the Camden and Amboy road?

(Objected to by counsel for defence.)

A. I know that they were familiar with the Hodge and Tanner brakes,
and we had a good deal of discussion as to the respective merits
976 of the brakes, mine included; the introduction of those brakes
were of recent date on that road, as the cars were only partially
supplied with double brakes. My object was, when they should decide
upon which was the best brakes, that they would probably adopt my
own. I might rather say it was to persuade them to adopt my own.

14. What brakes did you see in use on the Camden and Amboy road

when you first went to Bordentown, as you state, in the spring of 1852 to 1854? I mean on the passenger trains.

A. My impression is they were mostly single brakes which were then used. I think some of the Tanner brakes were in use, and my impression is they were using some of the Hodge brake, but am not positive. I know they were familiar with the Hodge brake.

15. Did you learn from M'r Lockwood, or M'r Van Rensselaer, at how early a date they had used a double-acting brake on their cars?

(Objected to by counsel for defence.)

A. I do not know that I can remember the date they gave me, if any. In my general inquiry in regard to the use of the double brake, on account of the suit Tanner vs. The Hudson River Railroad, I am satisfied that the Tanner brake was not in use prior to the patent, except the ones I have mentioned heretofore—the Talson brake and the Winans brake—that is, that came under my investigation.

(Answer objected to of all after the words commencing and including the words, "in my general inquiry," &c., on the second line of this page.)

16. Did or did not M'r Lockwood tell you that he had used the double brake on their cars before 1848 or 1849?

A. He did not tell me so.

977 17. After seeing M'r Lockwood and M'r Van Rensselaer, did you report to M'r North, of the Hudson River Railroad? If so, what did you report to him about the use of the double brake?

(Objected to by counsel for defence.)

A. I do not remember that I made any report to him about my seeing them.

18. Did you have consultations with M'r North with regard to your looking up testimony to defeat the Tanner patent? If so, when?

(Objected to by counsel for defence.)

A. I did at the time the suit was pending.

Cross-examined:

1. Cross. Did M'r North, or the Hudson road, retain or employ and pay you for looking up testimony to enable them to defeat the Tanner patent, or did you only act in that matter because you thought your interest in your brake would be promoted by defeating Tanner?

A. They did not retain, nor employ, nor pay me, but requested me. I had more interest, or I considered it more for my own interest, to defeat the broad grounds that Tanner had taken, claiming a patent for operating both brakes by either windlass, without regard to its construction.

2. Cross. Do you still consider it for your interest to defeat the broad ground, as you call it, so taken by Tanner, and the owner of his patent?

A. I look upon it now in a very different way from what I did then. The position that he had taken had defeated, in a great measure, the settlements that I was about making, but now I consider the Tanner brake but of little practical value. The value of my brake over and above the Tanner brake would justify any railroad company in paying me as much for the invention as though the Tanner brake was not in use.

978 3. Cross. Has M'r Sayles, the complainant in this case, any interest in your brake, or have you any interest in the Tanner brake?

A. He has no interest with me in the Stevens brake, nor have I in the Tanner brake.

4. Cross. Has M'r Sayles any interest with M'r Emigh or any other person in the Stevens brake?

A. I do not know as he has with M'r Emigh. I am quite positive he has not. I do not know that he has any interest in the Stevens brake. I am quite positive that no one but M'r Emigh and myself are interested in the Stevens brake.

5. Cross. Please describe the Winans brake which you say you found in use on the New York and Erie road.

A. Attached to the cross-bars of the brakes, or shoes, there were pullies, one pully on each; suspended above these two pullies, and attached to the body of the tender was another groove pully, and the forward trucks were arranged in the same manner. I should have reversed that, and said one pully connected with the shoes, and two suspended from the body of the tender; the forward truck arranged in the same manner. A chain passed over the first suspended pully, down round the pully attached to the shoes, up over the second suspended pully, and through the other pullies of the other truck, in the same manner, and then attached to the windlass; by drawing on the chain it forced or raised up the brake heads between the wheels, but was of very little practical value.

F. A. STEVENS.

CHICAGO, *May 5th*, 1868.

Witness, F. A. STEVENS, recalled, and examined by L. L. Bond, counsel for plaintiff.

979 Int. 1. You have stated that you knew Joseph F. Talson, New Jersey; when did you know him, and what railroad was he connected with, and what position, if any, did he hold?

A. I knew him from 1852 to 1854; he was not connected with any railroad that I know of; he was employed by a rubber company of New York City; I do not know what company employed him.

Int. 2. Do you know whether he had at any time previous to that time been in the employ of any railroad company; if so, of what company?

A. I do not know of my own personal knowledge; I only know from his own personal statement.

Int. 3. Did you during that time, or at any other time, offer said Talson the sum of $50, or other sum of money, to make an affidavit concerning the use of double brakes, which offer said Talson refused to accept?

(Objected to by counsel for defence.)

A. I have no recollection of ever making any offer of the kind.

Int. 4. Would you have been likely to have remembered it, if such offer had been made and refused?

(Objected to by counsel for defence.)

A. I think I would.

Int. 5. Did said Talson, at that time, or any other time, make an affidavit for you, or for any other parties, and deliver to you, concerning the use of said double brakes? If so, what became of it?

A. He did make an affidavit for me, and delivered it to me; I gave it to Capt. Parrot, of Boston; I might have retaken it, and I do not remember what became of it afterwards.

Int. 6. Do you know where that affidavit now is, and whether it can be found or produced?

A. I do not; neither do I know whether it can be found or produced.

980 Int. 7. Do you know whether any efforts have been made to find that affidavit, either by yourself or other parties; and, if so, with what success?

A. I have not tried to find it; other parties have inquired of me concerning it; I have informed them what I have stated here.

Int. 8. Can you remember the words of that affidavit? If you can, please give them; if you cannot, give the substance of the affidavit as fully as you can recollect the same.

(Objected to.)

A. I cannot recollect the identical words; I can give the substance, which was: That he constructed a brake upon one of the cars belonging to the New Jersey Railroad and Transportation Company, the same as the Tanner double brake, about the year 1843; it might have been some earlier or later; I know it was several years prior to the Tanner patent; the brake was used one or two trips; either the car or brake was broken up; that was the end of it.

Int. 9. You have stated that while investigating the subject of brakes from 1852 to 1854, that you thought you saw some cars in use on the Camden and Amboy Railroad which had Tanner brakes on them; were the brakes that you saw simple Tanner brakes, or only part of Tanner brakes?

(Objected to by counsel for defence.)

A. The first brake that I particularly recollect was the Tanner brake, in connection with the bumper brake, or buffer brake; I could not swear positively that I saw the Tanner brake; my impression is that it was there, and I saw it.

Cross-examined:

1. Cross-int. When did you last see the affidavit you have spoken of?

A. About 1853.

981 2. Cross-int. Did you not give said affidavit, or a duplicate of it, to M'r North, of the Hudson River Railroad?

A. I might have done so; I don't remember; I think he saw it.

F. A. STEVENS.

APRIL 18, 1868—11 a. m.

Present, counsel as before.

Examination adjourned to May 6, 1868, at 11 a. m.

Examination further adjourned die in diem to May 18th, at 11 a. m.

M'r Whipple, of counsel for defendant, being present on each of said adjourn days.

MAY 18TH, 1868—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and M'r Whipple, of counsel for defendant, and M'r Sayles, complainant, in person.

Examination further adjourned to May 19th, 1868, at 11 a. m.

MAY 19TH, 1868—11 a. m.

Present, M'r Cozzens, counsel for complainant, and the complainant in person, and M'r Whipple, counsel for defendant.

JEREMIAH COUNSELLOR, a witness produced on the part of the complainant, having been first duly cautioned and sworn, deposes and says as follows:

982 1. Q. What is your name, age, residence, and occupation?

A. My name is Jeremiah Counsellor. I am 49 years of age. I reside at Newark, New Jersey. I am manager of the New Jersey Mutual Life-Insurance Company.

2. Q. Were you ever in the employ of any railroad company or companies? If so, what ones?

A. I was. In the Morris and Essex Railroad Company, and in the New Jersey Railroad and Transportation Company.

3. Q. How long were you in the employ of those companies?

A. From the summer of 1845 to 1865 in the summer.

4. Q. Were you in the employ of those two companies at the same time? Please explain how you were employed by them.

A. I was employed by the Morris and Essex Railroad Company first, for about a year and a half or two years. In the summer of 1847 the New Jersey Railroad and Transportation Company employed me to go to Rahway on their road.

5. Q. Then did you continue in the employment of the New Jersey Railroad and Transportation Company from 1847 to 1865?

A. Yes, sir.

6. Q. In what capacity or capacities were you employed by the New Jersey Railroad and Transportation Company during this period?

A. As passenger conductor, or passenger and freight conductor; we ran both.

7. Q. Do you remember when double-acting car-brakes acting on both trucks, from either end of the car, were first introduced on the cars of the New Jersey Railroad? If so, when was it?

A. I do. It was in 1851, by M'r Baker, foreman of the repair shop.

8. Q. What sort of brakes had been in use on the New Jersey Railroad cars prior to that time?

A. The old-fashioned brake acting on one truck only.

983 9. Q. Will you describe generally the construction of the double-acting brake applied by Baker in 1851?

A. It was a single-lever double-acting brake, acting on all the trucks at the same time; the single lever was underneath the car.

10. Q. Prior to the time when M'r Baker introduced this double-acting brake on the New Jersey Railroad, could there have been any double-acting brakes used on the cars of that road, for any length of time, without your knowing of it?

A. No.

11. Q. Did you ever know of a car on the Camden and Amboy Railroad called the Tyler car?

A. I did.

12. Q. For about how long did you know of that car?

A. As early as 1847, I think. I think I kept the run of it until about 1858, or just before the war broke out. I do not recollect the exact year.

13. Q. During this period did you see that car and notice it pretty often?

A. I did.

14. Q. Can you state any peculiarities in its fittings up? If so, what?

A. There was a privy platform, and the seats differed from those of other cars.

15. Q. When you first knew of this car in 1847, what kind of brakes did it have?

A. It had the old-fashioned brake operating on a single truck.

16. Q. For about how long did that Tyler car continue to have this old-fashioned brake operating upon a single truck?

A. Until not earlier than 1851, about the time that M'r Baker put the one on the New Jersey car.

17. Q. When this Tyler car ceased to have the old-fashioned single

brake upon it, about the time that Baker put his brake upon the New Jersey Railroad car, as you have stated, what kind of brake did it have on it?

A. It had a brake with two levers, which they called the Hodge brake.

984 18. Q. Was it a double-acting brake, that is, acting on both trucks from one windlass?

(Question objected to, as instructing the witness; question withdrawn.)

19. Q. Upon how many trucks of the car did this brake with the two levers act?

(Question objected to for same reason.)

A. It acted on the two trucks at the same time, I believe.

20. Q. Was this Hodge brake put upon the Tyler car before or after Baker put his brake on the New Jersey Railroad car?

A. I think that it was about the same time.

21. Q. Was there any discussion among the railroad employees about these two brakes; and, if so, what was it?

A. There was; the men seemed to prefer that of M'r Baker.

22. Q. Do you remember any accident on the New Jersey Railroad when you were on the train; and, if so, what was the accident, and what leads you to remember it?

A. I do. In October, 1852, at Jersey City, the locomotive ran off the track, and I used one of those brakes of M'r Baker's myself, which was on a passenger and baggage car. I remember it because I lost my fingers and broke my legs through the accident, there being no ratchet to the brake, which I held on to as we were going down the grade. There was no ratchet on the windlass on that car; the brakeman jumped off, and I caught hold of the brake and held it myself; had there been a ratchet I could have locked the brake and jumped off myself; my fingers were broken between the railings of the car ahead of me and the brake-wheel.

23. Q. About how long was this accident after double brakes were first introduced on the New Jersey road?

985 A. About one year, I think.

24. Q. About how long was it, after you first saw a double brake of any kind?

A. Not over a year.

25. Q. What was the first double brake that you ever saw?

A. I am not positive whether it was the one M'r Baker first put upon our car, or the one on the Tyler car; it was one or the other. I never heard of any before.

26. Q. While you were in the employ of the New Jersey Railroad and Transportation Company, did other cars of the Camden and Amboy Railroad, besides the Tyler car, come into Jersey City; and, if so, about how often?

A. They did. Trains were coming in from Philadelphia, over their road, as often as twice a day.

27. Q. Before about the time that the double brake was put on the Tyler car, as you have stated, what kind of brakes were used on the passenger and crate cars of the Camden and Amboy road, which came into Jersey City?

A. The old-fashioned brake, acting on a single truck.

28. Q. Before the time this double brake was put on the Tyler car, could there have been any brake acting on both trucks from one wind-

lass used on any of these other Camden and Amboy cars, for any length of time, and you not have known it ?

A. I think not; there could not on any that came over our road.

29. Q. How positive do you feel about this, as to those of their cars that came over your road ?

A. They could not have come there unless I had seen them, or heard of it, because in those days conductors acted as brakemen part of the time; we had but one brakeman, and the conductor had to aid him in stopping the cars when they got to a station.

And being cross-examined by M'r Whipple, of counsel for defendant, he deposes and says:

1. Cross-q. Do you know what brakes were in use on the Tyler car in the years 1843, 1844, and 1845 ?

986 A. No, sir.

2. Cross-q. Do you know Edwin Lockwood, who had charge of the car department of the Camden and Amboy road.

A. No, sir.

3. Cross-q. Did you ever see him ?

A. I am not aware that I ever did; I might have.

4. Cross-q. Do you know William Coulter, conductor on the New Jersey Railroad and Transportation Company's road ?

A. I do.

5. Cross-q. When he states in his evidence taken in this case that there was a double-acting brake with one lever under the body of the car, as you have described, in use on the Tyler car prior to 1847, does he state truly ?

A. I am not able to say in regard to M'r Coulter what he saw.

6. Cross-q. Do you know James S. Gamble, and was he formerly conductor on the New Jersey Railroad and Transportation Company's road ?

A. I do know him, and he was formerly conductor on that road ?

7. Cross-q. Would he be likely to know whether there was such a double brake as you have described in use on a car of the New Jersey Railroad and Transportation Company prior to 1847 ?

A. I think he would prior to 1846; I forget whether he left us in 1846 or 1847. He went over the road twice a day.

8. Cross-q. May there not have come over the New Jersey Railroad and Transportation Company's road a crate-car with a double-acting centre-lever brake on it, belonging to the Camden and Amboy road, prior to 1850, without your knowing it ? If not, explain why.

A. I am satisfied in my mind that there could not have been, because I was daily on the road, and in contact with Camden and Amboy baggage-masters and conductors and brakemen.

987 9. Cross-q. Did you personally inspect all the cars of the Camden and Amboy Railroad Company which came to Jersey City from time to time to see what brakes were in use on those cars ?

A. I did not. I was not hired for that purpose.

10. Cross-q. In answer to the 22d direct interrogatory, you speak of an accident which occurred in October, 1852, and that, in consequence of there being no ratchet on the shaft of the windlass wheel, you had your fingers cut off in holding on to the wheel while trying to stop the train. Was it a usual thing on the cars of that road that no pawl and ratchet were in use on the brake-staff of the cars ?

A. There were none attached to the staff, I think, but on very few of the cars; there was a hole in which we put the pin attached to the

ratchet to hold the brake, and it was taken out when we got to the depot. This was to prevent persons from annoying us by stopping the cars and locking the brakes.

11. Cross-q. Was there a pawl and ratchet thereafter applied to the staff of the cars for the purpose of holding the power of the brakeman when he applied the brakes to a car?

A. I think it has been generally adopted since.

12. Cross-q. Is it or not harder work for a brakeman to hold a car with the brakes with or without a pawl and ratchet on the windlass-staff?

A. It is harder without. With the ratchet he can attend to two or three cars by passing through.

13. Cross-q. Then prior to this accident, as a general thing, the brakeman was obliged to hold the wheel in his hand while the brake was being applied?

A. If he chose to use one of those pocket ratchets that he carried he would not.

14. Cross-q. Did you have one at the time of the accident.

A. No.

15. Cross-q. Which is hardest on the brakeman, the operation of a double brake applying the power to two trucks or one truck, in case there is no pawl and ratchet on the brake-staff?

988 A. I do not believe there is much difference, for he could slide the wheels with either. I have worked harder to stop the train with a single brake than with a double brake.

16. Cross-q. Is it harder to apply the same amount of power to two trucks than to one truck at the same time in stopping a car where there is no pawl and ratchet on the staff or not? What is your opinion?

A. I do not believe it would make much difference, as you gain your power by the double leverage.

17. Cross-q. Is there any leverage given to the double-acting centre-lever brake, as put on by Baker, to the brakeman in applying the brake to the wheels of a car?

A. You get more power with less effort.

18. Cross-q. Was there a pawl and ratchet wheel or not applied to the brake-staff of the cars of the Camden and Amboy road that came to Jersey City prior to 1852?

A. I think theirs worked the same as ours; I am not positive about that.

18. Cross-q. Was there or not a pawl and ratchet on the windlass-staff of the Tyler car?

A. I do not recollect. There might have been and there might not have been. I cannot say.

20. Cross-q. How often should you judge the Tyler car came to Jersey City prior to 1852?

A. I should think as often as once a week; it might have been three times a week.

21. Cross-q. Did it run regularly from the time you knew it, as you say, in 1846 and 1847 to 1852?

A. I think it did, except when it went into the shop for repairs as other cars did.

22. Cross-q. You are quite sure of this are you?

A. I saw it frequently, which makes me feel sure of it.

And being re-examined by M'r Cozzens, he deposes and says as follows:

1. Redirect q. You have been asked in reference to M'r Coulter,
989 and I will therefore in that connection put this question to you:
Would the crank on the windlass-staff be as likely to fly back and strike a person in the single brake as in the double brake?

A. It would; not, however, with so much force, because the greater the power the greater the blow. I had a man who had his arm broke at Rahway by a blow from the windlass-crank of a single brake in 1846 or 1847. I think there was a pocket-ratchet on the staff that he used, but it got loose in some way, and the crank flew around and broke his arm.

And being further cross-examined by M'r Whipple, he deposes and says as follows:

1. Recross-q. Would the same reaction take place on a double brake, and with greater or less power?

A. It would, and with greater power.

J. COUNSELLOR.

Subscribed and sworn to before me this 19th day of May, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to May 22d, 1868, at 11 a. m.

MAY 22D, 1868—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

Examination adjourned to May 23, 1868, at 11 a. m., at the office of M'r Gifford, No. 34 Beach street, in the city of New York.

990 NEW YORK, *May 23d*, 1868—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

GEORGE GIFFORD, a witness of lawful age, produced on the part of the complainant, having been duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and profession?

A. My name is George Gifford; I am fifty years of age, and upwards; reside at Bergen, Hudson County, New Jersey, and am a lawyer doing business in the city of New York.

2. Q. Were you ever retained as counsel for the defence in a suit brought upon the patent for the so-called Tanner double-acting car brake which is in controversy in this cause? If so, what suit was it?

A. I was, and it was a suit against the Hudson River Railroad Company.

3. Q. Do you remember in what year that suit was pending?

A. It was in or about the year 1853.

4. Q. State what was the line of defense which the defendants in that case sought to establish?

A. It was to find a prior use of the invention patented by the patent on which the suit was brought.

5. Q. In the course of the preparation of that case for the defense, did you consult with any counsel or witnesses? If so, with whom?

A. I did; I consulted with M'r Thomas M. North, who was then

ratchet to hold the brake, and it was taken out when we got to the depot. This was to prevent persons from annoying us by stopping the cars and locking the brakes.

11. Cross-q. Was there a pawl and ratchet thereafter applied to the staff of the cars for the purpose of holding the power of the brakeman when he applied the brakes to a car?

A. I think it has been generally adopted since.

12. Cross-q. Is it or not harder work for a brakeman to hold a car with the brakes with or without a pawl and ratchet on the windlass-staff?

A. It is harder without. With the ratchet he can attend to two or three cars by passing through.

13. Cross-q. Then prior to this accident, as a general thing, the brakeman was obliged to hold the wheel in his hand while the brake was being applied?

A. If he chose to use one of those pocket ratchets that he carried he would not.

14. Cross-q. Did you have one at the time of the accident.

A. No.

15. Cross-q. Which is hardest on the brakeman, the operation of a double brake applying the power to two trucks or one truck, in case there is no pawl and ratchet on the brake-staff?

988 A. I do not believe there is much difference, for he could slide the wheels with either. I have worked harder to stop the train with a single brake than with a double brake.

16. Cross-q. Is it harder to apply the same amount of power to two trucks than to one truck at the same time in stopping a car where there is no pawl and ratchet on the staff or not? What is your opinion?

A. I do not believe it would make much difference, as you gain your power by the double leverage.

17. Cross-q. Is there any leverage given to the double-acting centre-lever brake, as put on by Baker, to the brakeman in applying the brake to the wheels of a car?

A. You get more power with less effort.

18. Cross-q. Was there a pawl and ratchet wheel or not applied to the brake-staff of the cars of the Camden and Amboy road that came to Jersey City prior to 1852?

A. I think theirs worked the same as ours; I am not positive about that.

18. Cross-q. Was there or not a pawl and ratchet on the windlass-staff of the Tyler car?

A. I do not recollect. There might have been and there might not have been. I cannot say.

20. Cross-q. How often should you judge the Tyler car came to Jersey City prior to 1852?

A. I should think as often as once a week; it might have been three times a week.

21. Cross-q. Did it run regularly from the time you knew it, as you say, in 1846 and 1847 to 1852?

A. I think it did, except when it went into the shop for repairs as other cars did.

22. Cross-q. You are quite sure of this are you?

A. I saw it frequently, which makes me feel sure of it.

And being re-examined by M'r Cozzens, he deposes and says as follows:

1. Redirect q. You have been asked in reference to M'r Coulter,
989 and I will therefore in that connection put this question to you:
Would the crank on the windlass-staff be as likely to fly back and strike a person in the single brake as in the double brake?

A. It would; not, however, with so much force, because the greater the power the greater the blow. I had a man who had his arm broke at Rahway by a blow from the windlass-crank of a single brake in 1846 or 1847. I think there was a pocket-ratchet on the staff that he used, but it got loose in some way, and the crank flew around and broke his arm.

And being further cross-examined by M'r Whipple, he deposes and says as follows:

1. Recross-q. Would the same reaction take place on a double brake, and with greater or less power?

A. It would, and with greater power.

J. COUNSELLOR.

Subscribed and sworn to before me this 19th day of May, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to May 22d, 1868, at 11 a. m.

MAY 22D, 1868—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

Examination adjourned to May 23, 1868, at 11 a. m., at the office of M'r Gifford, No. 34 Beach street, in the city of New York.

990 NEW YORK, *May 23d*, 1868—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

GEORGE GIFFORD, a witness of lawful age, produced on the part of the complainant, having been duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and profession?

A. My name is George Gifford; I am fifty years of age, and upwards; reside at Bergen, Hudson County, New Jersey, and am a lawyer doing business in the city of New York.

2. Q. Were you ever retained as counsel for the defence in a suit brought upon the patent for the so-called Tanner double-acting car brake which is in controversy in this cause? If so, what suit was it?

A. I was, and it was a suit against the Hudson River Railroad Company.

3. Q. Do you remember in what year that suit was pending?

A. It was in or about the year 1853.

4. Q. State what was the line of defense which the defendants in that case sought to establish?

A. It was to find a prior use of the invention patented by the patent on which the suit was brought.

5. Q. In the course of the preparation of that case for the defense, did you consult with any counsel or witnesses? If so, with whom?

A. I did; I consulted with M'r Thomas M. North, who was then

ratchet to hold the brake, and it was taken out when we got to the depot. This was to prevent persons from annoying us by stopping the cars and locking the brakes.

11. Cross-q. Was there a pawl and ratchet thereafter applied to the staff of the cars for the purpose of holding the power of the brakeman when he applied the brakes to a car?

A. I think it has been generally adopted since.

12. Cross-q. Is it or not harder work for a brakeman to hold a car with the brakes with or without a pawl and ratchet on the windlass-staff?

A. It is harder without. With the ratchet he can attend to two or three cars by passing through.

13. Cross-q. Then prior to this accident, as a general thing, the brakeman was obliged to hold the wheel in his hand while the brake was being applied?

A. If he chose to use one of those pocket ratchets that he carried he would not.

14. Cross-q. Did you have one at the time of the accident.

A. No.

15. Cross-q. Which is hardest on the brakeman, the operation of a double brake applying the power to two trucks or one truck, in case there is no pawl and ratchet on the brake-staff?

988 A. I do not believe there is much difference, for he could slide the wheels with either. I have worked harder to stop the train with a single brake than with a double brake.

16. Cross-q. Is it harder to apply the same amount of power to two trucks than to one truck at the same time in stopping a car where there is no pawl and ratchet on the staff or not? What is your opinion?

A. I do not believe it would make much difference, as you gain your power by the double leverage.

17. Cross-q. Is there any leverage given to the double-acting centre-lever brake, as put on by Baker, to the brakeman in applying the brake to the wheels of a car?

A. You get more power with less effort.

18. Cross-q. Was there a pawl and ratchet wheel or not applied to the brake-staff of the cars of the Camden and Amboy road that came to Jersey City prior to 1852?

A. I think theirs worked the same as ours; I am not positive about that.

18. Cross-q. Was there or not a pawl and ratchet on the windlass-staff of the Tyler car?

A. I do not recollect. There might have been and there might not have been. I cannot say.

20. Cross-q. How often should you judge the Tyler car came to Jersey City prior to 1852?

A. I should think as often as once a week; it might have been three times a week.

21. Cross-q. Did it run regularly from the time you knew it, as you say, in 1846 and 1847 to 1852?

A. I think it did, except when it went into the shop for repairs as other cars did.

22. Cross-q. You are quite sure of this are you?

A. I saw it frequently, which makes me feel sure of it.

And being re-examined by M'r Cozzens, he deposes and says as follows:

1. Redirect q. You have been asked in reference to M'r Coulter,
989 and I will therefore in that connection put this question to you:
Would the crank on the windlass-staff be as likely to fly back and strike a person in the single brake as in the double brake?

A. It would; not, however, with so much force, because the greater the power the greater the blow. I had a man who had his arm broke at Rahway by a blow from the windlass-crank of a single brake in 1846 or 1847. I think there was a pocket-ratchet on the staff that he used, but it got loose in some way, and the crank flew around and broke his arm.

And being further cross-examined by M'r Whipple, he deposes and says as follows:

1. Recross-q. Would the same reaction take place on a double brake, and with greater or less power?

A. It would, and with greater power.

J. COUNSELLOR.

Subscribed and sworn to before me this 19th day of May, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to May 22d, 1868, at 11 a. m.

MAY 22D, 1868—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

Examination adjourned to May 23, 1868, at 11 a. m., at the office of M'r Gifford, No. 34 Beach street, in the city of New York.

990 NEW YORK, *May 23d*, 1868—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

GEORGE GIFFORD, a witness of lawful age, produced on the part of the complainant, having been duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and profession?

A. My name is George Gifford; I am fifty years of age, and upwards; reside at Bergen, Hudson County, New Jersey, and am a lawyer doing business in the city of New York.

2. Q. Were you ever retained as counsel for the defence in a suit brought upon the patent for the so-called Tanner double-acting car brake which is in controversy in this cause? If so, what suit was it?

A. I was, and it was a suit against the Hudson River Railroad Company.

3. Q. Do you remember in what year that suit was pending?

A. It was in or about the year 1853.

4. Q. State what was the line of defense which the defendants in that case sought to establish?

A. It was to find a prior use of the invention patented by the patent on which the suit was brought.

5. Q. In the course of the preparation of that case for the defense, did you consult with any counsel or witnesses? If so, with whom?

A. I did; I consulted with M'r Thomas M. North, who was then

attorney of the Hudson River Railroad Company, also with M'r William W. Hubbell, then of Philadelphia, as one of the counsel, and with Joseph F. Talson, as a witness, and with some others whose names I do not now recollect.

6. Q. Please state, as nearly as you can remember, what information you obtained from Talson, in relation to said matter.

991 A. I obtained from M'r Talson information of an experiment having been tried on a car of the New Jersey Railroad with what he called the Stanley brake, which consisted of an attempt to use it as directed by Stanley, and a subsequent attempt of M'r Talson to use it as he thought best, and that the use of it was then given up and discontinued. I also obtained from M'r Talson information that such attempted use was not satisfactory—was very limited—and that no subsequent attempt to use it was made by him or within his knowledge.

7. Q. Was this all which Talson communicated to you in relation to the subject of the use of double-acting car brakes prior to the invention in reference to which the suit was brought?

A. It was.

8. Q. Did he profess to know anything on the subject of such prior use of double-acting car brakes except what he so communicated to you?

A. He did not. On the contrary, being very anxious to find subject-matter of defense to the suit, we used all the means (M'r North and mysel) at our command to ascertain from M'r Talson all that he knew which would in any way aid us in proving the use or existence of a double-acting brake prior to the alleged invention of the Tanner brake, and all we could get from M'r Talson upon that subject was information of the above-mentioned experiments with the so-called Stanley brake.

9. Q. Was Talson ready and willing to communicate what information he professed to have on the subject of double-acting brakes?

A. He appeared to be, and very anxious to aid us in finding matter of defence.

10. Q. I will call you attention to one or two specific matters, although the subject has been already covered generally by your previous answers, and I will ask you whether, in any of your consultations with Talson in reference to said suit, he said anything about the use, prior
to the invention of the Tanner brake, of a double-acting brake
992 upon a car called the "Tyler car," upon the Camden and Amboy
Company's railroad or upon any other car or cars of said Camden and Amboy Company?

A. He did not.

11. Q. Did he say anything about the use of any such brake upon any car or cars of the Long Island Railroad Company?

A. He did not.

12. Q. How full and thorough was the investigation made by the defendants in that case of the use of car brakes prior to the invention of the Tanner brake?

A. It was very full and very thorough, so far as I was concerned. I depended chiefly upon M'r North to find the witnesses or proposed witnesses, and in case that he came to the conclusion that they knew anything on the subject, desirable to prove as a defense, to bring them to me at my office, so that I could personally ascertain directly from them what they knew. I believe that M'r North made a very thorough search for any prior use of such brake, for I know that he appeared to be very anxious to find a reliable defense, and that I advised him repeatedly that to do so he would have to find a prior use of the invention. M'r

North did bring persons to me, and among them was M'r Talson, and the names of others I do not recollect. I do remember that M'r Talson was one, because at first we placed considerable reliance upon what he said of the trial of the Stanley brake, and subjected it to a thorough examination, and came to the conclusion that it was merely an abandoned experiment, and worth nothing as a defense.

13. Q. Please state any circumstances within your knowledge which made it specially important to succeed in finding a defense in the said suit.

A. There was no circumstance peculiar to that suit of that kind, except that there was a suit also on the same patent against the Erie Railroad, in which other counsel appeared for the defendants, and it being understood that the Erie road was to co-operate with the Hudson River road in defending against the patent, and that the suit against the Hudson River road would probably be first tried; this circumstance, 993 in connection with the fact that I had reason to believe that both companies depended very much upon me, caused me to feel particularly desirous of finding reliable matter of defense. This also stimulated me to make a very close examination of any proposed matter of defense to avoid making any mistakes about it.

14. Q. Was it considered by you that all the information and facts existing in respect to the railroads of the State of New Jersey relative to the use of double-acting brakes prior to the Tanner brake was obtained in this Hudson River Railroad suit?

A. It certainly was; and it was so understood between me, M'r North, and M'r Talson, so far as I know or have any reason to believe.

15. Q. After the investigation and preparation in said case was completed, what conclusion did you and the other counsel come to as to their being a defense to the action?

A. I came to the conclusion that we had nothing on which we could successfully defend. I then caused M'r Hubbell to come to my office and to have M'r North present, and I then and there stated to M'r Hubbell fully and fairly what matters of defense we had been able to find, and requested him to say whether he thought they were sufficiently reliable to risk a trial on, and he agreed with me that they were not. After which I advised M'r North to settle the suit on as easy terms as he could.

(So much of the answer as states what M'r Hubbell thought objected to by M'r Whipple.)

16. Q. Were you engaged as counsel in a suit tried at Canandaigua in or about 1859, upon the Hodge patent, and did you take part in the trial of said case?

A. I was, and acted as counsel for the defendants.

17. Q. Do you remember who were the defendants in that case?

A. The New York Central Railroad Company, according to my best recollection.

994 18. Q. Do you know Henry Waterman, of Hudson, New York, and was he a witness on the part of the defense in that case?

A. Yes; and he was such witness.

19. Q. Will you state what was the line of defense adopted in that case?

A. One, and a leading one, was that the Hodge improvement was not useful in view of what preceded it, and that the Hodge patent contained false suggestions or misrepresentations respecting the alleged utility of the thing he had patented. There were other matters of defense, but I do not remember them sufficiently to enumerate them. In my summing up of the case I made the subject of non-utility my leading point.

20. Q. Was any witness present at that trial from any other railroad; and if so, what railroad?

A. There was; from the Camden and Amboy Railroad.

21. Q. Please state what this witness was called for.

A. This witness was called on the part of the defendants to prove the results of a comparison between the use of the Hodge brake and another brake, which, according to my best recollection, was the Tanner brake.

And being cross-examined by Mr. Whipple, he deposes and says:

1. Cross-q. Are you retained as counsel for any party or parties interested in this Tanner patent?

A. I am retained with Mr. Cozzens in favor of the Tanner patent, and I suppose that it is by parties interested in it.

And being re-examined by Mr. Cozzens, he deposes and says:

1. Redirect q. Were you ever retained in favor of the Tanner patent by Mr. Sayles, the complainant in this case?

A. I was not; nor by any one else in favor of it until after the extension.

995 2. Redirect q. Was the retainer you speak of on behalf of M'r Mowry, the trustee of the extended term?

A. I so understand it.

And being further cross-examined by Mr. Whipple, he deposes and says:

1. Recross-q. Have you been consulted by Mr. Cozzens or any other person or persons in relation to the evidence or anything else connected with this case?

A. M'r Cozzens has conversed with me respecting what matters of defense we found in the suit against the Hudson River Railroad Company, and as to what conclusions the counsel for the defendants in that case came to thereon. I do not now remember that he has talked with me about anything else connected with this case or that he could have been said to consult me in the case at all. What has occurred has been more like matters of inquiry than anything else.

2. Recross-q. Do you understand by the Tanner brake a brake with a centre or cross lever under the body of the car by which the brakes of both trucks are operated from either end?

A. I understand that the Tanner brake would do that, but the particulars about it I do not now remember.

3. Recross-q. Has the Tanner brake a centre lever attached under the body of the car equidistant or thereabouts between the trucks or not?

A. I don't remember.

4. Recross-q. In your answer to the 21st direct interrogatory you say, "This witness was called on the part of the defendant to prove the result of a comparison between the use of the Hodge brake and another brake, which, according to my best recollection, was the Tanner brake." Please describe what you call the Tanner brake.

A. I do not now sufficiently remember the particulars of it to be able to describe it with certainty.

5. Recross-q. Was it a double-acting brake? If so, what kind of a double-acting brake?

996 A. According to my best recollection it was a double-acting brake. That I am quite certain of; and according to my best

recollection it had what was called a centre lever to connect rods to, but how those connections were arranged and made I do not now remember at all.

6. Recross-q. Wherein did this centre lever differ from the Hodge brake with which it was compared in the trial of the aforesaid case at Canandaigua?

A. That I do not remember, but it seems to me that one of them had a centre lever attached to something under the car body as a fulcrum, and that the other had not such attachment.

7. Recross-q. What was the result of the trial of said Hodge with the New York Central Railroad Company?

A. There was a verdict for the plaintiff, and I think of $1,500.

GEO. GIFFORD.

Subscribed and sworn to before me this 23d day of May, 1868.

JOSEPH GUTMAN, JR.,
Examiner, &c.

Examination adjourned to May 27th, 1868, at 11 a. m., at the office of M'r Cozzens, No. 7 Warren street, in the city of New York.

997 In the circuit court of the United States for the northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.
} In equity.

Testimony taken on the part of complainant before William Grier Hibble, United States commissioner and examiner, in the city of Philadelphia, under the rules of the Supreme Court of the United States.

MAY 25TH, 1868.

Present, Mr. S. D. Cozzens for complainant, and the complainant in person; Mr. S. M. Whipple for respondents.

ISAAC W. VAN HOUTEN, being duly sworn, deposes and says:

1. Question. What is your name, age, residence, and occupation?

Answer. My name is Isaac W. Van Houton; aged fifty-four years, about; reside in the city of Philadelphia, Pennsylvania; by occupation general overseer of the car department for Pennsylvania Railroad Company.

2. Question. How long have you been employed in that capacity by said company?

998 Answer. About two years in that capacity, and in other capacities, for the same company, nearly eighteen years. Up to the time I was employed in my present position I had charge of the company's shops (car-shops) at Philadelphia.

3. Question. Were you ever in the employ of the New Jersey Railroad and Transportation Company? If so, in about what year did you go into their employment?

Answer. I was in their employment. I think I commenced working for them in 1843.

4. Question. In what year did you leave their employment?

Answer. In the spring of 1850.

5. Question. While in their employment, did you w ular kind of shop; and, if so, what kind of shop?

Answer. I was employed in their car-shop.

6. Question. What kind of work did you do in this car-shop?

Answer. I helped to do all kinds of work that came there; building and repairs of cars, &c.

7. Question. Did this work include the building and applying and repairing of the trucks, running gear, and brakes of the cars?

Answer. It did.

8. Q. Are you familiar with the construction and operation of what are called single-acting car-brakes, operating upon only one truck at a time?

Answer. I am.

9. Question. Are you familiar with the construction and operation of double-acting brakes for railroad cars?

Answer. I am.

10. Question. During the time you were in the employ of the New Jersey Railroad and Transportation Company, what kind of brakes, whether single or double-acting, were used upon the passenger and crate cars of said company?

Answer. Single-acting brakes.

11. Question. Do you remember how many crate-cars were in use by said company during the time you were in its employ? If so, how many?

999 Answer. I can't say definitely how many; eight or more that carried those crates; we had a large number of flat cars, or platform-cars.

12. Question. About how frequently did your duties on said N. J. road lead you to see and examine its cars during the time you were in its employ?

Answer. Well, we had to do with the cars in some shape or other every day. The cars that were running daily in the passenger-trains we only done repairs to on the track when our attention was called to them by the yard-man.

13. Question. About how often did these cars need such repairs?

Answer. Sometimes we would go out every day, and again sometimes we would not go out for three or four days.

14. Question. Did the repairs which, as you testify, you did to the cars on said railroad require you to see the brakes which were on said cars?

Answer. They did.

15. Question. Could there have been any double-acting brakes used for any length of time on any of the cars of the said N. J. Railroad while you were in its employ, without your knowing it?

Answer. I don't think there could. There could have been, but I don't think there was. It is possible to do a good many things.

16. Question. During the time that you were in the employ of the said railroad, did any cars belonging to the Camden and Amboy R. R. Co. run over said N. J. Railroad to Jersey City?

Answer. Yes.

17. Question. About how many of such cars?

Answer. Probably some days a dozen would come to Jersey City. I think they would average a dozen cars a day—passenger-cars.

18. Question. Did you, while in said N. J. Railroad Co.'s employ, have to do repairs on these Camdem and Amboy R. R. cars?

Answer. Yes.

1000 19. Question. Upon what parts of the cars were these repairs?
Answer. Both on the trucks and body.

20. Question. When you repaired them on the trucks, did you see the brakes of the cars?

Answer. I did.

21. Question. About how often, on an average, were you required to repair these cars on the trucks?

Answer. I don't know that I can average it; probably twice a week.

22. Question. Up to the time you left the employ of said N. J. Railroad Co., in the spring of 1850, what kind of brakes were used on these Camden and Amboy cars which came to Jersey City, as stated?

Answer. Single-acting brakes.

23. Question. When, as nearly as you can state, did you first see a double-acting railroad car-brake?

Answer. I think in 1851, on the Pennsylvania Central Railroad.

24. Question. Had you ever seen one before you left the employ of the New Jersey Railroad?

Answer. I do not now recollect that I did.

Cross-examined by S. M. Whipple:

1. Cross-question. What time in the year 1843 did you enter the employ of the New Jersey Railroad Co.?

Answer. I am not positive whether it was 1843 or 1844, but whichever year it was, it was in the summer months. I recollect now it was in the summer months of 1843. I will answer the question it that way.

2. Cross-question. Were you ever in the employ of the Camden and Amboy R. R. Co.?

Answer. I was not.

3. Cross-question. To what extent were cars belonging to the Camden and Amboy Railroad Company repaired at Jersey City?

Answer. As small an extent as possible, with a view to safety in their running.

1001 4. Cross-question. Do you know what brakes were in use on all the baggage and passenger cars belonging to the Camden and Amboy Railroad during the time you were in the employ of the New Jersey R. R. and Trans. Co.?

Answer. I do not.

5. Cross-question. May there not have been one or more cars belonging to the Camden and Amboy Railroad Co. with a double brake thereon have come to Jersey City without you knowing it while you were in the employ of the New Jersey R. R. and Trans. Co.?

Answer. There may have been.

6. Cross-question. Are you positive that there was no double-acting brake in use on any car or cars in use belonging to the Camden and Amboy R. R. Co. that had not in use on the same a double-acting brake, during the time you were in the employ of said New Jersey R. R. and Trans. Co.?

Answer. I am not positive that there were not any in use.

7. Cross-question. Did you know of a car belonging to the Camden and Amboy R. R. Co. called the John Tyler or Tyler car?

Answer. I knew there was one called the Tyler car.

8. Cross-question. Do you know that there was not a double-acting brake applied to said Tyler car in the summer of 1843?

Answer. I do not know that there was not a double-acting brake applied to said car.

9. Cross-question. Do you know that there was not a double-acting

brake in use on said car during the time you were in the employ of said N. J. R. R. and T. Co.?

Answer. I do not.

10. Cross-question. Do you know that there was not a double-acting brake in use on a crate or flat car belonging to said Camden and Amboy R. R. Co. during the time you were in the employ of said N. J. R. R. and Trans. Co.?

Answer. I do not. If it is a general question, applying to all the crate or flat cars of the company, then I do not know.

1002 11. Cross question. Are you positive that no crate or platform car belonging to said Camden & Amboy Railroad Company with a double brake thereon came to Jersey City while you were employed there?

Answer. I am not positive; there may have been, but I did not see one that I can recollect of.

Re-examined:

25. Question. When you answered the 6th cross question, how did you understand it?

Answer. I understood it to mean any cars belonging to the Camden and Amboy R. R. Co. whenever they were on the road.

26. Question. You have been asked if there may not have been one or more Camden and Amboy cars with double brakes come to Jersey City while you were on the New Jersey road. Do you think any such Camden and Amboy cars could have run to Jersey City for any considerable length of time while you were on the N. J. road without your knowing it?

Answer. I don't think they could have run any considerable length of time without my knowing it, yet it is possible they might have come there without my seeing them.

Recross:

12. Cross-question. Assume that twenty or more witnesses, mostly in the employ of the Camden and Amboy R. R. Co., have testified, in this case, that one or more cars belonging to that company were in use upon that road, with double brakes in use on said cars from June, 1843, to 1852, and onward, are you prepared to say these witnesses are mistaken in giving such testimony, and that these cars, with said double brakes thereon, did not come to Jersey City?

Answer. I am not prepared to say that they were mistaken, 1003 neither am I prepared to give any evidence that such was the fact because they say so, but understand my evidence to be what I know, and not what they say.

13. Cross-question. Do you know that there was no double-acting brake in use upon a passenger car and also upon a platform car belonging to said Camden and Amboy Railroad Co., during the time you were in the employ of the New Jersey R. R. and Trans. Co.?

Answer. I do not answer the question as covering all parts of the Camden and Amboy R. R.

14. Cross-question. Do you know that no such passenger and platform car, with double brakes thereon, did not come to Jersey City while you were employed at that place?

Answer. I do not.

27. (Question by M'r Cozzens.) Could any such passenger car or platform car have come to Jersey City for any considerable length of time while you were employed there without your knowing it?

Answer. I think I answered that question before. I don't think they would have run there without my knowledge; it is possible they may have run a while without my seeing it.

28. Question. Assume what is the fact, that twenty or more witnesses, all either now or formerly in the employ of the Camden and Amboy or New Jersey R. R. Companies, have testified in this case, that to the best of their knowledge and recollection no Camden and Amboy cars came to Jersey City with double brakes until after 1850. Do these statements correspond or not with your recollection of the matter?

Answer. They do correspond with my recollection of the matter; I do not think they came there.

15. (Cross-question by M'r Whipple.) Do you know that a passenger car called the John Tyler, and a platform car for carrying baggage-crates, did not come to Jersey City when the business of the road required it, with double brakes thereon, while you were employed at Jersey City? 1004

Answer. I do not know that they did not come; if they did come, I do not know whether they had double brakes.

29. (Question by M'r Cozzens) Did you see the Tyler car several times?

Answer. I did.

30. Question. Were there any double brakes on it when you saw it?

Answer. I have no recollection of having examined the brakes; it may or may not have had them.

31. Question. Did you repair the Camden and Amboy crate-cars that came to Jersey City while you were employed there?

Answer. I helped to do so.

32. Question. About how frequently?

Answer. I should think once a week.

33. Question. Do you remember seeing double brakes on any of them?

Answer. I do not.

16. (Cross-question by M'r Whipple.) What kind of repairs did you do to these crate-cars of the Camden and Amboy Railroad?

Answer. The general repairs done to those cars were repairing the brakes.

17. Cross-question. At what place was the general repairs of the Camden and Amboy road done?

Answer. Bordentown, N. J.

18. Cross-question. Do you know that a crate-car belonging to said Camden and Amboy R. R. Co., with a double-acting brake thereon, did not come to Jersey City when the business of the road required it?

Answer. I do not know that such a car did not.

1005 34. (Question by M'r Cozzens.) Where were the general repairs to the crate-cars referred to in your 16th cross answer done?

Answer. At Jersey City.

19. (Cross-question by M'r Whipple.) What do you mean by general repairs of brakes at Jersey City when you say the general repairs of the Camden and Amboy R. R. Co. were done at Bordentown? Were or were not all general repairs done at Bordentown?

Answer. I mean to say that the general repairs done to the brakes of those cars when on the N. J. Railroad was done at Jersey City; it was very seldom that any other repairs was done to those cars by the N. J. R. R. Co., and I mean to say that all repairs what is known as general repairs by the company who own the cars is done at such company's general repair shops, and that the general repair shops of the Camden and Amboy R. R. Co. is at Bordentown. I will say further that I think that they consider general repairs as I do to be when a car or cars is so much out of repair as to have to be taken in the shop in order to have such repairs done; trucks, brakes, bodies, or any other parts of the cars.

35. (Question by M'r Cozzens.) What kind of repairs was it that were mostly done at Jersey City by you and the other men there to the crate-cars referred to in your 16th cross-answer?

Answer. Brakes.

(20. Cross-question by M'r Whipple.) Is it not a fact that more repairs are required on brakes of the cars of any road than any other part of the car?

1006 Answer. In small matters of repairs I should think they do. I will say that during the time I was employed on the New Jersey Railroad, the manner in which the brakes were constructed and put on would take more repairs than the brakes on the same number of cars as now constructed would do.

I. W. VAN HOUTEN.

Sworn to and subscribed before me this 25th day of May, A. D. 1868.

W. GRIER HIBLER,
U. S. Commissioner.

Isaac Nostrand, being duly sworn, deposes and says:

1. Question. What is your age, residence, and occupation?

Answer. Fifty years of age; residence, Philadelphia; no occupation at present.

2. Ques. What occupation were you last engaged in?

Ans. I have been stock-dealer and tobacco-broker.

3. Ques. Were you ever employed by the Camden and Amboy R. R. Co.; if so, in what year did you go into their employ?

Ans. Yes, sir; in the year 1848 I went into their employ.

4. Ques. In what capacity were you first employed by them?

Ans. I was employed as a baggage-master.

5. Ques. Did you run upon any train; and, if so, upon what train?

Ans. I did; I ran upon what was called the 9 o'clock train from Philadelphia to New York, by way of Tacony.

6. Ques. About how long did you continue upon that train?

Ans. I do not think it was a year; it might have been near a year.

7. Ques. After you left this train did you take another train of said company; and, if so, what train?

1007 Ans. I was transferred from the 9 o'clock train to what was called the 6 o'clock train, as conductor, running from Philadelphia by way of Camden and Bordentown, to Jersey City.

8. Ques. How long did you continue as conductor on this train?

Ans. It was a year, I suppose; it may be more.

9. Ques. During this time did you know of a car called the Tyler car?

Ans. I did know of such car.

10. Ques. What kind of brakes did this Tyler car have at this time?

Ans. The brakes on the whole train, I believe, were uniform. There was no difference, I believe, between this car and the other cars.

11. Ques. About what year was this time that you speak of?

Ans. I think part of each year 1849 and 1850. I know it was in 1849 that I took charge of the 6 o'clock train.

12. Ques. You say there was no difference between the brakes of this Tyler car and the other cars. I will ask you upon how many wheels the brakes of these cars, including the said Tyler car, operated from one windlass, at this period?

Ans. Upon four wheels, or upon one truck, the truck where the windlass was placed.

13. Ques. Did you have this Tyler car in this 6 o'clock train which you run, as you say, in 1849 and 1850?

Ans. It was a portion of the time. I have had it in other trains.

14. Ques. After you left the 6 o'clock train did you have any other train of said company; if so, what train?

Ans. I was transferred from that to the express-train, which went from Philadelphia to Jersey City, by way of Tacony. I think that at first it left at 9 o'clock, and was afterwards changed to 10 o'clock, by way of Camden.

15. Ques. Was this the same train as the 9 o'clock you have before spoken of, or was it a different train?

Ans. It was the same train.

1008 16. Ques. Did you ever know of double brakes being used on the cars of the Camden and Amboy R. R. Co.; and, if so, about what year did you first know of it?

Ans. I cannot specify the year; it was some time after I left the 6 o'clock train.

17. Ques. Was it before or after the time when you took the 9 o'clock train, which was afterwards changed to the 10 o'clock train?

Ans. It was after.

18. Ques. About how long after?

Ans. I cannot specify the time; it might have been a year.

19. Ques. What year would this make it?

Ans. It would be in the latter part of 1850, or some time in 1851.

20. Ques. What called your attention at this time, in 1850 or 1851, to the subject of double brakes, on the Camden and Amboy cars?

Ans. By hearing the conversation of men connected with the train. My impression was that the brakes operated to better advantage than the old brakes we had been formerly using.

21. Ques. At this time, in 1850 or 1851, what was the effect of the double brakes in respect to stopping trains, as compared with the brakes you had been formerly using?

Ans. The effect was that the trains would be stopped in a shorter space. The engineers could make a better calculation about stopping at the right place. Formerly there was difficulty about running by stations, and we were forced to back up again.

Cross-examined by S. M. Whipple:

1. Cross-ques. When did you leave the employ of the Camden and Amboy R. R. Co.?

Ans. I think, to the best of my knowledge, it was in 1858 or 1859; I cannot say which.

2. Cross-ques. Do you know what brakes were in use on the Camden and Amboy road from 1843 to 1848?

1009 Ans. I know nothing previous to my entering their employ.

3. Cross-ques. Was the Tyler car rebuilt, or not, soon after you entered the employ of the Camden and Amboy road?

Ans. Not to my knowledge.

4. Cross-ques. Had it have been rebuilt, would you have known it? that is to say, had it been rebuilt in the year 1849?

Ans. I think I should; for it could not have been used on the train, if it were a new car; I mean on that train.

5. Cross-ques. Do you know what brakes were in use, on all the cars of the Camden and Amboy road, from 1848 to 1851?

Ans. I know nothing of any of the cars except those I was connected with.

6. Cross-ques. Do you know that there was no car run in the trains of which you were baggage-master and conducter, from 1848 to 1851, that had a double brake on it?

Ans. I have no recollection of such.

7. Cross-ques. The question is, do you know, of your own personal knowledge, that there was not any car run in the trains of which you were baggage-master and conductor, from the time you entered the employ of the Camden and Amboy Co. to the year 1851?

Ans. I can only answer to my belief; I believe there were none.

8. Cross-ques. Do you know there were no such cars used on those trains?

Ans. I form my opinion from the circumstances and situation that I was placed in in different parts of the trains that I was connected with; for instance, if the engineer blew his whistles for the brakes, I, as conductor, generally assisted in plying the brakes, and I never knew any difference in the brakes at that time.

1010 9. Cross ques. Is there any difference in the application of power to a single brake than to a double brake? If there is, please explain the difference.

Ans. The single brake acts upon one truck, while the double brake acts upon both.

10. Cross-ques. Is the source of application of the power the same in both instances; that is to say, is the power in both instances applied through a brake windlass?

Ans. Yes, sir.

11. Cross-ques. Was there any pawl and ratchet-wheel on the windlass staff to hold the power when the brakes were applied by the brakeman?

Ans. I know there was one on the brake in the gig-top, where the lookout brakeman was; as to the other cars, I know there were a good many that did not have it at that time.

12. Cross-q. Did you know Edwin Lockwood who had charge of the car-department of the Camden and Amboy road?

Ans. I know him.

13. Cross-ques. Did you know him from 1848 to 1851?

Ans. Not the whole time.

14. Cross-q. When you did know him, what did you understand to be his position on that road?

Ans. I believe he was master mechanic of the car-shops on that road—of the car-department.

15. Cross-ques. Do you think M'r Lockwood would be likely to know what brakes were on the Tyler car from 1848 to 1851?

Ans. I suppose he would.

16. Cross-ques. Do you know, from personal inspection, that there was no double brake on the Tyler car from the year 1848 to 1851?

A. I only know from the working of the brakes.

17. Cross-ques. What do you know about the working of the brakes?

Ans. I know the working of a single brake from a double; one applies only to one truck, the other to both.

1011 18. Cross-q. What kind of a brake was on the Tyler car when you left the employ of the Camden and Amboy Company?

Ans. I do not know. I do not know that I had seen the car for some two or three years before I left.

19. Cross-ques. Did you ever see a double brake on the Tyler car?

Ans. Not to my knowledge.

20. Cross-ques. To what extent were double brakes in use on the Camden Amboy road when you left the employ of the company?

Ans. I believe they were on most all of the cars in the regular trains; I mean by that the express-lines.

21. Cross-ques. Could there have been a double brake on the Tyler car in 1851 or 1852 and you not have known it?

Ans. There could after my connection with the car ceased.

22. Cross-ques. When did your connection with or knowledge of the Tyler car cease?

Ans. I never knew much of it after taking charge of the regular express-line—the nine or ten o'clock train.

23. Cross-ques. What year did you take charge of that train?

Ans. Well, as I said before, it was in 1850 or 1851; I can't say which.

24. Cross-ques. Then your knowledge of the Tyler car is confined mostly on the year 1849, is it?

Ans. To 1849 and 1850.

25. Cross-ques. Then you do not recollect of the Tyler car being ebuilt in 1849; but you do recollect, as you say, what brakes were on it at that time, do you?

Ans. I do; by the using of them.

J. C. NOSTRAND.

Sworn to and subscribed before me this twenty-fifth day of May, A. D. 1868.

W. GRIER HIBLER,
U. S. Commissioner.

1012 JOHN BRIGGS, j'r, being sworn, deposes and says:

1. Ques. What is your age, residence, and occupation?

Ans. I think my age is about fifty-four; residence Philadelphia; occupation, I suppose, you would call that of a gentleman, as I am doing nothing.

2. Ques. What was the last occupation in which you were engaged?

Ans. I was ticket-agent for the West Jersey Railroad Co. from Cape May to Philadelphia.

3. Ques. About how long were you engaged there?

Ans. During one season; the summer season.

4. Ques. Were you ever in the employment of the Camden and Amboy R. R. Co.; and, if so, in what year did you go into their employ?

Ans. I was. I went there in the year 1849. I think it was in the month of March.

5. Ques. In what capacity were you employed by said company at this time?

Ans. As baggage-master first. I think I remained baggage-master for two years, or nearly so; then I was appointed conductor in the place of Van Doren.

6. Ques. What kind of trains did you run on as baggage-master and conductor?

Ans. They were all through trains to New York.

7. Ques. When you first went into the employ of said company in 1849, what kind of brakes were they using on their passenger-trains?

Ans. All single brakes, I believe.

8. Ques. Upon how many wheels did their brakes operate from one windlass?

Ans. They were intended, I suppose, to operate on all the wheels of the car; none of the brakes were of much account.

9. Ques. What do you understand by single brakes?

Ans. I always understood that the single brake was to apply to the whole truck; one truck at that end where the brake was applied.

1013 10. Ques. Then how do you mean to be understood in your 8th answer?

Ans. I don't mean to say that by applying the brake at one end it would operate on both ends, for it would not.

11. Ques. Was there a single brake at each end of the cars you referred to when you made your 8th answer?

Ans. Yes; there was.

12. Ques. Did you ever know of double-acting brakes being used on the cars of said Camden and Amboy Co.; if so, about how long was it after you first went into their employ?

Ans. Yes, sir; it was about two and a half years after I first went into their employ.

13. Ques. Do you remember any circumstance connected with your first finding out that said company was using double brakes on any of its cars? If so, please state the circumstance.

Ans. Yes, sir; many of our passengers found it out as soon as I did. The circumstance was that we generally ran so fast while coming into Burlington, that we frequently ran by the station; that is, our way-cars, in which we wanted to put our commutation passengers. After they put those brakes on we could stop much more quickly than we could before, because we had more power to hold: with the other brakes it was like sliding over a greased plate.

14. Ques. What brakes do you mean by the other brakes?

Ans. The single brakes; those that were previously in use on the cars.

15. Ques. When you say "we generally ran so fast while coming into Burlington," etc., what train did you refer to?

Ans. The train I was running; the mail-train.

16. Ques. About how long after you first went into the Camden and Amboy Company's employ was it that you first noticed that you could stop more quickly when coming into Burlington than you could before, with the single brakes?

Ans. It was two or three months after 1851, about two and a half

1014 years after I first went into their employ in 1849.

Cross-examined by M'r Whipple:

1. Cross-ques. When did you leave the employ of the Camden and Amboy Railroad Company?

Ans. In the latter part of 1863.

2. Cross-ques. Do you know what brakes were in use on the Camden and Amboy road before you went there in 1849?

Ans. I do not. I suppose they were the same as they were using when I went there; they had the single brakes when I went there. They made no change. They had the single brakes for some time afterwards—certainly two years.

3. Cross. Do you know that there was no double-acting brake in use on any car of the Camden and Amboy R. Road from 1849 to 1852?

Ans. I know they were there before 1852.

4. Cross-ques. Do you know from personal inspection of all the passenger cars on the Camden and Amboy road that there was no double brake on a car or cars of that road in 1849 and 1850?

Ans. That is a question that I should not like to answer, as I never saw more than half their cars. There was none at that time on any of the cars over which I had control.

5. Cross-ques. Are you familiar with the construction and operation of double-acting brakes?

Ans. I can't say that I am with the construction, but I am with the operation. I know when they are in order and out of order.

6. Cross-ques. Please describe the operation of a double-acting brake.

Ans. They operate on both ends of the car at the same time—that is, they check the whole running-gear of one car at the same time.

7. Cross-ques. Would or not a brakeman at each end of the
1015 car with a single brake on it have the same effect in stopping
the cars as a brakeman at one end would have on the same car
with a double brake?

Ans. I don't think it would.

8. Cross-ques. Why not?

Ans. I don't think that a single brake would have the same effect by applying it at each end that the double brake would, because the double brake is applied to all the wheels at once, and is more instantaneous, and would be more of a check to the wheels.

9. Question. What brakes were in use on the cars of the Camden and Amboy R. R. when you left the employ of said company?

Ans. That I cannot answer, as I was ticket-agent six years before I left there, and I did not know what was on the cars during that time; but when I left the cars they were all, or nearly all, double brakes.

10. Cross ques. When did you leave running upon the road?

Ans. I think I left running on the road either in the latter part of 1856 or the fore part of 1857.

11. Cross-ques. Do you know of your own personal knowledge that there was not a passenger and platform crate car for carrying baggage, on which a double-acting brake was in use, on the Camden and Amboy road before 1851?

Ans. I think there was none; I never heard of any. If there had been, I should have known it; I know I should have known it.

12. Cross-ques. Did you inspect all the cars of that road with a view to ascertain what brakes were on the cars of said road during this time?

Ans. If there were any changes made, I did.

13. Cross-ques. I asked you if you inspected the cars?

Ans. No, sir; we had an inspector at Camden to do that.

14. Cross-ques. Do you wish to be understood that you know nothing of what brakes were in use on the cars of the Camden and Amboy Railroad before you went into their employ?

1016 Ans. No; I do not. I know there were no double brakes, as they would never have taken them off to put on single brakes.

15. Cross-ques. Do you know that there were no double brakes in use on the cars of that road before 1849—before you went there?

Ans. I do not. I answered that a moment ago.

Re-examined by M'r Cozzens:

17. Ques. Between 1849 and 1851, did you know of a car on the Camden and Amboy R. Road called the Tyler car?

Ans. I did.

JOHN BRIGGS, J'R.

Sworn to and subscribed before me this 25th day of May, A. D. 1868.

W. GRIER HIBLER,
U. S. Commissioner and Examiner.

NEW YORK, *May 27th*, 1868.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

HENRY TANNER, a witness of lawful age, produced on the part of the complainant, having been duly cautioned and sworn, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is Henry Tanner; I am 54 years of age; reside at Buffalo, in the State of New York; I have no particular occupation at present.

2. Q. Are you the person to whom the letters patent on which this suit is brought were issued?

A. I am.

1017 3. Q. Have you any interest in this controversy, or in the said letters patent, either as respects the first term or the extended term thereof?

A. None whatever.

4. Q. Did you ever at any time visit any railroads in New Jersey, or any persons connected with any New Jersey railroads, in reference to the matter of a double-acting car brake? If yea, please state when you did so, where you went, for what purpose you went, whom you saw, and what took place. Answer fully.

A. I visited different persons in New Jersey connected with railroads at different times. The first time that I visited New Jersey with a brake must have been in 1849. It was the Turner brake; it had on the self-acting and also the single centre-lever attachment. At this time I visited a M'r Baker, at Jersey City, and the reason of my going to him at that time with the brake was, I had a letter of introduction to him from an old shopmate of his, and a friend of mine, in Rochester, of the name of Wiser. I went with the hope of getting him to introduce the Turner brake on the New Jersey Railroad. I did not succeed in getting it introduced at that time. He did not seem to like the self-acting part of the brake. After laboring among other roads for some time to introduce the Turner brake, and getting it on some cars in one form or another, finding it difficult to get this self-acting brake into operation, I had a model made of the centre-lever that was contained in the Turner brake, separating it from the self-acting part, and in that shape had introduced it on several roads, and returned to see M'r Baker, as near as I can fix it, in 1851, with the single lever on this model that I had had made. I went then to see if I could get him to put the single lever on, without the self-acting part. I found that he was already doing it. He was putting them on while I was there, on one or two cars, and I urged him at that time to fit up a train with them, so that he might be sure that they would work. I recollect that I offered to pay him if they did not work, and, if he had to take them off, to pay him for all the labor that was done. From that interview 1018 with Baker I went to Bordentown, to the Camden and Amboy shops. I saw a man there that was introduced to me as M'r Lockwood. I never had seen him before. I exhibited the model to him, and told him that I wanted to get the brake on that road also, and told him what M'r Baker was doing. We talked a good while about it, and he declined to put it on at the time, and the reason he gave was that they were putting on, or were going to put on, the Hodge brake; that they had made arrangements for that. I claimed the Hodge brake to be an infringement of the one I had, but met with no further success in getting my own (the Turner) brake introduced on the Camden and Amboy at that time. I don't recollect whether I went again to them. I saw Baker again once or twice. I do not recollect that I went to any other road in New Jersey to get it introduced.

5. Q. You say "from that interview with Baker I went to Bordentown." How soon after the interview with Baker did you go to Bordentown, and in what year was it?

A. The year that I have named, 1851, and on the day following my interview with Baker. M'r Baker had given me Lockwood's name, and advised me to go down there.

6. Q. At this time, when you saw Lockwood at Bordentown, did you see any of the Camden and Amboy Company's passenger-cars there?

A. Yes, a great many of them.

7. Q. Did you see what kind of brakes were upon those cars; and, if so, what kind were they?

A. Yes, I did see what kind of brakes were on them, and I saw no brakes upon the cars there except the old brake that braked on one truck—unless it were one or two Hodge brakes that they were then putting on. It appears to me that they were putting on one or two Hodge brakes, but I am not clear about it, as it was a good while ago. There were no double brakes on the cars, unless the Hodge brake, as I have excepted.

8. Q. What is it you mean you are not clear about?

1019 A. About the fact that they were then putting on the Hodge brake, or whether Lockwood simply told me that he was going to put them on.

9. Q. Do you know what position on the Camden and Amboy road this Lockwood occupied at that time?

A. I cannot say that I do of my certain knowledge. I understand he was superintendent of car-repairs.

10. Q. Had you about this time seen cars of the Camden and Amboy Company at other places than Bordentown? If so, mention some of the places, and state what kind of brakes such cars so seen by you had upon them.

A. I had ridden on them between New York and Philadelphia a great many times, and from the time I first had any interest in a railroad brake of any description up to the time I parted with that interest, I never saw a car anywhere in the land that I did not examine the brake of to see what kind it was, and I never saw a double-acting brake on any car belonging to any road until I began to put them on in 1848 or 1849. The Camden and Amboy Railroad cars had not, any of them that I saw, any double-acting brake on them up to this time we are talking about, 1851.

11. Q. You say that you had ridden on these Camden and Amboy cars between New York and Philadelphia a great many times; in what years were these times?

A. I am alluding now to the years 1848, 1849, 1850, and 1851, and nearly every year since.

12. Q. Had you, about the time and previous to the time of the interview with Lockwood in 1851, seen any of the Camden and Amboy cars at any other places than Bordentown; if so, at what places?

A. I had seen them at other places—some in Jersey City and some on the line of the road while I was riding on it.

13. Q. Did you observe what kind of brakes these cars had; if so, what kind were they?

A. I did; they were the old brake, braking on one single truck.

14. Q. You have said that when you went to Lockwood in 1851
1020 he declined to put the single centre-lever double-brake on the
Camden and Amboy cars, and that the reason he gave you was that they were putting on, or going to put on, the Hodge brake. Did he give you any other reason than this?

A. No, he did not.

15. Q. About how long did you talk with Lockwood at this time?

A. I do not recollect. I was there two or three hours, talking with him most all of the time about something.

16. Q. How distinct is your recollection of what took place with him at this interview?

A. There are some features about it very distinct. The words I cannot recall. I recollect distinctly sitting down with him on the side of the railroad track while I was waiting to get away, and talking there with him quite a while in the warm sun and sand.

17. Q. You say some features of the interview are very distinct. State generally what features you refer to.

A. I refer to that contained in my former answer—sitting there and talking—that is very plain to me now—for one thing—and the exhibiting to him the model I had with me and the long talk upon it—these are more particularly the points I refer to.

18. Q. And how distinct is your recollection respecting the matters you have testified to in relation to your wanting him, Lockwood, to put your single centre-lever double-brake on the Camden and Amboy cars, and his declining to put it on, and the remainder of that interview as you have here testified to it?

A. My mind is very clear on those points and in this full testimony, where I have had hesitancy, I have tried to show it in the answers.

19. Q. During this two or three hours interview with Lockwood did he say anything to you about a single centre-lever double-acting brake having been used on cars of the Camden and Amboy Railroad in the
year 1843 and after that time?

1021 A. Never—the first word or thought. Had he done so I would
have investigated it thoroughly on the spot as it would have been my duty to do.

20. Q. Did he in that interview say anything to you about there having been a single centre-lever double-acting brake used on cars of the Camden and Amboy Railroad at any time prior to the time of said interview.

A. Not one word.

21. Q. Did he in that interview say anything to you about a car of the Camden and Amboy Company, called the Tyler car?

A. No, sir; I never heard of that car until I read of it in a book of evidence sent to me by somebody. I think M'r Whipple sent it. I do not know where it came from.

22. Q. Did you, during this visit to Bordentown, hear anything from anybody, either about a car called the Tyler car or about single-lever double-acting brakes having been used on cars of the Camden and Amboy Company prior to such visit?

A. No, sir; not a word from anybody.

23. Q. Were you the plaintiff in a suit brought against the New York and Erie Railroad Company for the infringement of the patent now in controversy?

A. I was.

24. Q. Had you at any time prior to the trial of that suit, or have you at any time since said trial, learned of the use of any double-acting

brakes prior to the Batchelder & Thompson invention, other than the matters discussed at said trial ?

A. I never have heard of anything, unless it is what you have in controversy now, and I never heard of this until the present time.

And being cross-examined by M'r Whipple, of counsel for defendant, he says:

1. Cross q. Do you wish to be understood that of all the cars which you examined, owned by the Camden and Amboy Railroad Company, you did not see any double-acting brakes on said Camden and Amboy cars prior to 1851 ?

A. I do mean to be so understood.

1022 2. Cross-q. Did you examine all the cars owned by said company, and run on the different lines of said Camden and Amboy Company ?

A. No; I have no idea that I did.

And being re-examined by M'r Cozzens, he deposes:

1. Redirect q. You are asked whether you wish to be understood that you did not "see" any double-acting brakes on any of the Camden and Amboy cars prior to 1851. Do you know what kind of brakes were on those Camden and Amboy cars seen by you prior to 1851, and prior to the time of your interview with Lockwood ? and, if you say that you know what kind they were, please state what kind.

A. I do know what kind they were; they were the common single-acting brake, working on one truck only.

HENRY TANNER.

Subscribed and sworn to before me this 27th day of May, 1868.

JOSEPH GUTMAN, Jr.,
Examiner, &c.

Examination further adjourned to May 28, 1868, at 4 p. m.

May 28th, 1868—4 p. m.

Present, M'r Cozzens, for complainant, and M'r Whipple, of counsel for defendant.

Redirect examination of witness Henry Tanner, resumed by M'r Cozzens:

2. Redirect q. In your 4th direct answer you said that you had a model made of the center lever that was contained in the Turner brake separating it from the self-acting part. Will you please describe that model ?

1023 A. It was made with a center lever fastened to the frame of the model in the middle of the lever, with rods running from each end of the centre lever to each brake-staff upon the opposite end of the car, and other rods running from the quarter of the centre lever to levers in the trucks each way. It was like the description of the lever in the Batchelder & Thompson patent, called the Tanner patent, as that patent was issued to me, and I used that same model in exhibiting the Tanner patent for sale after that patent was issued. By the lever in the truck, I mean such as was used in the old trucks of the single brake.

3. Redirect q. Then you do mean that the entire brake, as shown in this model, was the same as the entire brake shown in the Batchelder & Thompson or Tanner patent you have referred to ?

A. I do.

4. Redirect q. You also stated in your 4th direct answer that "you exhibited the model" to the man you saw at Bordentown, who was introduced to you as M'r Lockwood; what model was this?

A. The one described in the answer above.

And being further cross-examined by M'r Whipple, he deposes and says:

1. Recross-q. In what year did you exhibit this model as already described, as you say, to M'r Lockwood?

A. In the year 1851.

2. Recross-q. What time in that year?

A. I think it was early in the fall; it was warm weather.

3. Recross-q. Did you, during the year 1851, go to the Hartford and Springfield Railroad Company, whose shops are located at Hartford, for the purpose of introducing the Turner brake?

A. I think I did; I am quite sure I did.

4. Recross-q. Did you there find in use upon the cars of that road a centre-lever brake claimed to have been invented by one Willard J. Nichols?

A. I found either at the first of my going there, or at some sub-
1024 sequent dates, a centre-lever brake in operation there that they
claimed was the production of M'r Nichols. I am not sure whether they said it was a production of M'r Nichols the first time I went there, or when I was there pressing for payment.

5. Recross-q. Did you find, on investigating, the time when the said double brake, claimed to have been invented by said Nichols, antedated the Turner patent of November 14, 1848, in which there is described a centre lever?

A. They claimed that it antedated the Turner patent, so far as the single lever in that patent was concerned. I do not recollect whether I made any investigation at that time respecting the bearing of the Nichols invention on the Turner patent that satisfied me in the case one way or another; but I did make an investigation subsequent to that after I had got out the Tanner patent, and after I had commenced suit against the Erie Railroad, and had received notice of this invention of Nichols as a defence; and that investigation was made entirely with reference to that suit to see how I stood with it.

6. Recross-q. On such investigation, whenever it was made, did you come to the conclusion that the claim of the time when the Nichols brake was invented antedated the Turner patent?

A. I do not know that the Turner patent was then in my mind, as I was not fighting for that; but, as I recollect it now, the claim that they put up did antedate the Turner patent, if that claim was correct.

7. Recross-q. Did you, during the year 1851, or at any time in that year, execute to the widow of Willard J. Nichols a bond agreeing to pay to her or any person in trust a certain sum from collections made on the Turner patent?

A. I don't recollect whether it was in the year 1851 or later, but there was a bond given to some name that I have forgotten—to a M'r Durand, I believe—to pay some sum, I don't recollect what, from collections
that might be made on this single lever in the Turner patent; that
1025 bond was given because of the investigation—the two things run-
ning so near each other—to settle the matter; and, in recollecting this, I think there must have been an investigation made on the Turner patent, and that investigation must have been made with this

very model, probably at the very time when I went there with the model.

8. Recross-q. May it be inferred from the fact of your executing such a bond to said Durand, in trust for the widow of Willard J. Nichols, that you came to the conclusion, after investigating the matter of dates, that the Nichols brake did antedate the Turner brake?

A. No; there was not that thorough investigation to give it that character, even if it existed there. M'r Durand represented her case to me as being poor, claiming that Nichols, her husband, had invented this and was dead, and even if M'r Turner had also invented it, and I was to make money out of it, I ought to help her as she was poor, and I therefore gave that bond.

9. Recross-q. At the time of your going to the Camden and Amboy road, as you say, were you acting as agent of C. B. Turner, or as owner of said Turner patent?

A. I was acting as agent under an irrevocable power of attorney.

10. Recross-q. At this time did you know of the application of Thompson & Batchelder for an alleged improvement in railroad-car brakes, of which application you afterwards became the owner?

A. No; but I became aware of Batchelder & Thompson's application at or about the time that I made the application for the reissue of the Turner patent. I first became aware of their application from the Patent Office when I made the application for the reissue of the Turner patent, and whilst that was pending.

11. Recross-q. Did you know of said Thompson & Batchelder's application at the time of your going to Hartford, and before executing said bond to the said Durand?

A. No, sir; I did not.

12. Recross-q. How were the connections made to the centre lever of the Nichols brake, in contradistinction from the connections as in the model of the Turner brake when you went to Hartford and saw in use the said Nichols brake? 1026

A. I think there was no difference to amount to anything, at least.

13. Recross-q. Soon after becoming owner of the Turner patent, did you apply to the Patent Office for a reissue of said patent?

A. I did; but I cannot say exactly how soon; it was not a great while.

14. Recross-q. Before the time of this application, whenever it was, do you wish to be understood that you knew nothing of the application of Thompson & Batchelder to the Patent Office for an alleged improvement in railroad car brakes?

A. Yes, sir; I wish to be so understood—and for quite a time after the application was made.

15. Recross-q. At what time as near as you can recollect did you make such application for a reissue?

A. I cannot give the date.

(The witness is here presented with a certified copy of his application for a reissue of said Turner patent and is asked)—

16. Recross-q. Whether it correctly represents said application as to date of signing and subject matter?

A. I presume it does. I know no reason why it is not a correct copy.

17. Recross-q. Will you annex the aforesaid application and make it a part of your deposition and mark it Exhibit H?

A. I have no reason to doubt the genuineness of the article. I have no objections to its being attached and marked as called for in the question, but I do not know that I can swear to its truthfulness, as I did not make it or compare it.

18. Recross-q. Did you set up in said reissue the following claim, to
wit: "What is claimed is to so combine the brakes of the two trucks
1027 with the operating windlass or mechanism at either end of a car
by the reciprocating lever *b*, or its equivalent, so as to enable a
brakeman or person by manual power and by turning or operating the
windlass or its mechanical equivalent at either end of the car to bring
or force the brakes of both brakes simultaneously against their respective wheels"?

A. That question being read from Exhibit H, I have no doubt it was my claim then made.

19. Recross-q. And is there also a claim in said application for reissue slightly modified from the one just quoted, signed by Cooper, which is as follows in pencil and appended to said application, or rather prefixed to the same, which reads as follows:

"But what I do claim and desire to secure by letters patent is so to combine the brakes of the two trucks with the operative windlasses or their equivalents at both ends of the car by means of the vibrating lever *b* or its equivalent, as to enable the brakeman by operating either of the windlasses to apply the brakes of both trucks simultaneously, and whether he be at the forward or rear end of the car.

"COOPER."

A. The Cooper signed there is Samuel Cooper, who was at that time examiner in the Patent Office. He wrote that claim and suggested it to me as one that he would allow on that reissue. I think he wrote the whole of it.

20. Recross-q. Was the model or one like it which you say you showed
to Lockwood in 1851 and the one you exhibited at Hartford the same
year as a model of the Turner brake put into the Patent Office as a
model, in your application as assignee of Thompson and Batchelder, for
an alleged improvement in railroad car brakes, and was the following
claim set up in said application, to wit: "But what is claimed by us is
to so combine the brakes of the two trucks with the operating windlasses
or their equivalents at both ends of the car by means of the vibrating
lever A, or its equivalent, or mechanism essentially as specified, as to
enable the brakeman by operating either of the windlasses to simultaneously apply the brakes of both trucks, or bring or force them
1028 against their respective wheels, and whether he be at the forward
or rear end of the car"? and is the lever called *b* in the claim for
the reissue of the Turner patent the same as designated by lever A in
the Batchelder and Thompson patent issued to you as assignee?

A. There was, I think, a model put into the Patent Office representing the same design; whether exactly like it I cannot tell now. The claim, I think, is correctly quoted as set up. The levers are intended to be the same.

21. Recross-q. And is the manner of connecting the rods to the lever the same in both cases?

A. The lever alluded to in the claim I asked for in the reissue of the Turner patent and the lever granted to me in the Batchelder and Thompson or Tanner patent and the rods attached to the levers and the windlasses in both cases were intended to be the same and do the same work.

And being again re-examined by M'r Cozzens, he says, as follows:

5. Redirect q. You have stated in your cross-examination that when you executed the Durand bond you did not know of Batchelder and

Thompson's application. Did you know of their invention when you executed that bond?

A. No, sir; nor for some time after.

6. Redirect q. Was your application for the Turner reissue before or after your visit to Bordentown in 1851, when you saw M'r Lockwood?

A. It was afterwards.

HENRY TANNER.

Subscribed and sworn to before me this 28th day of May, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to June 9th, 1868, at 11 a. m.

1029 In the circuit court of the United States for the northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company.
} In equity.

Testimony taken on the part of complainant, before W. Grier Hibler, United States commissioner and examiner, in the city of Philadelphia, under the rules of the Supreme Court of the United States.

JUNE 10TH, 1868.

Present, M'r S. D. Cozzens, for complainant, and the complainant in person; M'r S. M. Whipple, for respondents.

WILLIAM W. HUBBELL, a witness on the part of the complainant, being duly sworn, deposes and says:

1. Q. What is your name, age, residence, and occupation?

Ans. My name is William Wheeler Hubbell; residence is Philadelphia; occupation is that of a lawyer, and am in my 48th year.

2. Q. Have you been engaged in the management of cases arising upon letters patent for inventions; and, if so, for about how long?

Ans. I have, at times, for about twenty years.

3. Q. Have you made any inventions? If so, please mention some of them.

Ans. I have made a great many inventions in different matters. I have invented spark arresters for locomotive engines in 1841, and 1030 afterwards, about that time, improvements in car wheels; also, shells and fuses used by the United States, breech-loading fire-arms of different kinds, and other inventions.

4. Ques. Do you remember a suit brought in the State of New York, in or about the year 1853, by Henry Tanner vs. The Hudson River R. R. Co., for an infringement of the double-acting car-brake, known as the Tanner brake; and were you one of the counsel engaged in that case?

Ans. I do remember that suit. I was one of the counsel in the case with M'r Gifford and M'r North, who were also of counsel for the R. R. Co. with me.

5. Ques. Did you personally make any investigations in that case relative to the novelty of the invention of the Tanner brake; and, if so, did you come in contact with any person or persons who furnished any information respecting prior brakes; and, if you did, please state who such person or persons were?

Ans. I did make investigations respecting the use of brakes; there were a great many persons talked with and spoken to by myself. I could not pretend to remember them all; but one prominent person I remember was M'r Joseph Talson; M'r Stevens, I think, was also spoken to. I think he had a brake—Francis A. Stevens.

6. Ques. Had this Talson been connected (if you know) with any railroad; if so, with what railroad, and did you see him more than once upon this subject of prior brakes?

Ans. He said that he had been connected with the New Jersey Railroad and Transportation Company. I think he was seen at least twice by me in New York.

7. Ques. Will you state what information was furnished to you by Talson in said suit?

Ans. The information that he had and gave was that he had tried a brake on the New Jersey Railroad and Transportation Company's road running from Jersey City, experimentally, which he called a double-acting brake. My recollection is that he had used cords in making the experiment, and that they broke, and that he tried chains and
1031 they gave way, and that it was not continued in use. He described
it as intended to be the same in principle as the Tanner and that a M'r Stanley had had something to do with suggesting it. That was all the knowledge that he seemed to have about prior brakes, and that was all he communicated or pretended to know about it.

8. Ques. How full and thorough was the investigation and preparation on the part of the railroad company in that case?

Ans. It was as full as they could possibly make it for the time set for trial, and in consultation with M'r Gifford and M'r North, at M'r North's office at New York, and reviewing the whole of the case as it stood, we concluded that we could not stand on the defence, and that if M'r North could get it continued and settle it, he had better do it.

9. Ques. In that case was there any information obtained by you, or to your knowledge by the defendants, relating to brakes prior to the invention of the Tanner brake, which was not investigated?

Ans. The notices of special matter in the case contained the names of persons whom I have not seen. Those notices, I think, were given by M'r North or M'r Gifford, before I was brought into the case. There was no information obtained from them that was reliable for a defence; the Thompson and Batchelder application in the Patent Office dated so far back that it cut us out of most of the special matter. We did investigate all the information that we had amongst us; there was no pretence at that time of any other information than that which we had.

10. Ques. Did Talson, in either of the interviews which you had with him, say anything about a double-acting brake having been used on a car called the Tyler car, belonging to the Camden and Amboy Railroad Company, or upon any other car or cars belonging to said company?

Ans. No; not at all. There was no pretence of any knowledge of any brake on the Camden and Amboy Railroad on any car.

1032 11. Quest. As nearly as you recollect, in about what year or years was it that you saw Talson as you have stated?

Ans. I think it was in 1853, before that Hudson River case was appointed to be heard. It was at the office of the company that I saw him.

12. Ques. Were you after this date, 1853, engaged in any other suit which had been brought upon the Tanner patent; and, if so, about when, and what suit was it, and how were you engaged in it?

Ans. I was engaged on behalf of the Phila., Wilmington, and Baltimore Railroad Company, in the defence of a suit brought against them under the Tanner patent, by M'r Sayles, as assignee, in the circuit court of the United States in and for the eastern district of Pennsylvania. I had charge of the preparation of the case for the company, and attended to it personally in the years 1858, 1859, and 1860, and think it ran into 1861 and 1862.

13. Ques. In the course of this preparation, did you make any investigation into the subject of brakes prior to the invention of the Tanner brake; and, if so, over about how long a period of time did such investigation extend, in what localities were they made, and what brakes were investigated? Please answer fully.

Answer. I made investigations as to brakes prior to the date of the Tanner patent in every direction where there was any information to be obtained; it extended over about two years of time. There were investigations made in Baltimore, Washington, Philadelphia, Bordentown, New Jersey; Boston, New York. There were a great many brakes investigated; there were all that were found on file in the Patent Office; there were Milholland brakes, Leahey brakes, at Baltimore; there were the brakes on the defendants' road; also, as to brakes on the Camden and Amboy Railroad; also, as to the experiments of Thompson and Batchelder; also, as to a brake on the New Haven, Hartford, and Springfield road, called the Nichols brake; also, as to brakes made by Eaton, Gilbert & Co. Those were the principal investigations, I believe.

1033 14. Ques. You say that you investigated in this Philadelphia suit the subject of brakes on the Camden & Amboy Railroad. Will you state what turned your attention to that road, and at what place or places on the road you made your investigations?

Ans. I had made experiments with a spark-catcher for locomotives on that road in 1842, and was intimate with Isaac Dripps, the principal machinist or engineer at the company's works at Bordentown, and knew M'r Robert L. Stevens and Edwin Stevens, and I wanted to know what information was to be had there about double-acting brakes. I knew M'r Dripps to be a very smart, observing man, and that he could tell me all that was to be found out there; that is, on the Camden and Amboy R. R. I made the investigations at Bordentown, and also from M'r Dripps, himself, at Philadelphia.

15. Ques. Have you any memoranda relating to these investigations so made by you in respect of the Camden and Amboy R. R.; and, if yea, will you produce the same?

Ans. I have memoranda in my private book of record of the case which I have here, but it is my business-book, and I cannot part with it. I can give you the memoranda from the book, as follows: "1859. November 15—Professional services, examinations Baldwins & Norris' letter to Dripps, &c."; that part of it, "letter to Dripps, &c.," was a letter to M'r Dripps concerning the use of brakes on the Camden and Amboy Railroad, inquiring as to their use. There is also another entry in the following January, the 18th, as follows: "Letters to E., G. & Co., Dripps' services, etc., etc."; that means that there was a letter written by me to Eaton, Gilbert & Co., inquiring as to their manufacture of brakes, and also a letter to M'r Dripps inquiring as to double-acting brakes on eight-wheeled cars on the Camden and Amboy Railroad. M'r Dripps was then master machinist of the Pittsburg, Fort Wayne, and Chicago Railroad Company, at Fort Wayne, Indiana. These memoranda were made in my book in relation to the account I kept of charges and expenses in the case.

1034 16. Ques. Will you state by whom and in whose handwriting these memoranda were made, and when they were made, and in whose possession the book containing them has been since they were made?

Ans. They were made by me; they are my handwriting at the times they are respectively stated; the book has been in my possession since; these memoranda are headed Sayles vs. Philad'a, Wilmington & Balt. R. R. Co., 1858; that is the general heading to the memoranda, which are very numerous.

17. Ques. You refer in your fifteenth answer to two letters to Dripps—one mentioned in the entry dated November 15, 1859, and the other in the entry dated Janu. 18, 1860. Will you please state how two letters came to be written to Dripps.

Ans. My recollection is that the first letter was directed to him at Bordentown, N. J., under the supposition that he was there, as that was where I had known him to be since my first acquaintance with him in 1842, and I was not aware that he had left there; I never got an answer to that letter; I afterwards found that he had left there, and got his address at Fort Wayne, Indiana, and wrote to him there; I learned from the foreman of the car shop, M'r Lockwood, that he had gone to the Pittsburgh, Fort Wayne & Chicago Railroad, and also from the clerk at the company's office, at Bordentown, at which latter place I got his address in writing.

18. Ques. Which of these two letters, if either, is the one which you addressed to him at Fort Wayne?

Ans. The one in the memorandum of January 18th, 1860, mentioned.

19. Ques. Have you the original or a copy of this letter, and did you ever keep any copy of it?

Ans. I think I did not keep a copy of it; the original was sent to M'r Dripps; I have not seen it since; but I have his reply to it.

20. Ques. Will you please produce the reply and annex it to this deposition?

Ans. This is it, dated January 31st, 1860; I do annex it to my deposition.

1035 (See reply annexed, marked "Complainant's Exhibit, Dripps, new proofs.")

21. Ques. After receiving this reply from Dripps, what, if anything, did you do in relation to it?

Ans. I went to see what information I could get. I went to Bordentown, to the shops, which were below Bordentown, to see the foreman of the car shop, M'r Lockwood. I had been there before, and asked him about the double-acting brakes. He could not tell me the time when they were first used, but from the description of the brake having horizontal levers swinging free from the body of the car, I found it was the Hodge brake that was first used, and afterwards the nearest information I could get of the date from M'r Lockwood was about 1851. I was not satisfied about it until I had seen M'r Dripps, and I afterwards saw him in Philadelphia, and I learned all the facts about the use of the double brake on the Camden and Amboy railroad. M'r Dripps himself informed me that there was no double-acting brake used before 1851 and 1852. The information that I obtained was that the Hodge brake was the first double-acting brake used on the Camden and Amboy Railroad, and was used in 1851. There was no double-acting brake of any kind used before that time upon the Camden and Amboy Railroad, and that they had seen the centre-lever brake, or Tanner brake, as it is called, at Wilmington, on the Philadelphia, Wilmington and Baltimore road, which I represented, and they tried that on the Camden and Amboy road in 1852. I told him that was of no use to me in our case, as the Hodge patent was dated before that time, and the Tanner brake we had ourselves used in 1851; it was made by Eaton, Gilbert & Co., on a car built by them for the Phila., Wilmington and Balt. R. R. Co. So I did not take any testimony in the case, relating to any use on the Camden and Amboy Railroad.

(So much of the answer objected to as relates to what Dripps told the witness.)

1036 22. Ques. You have referred to your seeing Lockwood before you received the reply from Dripps, and have stated the information you received from him, Lockwood; did you see him again after you received Dripps' reply?

Ans. Yes; my recollection is that I did.

23. Ques. About how long, to the best recollection, after you received Dripps' reply, did you see Lockwood, and where did you see him?

Ans. It was down at the Bordentown shop, in the course of the next month, as near as I can recollect.

24. Ques. What information on the subject of double brakes did you obtain from Lockwood this second time?

Ans. That the description of the first double brake used on the Camden and Amboy road accorded with the Hodge brake, and the time was about 1851 when it was first used.

25. Ques. At either of these two interviews with Lockwood did you tell him what was the object of your inquiry of him about double brakes; if so, what did you tell him?

Ans. I told him that I wanted to see M'r Dripps to get information about the use of the double brakes on the road that I was defending, the Philad'a, Wilmington and Balt. R. R. Co., in a suit brought against them on the Tanner patent, and asked him what he could tell me about them. I had little or no acquaintance with M'r Lockwood, but M'r Dripps I knew very well, and for a long time.

26. Ques. Did Lockwood talk with you freely on the subject, and did he appear willing to communicate to you all he knew about it?

Ans. He did not talk much; he answered my inquiry as to how the brake was constructed, but he did not seem to me to know really much about it, particularly as to the time it was first used; and I did not rely much upon him, but sought to get the information from M'r Dripps. He did appear willing to communicate all he knew.

27. Ques. Did he say anything to you in either of your interviews with him about a double brake having been used on a car called the Tyler car, belonging to the Camden and Amboy Railroad, or upon
1037 any crate car, flat car, or any other car of said company in 1843, and after that time, and prior to the time when the Hodge brake, as he described it to you, was used?

Ans. No, he did not. Neither he nor any other person ever pretended that I ever heard of before this present time, that any double-acting brake was used on that road in 1843, or at any other time prior to 1851. If there had been any such pretension as that, I certainly should have heard it, in those suits in which I was engaged, and very likely in the great eight-wheeled car suit in which I prepared the defence.

28. Ques. As the result of your inquiries of Lockwood and your investigations, on the Camden and Amboy Railroad, respecting the history and use of double-acting brakes on said road, did you or not learn anything which you thought it advantageous or material to put in evidence

in the suit, Sayles vs. Philad'a, Wilmington & Balt. R. R. Co. in which you were engaged?

Ans. I did not, for the reasons that the Hodge brake put in use on the Camden and Amboy road in 1851 was antedated by the Hodge patent, and the centre-lever or Tanner brake, put in use on the road in or about 1852, was a copy of the brake that we used in 1851, on our own road, the Philad'a, Wilmington & Balt. R. R. Co., which was in evidence and prior to that time.

29. Ques. At the time when you made this investigation relative to the Camden and Amboy Railroad, what were your facilities for obtaining information from railroad companies about the use on their roads of inventions and mechanical devices?

Ans. I had acquired a pretty extensive acquaintance with the principal men acquainted with such matters on the railroad, growing out of the extensive preparations for the defence in the eight-wheeled car suit, brought by Ross Winans against the railroad companies, which lasted through several years previous to this latter brake-suit of 1858. I knew pretty well who to go to, to get information from, probably better than any other person at that time. The railroad companies always 1038 gave me every facility that I wanted for obtaining information. My business with them was always conducted fairly. They did not want to conceal anything, nor to deprive anybody of their just rights, and I had no difficulties in the matter.

30. Ques. You have spoken of investigating the Millholland brake; through whose instrumentality was that brake first brought up as a defence to the Tanner patent?

Ans. I believe I first discovered the history of it and brought it up in the defence.

Cross-examined by M'r Whipple:

1. Cross-ques. Do you mean by "copy" in your answer to the 28th direct interrogatory that it was a centre-lever brake?

Ans. I mean that it was a centre-lever brake; the idea of which was taken from similar brakes in use on the Philad., Wilmington and Baltimore R. R.

2. Cross-q. Wherein, if at all, did the two brakes differ?

Ans. I did not see the brake; the centre-lever brake distinguished it from the Hodge brake; they were alike in the distinguishing feature; whether they differed in any minor details I did not inquire, as that was not material and the time was too late to be of any use to me in the case.

3. Cross-q. What particular significance do you attach to the word "copy" as used in your answer to the 28th interrogatory?

Ans. I mean the use of a centre-lever attached to the body of the car copied from a similar fixture on the Wilmington road as the means of communicating the power between the trucks by means of a windlass attached to either end of the car, one windlass being at each end.

4. Cross-q. In your investigations, did you find that the centre-lever brake had been in use on any other road prior to its use on the Philad'a, Wilmington and Balt. road?

1039 Ans. Yes. It had been in use, I think, on the Fitchburg road, and Eaton, Gilbert & Co. had been sending it out with their cars, I think as early as 1850. The New Haven, Hartford and Springfield road had it in use, I think, before that. I was about to take the testimony as to its use, and it was made the subject of a stipulation; whether the stipulation was correct or not I did not know, but I was satisfied to take it. It was to the effect that it was in use in March or April, 1847. I have since been informed that this date was not correct; that it was in 1848. I know nothing of the fact, under the circumstances, as to when it was actually put in use.

5. Cross-ques. By who were you so informed?

Ans. I was informed by M'r Sayles, who made the stipulation with me, that he had since discovered that he had made a mistake.

6. Cross-ques. What was the result of this Philadelphia suit as it is called on brakes, in which Thomas Sayles is complainant, and the Philad'a and Balt. R. R. Co. is the respondent?

Ans. I do not know, of my own knowledge, how that was arranged about that suit; I was not consulted about its settlement. M'r Isaac Hazlehurst was the senior solicitor of the company; I understand that he had something to do with it. The record of the case in this court I suppose would show how it was determined. The case never came to trial, and it must have been either settled or withdrawn, but I do not know upon what terms.

7. Cross-ques. Was it or not dismissed by complainant paying costs?

Ans. I don't think it was dismissed by any judicial decision; I understand he withdrew it on leave and paid the costs, but upon what terms, or whether upon any terms, I don't know. I had nothing to do with the termination of the suit; I know that it was terminated without a hearing in court on the merits, but for what reason I don't know—I was not present; I suppose the record would show; I never examined it.

8. Cross-q. Were you, as counsel for defendant, prepared to try said cause, had the complainant desired a trial?

1040 Ans. I was retained and paid to argue the cause if it came to trial; but it did not come to trial.

9. Cross-ques. Upon what special matter did you, as counsel, most rely in the preparation of this case?

Ans. I had made up my mind that the strongest reliance I had was that stipulation made by M'r Sayles in the case with me, coupled with my evidence, to show that Thompson & Batchelder were experimenting at the time that Nichol's brake, as an independent invention, was stipulated to have gone into use. I suppose at the time that that stipulation was correct; I did not desire to take any improper advantage of M'r Sayles; he proposed to make it, to save the trouble and expense of taking evidence, and I accepted his proposition. I thought that an admitted fact like that in the case was a better reliance than any disputed evidence, and hence I relied most upon it.

10. Cross-ques. Did you consider the evidence as taken in that case sufficient to warrant you, as counsel for defendant, to go to trial?

Ans. Yes, I was willing to go to trial; it was the best case I could make up, so I thought that I would make the most of it if it came to trial,

11. Cross ques. Are you at the present time counsel for the Philad'a, Wilmington & Balt. R. R. Co.?

Answer. I never was the standing counsel of that company, but they occasionally employ me in patent cases and references of patent matters, and in business at Washington; but I have no case at present of theirs on hand.

12. Cross-ques. Did you consider from the evidence that Batchelder & Thompson were experimenting on brakes in the year 1847?

Ans. Yes; I thought I had established that pretty clearly.

13. Cross-ques. Were they in 1848?

Ans. I think, I thought at that time, that their experiments did run into 1848.

14. Cross-ques. Did Godfrey King testify in the Philadelphia case? If so, what did he testify?

1041 Ans. Yes, he did testify that they were experimenting on the lower road in 1848; it strikes me that there was a great deal of testimony taken on that subject, particularly on the complainant's side, and that I tried to establish a state of experiments, and he tried to establish a perfected brake, and that I also, on the defendant's side, tried to establish a state of experiment.

15. Cross-ques. Did Godfrey King testify that Batchelder and Thompson put their brake on the lower road with large push-rods?

Ans. Yes, he did say that.

16. Cross-ques. In what year did he say this was done?

Ans. He said it was done in 1848.

17. Cross-ques. Who was President of the Philadelphia, Wilmington and Balt. R. R. Co. when you prepared defendant's case for trial?

Ans. S. M. Felton was president.

18. Cross-ques. Was he ever connected with the Fitchburg road?

Ans. I think it appeared in the testimony taken in Boston that he was the superintendent of the Fitchburg road when Batchelder & Thompson tried their experiment on brakes.

19. Cross-ques. Did M'r Felton ever state to you that they put the brake on the Fitchburg road with push-rods, as alluded to in Godfrey King's testimony?

Ans. I don't recollect that M'r Felton ever stated that to me, as to the details of the brake; he told me that he considered it a failure; it was taken off, I believe. I will state here, as a matter of justice in this matter, that it appeared that the brake was made to operate both by hand from either end of the car, and also by a bumper, for the cars to operate against by the retardation of their motion, causing them to bear against each other, and the question was whether or not the hand arrangement was successful, even though the bumper arangement might be discarded, or whether the whole thing taken together was successful or not successful, and I prepared the case on that compound question.

M'r Felton was clear in his expression of opinion to me; taking
1042 it altogether that it was not satisfactory to him; he never expressed any opinion to me as to separating the hand arrangement from the bumper arrangement, and I do not know that that view of the matter had ever been brought before him. It was clearly established, I believe, that the bumper arrangement never did go into use.

20. Cross-ques. What of the hand arrangement?

Ans. The hand arrangement certainly did involve the principle contained in the Tanner patent, there could be no question of that, and therefore I had to put the case upon the test of experiment or non-experiment, as related to other circumstances involving the same principles.

21. Cross-ques. Did the Millholland brake involve the principle in the Batchelder & Thompson brake?

Ans. It involved the general idea of operating on both trucks from either end of the car, but it had a drum instead of the centre lever, and it was not repeated, but its use was discontinued, and there in it I had to contend with a condition of experiment, not repeated, not put in general use, not so practical as the rod of the lever, in the Thompson and Batchelder or Tanner patent, and the drum was not capable of multiplying the power, while the lever was; this capacity to multiply the power is an important feature in the application of the principle, and therefore, as between them, I had all these difficulties to contend with, and that is why I mainly relied upon that stipulation in the case.

22. Cross-ques. Do you wish to have it understood that the Millholland brake is not capable of being made to multiply power, both between the trucks and in the trucks?

Ans. The Millholland brake, as made, had the drum of uniform diameter throughout its length, and therefore that could not multiply power between the trucks; but by making the drum smaller in diameter at that portion from which it communicated the power to the trucks than at that portion from which it received the power from the windlasses, it could be made to multiply power between the trucks. I think it
1043 had the ordinary levers or fixtures between the trucks themselves
similar to the single-acting brakes, which, of course, multiply the power within the trucks. The general intent and object of the Millholland brake, so far as related to operating on both trucks from either end of the car, was certainly the same as in the Tanner brake; but the means employed to carry it into effect were very different, and that raised the question of experiment and abandonment in regard to it, as it was not continued in use.

Re-examined by M'r Cozzens:

31. Ques. In the Philadelphia suit, was it deemed advantageous by the defence to make any use of the information which you had previously obtained from Talson in the Hudson River suit?

Ans. No, that was considered of no account whatever. There was no testimony taken about it.

32. Question. How near to the time when the Dripps reply bears date, did you receive it, and in whose possession has it been since?

Ans. I received in the usual course of the mail a few days after its date. It has been in my possession ever since in the file of the case kept by me.

33. Ques. About when was the interview which you had with Lockwood prior to the time when you received the reply from Dripps?

Ans. It was in December, 1859, or January, 1860.

W'M W. HUBBELL.

Sworn to and subscribed before me this tenth day of June, A. D. 1868.

W'M GRIER HIBLER,
U. S. Commissioner.

1044 COMPLAINANT'S EXHIBIT.—DRIPPS' NEW PROOFS.

PITTSBURGH, FORT WAYNE AND CHICAGO RAILROAD COMPANY,
MASTER MACHINIST'S OFFICE,
Fort Wayne, Jan. 31st, 1860.

W'M W. HUBBELL, Esq., *Philadelphia:*

D'R SIR: In reply to yours of the 18th, in regard to the double-acting brake, is that the first I knew of them was when used on the Camden and Amboy R. R. Co.

M'r Lockwood, of Bordentown, N. J., foreman of car shops, C. & A. R. R. Co., will give you all of the required information. Hoping it will prove satisfactory, I remain,

Yours, respectfully,

ISAAC DRIPPS,
Per W. A. DRIPPS.

1045 CHICAGO, *October 12th*, 1868.

Present, complainant in person, and M'r Blodgett, defendant's counsel.

CHARLES H. FRISBIE, being first duly cautioned and sworn, deposeth and saith:

Int. 1. What is your name, age, residence, and occupation?

A. My name is Charles H. Frisbie; my age is 46 years; I reside in Rockford, Ill.; my occupation is locomotive engineer.

Int. 2. Were you ever in the employ of the New Jersey Railroad and Transportation Co.? If yea, at what time and in what capacity?

A. I was in the employ of the New Jersey R. R. & Trans. Co. between the years of 1846 and 1849. I was employed about three years, but cannot give the precise dates. I was employed as fireman.

Int. 3. On what trains were you employed as fireman?

A. On the New York and Philadelphia train; the New York and New Brunswick. I was about a year on the New York and Rahway train, and about a year on the New York and Philadelphia train. I was on other short trains besides these.

Int. 4. While you were so employed on the New Jersey Railroad, do you know what kind of brakes were used on the passenger and baggage or crate cars? If yea, please state whether they were single-acting brakes or double-acting brakes.

A. They were what were called a single-acting brake; they broke from one pair of trucks.

Int. 5. Please explain what you mean by one pair of trucks.

A. Well, I mean one truck of four wheels; some cars have eight wheels on a car and some have twelve wheels.

Int. 6. While you were so employed on said New Jersey Railroad
could there have been any double-acting brakes, operating the
1046 brakes on both trucks from a windlass at either end of the car,
used for any length of time, on said railroad and you not have
known it?

A. I think not.

Int. 7. During the time while you were employed on said New Jersey Railroad, were there any cars belonging to the Camden and Amboy Railroad Co. in the trains on which you were fireman?

A. There was. The Philadelphia trains were, most of them, Camden and Amboy cars—I do not know but all of them.

Int. 8. Did you, while in the employ of said New Jersey R. R. Co., know of a car called the John Tyler car?

A. There was such a car there; yes, sir.

Int. 9. Did you ever see that car? If yea, when, and about how often, as near as you can remember?

A. I have seen the car. I think I saw it at two different times. Once was when Henry Clay went over the road, and once when President Adams—I think it was John Adams—died and was taken to New York. I have frequently seen the car in the Philadelphia trains.

Int. 10. You say you have frequently seen it in the Philadelphia trains; who was fireman on those Philadelphia trains you speak of?

A. I was one; a man by the name of Cha's M. Cleary, now dead; William Pierson, and a boy by the name of Weare. They called him Bub Weare. I do not know what his name was.

Int. 11. About how often, as near as you can recollect, did you see the Tyler car in the Philadelphia trains, and in what year or years was it?

A. I saw the train nearly every day, but how often I saw this particular car I could not say. Perhaps twice a week and perhaps oftener. I saw it the most in 1849, or the last year I was there, as I was on this train.

Int. 12. Do you know the difference between what is known as a double-acting brake and the single-acting brake? If yea, please state the difference.

A. Yes, sir; I think I do. I have used them long enough; I
1047 ought to. All the difference there is, is that a single brake brakes
from one set of four wheels, and the double-acting brakes from the eight wheels. I mean that the single brake holds four wheels and a double brake holds eight wheels from the same purchase or windlass.

Int. 13. Do you know what kind of a brake the Tyler car had on while you knew it, during the time you were on the New Jersey road? If so, please state it.

A. I do not know of any except a single brake while I knew it.

Int. 14. When and where did you first see a double-acting car-brake on a car?

A. The first I ever saw was on a car in Detroit, Mich. This was some 3 or 4 years after I left the New Jersey R. R.

Int. 15. Was the brake on the Tyler car different from the brakes on the other cars you saw, belonging to the Camden & Amboy Company?

(Question objected to. Question withdrawn.)

What kind of brakes were on the other cars belonging to the Camden & Amboy Co. that were run in the trains with the said Tyler car?

A. I never saw any except the single-acting brake.

Int. 16. Could there have been any double-acting brakes used on the Tyler car or other cars belonging to the Camden and Amboy road that run into Jersey City during the time you were running on the Philadelphia trains, for any length of time, and you not have known it or seen it?

A. I think not.

Int. 17. Were you in the habit of noticing particularly, during that time, any new improvements that were being put on or used on the cars?

A. No further than the Philadelphia coaches were the nicest coaches. They were differently constructed. I do not know as I did then notice any particularly new improvements. I have generally noticed new im-
provements. The reason I noticed these cars were, first, they were
1048 all or nearly all lettered, and the seats were all numbered in the
inside of the car, and they had a centre door in the centre of the coach.

Int. 18. Please describe the Tyler car as near as you can.

A. The Tyler car was intended to be at this time about the same as a directors' car now, a little nicer car and nicer-running car than the others. I do not recollect that I ever was inside of the car. I think there was a saloon or privy on the platform.

Int. 19. After you left the New Jersey road where and in what capacity have you been employed?

A. I have been employed in the capacity of engineer, as locomotive engineer and as steamboat. I have worked for the Mich. Central R. R. Co. some 16 or 17 years. I have worked for the Burlington and Quincey Company about two years, the Chicago, Pittsburg and Ft Wayne about one year, the Chicago and Northwestern going on three years, and am now in their employ. This is as near as I recollect.

Int. 20. Please think the matter over, and state how many years it is since you left the New Jersey Transportation Company.

A. Well, sir, I do not know as I can state the exact time without referring to my books.

Int. 21. Are you positive as to the number of years you were on the Mich. Central road?

A. I am not.

Int. 22. How positive are you that you left the New Jersey road some time in the year 1849?

A. I am not positive what year I left there. I was there when Timothy L. Smith was sup't. I am not positive of the year I went there or the year I left. As near as I can figure it in my head I left there some twenty years ago. I was there the year of the famine in Ireland, and the year Henry Clay and John Adams went over the road.

Int. 23. You say you were on the Mich. Central R. R. some 16
1049 or 17 years, the Burlington and Quincey about two years, the Pittsburg and Fort Wayne about one year, and the Northwestern going on three years, which would make about 23 years; please explain anything you wish to in regard to this.

(Question objected to by H. W. Blodgett.)

A. The explanation I wish to make is simply that I have probably made some mistake in the time I worked for the Mich. Central R. R.; the other companies is more recently, and I can keep it in my head better.

Cross-examined by H. W. Blodgett:

1. Cross-int. At whose instance did you come here as a witness?

A. This gentleman (pointing to M'r Sayles).

2. Cross-int. When did he request you to come here?

A. This afternoon, as I saw him this forenoon between 11 or 12 o'clock a. m.

3. Cross-int. Where did you meet him?

A. At 82 S. Green street, Chicago, Illinois.

4. Cross-int. How did you happen to be there?

A. I came from Clinton, Iowa, last night, and was out all night, and this is my boarding place.

5. Cross-int. Did M'r Sayles call upon you there?

A. Yes, sir.

6. Cross-int. What did he tell you he wanted of you?

A. He told me he wanted I should come down and state what I knew about the brakes that were used on the Camden and Amboy cars.

7. Cross-int. Who did he tell you had referred him to you?

A. A man by the name of Hutton and a man by the name of Duncan.

8. Cross-int. Had you, as fireman on the New Jersey Road, anything to do with the peculiar form or kind of brakes on the cars?

A. I had nothing to do with the brakes on the cars.

1050 9. Cross-int. You say you know the Tyler car well; how many wheels were there under her.

A. She was what is called a twelve-wheel car.

10. Cross-int. What kind of springs had she?

A. A spring similar to half of a buggy spring over each wheel.

11. Cross-int. Was that all the springs she had?

A. The other coaches had different springs; I do not recollect any other on this.

12. Cross-int. Were there any other 12-wheeled cars on the Camden and Amboy road except the John Tyler car?

A. I do not recollect of any.

13. Cross-int. Did you know M'r Lockwood, the master car-builder, of the Camden and Amboy road?

A. No, sir; I did not.

14. Cross-int. Would not the master car-builder of the Camden and Amboy road be apt to know the kind of brakes used on that car better than yourself?

A. I think he would—yes, sir; as he made that his business.

15. Cross-int. Did you go directly from the New Jersey road to the Mich. Central road?

A. I started from New York City and went to Cayuga County, New York; I staid there, perhaps, two weeks, and then went to work for the Mich. Central R. R.

16. Cross-int. You say you did not see any double-acting brake until you had been on the Mich. Central road some three or four years. What kind of a double-acting brake was that?

A. I do not know as I could explain every part of it, although I know very well what it was; there was a lever in the centre of the car, underneath; when you turned the brake wheel on the end of the car it acted on eight of the wheels.

17. Cross-int. Was this the first time you had ever heard of a double-acting brake?

A. Yes, sir; this was the first time I ever knew anything about a double-acting brake.

1051 18. Cross-int. How far, and between what points, did you run as fireman on the New York and Philadelphia train?

A I ran from Jersey City to New Brunswick. I think 30 to 31 miles. I do not know the exact distance.

19. Cross-int. You say Henry Clay passed over the road in the Tyler car; was that before or after he ran for President, or was it the same year?

A. I am not positive that Henry Clay rode in that car, but I meant to say that car was in the train. I should think it was before he ran for President, but I am not positive whether it was before or after.

20. Cross-int. Do you run a freight or passenger train now?

A. Either one. I run both, sometimes one and sometimes the other.

21. Cross-int. What kind of brakes do they use on the passenger cars of the Northwestern road now?

A. I think that the majority of them are what are called the double-lever brakes.

22. Cross-int. Why do they call them double lever brakes?

A. Because they are levered at both ends of the coach.

23. Cross-int. Are there any levers under the coach?

A. That is what I mean; they are under the coach between the trucks.

24. Cross-int. You never heard of double brakes of any kind while on the New Jersey road, did you?

A. I never did. No, sir.

(S'g'd) C. H. FRISBIE.

Subscribed and sworn to before me this 12th day of Oct., 1868.

P. A. HOYNE,
Examinur.

1052 CHICAGO, *October* 14*th*, 1868.

Present, complainant and M'r West, his counsel, and M'r Blodgett, def't's counsel.

PATRICK H. FLANNEGAN, the witness introduced, cautioned and sworn, deposeth and saith:

Q. What is your name, age, residence, and occupation?

A. My name is Patrick H. Flannegan. 36 or 37 years of age. I reside in the city of Chicago. Am a railroad engineer. I have been in the employ of the N. J. R. R. and Transportation Co. I should think it was about 23 to 24 years ago. I was fireman on a locomotive engine. I was with Abraham Condict, engineer. I worked for the company three years and nine months. During this time M'r Talson was sup't of car repairs part of the time, and M'r Baker came in as sup't after Talson left. I think Baker came a year before I left. While I was in the employ of the said company I saw a car called the John Tyler on the road, which belonged to the Camden and Amboy Co. I remember that this car had a privy on one of the platforms, and had six wheels on each truck. It had a brake on each end, the same as any other cars. I have operated the brakes on the said car—this I have done for merriment. I would on being asked by some of the switchmen, pull the pin to let this car loose from the other part of the train. I would jump on the car and operate the brakes. I would leave the car door open and operate one end, then run through the car and operate the brake on the other end. I saw this John Tyler car sometimes once a week, sometimes twice a week, sometimes once a day, and sometimes not at all for a week. I frequently noticed this car, the wheels, trucks, and brakes; when I set the brakes on one end of the car it did not operate on both trucks, but only on one. I saw this Tyler car after M'r Baker came onto the road and from time to time during the whole period I was at work for the company, as I have mentioned, 3 years and 9 months. The brakes of the two trucks were not connected
1053 together in any manner. I did not lose a day in the 3 years and 9 months I worked for the company. After this time I left the road for a year and went to Wisconsin, and then went back on that road again. I got onto the John Tyler car perhaps as often as twice a week to operate the brakes, sometimes oftener and sometimes not so often. I was employed on a freight and passenger train. This Tyler car did not run on our train, and the reason I would jump onto the car was that our engine would be standing and waiting for this Philadelphia train to pass which had the Tyler car on, and I would jump on and pull the pin and work the brakes. I am now in the employ of the Chicago and Northwestern Company. I have been in their employ 4 years, I think, the ninth day of last July. M'r Sayles first talked to me about coming here to give my evidence; it was yesterday morning about eleven o'clock. I had a talk with M'r Blodgett after this. I got a telegraph dispatch yesterday about eleven o'clock a. m. to come to M'r Blodgett's office—the dispatch was from M'r Tilton, the master mechanic of the N. W. road, Galena div., and to come right away. I asked the gentleman what it was for; he said he did not know. This was the yard-master that gave it to me, and he said I must go right down town. I said to him, I do not know what this can be for; that I had not done anything that they wanted me there for; and as I was looking at it at the corner of Canal st., this man, M'r Sayles, came along and asked me if my name was M'r Flannegan. I told him yes, sir. He asked me if I was from Jersey City; and I told him yes, sir. He said he was acquainted with some of my friends in Jersey City; that he had seen them. He asked

me if I was acquainted with M'r Hutton. I said yes, sir. He asked me if I was acquainted with M'r McFarland. I told him I was. He asked me several other questions, but I told him I would like to be excused, as I had a telegraph from the company's lawyer, and must go down to his office, but if he would come around to-morrow morning I would like to have some further conversation with him. I told
1054 him I would go up to my house and change my clothes and go down to M'r Blodgett's office. M'r Sayles said he would go with me down there. So I got on some clean clothes and got into a street-car. And he asked me if I knew anything about this Tyler car. I told him I did. I told him I pulled the pin several times to cut it loose. This was all that passed between us. M'r Sayles and myself went to M'r Blodgett's office.

Question. Now, I want you to state the conversation you had with M'r Blodgett in his office.

(Objected to by M'r Blodgett.)

A. When I went into M'r Blodgett's office he was not in, and M'r Sayles and me waited until he did come in. M'r Blodgett came in and M'r Sayles introduced me to him. I do not remember what passed more than an introduction. M'r Sayles and M'r Blodgett had spoke to one another; the rest of the conversation I did not pay any attention to.

What did M'r Blodgett say to you about your testifying in this case?

(Objected to by M'r Blodgett.)

The witness says that he does not wish to make any trouble, and refuses to answer the question.

Q. Did M'r Sayles request or wish you to come here yesterday to testify?

A. Yes, sir.

Q. Why did you not come?

A. M'r Blodgett told me that unless I was sent for I need not come until to-day.

Q. Does the three years and nine months include any time after you went back from Wisconsin?

A. I worked three years and nine months before I went to Wisconsin. I stopped in Wisconsin for one year and then went back and worked for the company six or seven years more.

1055 Cross-examined by M'r Blodgett:

How old did you say you are?

36 or 37, I do not know which.

Had you had any conversation with any one about the Tyler car before M'r Sayles spoke to you about it?

No, sir, I had not. I had not thought about it; the kind of brakes had never been talked about up to the time M'r Sayles spoke to me about them. I have looked under the car to see how its brakes were made. I looked the car all over. They were single brakes. I saw some double ones on the road during the time I mentioned, three years and nine months; they were on a flat freight-car; they were put on under the charge of M'r Baker. Talson had nothing to do with putting on these brakes to my recollection. The double brake was put on after the time Talson left and the time I came to Wisconsin. I did not examine this brake, more than I made a little fun of the brakeman that was using it.

I mean by a single brake, a brake at each truck. The brake-wheel on the Tyler car had no ratchet. When I put the brake on I had to hold it with my hand, and when I let go of one end it would let go what

it held until I could go to the other end. I am positive they were single brakes, because I could screw up one end and the other would be entirely at liberty. I know it was at liberty, because anybody could have got up and tried it. I know it was at liberty, for I tried it and found it at liberty. I could not be at both ends of the car at once. When I would screw up one end and run to the other I would find it at liberty; there was no pawl and ratchet at either end of the car. I do not remember whether the Tyler car was on the road when I came back from Wisconsin. I paid no attention to it. I do not say that the Tyler car ran regular every day. I only say that it ran once or twice a week. I had no interest in the car. It was a handsome car, and a privy on one end of it, which made me look to it more than anything else. The Tyler car was the name it went by. It was in everybody's mouth.
1056 I do not remember whether the name was painted up anywhere on it. This Tyler car could not have had double brakes on it and I not have known it, even if they were different from what I have seen since. I first noticed the double-acting brakes after I went back from the West. I did not take much notice of them. I never frequented the cars much. I continued as fireman after I went back on the road again. I did not tell you yesterday that there was a flat car on which Talson put a double brake, nor that Talson tried some experiments with; I said it was Mr. Baker; if I did, you misunderstood me. I cannot describe any double brake now in use. I have not paid much attention to it. I do not know what brakes the Northwestern use on their cars. I was four years from last July in the employ of the N. W. road and since then. Previous to this I had been on the C. and R. I., now called the C., R. I. and P. I was on the New Jersey Central after I left the New Jersey R. R. & Trans. Co. I had no knowledge what kind of brakes they had in use on the Rock Island pass. cars; I had no intercourse with them. My business was in the round-house, switching. The passenger-cars were not standing round the yard where I was switching; they never came there.

The difference between a single brake and a double is that one is a single brake and the other is a double brake. A single brake is on each end, or has a windlass on each end, of the car; double brakes are connected.

I know there was no rods on the Tyler car to make connections. I could see it passing by that there were no rods; I never thought of looking for any. I never thought of the matter whether the Tyler car had single brakes or double brakes since I left Jersey City, until M'r Sayles spoke to me about it yesterday. I heard the brakes talked about while I was in Jersey City by M'r Condict, the engineer I was with, whether single or double, on the Tyler car. I was with M'r Condict before I went to Wisconsin. I do not know anything about the Tyler car after I went back to Wisconsin; I paid no attention to it. I was
1057 about 11 or 12 years of age when I went to work for the New Jersey road. I was very young. I then worked for them three years and nine months, when I went to Wisconsin. I do not remember what M'r Condict said about brakes on the Tyler car.

Redirect:

You have stated on your cross-examination that you first noticed a double-acting brake after you went back from the West. State, if you can, how long it was after you went back from the West before you first saw the double-acting brake?

I have not got any memory of it.

You are sure, are you, that you did not see any double-acting brakes until after you went back from the West?

Yes, sir.

Was the first that you saw the one put by Baker on that flat car you mentioned?

Yes, sir.

How many trucks does the single brake act upon from one windlass?

One, sir.

How many trucks does a double-acting brake act upon from one windlass?

Two.

What is your business on the Northwestern road?

I am running a switch engine at the south branch; there are no passenger-cars of the N. W. Company come there; only occasionally when they go to the pier, or pass through there; they do not stop there; they stop there a minute or two until a switch engine comes to take them away.

Did M'r Blodgett talk to you yesterday about the Tyler car?

(Objected to by M'r Blodgett.)

Yes, sir.

1058 Did he have any other business with you except that?

No, sir.

Recross:

You say in your cross-examination that the flat car put on the New Jersey road by Baker, with a double brake, was put on before you went to Wisconsin; is that right?

Right, sir; a couple of months before I left.

Redirect resumed:

May you not be mistaken as to the time when you first saw the double-acting brake on the flat car?

I have no record or minutes of it; but I do not think I am very far out of the way.

Might it not have been after you got back from Wisconsin that you first saw it?

I cannot answer that question correct.

(Signed) P. H. FLANAGAN.

Subscribed and sworn before me 14th day of October, 1868.

P. A. HOYNE,
Examiner.

PHILADELPHIA, *Oct.* 17, 1868.

Present, S. D. Cozzens, counsel for complainant, and the complainant in person, and S. M. Whipple, counsel for defendant.

CHARLES YUNDT, a witness on the part of the complainant, being duly sworn, deposes and says:

1. Have you been examined before as a witness in this case?

1059 A. I have.

2. Are you acquainted with W'm Quigley, who is an engineer on the Camden and Amboy R. R.?

A. Yes, sir.

3. How long have you known him?

A. From the best of my recollection I have known him since 1843 or 1844, up to the present time.

4. In the year 1843, was said Quigley employed on any R. R.; if so, what R. R.?

A. I cannot tell the exact year, but he was on the Camden and Amboy R. R. as brakeman. He was an extra brakeman, not employed by the Co., but by the men that wanted him.

5. You spoke in your former testimony in this case, of running excursion trains on the Camden and Amboy R. R. State whether said Quigley had anything to do on any of said trains; and, if so, what did he have to do?

A. Yes; he was a brakeman on those trains. He had to attend the brakes as an extra hand.

6. You say he was paid by the men when they wanted him. How did they come to want him?

A. Some of them would be sick, or something of that kind.

7. Was he sometimes employed by the men on the road, when they were away from the road, from other causes than sickness?

A. Yes; he took their places.

8. In your former testimony in this case, you spoke of a rod falling down on a car in one of the excursion trains referred to; will you state whether, since your former testimony was given, you have examined any cars on the Camden and Amboy road; and, if so, have you anything to explain in relation to this rod?

(Object to any further cross examination of the witness at this state of the case.)

A. I have examined cars. I found after examining the cars
1060 that it was different from what I stated in New York. I found
it was not the same model brake that they showed me in New
York; one of the bolts come out of the rod of this brake I am speaking of now. It was the forward truck on the car going towards New York. I had to stop and put another bolt in. There was a brake on each truck on each end of the car, and each truck braked by itself.

9. Please describe how that rod was placed in the truck, and if it was connected to any lever please state how and where that lever stood in the truck.

A. The lever did not lay flat; it stood up in the truck somewhat inclined; one rod was connected on the top of this lever; the other end of this rod was connected with the crank. There was another rod on the other end of the lever, went to the forward brake in the same truck.

10. Which one of these two rods was it which fell down?

A. The top one.

11. You say there was a brake on each truck on each end of this car on which the rod fell down, and that each truck was braked by itself. At that time, what were brakes rigged in that way called on the Camden and Amboy Railroad?

A. They were called double brakes.

12. Were these so-called double brakes connected so that both trucks could be braked from one end of the car?

A. I think they did not.

13. What was the first car on the Camden and Amboy road, so far as you know, "that had these double brakes;" that is, brakes on each end of the car, but not connected?

A. The Tyler car was the first that had two brakes on.

14. About what year did you first know of the Tyler car having this kind of double brakes on it?

A. In 1843.

15. After the Tyler car came out in 1843 with this kind of double

brakes on it, were other cars on the Camden and Amboy road fitted with brakes in the same manner?

A. I think not. I think they were all with single brakes.

1061 16. Will you state whether since your former testimony in this case you have thought over the subject of it, and if so, will you please state in what year it was that you first knew of the use on the Camden and Amboy cars, of the double-acting centre lever brake operating on both trucks, from one end of the car, like the model, Exhibit A, shown you in N. Y.?

A. Yes; I did think the subject over some in 1850, 1851, or 1852. I can't tell exactly about that.

Cross 1. The rod that fell down, and which you put up in its place by a bolt from your tool chest, dragged on the ground, did it, until you put it up in its place?

A. One end dragged on the ground.

Cross 2. Was the lever which you say was in the truck, was it in the back part of the truck from the crank, or in the front part of the truck nearest the crank?

A. Neither one.

Cross 3. Was it under the body of the car?

A. No, sir.

Where was it?

A. It was fast to the brake.

Cross 4. Was the lever in the end of the truck next to the crank or in the end of the truck nearest the centre of the car?

A. The lever was in the end nearest the centre of the car.

Cross 5. How was W'm Quigley employed when not engaged by some of the men, as you say he was, as extra hand?

A. He was not employed at all that I know of when he was not employed extra.

Cross 6. Was he a boy in 1843?

A. He was 16 or 17 years old; I suppose somewhere along there.

Cross 7. Was he a boy given to hunting or fishing when not employed?

A. I don't know for certain.

Cross 8. Was he in the habit of going to school?

1062 A. Not that I know of.

Cross 9. If you know, state how Quigley's father employed his time.

A. He followed fishing and gunning.

Cross 10. Did his father support his family in that way?

A. I believe he did.

Cross 11. Did he sell the fish and game he caught in the market where he lived?

A. I don't know.

Cross 12. Did W'm Quigley fire for you; if so, what time?

A. I can't tell that.

Cross 13. Did he fire for you in 1843?

A. I think not.

Cross 14. Did he in 1844?

A. I think he did not.

Cross 15. In 1845?

A. I don't remember that he fired for me at all.

Cross 16. How clear are you that he did not fire for you at all?

A. I can't tell, it is so long ago. I generally had my own regular fireman.

Cross 17. Did W'm Quigley brake on passenger trains run by you in 1843 and 1844?

A. He did, somewhere along there, between '43 and '45.

Cross 18. How much of the time?

A. Sometimes once a week and sometimes twice.

Cross 19. In succession, weeks through the year; if not, about how often?

A. The only times he braked for me was when we run the excursion trains—about two months in the year.

Cross 20. How much of these excursion trains did he brake?

A. I can't tell you. He did not brake every trip we run.

Cross 21. Then he only broke when some brakeman was sick or away?

A. Yes, sir.

1063 Cross 22. And paid by the brakeman?

A. Yes, sir.

Cross 23. Do you know M'r Sayles, the complainant in this case?

A. I know him when I see him, that is all.

Cross 24. Has he talked over this matter of brakes with you?

A. Yes.

Redirect cross 1. Please explain how the end of the rod which you have spoken of could fall down on the car on the excursion train?

A. It couldn't help but fall down after the bolt came out; it fell down outside of the truck, by the side of the truck.

Recross 2. You are sure, are you, that the body of the car was so attached to the truck, and the rod to the lever, that it would fall outside of the truck and track if detached from the lever?

A. The car body was attached to the centre of the truck.

Recross 3. Was the car body made to rest on side bearings on either side of the centre?

A. It was to keep the car from rolling.

Recross 4. Did this rod from the crank to the lever pass between the centre and one of these bearings?

A. It did.

CHARLES YUNDT.

Subscribed and sworn to before me this 17th day of Oct., 1868.

W. GRIER HIBLER,
U. S. Commissioner.

PHILADELPHIA, *Oct. 16th*, 1868.

BENJAMIN T. SEWARD, a witness on the part of the complainant, being duly sworn, deposes and says:

1. What is your name, age, residence, and occupation?

A. My name is Benjamin T. Seward; 47 years of age; residence, Philadelphia; am locomotive engineer.

1064 2. Were you ever in the employ of the Camden and Amboy R. R. Co., and if so, in what capacity and how long?

A. I was in their employ. I commenced in Aug., 1840, as brakeman. I was brakeman over two years. I was then fireman a little over two years. I was then raised to an engineer, and I continued as engineer until 1850 or 1851. I then left that road and went on the Harlem road, N. Y.

3. While you were employed on the Camden and Amboy R. R., did you know of a car on that road called the Tyler car?

A. I did.

4. Was that car different from the other cars on that road, in any respect; and, if so, will you state some of the differences?

A. It was a little different; there was a saloon or privy on the outside on one of the platforms, the car was got up in very good style, better than the other cars. John Tyler rode in it after it was rebuilt.

5. During how much of the time you were employed by the Camden and Amboy R. Road Co., as you have stated, did you know of this Tyler car?

A. Sometimes I would see it every day, and then I might not see it for a month or two. I knew of it in this way for years.

6. Did you see it when it was rebuilt in 1843?

A. I did see it.

7. Will you please state, if you know, what kind of brakes, whether single brakes, acting on only one truck, or double brakes, acting on both trucks from one windlass, were upon this Tyler car during the time you knew of it on the Camden and Amboy road, as you have stated?

A. I could not say; but my opinion is that they were single brakes, and I have no recollection of seeing any double brake anywhere before 1853, when I saw one on the N. Y. and New Haven road, where I was employed.

1065 8. How frequent opportunities did you have while you were on the Camden and Amboy Railroad of knowing what kind of brakes were on the Tyler car?

A. Sometimes I had an opportunity five or six times a day, and then again I might not see the car for a month. I sometimes saw the car five or six times a day. I saw it often at stations when it was in my train.

9. Was it in your train often?

A. It was. I sometimes ran it for three or four weeks right along.

10. Do you think that there could have been a double brake on this Tyler car for any length of time while you knew of it on the Camden and Amboy road without your being aware of it?

(Objected to.)

A. I think it could not.

11. Do you know W'm Quigley, who has been employed on the Camden and Amboy R. R. for many years past?

A. I do.

12. When did you first make his acquaintance?

A. About the year 1840 or 1841. He was a boy then.

13. When did you first know of his being employed on the Camden and Amboy R. R.?

A. I can't say what year. It must have been before 1844. I think it was before 1844.

14. What was he doing on the road before 1844?

A. He was an extra man, braking extra and firing extra; when a man was sick or wanted to be off for a day or a week, he would hire him in his place. The company did not employ him when he first went on the road; while he was an extra hand the men hired him.

15. While he was on the road as an extra hand, did you see him often?

A. I did.

1066 Cross-examination:

Cross 1. You say you were acquainted with William Quigley about the year 1840 or 1841; under what circumstances or on what occasion did you become so acquainted?

Answer. Well, I knew him as laying round the road, wanting to get on for a job of some kind.

Cross 2. Question. When not laying round the road, as you say, how did he employ his time?

Answer. Well, I suppose he done odd jobs round one place and another, and he went fishing and gunning a good deal.

Cross 3. Question. Do you know from personal inspection of the Tyler car, on the day it took President Tyler over the road, and do you know from such inspection the kind of brake on said Tyler car, whether double or single?

Answer. I do not. I did not inspect.

B. T. SEWARD.

Subscribed and sworn to before me this 16th day of Oct., 1868.

W. GRIER HIBLER,
U. S. Commissioner.

Joseph Herbert, a witness on the part of the complainant, being duly sworn, deposes and says:

1. What is your name, age, residence, and occupation?

A. Joseph Herbert; 58 years of age; reside in Bordentown, N. J. I am employed on the Camden and Amboy R. R., working by days' work repairing the road.

2. Were you ever employed as a brakeman on the Camden and Amboy R. R.; and, if so, when?

A. Yes. I commenced there when the road first commenced, if you can find out when that was. I used to run on the excursion and mail trains.

3. About what year was it, as near as you can tell, when you commenced being brakeman on said railroad?

1067 A. I can't tell what year it was when the road first commenced when the cars were drawn by horses. This was a year or two before the engines came on.

4. Do you remember a trip made by President Tyler over the Camden and Amboy R. R.?

A. Yes, sir.

5. Were you employed on the road at that time?

A. Yes, sir.

6. How?

A. On the brakes as brakeman.

7. Did you see the car in which Tyler made his trip?

A. Yes, sir.

8. When did you first see it?

A. A year or two before Tyler rode in it; a year, I think; that was in 1843 that Tyler rode in it.

9. Did you see this car at the time Tyler made his trip in it in 1843?

A. Yes; I saw the car the day he made his trip.

10. Do you know what kind of brakes this car had at that time, the time he made his trip; if so, what kind of brakes were they?

A. Yes, sir; there was a brake on each truck, and it took two men to brake both trucks; that is, if we wanted to brake both trucks at one time; else we would have to run through the car to do it.

11. What name did this car go by after Tyler made his trip in it?

A. It went by the name of the Tyler car after he made his trip in it.

12. Can you mention some of the trains that this car run in after the time Tyler made his trip in it?

A. It generally run to Trenton; sometimes it run on excursion trains; sometimes it run on other trains.

13. Did you see it when it used to run to Trenton, as you state, and when it run on these excursion trains, and on these other trains?

A. I did.

14. About how frequently did you see it when it ran in those trains?

1068 A. I can't tell what trains it run in every day. I saw the car most every day.

15. What kind of brakes did this car have when you thus saw it?

A. It had a brake on each truck; they turned a crank around to wind up the chain.

16. How many trucks did the brake at one end of this car brake on at these times when you so saw it?

A. It broke on one truck.

17. When they wanted to apply the brakes of both trucks of the car at the same time, how many men would it take to do it?

A. It took two.

18. What name was given on the Camden and Amboy R. R. to brakes like those on this Tyler car, as you have described them?

A. I can't tell.

19. I mean what did they call those brakes on the Tyler car?

A. They called it the double brake.

20. Was there any connection between the two brakes on the Tyler car?

A. No, sir.

21. After the Tyler car was fitted with these two brakes that were not connected, were there any other cars on the Camden and Amboy road fitted with the same kind of brakes?

A. No, not as long as I was on the road.

22. Did you ever act as brakeman on the Tyler car?

A. Not to run steady, once in a while in the excursion train. I saw it most every day. I had to go around and hunt up the cars for the excursion trains.

23. Do you know how many trucks the brake at one end of the car brakes on in the passenger cars now used on the Camden and Amboy road?

A. One brake will brake on both trucks forward and aft; one lever attaches to both of the trucks.

24. After Tyler made his trip how long did you know of the Tyler car on the Camden and Amboy road?

1069 A. I wasn't long on the road after that. I left the road just before the excursion trains quit running.

25. How many years was this after Tyler made his trip?

A. It might be, as near as I can fix it, about two years after.

26. Was it during these two years that you used to see the Tyler car as you have stated?

A. Yes, sir.

27. Do you know W'm Quigley, who is an engineer on the Camden and Amboy R. R.?

A. Yes, I know him.

28. About when did you first get acquainted with him?

A. I have known him ever since he was a boy.

29. Did you know him at the time the excursion trains were run on the road?

A. Yes, sir.

30. Did he do anything on the trains at this time? If so, what did he do on the Camden and Amboy trains?

A. He broke once in a while when I was on.

31. What kind of trains was it that he broke on?

A. Sometimes on the excursion trains.

32. Was this before you left the road?

A. Yes.

Cross-examined by M'r Whipple:

Cross. 1. It being so long ago, may you not be mistaken as to the kind of brakes on the Tyler car when he took his trip over the road in it?

A. No, sir; I can remember that well enough. It had the only double brake that was on the road.

Cross. 2. Do they use the same kind of brakes on the passenger-cars on the Camden and Amboy road now that they did on the Tyler car when it took the President over the road?

A. No, sir.

Cross. 3. Were you brakeman on the Tyler car the day it took the President over the road?

1070 A. No, sir.

Cross. 4. How then do you know what kind of brakes were on that car the day it took the President over the road?

A. Why, I saw it.

Cross. 5. Was the so-called Tyler car run in trains of the Camden and Amboy road before it took the President over the road?

A. Yes, once in a while it run in excursion trains.

Cross. 6. Did you brake on this car before it took the President over the road?

A. Yes, sir.

Cross. 7. How long before it took the President over the road did you brake on it?

A. I can't tell that now.

Cross. 8. Do you think it was a month before?

A. O, yes, more than that.

Cross. 9. Do you think it was six months?

A. Yes.

Cross 10. Do you think it was a year before?

A. Yes, I guess it was.

Cross. 11. Did M'r Sayles tell you what kind of a brake was on the Tyler car when it took the President over the road?

A. No; I don't want anybody to tell me that.

Cross. 12. Has he talked with you about what brakes were on the Tyler car?

A. He has asked me about them, and I told him.

Cross. 13. What led you to examine the brakes on the car the day it took the President over the road?

A. I had to see to the brakes when I was on the road.

Cross. 14. At what place did you see the brakes on the Tyler car the day it took the President over the road?

A. At Bordentown.

Cross. 15. Was the President in the car at the time you examined the brakes?

A. He was in the car.

Cross. 16. Did you see the President when the car stopped at Bordentown?

1071 A. Yes, sir.

Cross. 17. Which did you see first, the brakes on the cars or the President?

A. I had to look at the brakes first.

Cross. 18. Were you inspector of cars at Bordentown at the time the President passed over the road?

A. No, I wasn't inspector of them.

Cross. 19. What were your duties?

A. I was a brake-tender on the road.

Cross. 20. Was you brake-tender on that day?

A. I had come in with our line before Tyler arrived at Bordentown.

Cross. 21. After having discharged your duty as brake-tender on this train, what had you further to do on that day?

A. I had the cars to clean, the brakes to attend to, and grease the journals and attend to them.

Cross. 22. You mean, do you, the cars and journals of the train of which you was brake-tender?

A. Yes.

Cross. 23. Did you have to attend to cleaning of all the cars, and look after all the brakes, and grease the journals of the cars that came to Bordentown?

A. What we run we had to do it.

Cross. 24. Did you run on the train the day President Tyler was taken over the road, that is the train in which he rode?

A. No, I was not on with him at all.

Cross. 25. Was it your business to look after the cleaning of the cars and the brakes and oiling the journals of the cars in the train which took President Tyler over the road on that day?

A. No, sir; I had nothing to do with that at all.

Cross. 26. On the arrival of the train at Bordentown, which had the President on board, was it your duty first to look to the brakes?

A. No; but when I came along I always cast my eye down on to them and on the wheels, too.

Cross. 27. You especially notice the brakes on the cars, do you?

1072 A. Yes, sir.

Cross. 28. Have you always had in your mind distinctly the brakes that were on the Camden and Amboy road for the two years before you left the road?

Ans. Yes.

Cross. 29. So that you could have told any one at any time since, had you been asked, what kind of brakes were in use on the Tyler car?

Ans. Yes.

Cross. 30. Is everything else connected with the Tyler car just as fresh in your recollection, and by that I mean the trucks, the springs, the seats in the car, and the color of the car?

Ans. Well, yes; I could tell you the color of the car. The car was red.

Cross. 31. Were the seats in the Tyler car the same as are now used in the passenger cars of the Camden and Amboy road?

Ans. They were a good deal like them. I think it was chairs they had in that Tyler car, but I wont be sure; it has been so long, it has slipped my memory.

Cross. 32. Were all the chairs alike in the Tyler car, whatever kind they were?

Ans. Yes; I think they were all alike.

Cross. 33. What kind of springs were in use on the Tyler car?

Ans. That has slipped my recollection, too.

Cross. 34. Did it have any springs?

Ans. Oh, yes, it had springs.

Cross. 35. Were they India-rubber springs?

Ans. Well, I don't know. I had nothing to do with the springs and such things. I had to do with cleaning the cars, and with the journals and the brakes.

Cross. 36. Do you mean by the brakes, the blocks that press against the wheels?

Ans. I had the blocks that press against the wheels to leather. I had to do with the whole brakes.

Cross. 37. How many trucks were there under the Tyler car?

1073 Ans. Two trucks.

Cross 38. How many wheels in each truck of the Tyler car?

Ans. Eight in the two—four in each.

Cross 39. You are quite sure, are you, that the color of the car was red?

Ans. Well, I won't be sure. I think it was a kind of reddish color. It has been so long ago I can't remember.

Cross 40. Your recollection, then, is very indistinct, is it, in everything connected with the Tyler car, except the kind of brakes it had?

Ans. I know the brakes on it just as well as can be.

Cross 41. Then all else connected with the Tyler car is indistinct, is it, in your recollection, except the brakes?

Ans. Yes; near about. I know nearly how the car was built, and I think it had the rocking-chairs in it.

Cross 42. How was the Tyler car built?

Ans. It was built a good deal narrower than the cars are now. The platform was higher.

Cross 43. Did the Tyler car have a saloon inside of it as the cars do now running on that road?

Ans. Yes.

Cross 44. Was there a privy in the saloon?

Ans. Yes.

Cross 45. And this saloon was located inside of the door of the car, was it?

Ans. Yes.

Cross 46. You will please describe the construction of the brake on the Tyler car as you say you saw it the day the President was taken over the road in it.

Ans. It was the same as it always was.

Cross 47. How was it always? Please describe it.

Ans. It was a brake at each end. One man could brake it, but he would have to brake on each end. It would take two men to brake it at once.

Cross 48. Then you cannot describe the construction of the brake?

Ans. I can describe it enough to know near about how it was.

1074 Cross 49. What did you use on the platform to apply the brake?

Ans. A crank.

Cross 50. What was this crank connected to?

Ans. It was connected by a chain with the blocks.

Cross 51. In what way was it connected with the blocks by the chain?

Ans. By rods connected to the chain.

Cross 52. Do you know anything more about it than what you have stated?

Ans. No, I don't.

Re-examined:

53. Do you know how the single-acting brakes on the freight-cars now used on the Camden and Amboy Railroad are rigged?

Ans. No; I don't know exactly how they are fixed. I have nothing to do with them now. They are worked with a crank.

54. Is it a crank or a windlass?

Ans. One or two of them have cranks. Nearly the whole of them have wheels now.

55. How positive are you that the brakes on each end of the Tyler car operated on only one truck at a time?

Ans. I broke on it, and I know I couldn't stand on one end and brake both trucks; I am sure of that.

56. Was it any part of your business to know how the different parts of the brakes were connected?

Ans. It was my business to see that the brakes were all right. It wasn't my business to make them. It wasn't any part of my business to know how the parts of the brake were connected. All I know about that brake is, that one man couldn't stand at one end and brake it at both ends at one time—brake both trucks at the same time.

57. At the time the Tyler car carried the President, was there anything new about it; and, if so, what was new?

1075 Ans. There was nothing. I didn't take notice of anything new about it.

58. You have said the Tyler car was rebuilt; was it rebuilt before you left the road?

Ans. They said it was rebuilt after I left the road. That is all I know about it.

59. You said in your 17th cross-answer that you had to look at the brakes first at the time you saw the President at Bordentown. Why did you have to look at the brakes on the Tyler car at that time?

Ans. I hadn't to look at them, but I cast my eye on them at the time, and know both brakes were there at that time.

60. You say you had been brakeman on the Tyler car before it carried the President. Was the car known by any name before it carried the President?

Ans. No; it didn't go by any name before it carried the President.

61. What name did it go by after it carried the President?

Ans. We called it the Tyler car after he rode in it.

62. What part of the road did it run on before it carried the President in 1843?

Ans. Mostly from Bordentown to Trenton before it carried the President.

63. Was there any change made in the brakes of the Tyler car after the time when it carried the President before you left the road?

Ans. No; they never changed it before I left the road.

Recross:

Cross 64. Had the car been used for a time on the Camden and Amboy road between Bordentown and Trenton before it took the President over the road?

Ans. Used some; yes.

Cross 65. Then it was not a new car, or a car just fitted up, that took the President over the road?

1076 Ans. It wasn't brand new. It had been run some.

Cross 66. Do you know Edwin Lockwood, superintendent of the car department of the Camden and Amboy Railroad at that time and since?

Ans. Yes, sir.

Cross 67. Do you think he would know what kind of a brake was on the Tyler car when it took the President over the road?

(Objected to.)

Ans. I should think he would, for he made the brake and ought to know. If he didn't know no other man could.

Cross 68. When you received pay as brakeman on the Camden and Amboy road the year the President went over the road, did you sign a receipt for the money?

Ans. Capt. Shippen signed the roll that had our names on it.

Cross 69. Do you mean that M'r Lockwood made the brake on the Tyler car, or that he had charge of the making of it?

Ans. He had charge of the making of it, I suppose.

Re-examined:

70. If Edwin Lockwood should say that the Tyler car, when it carried the President, had on it brakes which would brake both trucks from one end of the car at the same time, would you think you were mistaken in what you have stated here to-day about those brakes?

Ans. No; I don't think I would be mistaken in what I have said.

71. Would you feel sure of the correctness of what you have said, no matter what Lockwood or any others might say about it?

Ans. I am near about sure that the car had a brake on each end. I am sure of that. I am sure.

1077 72. Would you be sure that the brakes on the Tyler car did not brake but one truck at a time from one end of the car, no matter what Lockwood or others might say about that?

Ans. I think I would be sure of it.

Recross:

73. Then you profess, do you, to know better what kind of brake was on the Tyler car, when it took the President over the road, than M'r Lockwood, or others under him?

(Objected to because the witness has not so stated.)

Ans. What I have stated I think is near about right; Lockwood may know more about how the brakes were made than I do.

Re-examined:

74. Would you know as much as Lockwood about whether the brakes on the Tyler car would brake on more than one truck from one end of the car at the same time?

Ans. I would know as much as he about that, because I have used the brakes; I don't think it could brake on both trucks at a time.

75. You say you "don't think;" do you feel sure about it?

Ans. I am sure they couldn't brake both trucks at the same time.

JAMES HERBERT.

Subscribed and sworn to before me this 17th day of October, 1868.

W. GRIER HIBLER,
U. S. Commissioner.

1078 NEW YORK, *Oct.* 26, 1868—10 a. m.

Present, M'r S. D. Cozzens, counsel for the complainant, and the complainant in person, and M'r S. M. Whipple, counsel for defendant.

JOSEPH CAPNER, a witness called on part of the complainant.

1. Q. Have you been examined as a witness in this case?

A. I have.

2. Q. Will you now state what was the first kind of double-acting brake—that is, acting on both trucks at the same time from either end of the car—which you saw or knew of being in use on the Camden and Amboy Railroad?

A. Double levers swung in links.

3. Q. Will you state whether there is anything now before you which represents this brake with double levers swung in links?

A. Something on the same principle. This on the model now before me is brass, and the other was iron; this is the only difference; I mean that this model does represent the brake, except that on the model the brake is brass, and on the car it was iron.

(Model annexed as an exhibit, marked "Hodge Model.")

4. Q. Will you state by what means the brake-power was applied at the ends of the car in this brake like the Hodge model?

A. By a crank; the model has wheels or windlasses.

And being cross-examined by M'r Whipple, counsel for defendant, he deposes and says as follows:

1079 1. Cross-q. What year did you first see a brake on a car of the Camden and Amboy road like the Hodge model?

A. In 1850, I think; in that neighborhood.

2. Cross-q. May it not have been in 1848 or 1849?

A. I could not say positively.

3. Cross-q. Before seeing a brake on a car of the Camden and Amboy road like the Hodge model, did you see on a car of that road a brake with a cross-lever under the body, by which the brakes were applied to both trucks from one truck or windlass?

A. Not until after this Hodge brake.

4. Cross-q. On reflection, do you think you were mistaken as to the time when you first saw the cross-lever connected double-brake, at the time when you testified before in this case?

A. As to that, the single or the double lever, the double lever was the first; but as to time, I cannot be positive.

And being re-examined by M'r Cozzens, he deposes and says:

1. Redirect q. What kind of brakes were used on the Camden and Amboy road before this double-lever or Hodge brake was used there, as you state?

A. The single brake on one truck.

And being further cross-examined by M'r Whipple, he deposes and says:

1. Recross-q. May there not have been a connected centre-lever brake in use on that road before you saw the Hodge-model brake, which escaped your observation?

A. I think not.

Q. Recross-q. Did you examine all the passenger, crate, and baggage cars of that road before you saw this Hodge-model brake for the purpose of ascertaining what brakes were in use on all the cars composing passenger trains?

1080 A. If there was anything new in the way of brakes I generally saw it. The train I ran had a great deal of braking to do, and it caused me to look out pretty well for the brakes. I cannot say that I particularly examined minutely, but if there was anything new I generally saw it. I did not make it a business to particularly inspect, but looked at the cars, and if there was any such thing under the cars I could see it.

3. Recross-q. Was your business such at the time you first saw the Hodge-model brake that you were brought in contact with all the cars that make up the passenger equipment of the Camden and Amboy road, and by that I mean the Philadelphia and Trenton line, the Bordentown and Trenton, the Camden and Amboy, and all their brakes respectively?

A. It was.

4. Recross-q. Did you, as brakeman, run upon all these lines?

A. No, sir.

JOSEPH CAPNER.

Subscribed and sworn to before me this 26th day of October, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination adjourned to Oct. 27th, 1868, at 9 a. m.

JOSEPH GUTMAN, J'R.

1081 GEORGE W. TEESE, a witness called on the part of the complainant.

Q. 1. What is your name age, residence and occupation?

A. My name is George W. Teese; I am 46 years of age; I reside in Jersey City; I am an engineer.

Q. 2. Were you ever employed on the Philadelphia and Trenton Railroad; if so, what did you do there?

A. Yes, sir; I served my time there as a machinist.

Q. 3. From the Philadelphia and Trenton Railroad did you go to any other railroad; if so, to what railroad?

A. I did, to the Camden and Amboy Railroad.

Q. 4. About how long did you remain on the Camden and Amboy Railroad, and what did you do there?

A. About five or six years; I was engineer.

Q. 5. Do you remember what year it was when you commenced on the Camden and Amboy road?

A. It was twenty-six years ago this month that I commenced running on the Philadelphia and Trenton road as an engineer. I ran on that road about two or three years, and then went on the Camden and Amboy road.

Q. 6. Did you do anything on the Camden and Amboy road except to run as engineer?

A. No, sir. I was transferred from the Philadelphia and Trenton road to the Camden and Amboy road.

Q. 7. After remaining the five or six years as engineer on the Camden and Amboy road, as you have stated, were you or not again employed on the Philadelphia and Trenton road as engineer?

A. Yes, sir; I came back and ran again.

Q. 8. About how long did you run again there?

A. I shifted back and forwards from one road to the other, so that I cannot exactly tell.

Q. 9. In about what year was it that you finally left the Camden and Amboy road?

A. In 1850 or 1851; I think in 1851.

Q. 10. While you were employed as you have above stated, did
1082 you know of a car on the Camden and Amboy road known as the
Tyler car?

A. Yes, sir.

Q. 11. For about how long did you know of that car?

A. I could not tell exactly, there was so much shifting of cars. She ran on the Philadelphia and Trenton road when I was running there.

Q. 12. And did you know of her after you went from the Philadelphia and Trenton road to the Camden and Amboy road?

A. Yes, sir.

Q. 13. Do you know what kind of brakes were on this Tyler car during the time you knew of her? And, if you do, state what kind.

A. I do; the double-lever brake, the same exactly as this Hodge model brake.

Q. 14. About when was it, as nearly as you can tell with reference to the time, when you left the Camden and Amboy road, that you first knew of this Tyler car having the Hodge brake?

A. It was about the time I left the road in 1851.

Q. 15. Do you know what kind of brakes were on this Tyler car before the Hodge brake was put on it, and, if so, what kind were they?

A. I think it had on a crank brake, without a ratchet.

Q. 16. How many trucks did these crank brakes on the Tyler car operate on at one time?

(Objected to by M'r Whipple.)

A. On one truck.

Q. 17. How many of these crank brakes operating on one truck at one time were there on this Tyler car before the Hodge brake was put on said car?

A. Two—one at each end.

Q. 18. Do you know a man on the Camden and Amboy road named William Quigley?

A. Yes, sir; he is an engineer now.

Q. 19. Do you know where said Quigley was employed after
1083 you went from the Philadelphia and Trenton road to the Camden
and Amboy road?

A. He was an extra brake-tender on the Camden and Amboy road; he was employed by the hands when they wanted him, sometimes as brakeman, sometimes as fireman. I do not know whether the company employed him at that time or not.

Q. 20. Do you remember some of the trains that Quigley ran on after you went from the Philadelphia and Trenton road to the Camden and Amboy road?

A. Yes, sir; he used to go as brake-tender for me from Trenton to Kensington on passenger trains. I cannot say what year it was. He ran extra on the Camden and Amboy road.

Q. 21. Do you remember a train being run over the Philadelphia and Trenton road to save the charter? and, if so, please state the circumstances.

A. I do; I ran the train, as engineer, to save the charter. The road had been in bad condition and had stopped running, and the State of Pennsylvania said they must run their trains.

Q. 22. State who was brakeman for you on this train that you ran to save the charter?

A. William Quigley.

And being cross-examined by M'r Whipple, he deposes and says as follows:

Cross-q. 1. Do you know what kind of a brake was in use on the Tyler car in the year 1843?

A. Yes, sir; it had on the single brake.

Cross-q. 2. How did you know it had on the single brake?

A. It had two cranks, one at each end, and required two men to put the brake on.

Cross-q. 3. Was this Tyler car a new or an old car in 1843?

A. We called her a new car.

1084 Cross-q. 4. Was it a new car in January or February, 1843?

A. I cannot say exactly as to that.

Cross-q. 5. What did you know about the car in 1843?

A. I saw her at Trenton in 1843. If I am not mistaken, she ran from Trenton to Jersey City in that year.

GEORGE W. TEESE.

Subscribed and sworn to before me this twenty-sixth day of October, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination adjourned to Oct. 27th, 1868, at 9 a. m.

JOSEPH GUTMAN, J'R,
Examiner, &c.

NEW YORK, *October 27th*, 1868.

Present, M'r Cozzens, counsel for the complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

THOMAS M. NORTH, a witness heretofore sworn and examined on the part of the complainant, recalled, and being further examined by M'r Cozzens, counsel for complainant, deposes and says as follows:

Q. 1. Will you look at the paper now shown you, which is the original of defendant's Exhibit K, put in evidence by them at the time of their examination of Joseph F. Talson, and state whether you ever saw that paper or one like it before?

A. In the summer of 1853, Joseph F. Talson showed me a paper containing drawings of trucks and brakes and certificates of their use. The paper was either the same now shown me or substantially like it. There is no year mark by which I can positively identify this
1085 paper as being the same then shown me, but it comes back to my memory as being either the same or substantially the same as the one then shown me. It certainly was this one or one containing substantially similar drawings and certificates.

Q. 2. In connection with what matter did Talson show you the paper in the summer of 1853?

A. In connection with the subject of my defense of the suit brought by Tanner against the Hudson River Railroad Company, as to which I have previously testified.

Q. 3. Was this paper shown you by Talson before or after the settlement of that suit, which settlement, as you testified before, you advised?

A. Before.

THOMAS M. NORTH.

Subscribed and sworn to before me this 1st day of Oct., 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Henry H. Disbrow, a witness of lawful age, produced on the part of the complainant, having been by me first duly cautioned and sworn to testify the truth, the whole truth, and nothing but the truth, in the matter of controversy herein, and being examined by M'r Cozzens, of counsel for complainant, deposes and says as follows:

(M'r Whipple objects to any further examination of this witness at this stage of the case.)

Q. 1. Have you before been examined in this case?

A. I have.

Q. 2. In your previous testimony you spoke of repairing a brake which operated on both trucks of the car at the same time. Will you look at the model now before you, marked "Hodge Model," and state what it represents?

A. This looks very much like the one I repaired. It runs in my mind there was another rod there, longitudinally in the centre of the car.

1086 Q. 3. State whether the brake which you think you repaired had cross-levers; and, if so, how many.

(Objected to.)

A. I could not exactly state.

And being cross-examined by M'r Whipple, he deposes and says:

Cross-q. 1. Was the brake which you repaired a single cross-lever brake?

A. It runs in my mind it was a double one.

Cross-q. 2. How many connecting rods?

A. It appears to me there were two.

Cross-q. 3. May it not have had four?

A. It might have had four, but I could not say.

HENRY H. DISBROW.

Subscribed and sworn to before me this 27th day of October, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Witness **George W. Teese** recalled for cross-examination, and his cross-examination being resumed by M'r Whipple, he deposes and says as follows:

Cross-q. 6. Have you had any conversation with M'r Sayles, complainant in this case, on the subject matter of your evidence since you were on the stand yesterday?

A. I have not, sir.

Cross-q. 7. Did not M'r Sayles, when you were out a few moments ago, call your attention to anything connected with your evidence given yesterday?

A. No, sir.

1087 Cross-q. 8. When was your attention first called to this matter of single and double brakes?

A. About four weeks ago.

Cross-q. 9. Who called on you?

A. M'r Sayles.

Cross-q. 10. What did he say that he wanted of you?

A. To ascertain about these brakes, the double-acting brake.

Cross-q. 11. What did he want to know about these brakes?

A. He asked me about a brake; if I ever saw such a brake on the road, such a one as the one in the model. I told him I had not until I was about leaving the road in about 1850 or 1851.

Cross-q. 12. Did you run the Tyler car in your train on the Philadelphia & Trenton road?

A. No, sir.

Cross-q. 13. Why was this car called the Tyler car?

A. Because it conveyed John Tyler over the road.

Cross-q. 14. When did it take the President over the road?

A. In 1841 or 1842, I think. I cannot say exactly.

Cross-q. 15. Did you see the Tyler car on the day it took the President over the road?

A. I did not.

Cross-q. 16. Do you know what kind of brakes the car had on at the time it took the President over the road?

A. I do not, of course, at that time.

Cross-q. 17. When did you first know from your own personal inspection of the car, the kind of brakes?

A. I think it was in 1845 or 1846.

Cross-q. 18. Are you positive as to time?

A. Of course.

Cross q. 19. Was this Tyler car originally built by the Camden and Amboy road?

A. I could not say. I do not think it was.

Cross-q. 20. What were some of the peculiarities of this Tyler car?

1088 A. She was a kind of a fancy car—a little more extra than any other car of the company on the road.

Cross q. 21. What kind of trucks had it?

A. She had what we called six-wheel trucks.

Cross-q. 22. What kind of springs?

A. I could not say exactly.

Cross-q. 23. Did it have a saloon and privy inside of the car?

A. No, sir; outside on the platform.

Cross-q. 24. What kind of seats had it?

A. I took no notice of the seats. I had nothing to do inside.

Cross-q. 25. Did this car run as a regular thing after it took the President over the road?

A. She run in a way train or passenger train as they thought fit, but I cannot say about it.

Cross-q. 26. What year did you run the train on the Philadelphia and Trenton road to save the charter?

A. I cannot exactly say.

Cross-q. 27. How many years before you left the road did you run this train?

A. I think it was in 1846 or 1847.

Cross-q. 28. Was this Tyler car rebuilt after it took the President over the road?

A. I cannot tell whether it was or not.

Cross-q. 29. Do you know Edwin Lockwood?

A. Yes, sir.

Cross-q. 30. Do you think he would be likely to know what kind of a brake was on the Tyler car when it took the President over the road?

A. I should think he would. He was boss of the shop, the car shop.

Cross-q. 31. You think, then, he ought to know what brake was on that car at that time?

A. Undoubtedly I should.

Cross-q. 32. The first double brake, then, which you have any recollection of seeing on the Camden and Amboy and Philadelphia and Trenton roads is the Hodge model brake, was it?

A. Yes; the brake similar to this Hodge model.

1089 And being re-examined by M'r Cozzens, of counsel for complainant, he deposes and says:

Redirect q. 1. What road were you on at the time the President went over the Camden and Amboy road?

A. On the Philadelphia and Trenton road.

Redirect q. 2. You said something about how well you remembered the Tyler car; please state how well you do remember it?

A. She was a fancy car. I remember the car well.

Redirect q. 3. May the running of the train to save the charter have been earlier than 1846 or 1847?

A. I cannot exactly say; it may be.

And being further cross-examined by M'r Whipple, he deposes and says:

Recross-q. 1. Then the substance of your evidence in this case is that you have no recollection of seeing a double-acting brake on the Camden and Amboy or Philadelphia and Trenton roads until you saw the Hodge model brake?

(Objected to.)

A. Yes, sir.

And being further re-examined by M'r Cozzens, he deposes and says:

Redirect q. 4. Do you mean by this answer to change in any way what you have above testified respecting the Tyler car?

(Objected to.)

A. No, sir.

1090 And being further cross-examined by M'r Whipple, he deposes and says:

Recross-q. 2. What more have you to say in regard to the Tyler car?

A. I have said enough now. What I have to say is that the Hodge model brake was on the Tyler car, and is the first double-acting brake that I saw on the road.

And being further re-examined by M'r Cozzens, he deposes and says:

Redirect q. 5. Before this Hodge brake was on the Tyler car what kind of brakes were on the Tyler car?

A. The single brake, that braked on one end, and required two brakemen to put the brakes on.

And being further cross-examined by M'r Whipple, he deposes and says:

Recross-q. 3. Is not there a possibility that you may be mistaken as to the kind of brakes on the Tyler car from the time it took the President on the road to the time you say you saw a Hodge brake on said Tyler car?

A. No mistake at all about it.

Recross-q. 4. Then you know, do you, what kind of brake was on the Tyler car at the time it took the President over the road?

A. The brake was on the Tyler car the same as it would be on the rest of the cars.

Recross-q. 5. You know this, do you?

A. I could not say exactly.

And being further re-examined by M'r Cozzens, he deposes and says:

Redirect q. 6. What is it that you mean you could not say exactly about?

1091 A. I say the brakes on the Tyler car were like the brakes on the other cars, single brakes.

And being further cross-examined by M'r Whipple, he deposes and says:

Recross-q. 6. You know this, do you?

A. Of course I do.

Recross-q. 7. There is no doubt at all in your mind?

A. I have told you so.

Subscribed and sworn to.

GEORGE W. TEESE.

NEW YORK, 34 *Beach Street*, *N. Y.*,
October 28th, 1868—a. m.

Present, M'r Cozzens, of counsel for the complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

George Gifford recalled as a witness on the part of the complainant.

Q. 1. Please look at the paper now shown you and state what it is, in whose handwriting the body of it is, and whose the signature to it is, and when, as nearly as you can state, it was written.

A. It is a letter which was dictated by me to M. B. Andruss, who wrote it as I dictated it, and who was then a clerk of mine. It was signed by me, and written about the time it bears date, and I have no doubt on the same day. It was written to M'r North, who was then secretary and attorney of the Hudson River Railroad Company. It was written while a suit was pending on the Tanner brake patent against the Hudson River Railroad Company.

Q. 2. M'r North was the same person to which you referred in your previous examination in this case?

1092 A. He was.

Q. 3. State whether that letter was written before or after your interviews with Joseph F. Talson in relation to the defense in the said suit?

A. It was written after those interviews, and after a very careful consideration of all the information I could get from M'r Talson respecting any use of a brake which would be serviceable as a defense in that suit.

Q. 4. Will you annex that letter to this deposition?

A. I have no objection to so doing.

(Letter annexed marked "Gifford's Exhibit, J. G., J'r.")

Subscribed and sworn to before me this 28th day of October, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Gifford's Exhibit.—J. G., J'r.

NEW YORK, *October 11th*, 1853.

M'r NORTH:

DEAR SIR: Have you heard from M'r Grovner? I find on examination of the case, 1st, that Thompson & Bachelder invented the brake as early as 1846 or 1847 (see testimony taken), and that the one shown in their drawings filed in 1847 is not essentially changed from the one shown in the drawings of the patent; 2d, that none of our patents which we have as evidence go back further than 1848; 3rd, that the Talson brake of 1842 was barely tried and laid aside, and amounts to such an experiment as the courts have often held to be insufficient to defeat a patent. Now, unless we receive aid from the eastern testimony of a prior use, the chances, in my opinion, will be greatly against us.

1093 If we expect to avail ourselves of that testimony, not a day should be lost in dispatching some smart, intelligent man to see those witnesses and bring them here, and thence to Albany.

Is it not possible that the plaintiff's attorney may not be anxious to try the cause this term, and would it not be well for you to telegraph him asking whether he expects to try?

I perhaps betray some anxiety about the case, for I realize that we are not and fear we shall not be ready, and I do hate a defeat.

Yours, truly,

GEO. GIFFORD.

OCTOBER 29TH, 1868—11 a. m.

Present, counsel as before and the complainant in person.

ISAAC P. WENDELL produced on the part of the complainant.

Q. 1. What is your name, age, residence, and occupation?

A. My name is Isaac P. Wendell. I am 56 years of age. I reside in Philadelphia. I am in the railroad-supply business.

Q. 2. Are you acquainted with Thomas Sayles, the complainant in this case; if so, for about how long have you known him?

A. I am; I have known him between three and four years.

Q. 3. Do you know, or did you ever see, a man by the name of J. E. Cudlipp?

A. I knew a M'r Cudlipp; I do not know his initials.

Q. 4. Were you ever present at a conversation between said Cudlipp and said Sayles? If so, where was said conversation?

1094 A. I' was at the Girard House, at the corner of West Broadway and Chambers street, New York City.

Q. 5. When, or what month and year did this conversation take place, as near as you can recollect?

A. I think it was in August, 1867.

Q. 6. Will you state as nearly as you can what the conversation was?

A. I can give the substance, but not the particular words. M'r Sayles requested me to be present. He told M'r Cudlipp that he wanted a good, smart railroad man to help get at the facts in this case of his; that, as he was opposing railroad companies, the railroad employees would be afraid to speak as freely to him as they would to him (Cudlipp), or a man like him, who had been employed on railroads. He asked M'r Cudlipp in regard to his knowledge of the double brake. I think he put it in this way, "You did not know of any double brake in use before the one put on by M'r Baker?" I think M'r Cudlipp stated that there was one (M'r Whipple here objects to any evidence of further conversation between these parties) that had been a failure, and lay in the shop at the time he went there. That seems to be the substance of the conversation as far as I can call it to mind at present.

Q. 7. In that conversation, did M'r Sayles say anything to Cudlipp about having any money to spend in the case?

A. I do not recollect that he did.

Q. 8. Did he tell Cudlipp that he had some $50,000 to spend in this case, and was not going to be mean about it; or anything to that effect?

A. Not that I recollect.

Q. 9. Could any such remark as that have been made by M'r Sayles without your hearing it?

A. I think not.

Q. 10. Did M'r Sayles say that he understood that Cudlipp was the only man that could influence Talson?

A. No, sir, not to my recollection.

Examination adjourned to same day at 3 p. m.

1095 OCTOBER 29TH, 1868—3 p. m.

Present, complainant in person and counsel as before.

Q. 11. In that conversation at the Girard House, did M'r Sayles say anything to Cudlipp about going before a lawyer and securing to Cudlipp any part of the income from the patent? If so, what did he say?

A. He did not.

Q. 12. Did Cudlipp in that conversation say anything to M'r Sayles in your presence about having heard about the old Stanley brake when he first went on the New Jersey road; and, if so, what did he say?

A. He said that he had heard of it, and that it had been a failure; that it lay somewhere about the shop when he went there.

Q. 13. Did he in that conversation say anything to M'r Sayles about knowing that there was no double brake on the New Jersey road before Baker put the double brake on? If so, what did he say? Answer fully.

A. He said that there was no double brake on, to his knowledge, before Baker put one on in 1850 or 1851.

Q. 14. In that conversation, did M'r Sayles say anything to Cudlipp about wanting him (Cudlipp) to look up the facts in regard to the use of double brakes; and, if so, what did he say?

A. He said he wanted a good, smart man like him, who had been an employee upon railroads, to look up the facts in the case.

Q. 15. In that conversation, did Sayles show Cudlipp any testimony, or what purported to be testimony; and, if he did, what testimony was it; and what, if anything, did he say to Cudlipp in connection with it?

A. He showed him some written testimony of the Albany case where M'r Talson had testified, and said that if M'r Talson would testify to that, it was the facts in the case.

Q. 16. Did he say anything to Cudlipp about wishing any testimony or any facts to be kept back by Talson or any other person?

A. No, sir.

1096 Q. 17. In regard to Sayles telling Cudlipp that he wished some smart railroad man like him to look up the facts, I will inquire what facts; that is, facts as to what matters Sayles wanted a man to look up?

A. In regard to the brake case; I understood that it was the general facts as to the brake being in use.

Q. 18. The brake being in use where?

A. On any roads. My idea was that he wanted some good man to look up the facts. In relation to the time this Tanner brake had been used on the New Jersey Transportation road and on the Camden & Amboy, Sayles said he wanted a good, smart man to look up the facts in this case. These were the words.

Q. 19. Was anything said in that conversation by M'r Sayles about Cudlipp's influencing Talson?

A. No, sir.

Q. 20. In that conversation, did Cudlipp say anything to Sayles about whether if there had been double brakes on the Camden & Amboy cars which came to Jersey City he would have seen them? If so, what did he say?

A. I do not remember.

Q. 21. After that conversation at the Girard House was concluded, where did Sayles and Cudlipp go, if you know?

A. They went up to the corner of Broadway and Vesey street. I went with them.

Q. 22. Cudlipp has said that he thinks that it is his impression that the person who was present at that conversation went down Chambers street to the ferry. Did you go down Chambers street to the ferry?

A. No, sir.

Q. 23. In accompanying them to the corner of Vesey street, where did you walk, and how near to them did you walk?

A. I walked alongside.

Cross-examined by M'r Whipple:

Cross-q. 1. You say you are engaged in the railroad-supply business. What kind of supply business?

1097 A. Journal boxes and bearings, and lubricators particularly.

Cross q. 2. What is the name of your firm, furnishing these supplies, and where is it located in Philadelphia?

A. It is in my own name; at 332 Walnut street, Philadelphia. The sign is I. P. Wendell & Co.; but there is no Co.

Cross-q. 3. Do you manufacture the articles in which you deal, to wit, oil and journal-boxes?

A. I do not. I contract for them.

Cross-q. 4. Is the article you deal in secured by patent?

A. It is, partly.

Cross q. 5. Is M'r Sayles an interested party?

A. No, sir.

Cross-q. 6. Have you any business connection with him?

A. No, sir.

Cross-q. 7. When did you first make his acquaintance?

A. Between three and four years ago.

Cross-q. 8. What business relations have called you and M'r Sayles together for the last year frequently?

A. I have sold M'r Sayles a part interest in a patent that I owned.

Cross-q. 9. Is there anything due from M'r Sayles to you for it?

A. No, sir.

Cross-q. 10. What circumstance called you and M'r Sayles and Cudlipp together at the Girard House?

A. We were both boarding there.

Cross-q. 11. How happened you to be privy to the conversation between Cudlipp and M'r Sayles?

A. M'r Sayles requested me.

Cross-q. 12. Why did M'r Sayles want you to be present?

A. I do not know.

Cross-q. 13. What inducement, if any, did Sayles offer Cudlipp to secure his services in looking up testimony in this case?

A. None in my presence.

1098 Cross-q. 14. Then he wished to secure his services without naming any remuneration, did he?

A. I do not know.

Cross-q. 15. What did you understand that Sayles wanted Cudlipp to see Talson for?

A. To see if his testimony would be the same as in the Albany case.

Cross-q. 16. You say Sayles and Cudlipp went to the corner of Broadway and Vesey street, and you went with them. What did they go there for?

A. I understood M'r Cudlipp was to go to see Talson at some office near there.

Cross-q. 17. Did he see him?

A. I do not know.

Cross-q. 18. Were you present at more than one interview between Sayles and Cudlipp?

A. No, sir.

Cross q. 19. Did Cudlipp give Sayles encouragement of entering into his service? - -

A. I think he did; he so impressed me.

Cross-q. 20. But no consideration was offered for such service, or none talked of?

A. Not in my presence.

Cross-q. 21. Had not all this matter of consideration been talked over at a meeting prior to this, at which you had been present?

A. I was never present at any other.

Cross-q. 22. Did you learn from M'r Sayles that he had had interviews with Cudlipp prior to this meeting, at which you say you were present?

A. Yes, sir.

Cross-q. 23. What did M'r Sayles tell you about the conversations or meetings had with M'r Cudlipp?

A. He said he thought he had found a first rate witness in M'r Cudlipp.

Cross-q. 24. Witness about what?

A. This brake case.

Cross-q. 25. Then he wanted M'r Cudlipp as a witness, did he not?

1099 A. I do not know.

Cross-q. 26. Did not M'r Sayles say that he intended to call him as a witness in this case?

A. No, sir.

Cross-q. 27. Did you infer that he intended to call him?

A. Yes.

Cross-q. 28. Did M'r Sayles ever say to you why he did not call him?

A. No, sir.

ISAAC P. WENDELL.

Subscribed and sworn to before me this 29th day of October, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Examination further adjourned to Nov. 4th, 1868, at 10 a. m.

NOVEMBER 4TH, 1868—10 a. m.

Examination further adjourned to Nov. 7, 1868, at 9 a. m.

JOSEPH GUTMAN, J'R,
Examiner, &c.

NEW YORK, *November 7th*, 1868—9 a. m.

Present, M'r Sayles, complainant, and M'r Whipple, counsel for defendant, and M'r Cozzens, counsel for complainant.

RICHARD C. WALCOTT, produced by complainant as a witness:

Q. 1. Have you before been examined as a witness in this case?

A. Yes; I have been examined by the defendant.

1100 Q. 2. In your former testimony in this case (M'r Whipple objects to any further examination of the witness), you spoke of a crate-car, running between Philadelphia and Trenton, which you thought had upon it a double-acting brake. Are you able to state positively how many cross levers, under the body of the car, that double brake had?

A. No, sir.

Q. 3. You spoke also of taking the place of an engineer who was killed, on the 25th of February, 1848. Are you able to state how long it was after you took the place of that engineer that you first saw the double break you referred to in your said previous testimony?

A. I could not say positively how long it was after.

Q. 4. Are you able to state whether it was one year, eighteen months, or two years after you took the place of that engineer?

A. I think it was somewhere along a year. It might have been a little over a year, and it might have been a little under a year. It might have been a year or eighteen months. I never set any of these things down.

Q. 5. Will you state whether it was while M'r Van Rensselaer was assistant superintendent?

A. Yes, sir; I think it was about the time of his first coming on that I saw it. I cannot swear to it, any how. It just appears like a dream to me; that is, I mean the date.

Q. 6. Will you please look at the model, now shown you, which is marked "Hodge Model," and state whether you can now say whether this model is, or is not, a representation of the double brake you referred to in your said previous testimony?

(Objected to, as the witness has already identified the model A as being the one.)

A. I can't say whether this model represents it or not.

Cross-examined by M'r Whipple:

1101 Cross-q. 1. Do you fix the time of seeing this double brake soon after the death of Joseph Cox, or about the time M'r Van Rensselaer came on the road as assistant superintendent?

A. It was somewheres within a year, or somewhere of that time; I can't fix the date; it bothers me to remember the time.

RICHARD C. WOLCOTT.

DAVID H. BAKER, being recalled on the part of the complainant, testifies as follows:

Q. 1. Please state whether since this suit has been pending you have had any interview with M'r J. E. Cudlipp, and, if so, where was it, and about how long ago was it?

A. I have had an interview with him twice, one at his house and one at my house; the one at my house was on Sunday.

Q. 2. In the interview at your house did you say anything to Cudlipp about there being money in this case, or in the double-acting brake patent; and if you did, what did you say?

A. I don't think the brake case was approached at all in the last interview—not to my knowledge.

Q. 3. Did you say anything about it at the other interview; and if so, what did you say?

A. I can't tell the exact words. I told him that there was considerable money in the concern; I may have said that in the course of the conversation. There was very little said, anyway.

Q. 4. What did you mean by that remark, that there was "money in the concern?"

A. I meant that if the patent was sustained, the R. R. Co. would have to pay a great deal of money, or else they would get clear of paying a great deal; the same as I would talk of any man doing business.

Q. 5. Did you say anything to Cudlipp at any time about there being "some money in it for both of us?"

A. I did not.

1102 Q. 6. Did you say anything to Cudlipp at any time about his "using his influence" with Joseph F. Talson for any purpose?

A. I did not.

Q. 7. Did you say anything at any time to Cudlipp about "managing Talson," or that "if he (Cudlipp) could manage M'r Talson, we could probably make some little out of it," or anything to any such effect?

A. The words "we," or "managing," were not brought into the conversation, nor nothing to that effect. I did not say as inquired of in the qu'stion.

Q. 8. In either of those interviews did Cudlipp say anything to you about what was the first double-acting brake he knew of on the New Jersey road; and if so, what did he say?

A. I never heard of any other kind of a double-acting brake from him as being used on the road, except the one I put on and the trial of what was called the Stanley brake.

Q. 9. At any other times than these interviews since this suit has been pending has said Cudlipp stated anything to you about what he knew respecting the use of a double-acting brake on the New Jersey Railroad; and if so, what has he said?

A. Not recently, but I have heard him make this expression, that there was no other brake on the road to his knowledge, other than above specified, viz, the Stanley experiment and the one I put on.

Q. 10. Has he told you that more than once?

A. I cannot say positively, but I think he has. I think he told me so at the interview at his house.

Q. 11. Are you sure that he has told you so at least once?

A. Yes.

D. H. BAKER.

HENRY WATERMAN recalled as a witness on the part of the complainant.

1103 Q. 1. In your former testimony in this case you stated the circumstances of an interview you had with Edwin Lockwood at Bordentown, New Jersey, in 1859—did you know Edwin Lockwood by sight before going to Bordentown to see him on the occasion referred to?

A. I met M'r Lockwood in an interference case in the year 1854, but retained scarcely any recollection of him until the interview spoken of, when I was introduced to him by M'r Dougherty, master mechanic at the time. I had no introduction to M'r Lockwood at my first meeting with him in 1854.

Q. 2. How long had you known M'r Dougherty at the time of your interview with M'r Lockwood, referred to in your previous testimony in this case?

A. I think about six years at that time—when he was foreman for M'r Dunham—I refer to the M'r Dougherty whose first name is, I think, Samuel. He was familiarly called Sam Dougherty.

Q. 3. How intimate had you been with M'r Dougherty during this time?

A. Quite intimate; there was a free, familiar understanding between us.

Q. 4. Did you upon going to Bordentown to see Lockwood at the time you have referred to in 1859, request M'r Dougherty to introduce you to him?

A. I think I did, but I have no positive recollection of how it came about.

Q. 5. How came you to see M'r Dougherty at all when you so went to Bordentown?

A. I went into the locomotive shop at first, and I at once met M'r Dougherty, whom I recognized as my old acquaintance when he was foreman for M'r Dunham, at Thirty-third street in this city.

Q. 6. Were you looking for him when you went into the locomotive shop?

A. I knew that he was employed there and I naturally looked for him at once for the reason that I was most familiar with M'r Dougherty, and I knew he could direct me to the parties that could give me the information that I wanted.

1104 Q. 7. To whom did he take you?

A. To M'r Lockwood.

Q. 8. Is there any doubt in your mind that you saw Lockwood at Bordentown at that time?

A. I have not the least doubt; the circumstances are fresh in my memory.

Q. 9. Did you go to Bordentown more than once to see Lockwood upon the subject spoken of by you in your former testimony?

A. I did.

Q. 10. How many times?

A. Certainly twice, and I think three times.

Q. 11. It has been testified in this case that at the time you went to Bordentown to see Lockwood, as stated in your previous testimony, he (Lockwood) was absent from Bordentown. Is this true?

A. At my first visit to Bordentown I met M'r Lockwood, and this introduction that I have spoken of took place; it is not true that he was absent at the time above asked about.

Q. 12. Do you know a man by the name of Isaac Dripps?

A. I do.

Q. 13. Did you ever, at any time, call upon him at Fort Wayne, Indiana, in reference to the subject of double brakes?

A. I never did; I never was in the town of Fort Wayne.

Q. 14. How long have you known the said Dripps?

A. I have known him since 1847, I think, when he was master mechanic of the Camden and Amboy road. I never was familiar with M'r Dripps, but I was in the habit of stopping at Bordentown and talking of railroad machinery generally, with him.

Q. 15. Did you at any time see M'r Dripps at Trenton, New Jersey; and if so, about what year was it?

A. I did see M'r Dripps at Trenton; I think it was in 1859.

1105 Q. 16. Had that call anything to do with the subject upon which you saw Lockwood, in 1859; and if so, was your call on Dripps before you saw Lockwood or after?

A. I have had two matters of inquiry with M'r Dripps at Trenton—one in which I was defending the railroad companies against the Mathews spark-arrester patent, the other was the Hodge car-brake patent; my memory is not clear now as to dates, and I cannot state positively—the two matters lapped onto each other, but to the best of my recollection and belief I saw him before I saw Lockwood upon this very subject of the interview with Lockwood.

Q. 17. Do you remember at this time, when you so called on Dripps with reference to the subject of the Hodge brake on which you saw Lockwood, where you found Dripps?

A. I do; I found him at his dwelling.

Q. 18. Do you remember what condition of health he was in when you so found him?

A. He was complaining that he was not able to leave his room.

Q. 19. Will you state what was the conversation, or the substance of the conversation between you and him at this time on the subject of the Hodge brake, or on the subject of double-acting brakes?

A. I was endeavoring to get at the history of double-acting brakes on the Camden and Amboy Railroad; he stated that he did not recollect distinctly much about it, or words to that effect; that it was not in his line much; that M'r Lockwood could tell me all about it.

Q. 20. Did he, in that conversation, say anything to you about when he thought double-acting brakes were first used on the Camden and Amboy Railroad; if so, what did he say?

A. I do not recollect that he told me anything.

Q. 21. State how familiar you are with the construction and operation of the single brake and the various forms of double-acting brakes.

A. I consider myself quite familiar with all the forms of brakes above named.

1106 Q. 22. Will you also state what has been your experience as a practical railroad man.

A. Thirty years ago, in the year 1838, I had charge of the machinery of a railway, and was familiar then with all the forms of railway machinery known, and have kept myself posted in all the various machinery as it has been introduced, and I have constructed locomotive engines, railway cars, a dummy engine, and other railway machinery.

Q. 23. Have you ever been master mechanic of the Hudson River Railroad?

A. I have.

Q. 24. Will you please state what is the effect as to the flying back of the crank or windlass wheel in the case of the single-acting brake, acting upon only four wheels, when the brake had been put on and then is let go of, provided there is no pawl and ratchet to hold the brake staff?

A. It will instantly fly back and loosen itself if the parts are free to work.

Q. 25. Will you state what causes this flying back under such circumstances.

A. It is due to the strain and elasticity of the parts, like the bow unbending itself.

Q. 26. State what effect, if any, the springs on the brake bars have upon this flying back.

A. They add to and increase the flying back of the parts.

Q. 27. State whether or not the force with which this flying back often takes place in the single-acting brake is or is not considerable.

A. It is considerable and governed by the force with which the brake is wound up, and the strength of the springs that press back the brake bars.

Q. 28. In respect to this matter of flying back, is there any difference, or any essential difference, in the flying back produced when the brake or windlass staff is not held by anything after the brake has been wound up so as to be applied to the wheels, between the single-acting
1107 brake and the different forms of double-acting brakes known respectively as the Tanner or single centre-lever brake, the Hodge brake, or the Stevens brake ?

A. There is no essential difference. The action varies in degree with the number and elasticity of the parts involved.

Q. 29. Is it ever the case with the single brake that the piece of chain ordinarily used to form a flexible connection between the lower end of the windlass-staff and the rod which runs to the brake lever in the truck sometimes gets kinked or caught around the windlass-staff, so as of itself to hold the brake from letting itself off after it has been applied, and the crank or brake wheel from flying back, assuming as before that the brake staff is not held by any other means after the brake has been so applied ?

A. It is sometimes the case that the chain becomes jammed or caught, for the reason that from the gravity of the chain, if left to itself, it winds itself spirally around the brake staff in a downward direction, and when the length of the slack of the chain and of the parts allows the brake to tighten itself when the spiral coil of the chain is near the bottom of the barrel, the chain jams itself between the last preceding coil and the bottom support of the barrel, and jams itself quite tight.

Q. 30. Does it also sometimes happen with the single-acting brake that, after such a jamming of the chain has taken place so as of itself to hold the brake staff when the brake has been applied as you have stated, that, from some jar or other cause, the chain will free itself again and at once let the brakes off the wheels, and permit the crank or brake wheel to fly back, assuming, as before, that the brake staff has not been held by any other means than the jamming of the chain ?

A. In answer to this question I will state that when the jamming condition that I have above described has taken place, by the jar of the parts if the cars are in motion, it would be sure to loosen itself sooner or later, and allow it to fly back.

1108 Q. 31. Will this also sometimes happen if the jamming is not too tight, even though the car may not actually be in motion ?

A. There may be conditions in which the loosening of the bumpers, by taking off the brakes at any part of the train, or by reversing the locomotive, or by the sudden starting or twitching upon the draw bars, the disturbed relation between the car and the trucks, especially when the brakes are put on, that may by a sudden strain of the parts loosen itself.

Q. 32. Can you give any sort of idea about how many times, say in the course of a year, such a jamming of the chain might occur with the single brake ?

A. It is difficult to answer with any precision.

Q. 33. Is it a thing which may happen often or not ?

A. When the adjustments of the parts are as above by me described, it may occur often, or I should say I would expect it to occur often.

Q. 34. Will you please state whether, from whatever cause you say that the jamming and loosening again, which has been spoken of, may occur, is it or not the fact that it does occur, or is liable to occur frequently upon cars fitted with the single-acting brake ?

A. It will occur and is likely to occur in all cases.

Q. 35. May this same jamming and loosening again of the chain also occur frequently with the Tanner, Hodge, and Stevens double-acting brakes and from the same causes ?

A. It may occur with all the brakes mentioned, and from the same causes.

Q. 36. Will you state, as a practical railroad man, familiar with the different forms of brakes, both single-acting and double-acting, whether from the mere fact that a brake had been wound up so as to apply the brake shoes to the wheels, the brake staff not being provided with any means of holding it, and the brake crank or windlass had at first remained stationary after the brake shoes had been so applied, and had then suddenly flown back, even through with considerable force, a person could tell whether the brake was a single-acting brake or a double-acting brake ?

1109 A. It could not be told with precision under such circumstances whether the brake was a single-acting or a double-acting brake.

Cross-examined by M'r Whipple :

Cross-q. 1. Would you consider a brake in order, in which the chain would jam in applying the brakes to the wheels to check the train ?

A. I should not think it in order. I would have it corrected.

Re examined by M'r Cozzens :

Redirect q. 1. As a matter of fact are not cars the brakes of which are liable to have the chain jam as stated often run in railroad trains ?

A. They are, for the reason that the brake-shoes are constantly wearing, increasing the slack of the chain until it may arrive at the jamming condition without previous notice.

Cross-examined by M'r Whipple :

Recross-q. 2. Would it not be the duty of the brakeman to report the brakes in the condition you have described as being out of order, and would a car be allowed to run until so adjusted as to allow the brakes to work freely ?

A. It would be the duty of the brakeman to report the brake in such condition ; it is difficult to answer the last part of the question. Well, managed railroads are in the habit of repairing and adjusting all such delinquencies as soon as circumstances will allow.

Re-examined by M'r Cozzens :

Redirect q. 2. State whether or not a greater or less degree of 1110 jamming of the kind stated might not often occur upon cars considered in sufficiently good order to be run in a train ?

A. It might.

Recross-examined by M'r Whipple :

Recross-q. 3. And yet such brake would be out of order, would it not, in your opinion ?

A. It would be out of order.

Re-examined by M'r Cozzens :

Redirect q. 3. Would it be so much out of order that, notwithstanding, it might not be run in trains ?

A. It might not be so much out of order that it might not be run in trains successfully.

Cross-examined by M'r Whipple:

Recross-q. 4. Would it be a successful brake in which the chain would jam in applying the brakes to the wheels?

A. It would be a successful brake, but it would only require the loosening action of the brakeman.

HENRY WATERMAN.

THOMAS SAYLES, complainant, recalled.

Q. 1. J. E. Cudlipp, a witness in this case on the part of the defense, testified to interviews had between you and him on the subject of brakes. Will you state what, if anything, was said between you at any of those interviews about what Cudlipp in his testimony has called the Bachelder & Thompson brake?

1111 A. I do not remember of anything being said between us about the Bachelder & Thompson brake. The Tanner brake was spoken of, but I do not remember of Bachelder & Thompson's name being mentioned at all.

Q. 2. In those interviews, what, if anything, did you say to Cudlipp you wished him to do on your behalf in reference to this case?

A. I said to him that I would like to have him look up testimony for me in a suit I had with the Chicago & Northwestern R. R. Co.; that I had understood that he had been on the New Jersey R. R. a long time, and of course must be acquainted with a great many of the men that had been on that road, and the Camden and Amboy road, from 1843 to 1850, or thereabouts. I told him that I had the most of R. R. Co.'s in the United States combined against me in this suit, and I was obliged to go to men employed by railroads to prove the facts in regard to my brake matter, and these railroad men that he was acquainted with would be more likely to talk freely with him, and tell him what they knew about it, than they would with me. I told him I wanted somebody to look up evidence, that was smart, and was acquainted with the men on the Camden and Amboy and the New Jersey roads. I told him that Joseph F. Talson testified in 1854, in a case of the New York and Erie R. R., about these double-brakes, and that I supposed what he testified to at that time was true. I showed and read to him Talson's evidence in that Erie case, and I wished him to look up evidence for me to show the facts as to the use of double-brakes on the New Jersey road and on the Camden and Amboy road.

Q. 3. Did you say anything to him, at any of these interviews, about having $50,000 to spend in this case and were not going to be mean about it?

A. I did not.

Q. 4. At either of these interviews, did you say anything to him about his being the only man who could influence M'r Joseph F. Talson?

A. I did not.

Q. 5. In either of these interviews, did you say anything to him about wishing him to see Talson, and if so, what did you say?

1112 A. There was considerable said about Talson's testimony in the Erie case, and his looking up testimony against me in this present case, and I recollect that Cudlipp asked me if I knew what testimony Talson had got against me, and I told him I did not any further than testimony that had been put in the case, and I know he said that if he could see Talson he could find out what testimony he had in the case, as he said Talson was a brother-in-law of his and would tell him all about it. And whether I asked him to see Talson, or whether he first proposed to see him himself and ascertain what he could from him, I am unable to say.

Q. 6. Is that all or the substance of all that was said between you at those interviews about his seeing Talson?

A. He did call on me at the Girard House, in the latter part of August, 1867, and had a conversation with me there and spoke of calling on Talson the next Sunday, and then asked me if I knew where Talson's office was or his place of business. I told him I did, and he said he would go and see him then if he was at his office, and he did go. I went with him as far as the corner of Vesey street and the Astor House, and showed him where Talson's office was. I saw him after he called to see Talson. He said Talson was not in town. I think he said he was in Baltimore. He then said he would go and see Talson on the Sunday following. That, I think, is the substance of the talk I had with him about seeing Talson until after he had seen Talson.

Q. 7. What conversation did you have with him after he had seen Talson?

A. I saw him a few days after. He said he had seen Talson. He
told me that Talson told him that he had found testimony that was
sure to defeat my patent; that he had found testimony to show that
the centre-lever double-acting brake had been used on the Long Island
road a long time before my brake was invented. I think he said before
the Tanner brake was invented. He said Talson told him that they had
already taken testimony enough to defeat the patent. He also
1113 said that Talson said that he wouldn't give anything for the Tanner patent, and he (Cudlipp) said he would rather not have any-
thing to do with it; that is, looking up testimony in the case.

Q. 8. In any of these interviews did you say anything to Cudlipp about wishing him to influence Talson so far as to hold back what evidence he (Talson) had collected for the railroad companies, and to go no further with his (Talson's) own evidence than to answer questions as they were put to him?

A. I did not. I never heard anything about that until I heard Cudlipp testify to it in this case.

Q. 9. What, if anything, did you say to Cudlipp at any of these interviews about giving him 10 per cent. of the income of the brake or patent?

A. At one of the interviews that I had with him I told him that if he would take hold of the matter and help me look up the evidence, that if I succeeded in the suit, I would give him 10 per cent. of the net proceeds for his services.

Q. 10. Please state, specifically, what you meant and said to him this 10 per cent was to pay for.

A. I told him if he would go to work and assist me in looking up evidence to prove the facts in the case, as had been testified to by Talson in a previous case, which I supposed was true, and I told him that I supposed it was a big job, for we would have to go all over the country to look up men that had been on the Camden and Amboy Road, and on the New Jersey Road, between 1843 and 1850, for we had to get those facts from men who had been on those roads and knew about the brakes that had been used on those roads between 1843 and 1851. I told him they had proved on the other side that a brake like the Tanner brake had been put on a car on the Camden and Amboy Road in 1853, by a number of witnesses. I told him I thought these witnesses were mistaken about the time the brake was put on a Camden and Amboy car, and it was for looking up the witnesses to prove the facts in this case that I proposed to give him the 10 per cent. for, if I succeeded in the case.

1114 Q. 11. Did you in any of those interviews say a word to Cudlipp, or intimate to him, that you wished any part of this 10 per cent., or any money whatever to be used to influence Talson, or induce him (Talson) to hold back anything?

A. No; nothing of the kind.

Q. 12. In any of these interviews did you say anything to Cudlipp about his being at liberty to divide this 10 per cent. with anybody?

A. I did not.

Q. 13. You have referred to the interview at the Girard House. Please state what the conversation between you and Cudlipp at that interview was.

A. The conversation between us there was about the testimony that Talson gave in the Erie case, and about Cudlipp looking up testimony for me of the same nature that Talson testified in the Erie case, and to show that the double-acting brake was not used on the Camden & Amboy Road before 1850 or 1851; that was the substance of our conversation there.

Q. 14. Then it did not differ essentially, did it, from the conversation you had with him at the interviews previous to that?

A. I don't remember that they differed very materially. I now recollect that at the Girard House interview, and also at the first interview I had with him, he said that when he first went on the New Jersey Road he saw a brake that he was told had been tried on a car by one Stanley some time before he went there, and had failed and was taken off the car and lay somewhere in the shop over head. He had seen that brake lay there for a long time. He said that was the only double brake he ever saw or heard of until David H. Baker put on a car on the New Jersey road in 1850 or 1851.

Q. 15. Who was present at the conversation at the Girard House?

A. Isaac P. Wendell.

Q. 16. After the conversation at the Girard House, where did said Wendell go?

1115 A. He went with Cudlipp and me up to the corner of the Astor House and Vesey street; I don't know where he went after that.

Q. 17. During the walk from the Girard House to Vesey street, how near was Wendell to you and Cudlipp?

A. We three walked along side by side.

Q. 18. After the interview with Cudlipp at the Girard House, did Cudlipp at any subsequent interview say anything to you about his not being able to influence Talson any one way or the other?

A. I never heard anything of the kind until I heard him testify to it.

Q. 19. You have stated what Cudlipp said about what was the first knowledge he had about double-acting brakes on the New Jersey Railroad. About when was the first time that he made to you any different statement on that subject, and what was such different statement?

A. It was in February, 1868, just before I commenced taking testimony here in New York. I called on him, expecting from what he had previously told me he knew about this brake matter that he would be one of my best witnesses. At that interview he told me that he believed they had some kind of a double-acting brake on a car on the New Jersey Road, that he was repairing a short time before he was married; that while he was repairing this brake an engine backed up against this car and broke both of his collar bones; he said he recollected very distinctly how that brake was arranged in the truck, and marked out for me on the blank leaf of a book, the brake that he was repairing at the time he was hurt. I asked him if he was positive that the little drawing that he made represented the brake correctly that he was repairing when he was hurt. He said it did; he recollected how the brake was arranged as well as though it was a month ago.

Examination adjourned to Nov. 9th, 10 a. m.

1116 NOVEMBER 9TH—10 a. m.

Present, counsel as before, and complainant in person.

Q. 20. After he had made that little drawing, did you say anything to him about it; and, if so, what did you say?

A. After he had made the drawing, I asked him if he was sure that that was a correct representation of the brake that he was repairing on the car; he said it was, and he recollected it as distinctly as though it were a month ago. I then showed him that it would be impossible for a brake arranged in the trucks like the drawing he had made, to be applied to both trucks by means of a centre lever. I showed him that if the brakes were applied or operated upon by means of the centre lever, that the brakes would be drawn from the wheels instead of being pressed against them.

Q. 21. What became of that little drawing, if you know?

A. The drawing that he made was in a book. I took a piece of paper and made an exact copy of his drawing from the book, which drawing was filed as an exhibit in this case, in M'r Cudlipp's testimony. I think it was marked "Cudlipp's Exhibit."

Q. 22. When did you make that copy?

A. At the time I had the talk with Cudlipp, at the same time that he made his drawing or a few minutes after, it was in his presence, and I made it on the book that he made his drawing on, his drawing being before me.

Q. 23. What did you make this copy for?

A. I made the copy so as to be sure and not forget the exact arrangement of the brake he had drawn, thinking at the time, as I told him, that he was mistaken about its being connected with the centre lever.

Q. 24. Do you know what has become of the drawing which Cudlipp made at that time in the book?

A. I do not; I have not seen it since that time.

Q. 25. Did you ever see a man named Isaac Dripps, and did you ever call on him; and, if so, when and where?

A. I did see him at Fort Wayne, Indiana, in the month of November, 1867.

1117 Q. 26. Please state what conversation, if any, took place between you and said Dripps at that interview.

A. I asked M'r Dripps if he could tell me when double-acting brakes were first used on the Camden and Amboy cars. He said he could not tell when they first used them there. His recollection was that they commenced using them there somewhere about 1850; that he was not positive about that even. I asked him which was first used, the Hodge brake or the centre lever brake. He said he could not tell how the brake was arranged.

Q. 27. Did he say anything to you about the Tyler car; and, if so, what?

A. I asked him if he remembered the Tyler car. He said at first that he did not; but after I explained to him of its having a privy on the platform, he said he believed he recollected something about it, but could not tell what kind of brakes it had on.

Q. 28. Did you mention your name to him at that interview?

A. I did. I introduced myself to him when I went in. I never had seen him before to my recollection. I asked him if his name was Dripps; he said it was, and I told him who I was.

Q. 29. Did you at any time in that conversation mention the name of Waterman in any way, or did you tell him that your name was Henry Waterman?

A. I do not remember that Henry Waterman's name was mentioned at all. I certainly did not tell him that I was Henry Waterman.

Q. 30. Will you state any circumstance within your knowledge that has recently occurred in Chicago in relation to the witness Patrick Flanagan, who has testified on your behalf in this case?

A. About the middle of October last I heard of a man by the name of Pat—a man that was called Pat. who was an engineer on the Chicago and Northwestern Railroad, and I was unable to learn his other name; 1118 and I went to the machine shop to the master mechanic, M'r Tilton, and he told me that his name was Pat Flanagan, and that he was on the south branch on an engine. This was some two or three miles south of the machine shop. I went immediately to the south branch to see Flanagan. When I got there Flanagan had a telegraph dispatch from this Tilton, master mechanic, telling him to go immediately down to M'r Blodgett's office; and he said he could not talk to me much there, as he must go down immediately to see Blodgett, who was the attorney of the company. I told him I would go down with him. We got in the horse-car together and went down to Blodgett's office. Blodgett was not in, and we waited until he came in. I introduced Flanagan to Blodgett, and Blodgett asked him what he came there with Sayles for. Flanagan said that he did not know anything about Sayles; he supposed he wanted to see him about a man that was killed on the road a short time before. I then told Blodgett that Flanagan had just told me that he recollected the old Tyler car well; that he had often applied the brakes on it, and that he was positively sure——

(M'r Whipple objects to what Flanagan told the witness.)

that it had the single brake on, and that Flanagan was the man whose testimony I wished to take that afternoon at 2 o'clock. Blodgett turned to Flanagan and told him that if he went and testified in the case on my request that day he could leave the company's employ at once. I told Flanagan that if the company discharged him for going and testifying to the facts in the case——

(M'r Whipple objects to what the witness told Flanagan.)

I would pay him the same wages they were paying until he got as good or better job. I asked him then to come up to M'r Hoyne, the commissioner's office, at 2 o'clock that day. He said he thought he would. This talk all occurred in M'r Blodgett's presence, in his office. 1119 M'r Flanagan did not appear there to give his evidence on that day, and on the next morning I got a subpœna from M'r Hoyne, and had him subpœnaed, and he came and gave his evidence.

Cross examined by M'r Whipple:

Cross-q. 1. There has been much testified to in this case by this and other witnesses relating to M'r Talson, and what he testified to at Albany; will you please state when you first saw or became acquainted with M'r Talson?

A. I cannot tell when I first saw him. It was, however, a short time before the suit with the New York and Erie Railroad was tried, in October, 1854.

Cross-q. 2. Where did you then see him?

A. I cannot tell whether it was in New York or in Albany that I first saw him.

Cross-q. 3. When you saw him in Albany, and before the trial in which he testified, did you have him examined by your counsel, M'r Keller, or rather the counsel for the complainant in this case?

A. I do not know that he was examined by M'r Keller; I do know that he saw M'r Keller in Albany, and told him what he knew about the matter, for I was present and heard it.

Cross-q. 4. Has not M'r Keller testified in this case that he, Talson, was brought to him, and that he had a full and careful conversation with him, Talson, in reference to the kinds of brakes that had been used on the cars of certain railroad companies in New Jersey?

A. I do not know that M'r Keller has testified to all of that. I think he has to the substance of it.

Cross-q. 5. Has he testified that he, Talson, was brought to him, Keller?

A. I think he has.

Cross-q. 6. And did this take place before he was put upon the stand as a witness for the defendant?

A. I think it did.

1120 Cross-q. 7. Was there a model put into the case by M'r Talson? If so, did that model represent a double-acting brake made up of a centre lever attached to the body of the car, with four connecting rods to connect the levers in the trucks and the windlasses in such a manner as to enable the brakeman to apply the brakes of both trucks from either end of the car?

A. There was a model put in the case by the defendant said to represent a brake put on by one Stanley, or by Talson. That model represented a brake that would apply the brakes to both trucks from a windlass at either end. I cannot recollect all the details of the mechanism of the brake. I do recollect that the brake was quite different from the Tanner brake in many respects, so much so that I thought it was not a practical brake; and whether it had one centre lever or two centre levers I am unable to say. I know it was quite complicated within the trucks. I cannot say whether there were four connecting rods.

Cross-q. 8. Have you not testified that it was your impression that there were four connecting rods represented in said model?

A. I think I have; and it is now my impression that there were, although I am not positive about it.

Cross-q. 9. Has not Samuel Blatchford testified in this case, from notes taken at the time of that trial, that the model in question exhibits a double-acting brake with lever in centre?

A. I do not remember particularly about that.

Cross-q. 10. Have you not had the notes referred to in your possession during most of the time since that trial, and yet do not remember so important a feature as the one called in question?

A. I have had the notes in my possession most of the time. I have not read them over for a long time. The notes show for themselves what they are.

Cross-q. 11. Does the Tanner centre-lever patent, so called, claim any particular arrangement of mechanism in the centre of the car?

1121 A. I do not know that it does. The letters patent will show for themselves.

Cross-q. 12. Was not the lever and the connecting rods in the model exhibited by the defendant on the trial at Albany the same as the lever and connections in the model filed in the Patent Office by Henry Tanner in 1852?

A. I think they were not exactly the same. I think there was some difference, but I am unable to state what that difference was. I do remember that that brake was so arranged that if it had been continued in practical use on the New Jersey Railroad, that my opinion was at the time that it might have defeated the Tanner patent.

Cross-q. 13. Were the two models alike in this respect, a centre lever with four connecting rods?

A. I cannot tell positively.

Cross-q. 14. What is your impression?

A. My impression is that there was a difference. What that difference was I cannot say.

Cross-q. 15. I have asked you whether they were alike in this respect, as I have already stated, a centre lever and four connecting rods?

A. I am unable to say whether they were alike or not in that respect. I think there was some difference.

Cross-q. 16. Name the difference.

A. I cannot.

Cross q. 17. In M'r Talson's testimony at Albany did he use the word abandoned?

A. I do not now recollect particularly.

Cross-q. 18. Did he say in his evidence at that time that he had testified to all he knew about double brakes while on the New Jersey road?

A. I do not now recollect that he did.

Cross-q. 19. Was there any question of this character put to him while on the stand?

A. I do not know whether there was or not.

Cross-q. 20. Was there anything in his testimony at Albany favorable to the defendant by whom he was called to testify?

1122 A. I remember that I thought at the time that there was not anything of importance.

Cross-q. 21. What he was to testify was all talked over and understood by him, M'r Keller, and yourself, was it not, before he was put upon the stand?

A. All I know about that is that I saw M'r Talson. He told me what he knew about the brake being used on the New Jersey road, and I asked him if he would not call at M'r Keller's or M'r Blatchford's room, and I told him where it was, and he said he would, and he did call there, and told M'r Keller what he knew about it, as he stated at the time that he had told all he knew about the use of double brakes while he was on the New Jersey road.

Cross-q. 22. Was Talson recalled at that trial? If so, what did he testify to on the recall?

A. I think he was recalled. I am unable now to say what he testified to when he was recalled. I have had so many other matters in my mind for the last day or two that I could not say at this moment.

Cross-q. 23. Do you know anything that he testified to in detail at that trial?

A. I do.

Cross-q. 24. Please take the matter up in detail.

A. He testified on that trial that one Isaac Newton Stanley put a brake on a car on the New Jersey road in 1842, and that it was tied up with strings. That the brake failed and did not go into use. That he afterwards took the brake off and applied it mechanically. That he strengthened it; that he added a lever; that they tried the brake; that

it ran to Philadelphia, or opposite to Philadelphia, two or three times; that it may have run more and may have run less than three times; that after it had been on the car about a week it was taken off and the single-foot brake put on in its place; that the single-foot brake was continued on all the cars up to the time he left the road, which was in August, 1849. He stated that the Griggs brake did not go into use on the road. He said that there was a double brake put on a tender
1123 which could not be operated from either end, and did not have a transverse lever under it, only single connecting rods.

Cross-q. 25. All this that you have testified to was arranged between you and M'r Talson and your counsel that he, Talson, should testify to when put upon the stand by defendant, was it?

A. I know of no arrangement. I merely asked Talson what he knew about it, and he told me, and I asked him to tell M'r Keller.

Cross-q. 26. Did he tell M'r Keller in your presence?

A. He did.

Cross-q. 27. What proceedings have you caused to be instituted against M'r Talson within the last year?

A. I have made an affidavit which was filed with a commissioner, with several other affidavits, and M'r Talson has been arrested on the charge of perjury, I believe, in regard to matters that he has testified to in this brake case, in reference to the Isaac Newton Stanley brake, or the one put on by said Talson.

Cross-q. 28. Who was instrumental in procuring the other affidavits you speak of?

A. I was myself.

Cross-q. 29. Where was Talson arrested?

A. In Chicago, Illinois.

Cross-q. 30. At whose instigation in that place?

A. The marshal here in New York told me that his deputy had seen Talson at his house in New Jersey, and Talson had agreed to come over here the next morning and give bail, but did not come as agreed, and he had heard that he had gone to Chicago. I told him I was going to Chicago, and he said that he would write a note and send a warrant to the marshal at Chicago, and he did so. He sent it by me.

Cross-q. 31. Did you give the warrant to the marshal for his arrest in Chicago?

A. I did.

Cross-q. 32. Has M'r Talson had a hearing in that case; if so, to what extent?

A. There has been some testimony taken on the part of the government. It is not yet closed.

1124 Cross-q. 33. When was this case first set down for a hearing?

A. My impression is that it was in September last.

Cross-q. 34. Who has had the management of the case on the part of the government?

A. S. D. Cozzens.

Cross-q. 35. Have you also been an active party?

A. I have.

Cross-q. 36. Is S. D. Cozzens pecuniarily interested in the Tanner patent?

A. I understand that he is somewhat in the extension of the patent.

Cross-q. 37. Has the United States attorney had anything to do with this case; that is, in taking proofs?

A. I do not think he has.

Cross-q. 38. Have you called upon John H. Jobes, a witness for defendant in this case?

A. I have seen him.

Cross-q. 39. For what purpose?

A. I called on him for the purpose of ascertaining whether he was sure as to the time he first saw a double-acting brake on the New Jersey road, and he told me that he was not positive as to the time; it might have been earlier and it might have been later than he stated in his testimony given in this case; and I had thought of calling him as a witness in this brake case.

Cross-q. 40. Did he state to you that he was in doubt whether the brake testified to by him was used in Talson's time or in Baker's?

A. I do not now recollect particularly what he said about that.

Cross-q. 41. If the brake was used in Talson's time, why should you wish to call him as a witness?

A. I had my reasons for wishing to call him, as I had been advised by my counsel in regard to the testimony of many other witnesses that had been examined by the defendant, and I think that it would be hardly proper for me to state to the counsel of the defendant what my
object might have been in calling him.

1125 Cross-q. 42. Was not M'r Jobes very clear in his mind that the
brake to which he has testified in this case was used in Talson's
time; that is, prior to August, 1849?

A. I do not remember particularly what he said as to the time it was used, only that it might have been earlier or later than he stated in his testimony that he thought he saw it.

Cross-q. 43. Have you seen James S. Gamble, a witness for defendant in this case? If so, for what purpose?

A. I have seen him, and for the same purpose that I saw Jobes.

Cross-q. 44. What did you learn from him about the use of a double brake on the New Jersey road while he was conductor on the Philadelphia train?

A. He told me he thought there was a double brake on a car on the train on which he was conductor.

Cross-q. 45. Did he express himself as having any doubt in his mind as to whether there was such a brake in use in the time spoken of?

A. I do not know that he did.

Cross-q. 46. What other witnesses have you seen who have testified for the defendant in relation to the use of double brakes on the New Jersey Railroad?

A. I saw Bernard Hughes some time last spring, only for a few moments. I asked him if what he testified to in Albany, in 1854, was true. He said it was; every word of it.

(Answer objected to as not being called for by the question.)

I do not now remember of seeing any others that testified particularly as to the New Jersey brake on the part of the defendant.

Cross-q. 47. Have you seen any witnesses who have testified for defendant in this case of the use of a double brake on the Camden & Amboy road? If so, whom, and for what purpose?

A. I have. I have seen Joseph Capner, John Conover, William
1126 Coulter, Charles Cox, Henry H. Disbrow, Thomas Herburt,
George Stockham, George W. Thompson, Charles Yundt, and
Richard C. Wolcott. I may have seen some others. I had understood that some of these men had changed their minds since they were examined as witnesses; that they thought that they were mistaken in some portions of their testimony, and I called on them to ascertain what their

present recollection of the facts in the case was, and, if I found that the change would be any benefit to me, my intention was to call them as witnesses.

Cross-q. 48. Name those witnesses who have changed their minds since giving their evidence in this case.

A. I believe Charles Yundt, Joseph Capner, Henry H. Disbrow, and Richard C. Wolcott have somewhat changed their minds, and have so testified, or their testimony will show whether they have changed their minds or not. I believe those are all that I remember.

Cross-q. 49. Any of these witnesses already named do you intend to call? If so, name them.

A. I do not know whether I shall or not; it will depend on the advice of my counsel.

Cross-q. 50. Do you intend to call John Conover?

A. I have not decided to.

Cross q. 51. Have you decided not to?

A. I do not know that I have decided anything about it.

Cross-q. 52. Do you intend to call any of the witnesses herein named to testify in Philadelphia to-morrow, or thereafter, as soon as parties can be heard?

A. I do not know whether I shall or not. I have not decided to. It will depend on circumstances.

Cross-q. 53. Who informed you that some of these witnesses named by you had changed their minds since they had testified?

A. Friends of mine, whom I do not wish to name.

Cross q. 54. You will please name them.

A. Some of the parties are in the employ of the New Jersey railroads,
and did not wish to have their names mentioned in the matter, as
1127 it might get them into trouble with their employers; therefore I
do not wish to name them.

Cross-q. 55. Does this change of mind in the witnesses named by you amount to a contradiction of what they had already sworn to as being the truth in the case?

A. That is not for me to decide. The testimony will show for itself.

Cross-q. 56. Have your friends been instrumental in working upon the minds of these witnesses with the view to induce them to contradict their evidence already given?

A. Not that I know of.

Cross q. 57. Have you been instrumental in any work of this character?

A. I do not know that I have. I have talked with some of the men, and have asked them what their present recollection of the facts was, and have asked them to come and testify to it, and they have done so.

Cross-q. 58. Then no undue influence over these men has been exercised by you or your friends to induce them to testify, has there?

A. Not that I am aware of.

Cross-q. 59. Have you sworn truly on all points on which you have been interrogated in this case?

A. I have, according to my best recollection of the different matters as I have testified.

Re-examined by M'r Cozzens:

Redirect q. 1. Have you caused inquiries and efforts to be made to find the model which was put in by the defendants at the Albany trial in 1854? and, if so, state what the result was.

A. I have; and have never been able to learn anything about what had become of the model.

Redirect q. 2. State what, if any, advice M'r Keller gave you at or before the Albany trial, in reference to the effect in the case of the Isaac Newton Stanley or Talson brake; and state what legal reasons, if any, he gave you as the grounds of such advice.

(Objected to.)

1128 A. M'r Keller told me at the time before the trial, or at the time of the trial, that inasmuch as the trial of that brake was a failure, that the court would hold it as an abandoned experiment, and he thought it would not affect my patent; but he said that although it was quite different from the Tanner brake, if it had continued on the road in successful use, it might have defeated my patent.

And being further cross-examined by M'r Whipple, he deposes and says:

Recross-q. 1. What did John Conover say when you called upon him?

A. He said he thought there was a double brake on the Tyler car at the time Tyler took his trip over the road. He said that he did not think that he was mistaken, and yet it was possible that he might be.

Recross-q. 2. Did he think it very probable that he was mistaken?

A. I do not know that he said as to that. He seemed to think that he had testified as to the truth in the matter.

Recross-q. 3. What did Charles Cox say when you called upon him?

A. He said, after reading over his testimony, as I showed it to him as it is printed in defendant's testimony, that he did not see how he could change his testimony very well, as he had testified that he saw the wheels of the car slip on the track, while he was on that road, and he left there, I think he said in 1850. He said he could not tell whether it was the Hodge brake or the centre-lever brake.

Recross-q. 4. What did Thomas Herbert say when you called on him?

A. He said but very little; he was busy; and I do not think I talked with him more than ten seconds. I asked him a question, and he went under a car to attend to something, and as I was in a hurry I left as he went under the car.

Recross-q. 5. What relation, if any, between Thomas Herbert and the one who has testified in this case?

1129 A. I do not know.

Recross-q. 6. What did George Stockham say when you called on him?

A. I did not call on him; I met him accidentally at a hotel in Bordentown. I do not remember particularly.

Recross-q. 7. Did he say anything favorable to the complainant in this case?

A. I do not remember that he did.

Recross-q. 8. What did George W. Thompson say when you called on him?

A. I met him at the hotel in Bordentown, also. We talked some in regard to the testimony in this case. He said he had testified according to his best recollection. He said that it was very evident that some of the witnesses were mistaken, and he said he did not know which side it was.

Recross-q. 9. Did he say to you that he thought he was mistaken in the evidence he had given?

A. He did not. He said it was possible he might be; but he had testified to his best recollection at the time.

Recross-q. 10. Did he use the word "possible"?

A. He did, and at the same time said he hardly thought he was mistaken; he certainly testified to the best of his recollection at the time.

Recross-q. 11. Have you named all the witnesses that have been examined by the defendant in this case, called upon by you to see if they had not changed their mind?

A. As I stated before, I may have seen others.

Recross-q. 12. Do you intend to call as a witness any one whose name you have not mentioned?

A. I expect to see some to-night, or to-morrow morning, that have been called by the defendants, and after I see them I shall decide whether to call them or not.

Recross-q. 13. Please name them.

A. I had rather not name them just now.

Recross-q. 14. I insist.

A. And I refuse.

Recross-q. 15. Was one of your informing friends named William Quigley?

1130 A. No, sir.

Recross-q. 16. D. T. Jeffries?

A. No.

Recross-q. 17. Has he been lately discharged from the Camden and Amboy road?

A. I do not know if he has.

Recross-q. 18. Do you know that he has not?

A. I do not know that he has not.

Recross-q. 19. Is Henry Waterman one of your informing friends?

A. No; I think not.

Recross-q. 20. Do you know that he is not?

A. I do.

THO'S SAYLES.

Subscribed and sworn to before me this 9th day of November, 1868.

JOSEPH GUTMAN, J'R,
Examiner, &c.

PHILADELPHIA, *Nov.* 10, 1868.

WILLIAM CRIM sworn.

(Counsel for defendants objects to any further examination of this witness at this stage of the case.)

Q. 1. Have you been examined before in this case on the subject of brakes on the Camden and Amboy road?

A. Yes, sir.

Q. 2. Was that examination in New York?

A. Yes, sir.

Q. 3. When you were returning home from the examination, who was with you?

A. Charles Yundt.

Q. 4. When so returning with said Yundt, did you talk over your examination in New York; and, if you did, did you come to any conlusion about it; and, if so, what was the conclusion?

1131 A. Yes, sir; we did talk it over. We were talking it over, and I told Yundt I thought we were both mistaken. We had both spoken about the double brakes, and I told him I thought they were not connected so that one truck would work with the other; they were separate brakes. After I came home I studied the thing over so that I might be certain. I don't know that I am certain yet. I was in the Camden and Amboy yard and I thought I would just look at the cars and see whether I was mistaken or no; and I examined them and found the long rod running clear through the car—the brake-rod—and I came to the conclusion that that rod was not there—that is, was not on at the time that I was on the Camden and Amboy road.

Q. 5. Now that you have so thought the matter over, state what kind of brake you now say was on the car you spoke of in your examination in New York, on which the rod fell down on one of the excursion-trains, and also what kind of a brake was on the John Tyler car, which you also spoke of in said New York examination.

A. Well, sir, it was called a double brake. But this double brake, as it was called, had a brake at both ends of the car, and each brake was separate, and one brake didn't brake all the wheels—both trucks—one brake broke on one truck. One brake could only stop the wheels in the truck. If there were three pair of wheels in the trucks the brake would brake on the front and back wheels.

Q. 6. Then, will you now say whether, while you were on the Camden and Amboy road, there were any brakes on the cars of that road in which one brake would brake all the wheels of the car from one end of the car?

A. I can't say certainly. I don't think there were any while I was on the road. I left in 1850.

Q. 7. Will you state what was the first brake acting on all the wheels of the car, from one end of the car, which you ever saw, and state whether it was before or after you left the Camden and Amboy road that you saw it?

1132 A. The first I think I ever saw, to the best of my recollection, was on the Camden and Atlantic road where I am now; that I took notice of this was as after I left the Camden and Amboy road.

Q. 8. Please state whether there is any model now present which is like the brake you so saw on the Camden & Atlantic road.

A. It was not like this model (Hodge brake), but was like the Stevens brake, the levers being upright in the trucks, and being connected through by one rod so as to work from either end.

Q. 9. Will you state how many brakemen you now say were required to put on all the brakes at the same time on the John Tyler car, and on the car on which the rod fell down on the excursion-train, and which two cars were spoken of by you in your examination in New York?

A. It took two brakemen, one on each end. If one man did it he would have to run through the car.

Cross-examination waived by counsel for defendants.

WILLIAM CRIM.

Sworn to and subscribed before me this 10th day of November, 1868.

W. GRIER HIBLER,
U. S. Commissioner.

ASHER PENCOST produced and sworn.

(Any further examination of this witness at this state of the case objected to by counsel for defendants.)

Q. 1. Have you before been examined in New York on the part of the R. R., the defendants in this case?

A. Yes, sir.

1133 Q. 2. Will you state whether, since you were so examined, you have thought this matter over; and, if so, state whether your reflection upon it has caused you in any respect to change your mind on the subject.

A. I have thought the matter over, and I have talked with my old comrades who was with me on the road at the time, which has convinced me that the brake on the Tyler car in 1843 was not connected; there was two ends, and a brake on each end, but was not connected in the centre, to the best of my knowledge.

Q. 3. How many trucks do you now say one of these brakes on the Tyler car would brake on?

A. To the best of my knowledge, one.

Q. 4. About what year, as nearly as you can state, do you now say the first double brakes, connected so that one man from one end of the car could apply all the brakes at one time, were used on the Camden and Amboy road?

A. I think I should say about 1852 or 1853; I can remember that; I can't say certain—somewhere about there.

Q. 5. Please state who talked to you about these double brakes being connected before you was examined in New York, and from whom you first got the idea that these brakes were so connected in 1843, and afterwards?

A. M'r Andrew Rybow; he is car inspector of Camden and Amboy road, at Camden.

Q. 6. What did he say to you about it?

A. He asked me if I didn't remember the Tyler car. I told him I did; that I was brakeman on it when John Tyler went through. He then said M'r Edwin Lockwood wanted to see me, and asked me when I would be home; I told him on Thursday night. M'r Lockwood did not come, but sent M'r Ryhow; he was in my house. We had quite a talk about the brake. I told him I couldn't tell exactly; it was a double brake, but I couldn't tell exactly. He then said M'r Lockwood would send me a pass to go to N. Y. I told him that I didn't think I could be of much service to him, as I didn't remember much about it.

Q. 7. Did M'r Ryhow say anything about there being a suit pending about these brakes?

1134 A. Yes, sir; well, I could not tell exactly what he did say. He said there was a suit; that these parties had sued the Camden and Amboy Company, claiming $50 a car for every car it was used on; and then he began to count up how much it would come to; he said how much it come to, but I don't recollect how much.

Q. 8. Did he say anything about it being important for the Camden and Amboy Co. to defeat the patent; if so, what did he say?

A. Yes, sir. I don't recollect what he said. I recollect he said it was a big thing for the company.

Q. 9. Did he say anything about what would happen if the patent was not defeated?

A. I don't recollect his saying anything about it.

Cross-examination waived by counsel for defendant.

ASHER PENCOST.

W. GRIER HIBLER,
U. S. Commissioner.

JAMES SEEDS produced and sworn.

(Further examination of this witness objected to by counself or defendants.)

Q. 1. Have you been examined before in this case?

A. Yes, sir.

Q. 2. Since you was so examined have you thought over this brake matter, and, if so, will you please state when, you now say, to the best of your recollection, you first saw on the cars of the Camden and Amboy R. R. a brake so constructed that one man could apply all the brakes of the car at the same time from one end of the car?

1135 A. Somewhat, sir. I think, sir, it was somewhere from 1851 to 1855 that I first saw such a connected brake.

Q. 3. Before this time had you seen cars on the Camden and Amboy road which had a brake on each end of the car, but which brakes were not connected?

A. Yes, sir.

Q. 4. What did the R. R. hands call these brakes?

A. Well, I have heard them called double brakes; but I don't recognize them as double brakes unless they are connected.

Q. 5. With these so-called double brakes which were not connected, how many men did it take to apply all the brakes of the car at the same time?

A. It would take two, sir; one at each end.

Cross-examination waived by counsel for defendant.

JAMES SEEDS.

Sworn to and subscribed before me this 10th day of November, 1868.

W. GRIER HIBLER,
U. S. Commissioner.

1136, 1137

1138 *Testimony on the part of complainant, taken at Buffalo, January 21st, 1869.*

Present, S. D. Cozzens, esq., counsel for complainant, and S. M. Whipple, esq., counsel for defendant.

THOMAS P. GROSVENOR, being called and sworn, deposes as follows:

1. Question. What is your name, age, residence, and occupation?

Ans. Thomas P. Grosvenor; age, 49; reside in Buffalo; am a counsellor-at-law.

2. Question. Do you remember an action at law brought in the name of Henry Tanner, upon what is called the Tanner car-brake patent, against the New York and Erie Railroad Company, and tried in Albany in 1854, and were you one of the counsel engaged in that trial on the part of the railroad?

Ans. I remember the action, and was one of the counsel for the defendants.

3. Question. Will you state whether you took any part in the preparation of that cause for trial on the part of the defendant? and, if so, please state fully what you did.

Ans. I took part generally in the preparation of the cause for trial, in connection with M'r Charles Daniels, my associate. He was the attorney of record for the defendant. I was principally charged with the duty of looking up the evidence for the defence. I had pretty much the whole charge of that branch of the case. My course of operations was correspondence with such persons and companies as I thought would be most likely to give me information on the subject, and visiting different portions of the country for the purpose of acquiring information from different persons and companies on that subject, procuring models, and drawings of different inventions of that kind.

4. Question. Will you please state what parts of the country you visited in the course of these investigations?

Ans. I went to North Adams, Mass., and saw Nehe- [NOTE BY THE

PRINTER.—Pp. 386, 387 of printed and 1520-1527 of original 1139 record missing.] claimed then that Isaac Newton Stanley put this brake on in the fall of 1842, and that he, Talson, subsequently made some improvement in the manner of fastening the brake to the cars, and the application of it.

14. Question. Please state, if you recollect, what Talson, and also what Hughes, testified to respecting this brake on the N. J. Railroad, at the trial in Albany?

Ans. Talson stated that Stanley applied that brake to one of the cars. He stated that it was not properly applied, and it broke; that they undertook to lengthen it out with strings, and they were not strong enough to hold it, and it broke. He stated that he subsequently made an application of the same brake to a car of the same company, making the rods stronger. He said that that operated the same as the Tanner brake. That car they ran on the road to some extent, to Philadelphia, or Camden, opposite Philadelphia. Talson or Hughes stated that it was run to Camden three times, I think, and that it was then removed from the cars and given up. I think one gave as the reason why it was given up, that Smith was in favor of the Griggs brake, because it operated from the engine and saved brakemen. One gave as another reason, that owing to the rate of speed, it was unnecessary to have that kind of brake. I don't know which one gave that reason; there was a mixing up in the testimony about the reasons for giving it up. The witnesses differed about the reasons. They testified that this brake was continued in use on their eight-wheeled tenders, operating on one end, but don't recollect that they stated how long.

15. Question. Did they, or not, state that these tenders had any intermediate lever between the two trucks of the tender?

Ans. I don't recollect that they did, or did not. With reference to the car, they stated that there was an intermediate lever.

16. Question. How full and thorough were your investigations in New Jersey with reference to this brake on the N. J. Railroad?

1140 Ans. I made as full and thorough investigations as I thought the subject demanded. I did not see Talson until after my return from Trenton; had I seen him, I probably should not have gone to Trenton. When I saw Talson he claimed to know all about it.

17. Question. Did you hear from Talson, or from any one else, in any of your investigations, anything respecting the use upon the Camden and Amboy R. R., or any other R. R. in New Jersey, of any brake like the Tanner brake, except this brake you have spoken of?

Ans. I did not hear anything about any other brake being used.

18. Question. You have stated that Nehemiah Hodge visited several places in New England in company with you, in the course of your investigations preparatory to the Albany trial. Do you remember what year it was, or how long before the trial it was, that he went with you to these places?

Ans. I think it was in the fall of 1853.

19. Question. Was he aiding you in looking up evidence in the case?

Ans. He was. He was the licensor of the right to use his brake to the N. Y. and Erie R. R. Co.; that was what they were sued for. It was claimed that that was an infringement of the Tanner patent, and we called on him to help defend us.

20. Question. How active a part did he take in thus helping you?

Ans. He went with me and was as active as I was in hunting up the witnesses. I think he did not go to Hartford or New Haven with me;

he was with me at Green Island. He went with me to some other places. He was present at the trial.

21. Question. Did he make suggestions to you in aid of the defence in the Erie suit?

Ans. Yes; he counseled with me about it, and gave me a pamphlet he published on the subject.

22. Question. Did you, at any time, hear from Hodge or receive from him any hint or information that a brake like the Tanner brake had been in use on any railroad in [NOTE BY PRINTER.—Two pp. of printed record (390, 391) and pp. 1536–1543 of original record missing.]

1141 ing the same, that they ran trains very slowly at that time, and did not require such a brake?

Ans. That was the reason assigned by some of the witnesses or one of the witnesses; I can't recollect which—either Talson or Hughes; I think it was Hughes.

38. Question. Did Talson claim that the brake he put on operated as effectually, while it was used, as the Tanner brake?

Ans. He claimed it operated precisely like it. I recollect of asking Talson this question in reference to this brake—if it operated precisely as the Tanner brake, why it was subject to these break-downs—why it should break when operated, as the Tanner brake was not subject to do. His reply was, that it was because it was not properly constructed; that the materials were not of sufficient strength, and that in applying new machinery that you could not always tell what particular strength to give particular parts, and that it was an experiment.

39. Question. What value or consideration did you give to this information you had elicited from M'r Talson?

Ans. I regarded it as important evidence in the case.

40. Question. Did you view it in the light of an experiment?

Ans. No, sir; for I had supposed that the brake had been used on the cars of that road up to that time.

(Answer objected to.)

41. Question. From your conversation with Talson, were you led to believe that the brake had been in continued use on that road?

Ans. He told me so. He swore it on the trial, too—it was on the eight-wheeled tenders. Talson said to me, "We are using that brake now." At the trial he swore that they afterwards used it on their eight-wheeled tenders, with the brake at one end. I had got the impression that it was used on their cars.

42. Question. Did you have any conversation with Talson, at Albany, before he was put upon the stand to testify?

Ans. Yes, sir.

1144 43. Question. If so, what did you expect him to testify to from such conversation?

Ans. I don't know as I could answer any more correctly than by saying that I expected him to testify to just what he did testify to. I was not disappointed in his testimony when it came out.

44. Question. Was he recalled after he was first put on the stand to give further testimony?

Ans. I don't recollect that he was.

45. Question. Are you sure that the defendant did not recall him?

Ans. I am not sure about that; it may have been so: it was so long ago, I should not recollect about that.

46. Question. Do you think that he was recalled by defendant?

Ans. I have no recollection on that point; I have no reason why I should think so. I have referred to Judge Daniels' minutes, and did not find in them that he was recalled by defendant, but they might not show it; the testimony might have been added right on.

47. Question. On what special matter did you, as counsel for the defendant, most rely on the trial of that case?

Ans. We relied upon the Nichols brake and the Isaac Newton Stanley brake, as testified to by Talson and others. We did not go to the jury on the Springfield brake. The judge took that question from the jury, and it was excepted to by the defendant's counsel.

48. Question. Was the question of abandonment by Bachelder & Thompson for the five years for which their application lay in the Patent Office, before a patent was granted to Tanner, as assignee, raised and argued by defendant's counsel in this case?

(Objected to.)

Ans. I have no recollection of it.

49. Question. Were all the papers in the case on file in the Pat-
1145 ent Office in reference to the application of Batchelder & Thomp-
son put into the case by the defendants, or any of them?

(Objected to.)

Ans. We procured our copies from the Patent Office. Whether they were all the papers or not, I can't say. I had no other information than the usual certificate with the papers. I can't recollect whether they were all put in or not.

50. Question. What was the result of the trial?

Ans. A verdict in favor of the plaintiff.

51. Question. For how much?

Ans. The damages were agreed upon at $75.00, I think.

52. Question. Thereafter, was there a bill of exceptions filed?

Ans. Yes, sir.

53. Question. What disposal was made of it?

Ans. I can give you no other information than what I have derived from other sources. I have no information on that subject except hearsay. I have heard that it was compromised, and from Henry Tanner and others.

(Answer objected to.)

54. Question. Was there ever a trial had on this bill of exceptions?

Ans. Not as I know of.

55. Question. At the time of the trial, you were practicing as an attorney in patent cases?

Ans. No, sir.

56. Question. Was your associate M'r Daniels?

Ans. I don't know about that; the papers were sent to me at Dunkirk; I was the general counsel at that end of the road. Not being a patent lawyer, I was unwilling to undertake it. A few days after that I was coming down with M'r Minot on a train to Buffalo; well, I so
informed him, and on consultation here between ourselves and
1146 other people, it was finally concluded to hand the papers over to
M'r Daniels. I supposed at that time this was the last I should have to do with the case, but subsequently to this, by direction of M'r Minot or M'r Ramsdell, I was called upon to go off and work up the case.

57. Question. Was M'r Daniels at that time a practitioner in the trial of patent cases?

Ans. I don't know.

58. Question. Did the officers of the N. Y. and Erie R. R. Co. take any interest in the case after passing it over to your hands, and through you to Judge Daniels?

Ans. I can't state what amount of interest they took in it, except by their actions; by their directions I worked up the case.

59. Question. What were their actions?

Ans. They directed me to take hold of the case and work it up; at the time of the strike on their road they felt interested enough to pay $1,400 or $1,500 to put the cause over the term.

60. Question. Did the verdict of the jury in this case amount to anything more than the simple verdict for $75.00?

(Objected to.)

Ans. I suppose the effect of it was to establish the plaintiff's rights.

61. Question. Did the jury say anything more in their verdict than that they find for the plaintiff $75.00 damages?

(Objected to.)

Ans. I don't know.

62. Question. Did they find anything more than $75 damages?

(Objected to.)

Ans. They did not.

1147 **Redirect:**

63. Question. In reference to your answer to the 41st cross-question, did Talson tell you that this brake on the New Jersey road was continued in use on any car?

Ans. I don't think he did, but I got that impression from what he said when I saw him at Jersey City; after telling me the history of the brake as applied to the car by Stanley and himself, he told me that they continued to use that brake; I inferred that it was upon cars, but when he came to Albany to testify, I learned to the contrary—that it was upon the 8-wheeled tenders that the brake was continued in use.

Recross:

64. Question. Did you understand from M'r Talson that this brake upon the 8-wheeled tenders operated upon all the wheels from one end?

Ans. I did, but that it had but one windlass.

T. P. GROSVENOR.

Subscribed and sworn to before me this 21st day of January, A. D. 1869.

H. D. FITZGERALD,
United States Commissioner.

Defendant's counsel makes no objection to the foregoing deposition because it is taken before a United States commissioner.

H. D. FITZGERALD,
U. S. Commissioner.

Testimony on the part of complainant taken at the city of New York.

JANUARY 25, 1869—11 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

1148 **DAVID H. BAKER**, recalled (as a witness for the complainant, being further examined by M'r Cozzens, deposes and says as follows:

1. Q. M'r's Mary A. Cudlipp has testified in this case that she heard a conversation at her husband's house, on a Sunday, between yourself and her husband, J. E. Cudlipp, and that in that conversation you asked,

"Was there a man here to see you (J. E. Cudlipp) about a patent brake?" Did you say so?

A. I don't think I did.

2. Q. Did J. E. Cudlipp reply to you that there was, and that the man said you (the witness) sent him?

A. No; he did not, to my knowledge.

3. Q. Did you say to Cudlipp, "I told him (the man) if any man could have any influence with M'r Talson, he (Cudlipp) could"?

A. I did not.

4. Q. Did you say to Cudlipp, "There is money in that; if you and Talson are a mind to play your cards right, you can make something out of it"?

A. I never mentioned Talson's name to my knowledge; I am certain of it.

5. Q. Did you say anything about playing cards right?

A. I don't think that I ever used that expression.

6. Q. Did you say, "You and Talson are not employed (on the railroad), and you might as well make what you can out of it"?

A. I do not think that I ever used Talson's name.

7. Q. Did you say anything about wanting nothing to do with it because you were employed on the railroad?

A. I think it is likely I did, for I have said it often.

8. Q. In so saying what have you meant, and in so saying to Cudlipp, what did you mean?

A. I meant just what I said, that I did not want anything to do with it. I meant that towards him and to others.

9. Q. State why you wanted nothing to do with it.

A. Because I was employed by the railroad company.

1149 10. Q. State what it was that you wanted nothing to do with, because you were employed by the railroad company.

A. It may be only an opinion of mine; but I supposed I was not going to do them any good, and I did not want to go against my employers.

11. Q. When you have testified in this case have you done so voluntarily or have you been called against your will?

A. It has been against my will all the way through.

12. Q. You have said that you did not mention the name of Talson to Cudlipp. Did you say anything to Cudlipp in the conversation referred to about his "playing his (Cudlipp's) cards right," or anything to that effect?

A. I don't think I used the expression, "playing his cards right." I might have told him that there was money in the concern, and that if he had anything to do with it he would get his pay for it as he went along.

13. Q. What or whom did you refer to by the "concern," and what kind of services did you mean that he would get his pay for?

A. I meant that if he was employed by Sayles or any party, that he would be paid for it and ought to be paid for it. I meant that if he was employed by Sayles in assisting him to look up testimony he would get his pay for it.

14. Q. Did Cudlipp say anything to you in this conversation about Sayles having told him that he, Sayles, wanted him to assist him in looking up testimony? If so, what did he say?

A. I think that is about what he told me; that Sayles wanted him to assist him in looking up testimony; that is how I came to make use of the expression, or something to that effect. He may not have used exactly those words; that is what I understood from him.

And being cross-examined by M'r Whipple, he deposes and says as follows:

1. Cross-q. Was the interview above referred to at Cudlipp's
1150 house, on Sunday, the only one that you ever had at the house of
said Cudlipp on Tenth avenue, at the corner of 69th street?

A. I think it is the only one I ever had there with him; I called at his house there once, but he was not at home.

2. Cross-q. Is this interview the only one on this subject that you have had with him at his house, as above stated?

A. I did not go there for that subject at all; I did not go there to have an interview with him on the subject; I merely called there on a friendly visit.

3. Cross-q. Have you been in the habit of frequently calling on M'r Cudlipp on friendly visits?

A. I have called on him at his house in Seventh avenue and also in Jersey City, and have been intimately acquainted with him.

4. Cross-q. How comes about this intimate acquaintance?

A. He was a young man that was employed by the New Jersey Railroad Company when I went in charge there. He got married while he was there. I recommended him to M'r Jackson for a berth as conductor that was vacant on the road, and he got it. He was at that time considered a smart, active young man, and was a great deal thought of by the officers of the company. We bought lots in Jersey City, on one block, right behind each other. He came to me and wanted me to go into business with him, and offered to put in from $10,000 to $20,000, if I would go into business with him; and upon the whole we have been as intimate as two men could be together, in different places.

5. Cross q. In what year did he offer to go into business with you?

A. Somewhere about 1861 or 1862. I am not certain about the time—just before he moved up to the place where he is now.

6. Cross-q. How long before the interview of Sunday, alluded to by you in your evidence, did you have an interview with him at his house
in Seventh avenue?
1151 A. I cannot state the exact time. I could not tell, perhaps,
within a year. I did not charge my mind with it. It was just
before he moved away from there, I think somewhere about 1862 or 1863. I cannot tell certain about it. I have seen him several times since, at my shop and at my house. He stayed to tea at my house since I talked to him about the brake.

7. Cross q. Have you called upon him at his house since 1860, at any other times than the call you made on him in Seventh avenue, and in Tenth avenue, corner of 69th street?

A. I called twice at 69th street. Once he was at home, and once he was not.

8. Cross-q. Then you called upon him but three times since 1860?

A. That is all that I can remember. I have met him often.

9. Cross-q. How often?

A. I could not state; two or three times; it may be more, it may be less. I think it was more than that. He came twice to see me about this partnership business.

10. Cross-q. Were you examined for the complainant in this case in his suit against the Philadelphia, Baltimore and Wilmington Railroad about the year 1860?

A. I do not think that I was. I cannot remember it. I was examined two or three times, but I do not think that it was in that suit.

11. Cross q. Are you sure that you was not examined in that suit?

A. I am not sure of it. I do not think that I was. I have no recollection of it. If it is in that book, and the book is correct, then I was examined in that suit. Yes, I was sworn in that case, as I find by looking at the testimony in the book.

12. Cross-q. Was you a willing witness in that case?

A. I do not know that I made any objections to being sworn at that time.

13. Cross q. Were you examined in the application of Bachelder and Thompson and others, in the matter of the extension of the Tanner patent, now at issue in this case?

1152 A. I was.

14. Cross q. Were you a willing witness on that occasion?

A. I do not think that I had any objections to coming.

15. Cross-q. How many times have you been examined in this case?

A. This is the third time, I believe.

16. Cross-q. Have you been a willing witness each time?

A. What do you mean by a willing witness?

17. Cross-q. I mean, have you come upon the mere request of the complainant?

A. I have never come on the mere request of the complainant. I have objected to coming every time.

18. Cross-q. Have you been subpœnaed at each time that you appeared in this case?

A. I have.

19. Cross q. Were you subpœnaed in the other cases in which you have testified?

A. In one I know I was. In the other I am not sure, but I think I was.

And being re examined by M'r Cozzens, he deposes and says:

1. Redirect q. Since the matter of your testimony in the Philadelphia, Wilmington and Baltimore R. R. suit has been inquired about on the other side, I will ask you whether or not you stated in that testimony that the first double-acting brake put upon the New Jersey Railroad and Transportation Company's road, to your knowledge, was built and put on by yourself, with the assistance of the men on the road, in the fall of the year 1851?

A. There is no doubt about it.

2. Redirect q. Did you testify the same thing in the deposition given by you on the extension-application referred to on the other side?

A. I think I did.

1153 **And being further cross-examined by M'r Whipple, he deposes and says:**

1. Recross-q. Do you know what brakes were in use on the New Jersey Railroad and Transportation Company's cars and on the cars of the Camden and Amboy Railroad Company prior to August, 1849, when you took charge of the car department of the former company?

A. Only by what brakes were on when I took charge. They all had brakes on when I took charge.

2. Recross-q. Do you know what brakes were in use on all the cars of the Camden and Amboy Railroad Company when you took charge?

A. I do not.

D. H. BAKER.

Subscribed and sworn to before me this 25th day of January, 1869.

JOSEPH GUTMAN, J'R,
Examiner, &c.

WILLIAM COULTER, called as a witness on the part of complainant, being examined by M'r Cozzens, for complainant, deposes and says as follows:

1. Q. State whether, from the circumstances which occurred in relation to the brake of the Tyler car, as you have heretofore testified in this case when the crank flew around and hit your hand, you could tell whether that car had on it a double-acting brake or a single-acting brake?

A. That would be impossible for me to tell.

And being cross-examined by M'r Whipple, he deposes and says as folllows:

1. Cross-q. What kind of a brake do you think there was on that car?

1154 (Objected to.)

A. It is impossible for me to tell.

W. COULTER.

Subscribed and sworn to before me this 25th day of January, 1869.

JOSEPH GUTMAN, J'R,
Examiner, &c.

STEPHEN W. REILLY, a witness produced on the part of the complainant, being examined by M'r Cozzens, deposes and says as follows:

1. Q. What is your name, age, residence, and occupation?

A. My name is Stephen W. Reilly. I am 29 years of age. I reside at Newark, N. J. I am a clerk by occupation.

2. Q. Were you ever in the employ of the New Jersey Railroad and Transportation Co.? If so, when, in what capacity, and for how long?

A. I was, as clerk in the general ticket department, from 1856, I think, to 1862.

3. Q. Do you know a man by the name of Jonathan E. Cudlipp, who was formerly in the employ of said company?

A. I knew the ticket agent at the foot of Courtlandt street. We used to call him Ed. Cudlipp.

4. Q. Was that man discharged from the employment of the said railroad company?

A. Virtually, he was. He was given time to resign, to find other employment.

5. Q. What year was this? and state, as briefly as you can, the circumstances which led to it.

A. The year I cannot remember. It was somewhere about 1859 or 1860. I was acting as second clerk in the general ticket department at Jersey City. Through a concerted plan with the head 1155 clerk, M'r Cudlipp received for each week-day a certain number of tickets for certain stations on the road, over and above the regular number alloted to his station. The extra issue of tickets was sold by M'r Cudlipp, and a like number that had been collected in the cars by the conductors, when delivered in the general ticket office, were destroyed by the head clerk mentioned above, so as to not have any evidence of their issue. In time, the head clerk was found as the party issuing the tickets in this manner. Each Wednesday and Saturday were the days for delivering the quota of tickets to each office for the three

following week days. We found each day that more tickets were being received than the sales at New York station called for. We also found that the head clerk was destroying tickets which had been collected by conductors, which should have been destroyed on the following day. I watched the head clerk for some months—I think about three months; and was satisfied he was in collusion with some party—then I did not know whom. I told the general ticket agent; he told the general superintendent, and I was ordered to watch further. I wish to be understood that I complained then of the head clerk. After the tickets were made up on Tuesday for the delivery on Wednesday by the head clerk, and when he was gone home, the general ticket agent and myself would take the tickets to be delivered to M'r Cudlipp on the next day, and make a private mark on the tickets that were to be delivered to him. We found, when he returned his packages, that all he returned had our private mark put on. Still tickets were being received in the cars from passengers going from New York without this mark. M'r Gwinner, the general ticket agent, went with the conductor of a certain train, and each passenger having tickets without that private mark was examined as to where the purchase of said ticket was made—the description of the seller, whether they had purchased tickets there before, and also the name and residence of the passenger. On one train he found six passengers, all of whom stated that they had bought their tickets at the
1156 regular office; two passengers of whom had bought there before.

M'r Gwinner, the general ticket agent, reported this to M'r Jackson, the vice-president and general superintendent. Immediately he called the chief clerk to his office and accused him of overissuing tickets, and demanded the names of the parties with whom he was in league. M'r Gwinner told me that he had confessed to all, but wished that it might not be made public; that he would return what he had taken, as he then had money in the bank to the amount of $1,500 or $3,000, and that Cudlipp was in with him. He also gave to M'r Gwinner the number of each kind of tickets which he issued each day over and above Cudlipp's quota. M'r Jackson, with this clerk, went to Cudlipp's office. Cudlipp denied having received any tickets from this party. The chief clerk reiterated that Cudlipp was his accomplice. M'r Jackson, so I was told by M'r Gwinner, gave the chief clerk and M'r Cudlipp a certain time to leave the road and obtain other situations. Whether Cudlipp ever returned any money or not I know not. Both left the road at about the same time.

(M'r Whipple objects to so much of the answer as is hearsay.)

6. Q. At the time of this occurrence, was there any other office for the sale of tickets for the stations you have referred to than the office in which M'r Cudlipp then was, and was there any other person in said office except said Cudlipp to sell said tickets?

A. No, sir.

7. Q. For about how long a time did this overissue and sale of tickets continue to your knowledge?

A. Four months.

8. Q. Where was the office in which said Cudlipp was at that time?

A. At the foot of Courtlandt street, New York. It was known as the way-office.

9. Q. May the time when these occurrences took place, and when Cudlipp left the road, have been earlier than you thought above?

1157 A. I could not say, unless I had access to some of the books.

10. Q. May it have been as early as 1857, or in that vicinity?

A. No, sir.

And being cross-examined by M'r Whipple, he deposes and says as follows:

1. Cross-q. Please give the name of the chief clerk in the ticket department who, you say, was in league with Cudlipp.

A. I decline so doing, because he is a party whom I meet quite often now, and I don't want to hurt him in his business now—the same as I have never mentioned M'r Cudlipp's name since he left the road.

2. Cross-q. Have you the same regard for M'r Cudlipp in relation to it as you have for the chief clerk ?

A. I have.

3. Cross q. If legally summoned, will you appear in this case and state the name of the head clerk, and the part which you say he acted in this matter ?

A. If that should be the case, I should consult counsel.

4. Cross-q. Did you consult counsel before appearing here against M'r Cudlipp ?

A. No, sir.

5. Cross-q. Why not, if you regard them with equal favor ?

A. My occupation is such, that as clerk and salesman with one of the heaviest concerns in this city, David Dows & Co., that my time is required by them, and on receiving the subpœna to testify before the commissioner, I complied, but as I know nothing of the case, or nothing further than as stated under oath, I would not trespass on the time of my employers unless compelled to.

6. Cross q. To whom did you first relate, of late, what you knew about this matter of which you have testified ?

A. To M'r Sayles.

1158 7. Cross q. If you are the friend of M'r Cudlipp, why did you open this case to M'r Sayles, or tell him what you knew about it ?

A. Through M'r Jackson—F. W. Jackson. M'r Sayles came to my office and I refused to tell him anything about it at all. He came twice—I refused him both times, and told him to go to M'r Jackson and M'r Southmayd, and they would tell him the circumstances, as I did not wish to be mixed in any court matters, and have anything to say against M'r Cudlipp, or any one else. He came back the third time. I had told him that if M'r Jackson requested me to do so, I would tell him the reason of Cudlipp's leaving the road. He came back the third time and told me that M'r Jackson was not really acquainted with the facts, but thought that he was forced to resign, but could not remember the circumstances, and that Jackson said if I would not testify voluntarily, to subpœna me. I gave M'r Sayles a statement of the case. This M'r Jackson is now general superintendent of the New Jersey Railroad, as his father was before him.

8. Cross-q. Did you state the whole matter to M'r Sayles, as you have testified, before you were subpœnaed ?

A. I did.

9. Cross q. Would you have done the same in relation to the head clerk, if you had been called upon under like circumstances ?

A. Yes, sir.

10. Cross-q. How long since you have seen M'r Cudlipp ?

A. Seven or eight years—probably more.

STEPHEN W. REILLY.

Subscribed and sworn to before me this 25th day of January, 1869.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Isaac P. Wendell, recalled on the part of the complainant:

1. Q. You have heretofore testified respecting a conversation at
1159 which you were present at the Girard House between M'r Sayles,
the complainant, and J. E. Cudlipp. Will you please state in
what month and year and on what day of the month that conversation
took place.

A. It was on the 26th of August, 1867.

2. Q. At any time while M'r Sayles and Cudlipp were in company that day, did you hear M'r Sayles say anything to Cudlipp about his intention to visit Albany and Saratoga; if so, what did he say?

A. He said he expected to visit Albany and Saratoga on the Saturday following, and that he expected to be back in the early part of the next week.

3. Q. Do you know whether M'r Sayles went to Albany and Saratoga at that time; and, if so, did you see him on his return, and, if so, where?

A. He did; he left on Saturday, and I saw him at the Girard House, New York, on Tuesday evening of the next week.

4. Q. Did he then tell you anything about having seen Cudlipp; and, if so, when did he say he had seen him, and what, if anything, did he tell you that Cudlipp had said?

(M'r Whipple objects to anything that M'r Sayles told the witness.)

A. I think he said that he had seen M'r Cudlipp—I do not recollect when, and that M'r Cudlipp said that he had seen M'r Talson, and that M'r Talson had said he was going to do all he could to break the patent—something to that effect.

5. Q. Did you about the time of the Presidential election, last November, see M'r Sayles; if so where was it, and what day was it?

A. I did; first, at my office, 332 Walnut street, Philadelphia; it was on the 4th of November, next day after election.

6. Q. Did you on that day, the 4th of November, start with M'r Sayles to see any person; if so, what person?

A. I did. I started with M'r Sayles to see Asher Pancoast.

1160 7. Q. What, if anything, did M'r Sayles state to you as his
reason for wishing to see Pancoast?

(Former objection renewed.)

A. He said he thought that Pancoast was mistaken in the testimony he had given before, as instead of one brake acting from each end of the car, he thought there were two brakes, one on each end.

ISAAC P. WENDELL.

Subscribed and sworn to before me this 25th day of January, 1869.

JOSEPH GUTMAN, J'R,
Examiner, &c.

Cross-examination waived by M'r Whipple.

Adjourned to January 26th, inst., at 10 a. m.

New York, *January* 26, 1869—10 a. m.

Present, M'r Cozzens, of counsel for complainant, and the complainant in person, and M'r Whipple, of counsel for defendant.

Thomas Sayles, the complainant, recalled as a witness on his own behalf, and being examined by M'r Cozzens, he deposes and says as follows:

1. Q. Referring to the interviews heretofore testified to by you as having taken place between J. E. Cudlipp and yourself, please state when it was, giving the precise date, as nearly as you can, you first called to see said Cudlipp, and whether you then found him.

A. I called to see Cudlipp some time in August, 1867, at his house at the corner of Tenth avenue and Sixty-ninth street, N. Y., and he was not at home.

2. Q. Whom did you see when you so called?

1161 A. I saw a lady who said she was M'r's Cudlipp, who came to the door.

3. Q. Did you say anything to M'r's Cudlipp about M'r David H. Baker?

A. I asked for M'r Cudlipp; she said he was on Long Island and would not return until the next evening, or evening after, which was Saturday evening; that he would be sure to be home on Saturday evening. I told her I would call on Saturday evening. That was all that was said. M'r David H. Baker's name was not mentioned.

4. Q. M'r's Cudlipp has testified that you then told her that M'r David H. Baker sent you there, and that M'r Baker would come himself and see M'r Cudlipp on Sunday, and that you would call again on Saturday evening before the Sunday on which M'r Baker would be there. Did you say this, or anything like it, to her?

A. I did not. I only said I would call on Saturday evening myself.

5. Q. Are you able to state the precise date when the interview before testified to took place between Cudlipp and yourself at the Girard House, New York? If yea, please do so.

A. I am. It was on Monday morning, the 26th day of August, 1867.

6. Q. Did you at any time, while in company with Cudlipp on that morning, say anything to him about your intention of going to Saratoga and Albany; if so, what did you say?

A. I did. After he had called at Talson's office, on Vesey street, on that morning, as I have previously testified in this case, he said that Talson had gone to Baltimore and would not be home until Saturday of that week, and that he would call and see him on Sunday, and would call on me at the Girard House on his return from Talson's on Sunday evening, if he could see me there at that time. I told him I was going to Albany and Saratoga on Saturday of that same week, and would not return until Tuesday morning following.

(M'r Whipple objects to what the witness told Cudlipp.)

1162 He then said he would call at the Girard House on Tuesday morning.

7. Q. Did you go to Albany and Saratoga at that time, and will you state when you returned, and on what day after your return you next saw Cudlipp, if at all, and give the exact dates of these events, so far as you are able to, and state what means, if any, you have of fixing such dates?

A. I did leave New York on Saturday evening by the steamboat to Albany—on Saturday, the 31st day of August, 1867. On Sunday morning I took cars from Albany and went to Saratoga Springs. I saw George Harding at Saratoga on that day. In the afternoon of that day, Sunday, I got a team and drove out to my brother-in-law's, Jarvis Emigh's, to see my daughter, who was then stopping there. I remained there until Monday morning, and on Monday morning drove back to Saratoga and took the morning train for Troy. In the afternoon I went from Troy to Albany, and on Monday night, the 2d of September, I came by steamboat to New York, and arrived in New York on Tuesday morning, September 3d. M'r Cudlipp did not call on me at the Girard House, as he had agreed, on that Tuesday morning, and about noon of that day I went up to his house, at 10th avenue and 69th street, and saw him there. I am positive that these dates are correct from my diary; I have kept a daily diary for many years.

(Answer objected to by M'r Whipple.)

8. Q. Are there references in your diary to these events under the dates stated by you above?

A. There are.

9. Q. When were those entries made, and by whom?

A. They were made on the days referred to, by myself.

10. Q. Is that diary now present here, and is it open to the inspection of opposing counsel?

(Objected to unless the diary be put in evidence.)

1163 A. It is here, and can be inspected by the counsel.

(The diary is here annexed, it being stipulated by defendant's counsel that after this case is disposed of, it may be returned to the complainant.)

11. Q. State what Cudlipp said to you at the interview with him on September 3d.

(Objected to.)

A. He said that he saw Talson on the Sunday previous at his own house in Hudson City, and that he had a long talk with him; that Talson told him there had already been enough testimony put in the case to defeat my patent; that my patent brake was defeated sure, and that he had found testimony to show that the Tanner brake had been used on the Long Island Railroad a long time before it was invented by our party, and he also stated that he had made up his mind not to take hold of the matter and assist me in looking up testimony.

(Answer objected to.)

12. Q. You have hertofore testified in this case respecting an interview you had with M'r George W. Thompson, at Bordentown, on the 3d day of November, 1868. Did you at any time during your conversation with Thompson, at Bordentown, either on the 3d of November, or the day afterwards, or at any other time, say anything to him about wanting a "square masonic talk" with him?

A. I did not.

13. Q. Did you say anything to him about M'r Pancoast and others having their memory refreshed and altering their testimony; if so, what?

A. I did not mention M'r Pancoast's name to him. At the time I saw M'r Thompson, on the 3d and 4th of November, I had never seen or heard from M'r Pancoast after he testified here in New York in this case. I had seen M'r Yundt, who had testified for the defendants
in this case, and afterwards had changed his mind and had testi-
1164 on the part of the complainant in this case. I showed M'r
Thompson M'r Yundt's testimony in the case. I did not tell him that he had had his mind refreshed.

14. Q. Did you ask M'r Thompson to change his testimony?

A. I did not.

15. Q. Did you mention to him "half a dozen different names" as witnesses who had corrected their statements?

A. I did not.

16. Q. M'r Thompson has testified in this case that you said to him that it was very evident that some of the witnesses were mistaken, and that you did not know which side it was. Is that true; did you so say to him?

A. I showed M'r Thompson the testimony of a number of my witnesses in this case; also the testimony of a number of the witnesses on the part of the defence. After seeing this testimony and seeing how the testimony conflicted, he, M'r Thompson, made the remark that one party or the other was evidently mistaken, and he did not know which. I think I then said that there must be a mistake somewhere; both parties could not be correct.

17. Q. Thompson has testified in this case that you told him that Yundt, Pancoast, Wolcott, Crim, and Seeds had changed their testimony. Is this true; did you so tell him?

A. It is not true; I did not tell him anything of the kind. I only mentioned Yundt's name as one who had changed his testimony. Neither of the others there mentioned had changed their testimony then, and did not testify on the part of the complainant until about a week after that. I had only seen two of the parties there mentioned, which were Yundt and Crim. I did not mention Crim's name to him, for he had not yet testified. I saw Crim, and he told me what he should testify to, on the 4th day of November, after I saw M'r Thompson. I also saw Pancoast, for the first time, on the afternoon of the 4th of November, and I was advised to go and see him on that day by M'r Yundt, who had already testified in this case. After coming back from Philadelphia,
1165 I think, on the 5th or 6th of November—at any rate on the day
before M'r Wolcott testified on the part of the complainant, I saw him, Wolcott, at Hoboken, for the first time since he testified here in New York on the part of the defendants; and I did not see M'r Seeds after he testified here in New York on the part of the defendants until the evening before he testified in this case in Philadelphia, which, I think, was the 9th of November.

18. Q. You say you had not seen these men, Pancoast, Wolcott, and Seeds, when you saw Thompson. Had you heard in any way, directly or indirectly, that they would correct their testimony, or did you know anything about it, whether they would or would not?

A. I had not heard a word about their correcting their testimony, and I did not know anything at all about it until I saw them. M'r Yundt advised me to see Wolcott and Pancoast. He said he thought they ought to know what brake was on that Tyler car, and he said he thought they were honest men and would tell me just what they knew about it, and that if they had been mistaken they would say so.

(M'r Whipple objects to what Yundt said to the witness.)

19. Q. Did anybody accompany you a part of the way when you went to find Pancoast; if so, who?

A. M'r Isaac P. Wendell went down as far as the navy-yard with me, where M'r Yundt told me I should find Pancoast, and we looked about there for some time and finally ascertained that he was some two miles further south. Then M'r Wendell went back to his office, and I went down and saw Pancoast.

20. Q. Returning a moment to the witness Cudlipp, I will ask you whether in any interview with him anywhere you ever said anything to him about seeing M'r Cozzens in relation to the ten per cent. of the patent which has been heretofore referred to in this case, or anything
about M'r Cozzens being willing you should make any arrange-
1166 ment with him, or that you wanted to see M'r Cozzens before you
entered into this matter of the ten per cent., or anything in any way referring or pointing to any such subject?

A. I did not say anything to him at any time about referring the ten per cent. matter to M'r Cozzens or anybody else, or anything of the kind. One object I had in offering him the ten per cent. was to have some one to look up this testimony, so that I could spend some of my time in Chicago looking after a very important suit I had going on there in regard to a patent cultivator.

21. Q. Had you told M'r Cozzens anything about this offer of ten per cent. or ever consulted him in any way about any such thing?

A. I had not. I do not think that I ever mentioned it to M'r Cozzens until after Cudlipp testified.

Adjourned to 7 p. m. of same day.

JANUARY 26TH, 1869—7 p. m.

Present, counsel, as before, and complainant in person.

And the said complainant, Thomas Sayles, being cross-examined by M'r Whipple, did depose and say:

1. Cross-q. In answer to the 9th interrogatory, on page 361 of complainant's proof, you say, "at one of the interviews I had with him, Cudlipp, I told him that if he would take hold of the matter and help me look up the evidence, that if I succeeded in the suit I would give him ten per cent. of the net proceeds for his services." Also, in answer to the 10th interrogatory, you say, "and I told him that I supposed it was a big job, for we would have to go all over the country to look up men that had been on the Camden and Amboy road, and on the New Jersey road, between 1843 and 1850, for we had to get these facts from men who had been on these roads and knew about those brakes that had been used on those roads between 1843 and 1851." In the 1167 performance of all this service, who was to furnish money for the expense, you or Cudlipp?

(Objected to, on the ground that it is not in cross-examination of any matter inquired of upon the examination-in-chief, and the counsel is notified that in respect of all such cross-questions he makes the witness his own, and will be bound by his answers.)

Counsel for defendant says: If I mistake not, the matter of ten per cent. has been called in question in the last examination.

A. There never was anything said between Cudlipp and me as to who should pay the expenses inquired of. There had been very little said between us on that subject, for when I first spoke to Cudlipp about it, he wished to see M'r Talson to ascertain how the case stood and what the prospect was of my gaining my case.

2. Cross-q. Is it true that you offered Cudlipp ten per cent. of the nett proceeds of the patent if you succeeded, making no allusion to expenses?

A. It is true that I offered him ten per cent. of the nett proceeds of the original patent if I succeeded, provided he would do what I wished him to, and there was nothing said about the expense of looking up such testimony. There probably would have been something said if he had concluded to accept that proposition.

3. Cross-q. Was it not ten per cent. of the gross proceeds of the patent that you were to give him for these services?

A. I said it was of the nett proceeds, and it was not of the gross proceeds.

4. Cross-q. Did you suppose that a man in a good business would leave it to enter your service on ten per cent. of the nett proceeds of your patent?

A. I thought then that it would pay him well for the service he would have to render, and I think yet that it would have paid him well.

5. Cross-q. Have you read the letter filed as an exhibit in this case, written by Cudlipp to Talson, Sept. 5, 1867?

1168 A. I have read said exhibit.

6. Cross-q. So far as you are concerned in that letter, does it convey the spirit and the substance of your conversation, as therein stated ?

A. It does not.

7. Cross-q. Then do you say that Cudlipp has falsified the spirit and substance of your conversation with him ?

A. I do not say whether he has or has not; the letter shows for itself.

8. Cross-q. Has he spoken truly or written truly in that letter in reference to yourself ?

A. I do not know anything about but a very small portion of that letter.

9. Cross-q. What do you know about that portion ?

A. I know that he agreed to see me at the Girard House on Tuesday, the 3d day of September. As he states here, he was to give me an answer the next Tuesday. There was a ten per cent. also spoken of, but not in the way he has stated in this letter. I think that is all I know of the conversation between Cudlipp and myself which is stated in the letter.

10. Cross-q. Was not this letter written to Talson before Cudlipp saw him in relation to this matter ?

A. I do not know when it was written. If it was written on the day it is dated, on the 5th day of September, that was five days after M'r Cudlipp told me he saw him. I never heard of the letter until I saw it in evidence in this case.

11. Cross-q Do you think that it was written at any other time than it purports to have been written ?

A. I am sure I cannot tell when it was written.

12. Cross-q. What do you think about it ?

(Objected to.)

A. Well, sir, I do not think the letter was written or sent to Talson before Cudlipp saw him, if the date of the letter is correct, for I think
Cudlipp saw him Sunday, or the first day of September, 1867, as
1169 he told me on the 3d of September when I called on him, for I
think that at that time Cudlipp told me the truth about the
matter.

13. Cross-q. In your direct examination to day, you deny that you said to George W. Thompson, at Bordentown, that you wanted a little square masonic talk with him. Is M'r Thompson a mason ?

A. I do not know.

14. Cross-q. Are you a mason ?

A. I am a mason.

15. Cross-q. And yet you do not know whether George W. Thompson is a mason. Is that so ?

A. That is so. I never met M'r Thompson in a lodge or had any legal information of his being a mason.

16. Cross-q. James Seeds, in his evidence taken in Philadelphia for the defendant, on the 22d day of December, 1868, says, "I told M'r Sayles outside of this room that I didn't see conscientiously that I could tell anything differently from what I told in New York." Is this statement true ?

A. I never heard him say anything of the kind. He told me substantially what he did testify to, on the 10th day of November, I believe, in Philadelphia, outside of the room where his testimony was taken, and I think that he stated this to me in the presence of my counsel, M'r Cozzens.

17. Cross q. In answer to the 2d redirect question on page 375, complainant's proofs, you answer, "M'r Keller told me at the time, before the trial, that inasmuch as the trial of that brake (alluding to the Stanley-Talson brake) was a failure, that the court would hold it as an abandoned experiment." Were you present at the time the court charged the jury in this case?

A. I think I was present.

18. Cross q. Did you hear the charge of the court to the jury?

A. I think I did.

19. Cross q. How did the court charge the jury on the evidence relating to the Stanley-Talson brake?

(Objected to.)

1170 A. I do not think I could state now what that charge was.

20. Cross-q. Did he make any charge in relation to the evidence given in on that brake?

(Objected to.)

A. I think he did say something about it; I could not say what it was exactly.

21. Cross-q. Was what he did say favorable to the defendant or to the complainant?

(Objected to.)

A. I don't remember of its being unfavorable to the complainant.

22. Cross-q. Was it not favorable to the defendant, and had the jury found in accordance with the charge would not the verdict have been for the defendant?

(Objected to.)

A. I have no recollection of anything of that kind.

23. Cross-q. When the jury in that case returned their verdict of $75 damages, did they also say that the Stevens brake and the Hodge brake used by the defendants are infringements of the plaintiff's patent?

(Objected to.)

A. My recollection is that they did

24. Cross-q. Do the minutes of the trial show any such thing?

(Objected to.)

A. I do not know whether they do or not.

25. Cross-q. Did you have the minutes of the trial when you made out your bill of complaint in this case, or did you refer to them before making it out?

1171 A. We had a certified copy of some document from M'r A. A. Boyce, clerk of that court. That document stated what the verdict of the jury was, I believe.

26. Cross-q. Well, what did it say the verdict of the jury was?

(Objected to.)

A. Just what was stated in my bill of complaint.

27. Cross-q. What was stated in your bill of complaint as the verdict of the jury? To be more direct, did the jury find any other verdict than of $75 damages?

(Objected to.)

A. I don't think that jury found but one verdict in that case. I do not think they would be likely to. If you look at my bill of complaint you will there learn what the verdict was as coming from M'r Boyce, the clerk of the court.

28. Cross-q. Were not these the words of the verdict as they came from the clerk of the court, namely: "The jury here come into court, and being called answer and say that they find for the plaintiff a verdict for $75 damages." Anything more added to this verdict by the jury?

(Objected to.)

A. I recollect now positively that there was more added to that verdict.

29. Cross-q. Is there any record of such addition in the minutes as certified to by A. A. Boyce, clerk of the court?

A. I do not know about the minutes. I now recollect that some time after the trial of this case at Albany there was a hearing of the case in Buffalo—an appeal, I think—and there was something wrong about the minutes with regard to the verdict of the jury, and that Judge Hall ordered the clerk to add something to his minutes with regard to 1172 the verdict of that jury which the clerk had not got down, and I think it was that the jury found that the Hodge brake and the Stevens brake used by the defendants was an infringement of the plaintiff's patent.

30. Cross-q. Were you present in Buffalo at the time you speak of, to wit, in August, 1855, when this case came up on a bill of exceptions?

A. I was present; I cannot say as to the exact date.

31. Cross-q. And did you hear Judge Hall amend the verdict of the jury as you have stated, or, in other words, did you hear him order the clerk to amend the verdict of the jury as you have stated?

A. I do not know that any verdict was amended. I heard the judge tell the clerk to correct his minutes with regard to the verdict.

32. Cross-q. Then you use the word "correct" instead of "amend," do you?

A. You can call it whatever you like.

33. Cross-q. If I put "correct" in place of the word "amend" in the question, what will then be your answer?

A. It would not change my answer.

34. Cross-q. Then you did hear Judge Hall direct the clerk to correct the verdict of the jury, by adding that the Hodge brake and the Stevens brakes are infringements of the plaintiff's patent, did you?

A. I did not. I merely heard the judge tell the clerk to correct his minutes, so as to state just what the verdict of the jury was, as he recollected at the time, and as I recollected at the time.

35. Cross-q. Was M'r C. Daniels, counsel for defendant, present at the time?

A. I do not remember.

36. Cross-q. Do you think he was present?

A. I have no recollection about it.

37. Cross-q. Was M'r Grosvenor present?

A. I do not recollect. I should think one or both of them would have been present.

38. Cross-q. Did C. Daniels consent to this correction of the verdict of the jury, as you call it, or was it made without the consent of the defendant's counsel?

1173 A. I think I now recollect that my counsel, Samuel Blatchford, and the counsel for the defendants in that case, talked some on that subject, and I think they all agreed with the judge as to what the verdict of the jury was with regard to the Stevens and Hodge brake.

39. Cross-q. In answer to the 32d cross interrogatory, complainant's proof, page 371, speaking of the case of the United States against Joseph F. Talson, you say there has been some testimony taken on the part of the government; is it not yet closed? What progress has been made in the matter since you last testified?

(Objected to.)

A. I left this city soon after I testified in November last, and have learned since that the testimony had been closed and the case submitted, and that is all I know about it.

40. Cross-q. What testimony given by M'r Talson in this case do you understand to be the foundation of a charge against him of perjury, in contradistinction to what he had previously testified to? Please state fully.

(Objected to.)

A. That is more for the counsel in the case to say than for me, but I understand that in this case he has stated that the brake put on by him in 1842 was nearer like the Tanner brake than what he had previously testified to, and that this brake was continued on the car on which it was put; that is the prominent point, I understand.

41. Cross-q. What do you say he had previously testified to on the same matter?

(Objected to.)

A. That a brake different in some respects from the one he testified to in this case was put on a car in 1842, and used only a few days, when
it was taken off and the single treadle-brake put on in its place,
1174 and was never used thereafter while he was on the road. That is
the substance of it.

42. Cross-q. That you think a sufficient ground for the charge of perjury, do you?

A. I should think so.

43. Cross-q. Did you ever in your life make a statement to one or more persons, and then go into court and under oath contradict it?

A. I never did.

44. Cross-q. Were you ever charged in a public manner and in a public place and by an officer of the government with perjury?

A. I have no recollection of anything of the kind.

45. Cross-q. Do you remember a case being tried in the recorder's court of Cook County, in the State of Illinois, in October, 1863, entitled "The People ag'st Nehemiah Hodge," charged with an assault with intent to kill?

(Objected to.)

A. I recollect such a suit.

46. Cross-q. Were you a witness for the defendant in that case or suit?

(Objected to.)

A. I was.

47. Cross-q. When Joseph Knox made the closing argument for the people, did he not publicly charge you, in the court-house, with perjury?

A. I am not aware that he did.

48. Cross-q. Did he not turn to you, sitting within the bar, and say to you, "I charge you, Thomas Sayles, with perjury. My name is Joseph Knox. I live in such a street, at such a number, in Chicago. You ought to be arrested and held to answer before you leave the city"? Answer truly, upon your oath, if he did not make this charge, in the presence of many witnesses, in the concluding argument for the people against the
said Nehemiah Hodge?
1175 A. He made no such charge in my presence, and I think I was
there during his argument, or a portion of it, at any rate.

49. Cross-q. Do you stand by that answer?

A. That is my answer.

50. Cross-q. Is it a true answer, so help you God?

A. I have answered the question according to my recollection of the facts in the case.

51. Cross-q. Is your answer yea or nay ?

A. I have answered the question.

52. Cross-q. Truly, so help you God ?

A. You have my answer.

And being re-examined by M'r Cozzens, he says as follows:

1. Redirect q. Since this matter has been gone into upon the other side, please state what was the offence charged in that case, and upon whose complaint the proceedings were instituted.

A. I understood at the time (objected to as to what the witness understood) that one Stephen M. Whipple, of North Adams, Massachusetts, complained of Nehemiah Hodge, of the same place, for making an infernal machine, and sending it to Chicago, Illinois, directed to said Whipple, and it was proved on that trial that such a machine had been sent to said Whipple at Chicago. Hodge was charged with making the machine and sending it, and this trial was on that charge. The trial resulted in M'r Hodge being found not guilty. He was discharged.

2. Redirect q. Was this S. M. Whipple the counsel who has been cross-examining you ?

A. The same.

3. Redirect q. If you have any further statements which you may wish to make in this connection, please make them here.

A. This M'r Whipple was also a witness in that Hodge infernal-machine case against M'r Hodge, and it was stated after that trial 1176 was over and Hodge discharged that if M'r Whipple had been on trial instead of Hodge he would not have come off as well as Hodge did. This was stated by some of the jurymen on that case. M'r Knox, in summing up that case, did talk pretty strong about my evidence, as my evidence did not agree with M'r Whipple's, but he did not in my presence make the statements mentioned in M'r Whipple's question to me.

THOMAS SAYLES.

Testimony on the part of complainant, taken at Philadelphia, January 29th, 1869.

Present, the complainant, in person, and S. M. Whipple, esq., counsel for defendant.

Asher Pancoast, recalled, deposes as follows:

1. Question. Edwin Lockwood has testified in this case that after you were first examined in this matter, in New York, you were employed by him on the Camden & Amboy R. R., and that through neglect and dissipation he discharged you. Is this statement in regard to his discharging you true ?

Answer. It is not true.

2. Question. Please state the circumstances of your going into the employ of the Camden & Amboy R. R. Company, and why you left it.

Answer. I went into the employ of the company under the expectation of getting an engine to run. M'r Lockwood held out inducements that he would use his influence towards helping me to get a situation as engineer, which he did not. He kept me working under the cars, and I got tired. I told his foreman that I would quit. He then said I had better not quit till I got something else to do. I told him if I had to do that kind of work I would do it for some other company. I then 1177 started to New York, hunting for a situation. I was gone two days. I came back, and goes to M'r Reybow. I told him I supposed he had another man in my place. He said no, so I went to work and worked about a week or ten days. My money come down. I then goes home and told my wife I wouldn't work any more. I didn't say anything to M'r Reybow about it at all.

3. Question. Then you left of your own accord, did you?

Answer. I left of my own accord.

4. Question. During this time that you so worked for the Camden & Amboy R. R. Company, did you spend any time in dissipation, or were you off on any drunken spree?

Answer. No, sir. I was off duty sick with neuralgia in the face, four or five days.

5. Question. At the time of your applying for the situation on the Camden & Amboy R. R., did you say anything to Lockwood about a man by the name of Wood using his influence to get you discharged from your previous situation?

Answer. No, sir; I had no occasion to. I did not know of his using any such influence, and he did not use any such influence.

6. Question. Is your regular business running a locomotive engine?

Answer. Yes, sir.

7. Question. About what are the average wages of a locomotive engineer?

Answer. About eighty dollars a month. I get more than that now.

8. Question. You say you got tired of the work Lockwood kept you at under the cars. What wages did you receive for that work?

Answer. A dollar and eighty-seven and a half cents a day.

9. Question. Did George W. Thompson, a witness in this case, have a conversation with you last December in Philadelphia, by Graham's Hotel?

1178 Answer. Yes, sir.

10. Question. Please state fully what that conversation was, as nearly as you can remember it.

Answer. Well, I met him in the door of the hotel. He says, "Pancoast, how are you? I am glad to see you. You are the man I have been looking for all day; I have been over to your house. What I was going to say," he said, "is about that brake. You have put myself and M'r Lockwood in a bad fix." I says, "Thompson, I don't know what kind of a fix you are in, but I know I was mistaken when I come to talk to my old men I had railroaded with." "Oh, I suppose," he says, "M'r Sayles has paid you, or promised you, like he has some of the rest, twenty per cent. of the patent." I says, "M'r Sayles has never promised me a cent, but I suppose every man has his price." He then went on to tell about his doing business for the company—about his fixing up the Tyler car. He then made use of language towards M'r Sayles which wasn't very becoming. I don't remember what he said. I told him that M'r Sayles had always used me like a gentleman. I then said I had never spoken to M'r Sayles more than twice or three times in my life. "Oh," he says, "it makes no difference about that. You had better go back to the company; you were brought up there." "Well," I says, "I don't care anything about the company or anybody else. I want every man to have his rights."

11. Question. Did he say anything to you about making your testimony like what you stated in New York; if so, what did he say?

Answer. Yes; he asked me if I couldn't rectify that. I told him, no; I was satisfied what I said last was right. He said if I was not going to make any corrections he had no more to say.

12. Question. Did you tell him that ten or twenty thousand dollars

from either party would make you tell a great deal, or anything to that effect?

Answer. No, sir; such language was not used at all.

13. Question. Did you tell him that the company had not used you right by discharging you, and that you were going to have your price if you could get it?

1179 Answer. No, sir; there was no such language used at all between me and M'r Thompson.

14. Question. You say you told Thompson you knew you were mistaken when you came to talk with the men you had railroaded with. What did you mean you were mistaken about?

Answer. I meant I was mistaken about the brake; about its being connected.

15. Question. Do you mean about the testimony regarding the brake which you gave in New York?

Answer. Yes, sir.

16. Question. How long have you known this witness, Thompson?

Answer. I have been acquainted with him ever since 1837 or 1838.

17. Question. Do you know about when he commenced to do work for the Camden and Amboy R. R. Company?

Answer. As near as I can tell, about 1848. He had a little shop in 1846.

18. Question. Was he doing any work for them in 1843?

Answer. No, sir; I don't think he was. He might have done a little work. I don't think he had any shop then at all. He had a shop in 1848.

19. Question. Will you please state, as fully as you can remember, all the conversation which took place between you and M'r Reybow at the time he first came to you to procure you to testify in this case?

Answer. He came and asked me about the brake, and I told him I didn't recollect exactly, but would see how it was. So we talked it over, and we rather brought it to our minds that it was a double brake; and I rather thought it was a double brake.

20. Question. Did he say anything about why the railroad company were trying to procure evidence in this suit; if so, what?

Answer. M'r Reybow never said anything to me about it.

1180 21. Question. Did the witness Lockwood ever say anything to you about this Sayles suit being an important one to the railroad company, or anything about why they were procuring testimony in it; if so, what did he say?

Answer. M'r Lockwood and me got in conversation about this brake. I says to M'r Lockwood, I don't see why the company should take such interest in it. I understood M'r Van Rensselaer had paid M'r Sayles for his right. M'r Lockwood said that he had been blackmailing several companies, and they were going to try to work it out now.

22. Question. When and where did this conversation take place?

Answer. In the car, between Bordentown and Trenton. It was just before I testified in New York.

23. Question. Did Lockwood say anything to you then about wanting your testimony in the case?

Answer. Yes; he said something about it at that time. There was some other gentleman came up and began to talk to him and throwed us out.

24. Question. You say Lockwood said they were "going to try to work it out." Work what out?

Answer. The brake. He was talking about the brake, and he said they were going to work him (M'r Sayles) out.

(Objected to.)

25. Question. State, if you remember, what day it was that M'r Sayles talked with you for the first time after you were examined in New York, and shortly before you corrected your testimony in Philadelphia.

Answer. It was the forepart of November last; the day after election.

Cross-examination waived by defendant.

ASHER PANCOAST.

Sworn to and subscribed before me this 29th day of January, 1869.

W. GRIER HIBLER,
U. S. Commissioner.

1181 Continued from 29th inst.

Present, complainant in person; S. M. Whipple, esq., for respondents.

Elizabeth Pancoast, being duly sworn, says:

1. Question. What is your name, age, and residence?

Answer. Elizabeth Pancoast; aged fifty years, and reside at Camden, New Jersey.

2. Question. Are you the wife of Asher Pancoast; if so, how long have you been his wife?

Answer. I am, and have been for thirty years.

3. Question. Do you remember your husband's working for the Camden and Amboy Railroad Company in the fall of 1867?

Answer. Yes, sir.

4. Question. About how long was he in their employ at that time?

Answer. I should suppose two or three months.

5. Question. Do you know what kind of work he was doing at that time; if so, what?

Answer. Something of repairing cars.

6. Question. Had he worked for that company before; if so, in what capacity and about how long?

Answer. He has, in the capacity of brakeman, fireman, and engineer. I should suppose as engineer about 14 years. It is twenty-six years since he commenced working for them. I think I am mistaken—it is longer than that; it is 28 years.

7. Question. During the two or three months you say he was at work for the company in 1867 was he off duty on a drunken spree, and has he been in the habit of being on such sprees during the last 30 years? Please state fully.

Answer. During the two or three months he was off hunting for a situation once or twice. He was not on a drunken spree. He has not been in the habit of going on such drunken sprees in the last 30 years. I have seen him under the influence of liquor, I distinctly remember, but three times during the last 30 years. I can recollect the
1182 first very well—it was when James K. Polk was elected President. He was so that he came home himself, and was a little jolly, and was afterwards very sick. The others I can't recollect; they were within the last six years. But he was never so drunk but what he could walk home and take his supper, and attend to any business had it been business hours.

8. Question. Have you ever known him to neglect his business from the influence of liquor?

Answer. Not from the influence of liquor; no, sir.

9. Question. Is your husband a member of any church; if so, what church, and how long has he been a member?

Answer. Yes, sir; the Methodist Episcopal Church in Camden, and has been about 14 years. I am a member of the same church.

10. Question. Do you know why your husband left the employ of the Camden and Amboy R. R. Co. in 1867; if so, please state?

Answer. He was dissatisfied with his situation. When he accepted this situation he took it for a short time. He expected to be made an engineer; that is what he told me at the time he took it. He complained very much at not getting the situation that was promised him. He said he would not work for them in the position in which he was; if he done such work he would do it for some one else, but he would not do it for the Camden and Amboy R. R. Co., as he felt too much humiliated.

11. Question. During the two or three months that he was in the employ of that company, in 1867, how often was he at home?

Answer. He spent his evenings home, and was home to his meals, as we lived very near where his work was. It has been his habit for the last 30 years, at home. It is very seldom he goes out evenings.

12. Question. During the whole 30 years that you have lived with him, about how many evenings, as near as you can recollect, has he spent away from home when not absent on business?

1183 Answer. I can't say how many; it is a good many years to recollect. Unless on business, it wouldn't average a dozen evenings a year, or, I am sure, the half of that.

13. Question. During the two or three months he was in the employ of the Camden and Amboy Company in 1867, was he home sick; if so, about how long?

Answer. He was at home sick, I think, about a week, with neuralgia or erysipelas.

14. Question. Could he have been off on a spree during that time and you not have known it?

Answer. I think not, as his business was close at home. He was gone to New York to look for employment two or three days during that time.

15. Question. You have said that you saw your husband under the influence of liquor distinctly three times; are those the only times when you ever saw him under the influence of liquor?

Answer. The only times that I can say that he was ever under the influence of liquor.

Cross-examination declined.

ELIZABETH PANCOAST.

Sworn to and subscribed before me this 30th day of January, 1869.

W. GRIER HIBLER,
U. S. Commissioner.

N. Y., FEBRUARY 3, 1869—2 p. m.

Present, M'r Sayles, complainant, in person, and M'r Whipple, of counsel for defendant, and M'r Cozzens, of counsel for complainant.

JOSEPH HERBERT, a witness recalled by complainant, deposes and says as follows:

1. Q. Have you been examined as a witness in this case?
A. Yes.

1184 2. Q. You stated in your former testimony that you had something to do with the excursion trains run on the Camden and Amboy Railroad between the year 1843 and the time you left the road. How many seasons were those excursion trains run before you left that company?

A. About two, I guess, as near as I can tell.

3. Q. What year was it that you left that company?

A. I cannot recollect, hardly; but I think in about the year 1845; I guess it was 1845, that is, when I left the cars.

4. Q. Were you ever discharged from the employ of the Camden and Amboy Railroad for taking things from the cars, or for any other reason?

A. No, sir; I never was discharged from the road in my life.

5. Q. Do you know Edwin Lockwood, superintendent of car repairs on said railroad?

A. Yes, sir.

6. Q. Edwin Lockwood has testified in this case that you were discharged from said road for taking things from the cars belonging to the passengers, and that he reported you to Captain Shippen, who discharged you for it; is that true?

A. No, sir; I deny that.

7. Q. Did you, while in the employ of said company, and while you were engaged about the cars, have any difficulty with Edwin Lockwood? And, if so, please state fully all the circumstances of the matter.

A. When I went on to the excursion trains, Captain Shippen always gave me the right of the whole control over the line; getting the cars ready, that is what I call the control; and he used to tell me whenever the cars reached each end to go through the cars and not to allow any one else to go through until I went through myself, and if I found anything in the cars to keep it until the owner called for it, and if the owner did not call for it it became mine. I was going over to Amboy, and after I got to Amboy I went through the cars and found a green veil, which had three or four holes in it, and the engineer went through
1185 the cars. I had hung it on the side of the car; the engineer took
it down and wore it on his hat for some time around the wharf. I hung it there for the purpose that whoever lost it might see it and get it; the engineer brought it back and hung it up on the same place. When we went back to Bordentown, I went through the cars and picked up the veil, which had fallen down. Lockwood was standing in the door when I picked the veil up, and wanted to know what that was. I said it was none of his business. He said the owner wanted it, and the boat had pushed off; he had not been on board the boat at all. He came back to the car again, and said the owner wanted it. I threw it to him, and it fell on the car floor. I told him "take it home to your wife." He turned around and said, "If you will take one thing, you will take another." With that I put after him, and he started for home. When I got home myself I took my supper, and the more I thought of it the less I liked it. I have lived in Bordentown 59 years and had never been accused of stealing before. So the next morning I went down to the wharf to see Captain Shippen. As I was going through to the office I met Lockwood at the door; said I, "Lockwood, what was that you said to me last night?" He said, "Nothing." Says I, "You did; you said if I took one thing I would take another." I don't know whether he answered yes or no, but I answered, "I have a good mind to knock you clean through that door." Captain Shippen was up in his office. Lockwood walked out and got a club and came in with it. Says

I, "Lockwood, I don't fear your club at all." And while we were talking Captain Shippen slipped around by him. Lockwood didn't see him; he started for the captain's office and then came back again. By that time Captain Shippen got back to his office again, and I went after him. I told Lockwood he could not get me discharged anyhow. He had threatened to get me discharged. I followed Captain Shippen to his office, and he said, "Joe, what is the matter?" And I said, "Lockwood has been adjudging me of stealing." "O, don't you mind
Lockwood," said he—just so; "You go back to the car-house
1186 and attend to your cars." Said I, "Captain, I'm not going to do
it; I'm going to quit," I said, "I want my money." He said, "Go over to your cars." He said, "I won't pay you; you go over to your cars." I said, "I won't do it, I am going home." Just as I was going out of the door, he said, "Come down to-morrow and I'll give you your money, but go over and attend to your cars." These were the last words he said to me as I was going down stairs. On the next day I went down to his office for the money. Lockwood had followed me over with a club, as I was going home through the car-house, the day before. The captain tried to coax me to take my turn again on the cars, but I refused to go, and left.

8. Q. After you left the cars at this time, how long did you remain off the road?

A. Not quite two months, and then Captain Shippen sent to me to come and saw wood under the shed, with a buzz-saw, and I remained there about two years.

9. Q. Did you leave the company at the end of this two years; and if so, why?

A. I did, on account of my eyes; the dust got into my eyes and made them sore. I then went on to a farm.

10. Q. About how many years have you been engaged in your present employment on the Camden & Amboy road?

A. Three years this coming spring.

11. Q. Lockwood has testified that the thing which he says you took out of the cars was a large shawl. Is this true?

A. No; I never found a shawl in the cars in my life.

12. Q. Are you acquainted with Asher Pancoast, who has been employed on the Camden & Amboy Railroad?

A. Yes.

13. Q. How long and about how intimately have you known him?

A. I guess about twenty years ago; he is a little related to my mother; he used to run on the road there; we spoke to each other when we met;
we met quite often.
1187 14. Q. Since you have been acquainted with him, have you
known him to be a drinking man, or apt to go on sprees?

A. No, sir; I always saw him conducting himself upright, carrying himself straight. I never saw him on a spree.

And being cross-examined by M'r Whipple, he deposes and says as follows:

1. Cross-q. Did M'r Lockwood, at the time this matter happened of which you have spoken, have charge of the car department of the Camden & Amboy road, the same as he now has?

A. Yes.

JOSEPH HERBERT.

Subscribed and sworn to before me this 3d day of February, 1869.

JOSEPH GUTMAN, J'r,
Examiner, &c.

1188 In the circuit court of the United States, for the northern district of Illinois.

THOMAS SAYLES *vs.* THE CHICAGO AND NORTHWESTERN RAILROAD Company.	In equity.

Depositions of witnesses on behalf of complainant, taken before William Grier Hibler, United States commissioner and examiner, at his office, No. 435 Library street, Philadelphia, on the sixth day of March, A. D. 1869. M'r S. D. Cozzens attending on behalf of complainant, and M'r S. M. Whipple on behalf of respondents.

Charles Yundt, being recalled, testifies as follows:

1. Question. Did you, on Monday, the 22d of February, 1869, see Thomas Sayles, the complainant in this case, in Philadelphia, and did he read to you questions 11, 12, and 13, on page 308 of the printed record in this case, containing complainant's new proofs, and which questions and answers I now show you, and did he ask you if those answers given by you to those questions were true, and did you say to him that they were true?

(Objected to by M'r Whipple.)

1189 Answer. He didn't read nothing to me. He asked me if those questions and answers were right. I said yes. I said to him the Tyler car had double brakes in 1843, but not connected together; I meant brakes at each end of the car. That was what I said all the time. I say that in 1845 and 1846, to the best of my knowledge, they was connected brakes.

2. Question. Did you say to M'r Sayles at this time that what you testified to in this case in October, 1868, was true, and that the double connecting brake was first put on the old Tyler car about the time the McLaughlin brake was first put on the Camden and Amboy road?

Answer. I don't remember what I said to M'r Sayles; he never asked me a word about the brakes the other day when he met me. He only took a drink and walked right off. He only asked me those three answers 11, 12, and 13, which you showed me, and he asked me if those were true, and I said yes, and that was all there was about it; there were two gentlemen with him.

3. Question. Did you tell him at this time that George Thompson, of Bordentown, was here to see you before you testified in this case last December, and told you that what you had testified to made him (Thompson) and Lockwood liars?

Answer. I did tell him so.

4. Question. Were the two gentlemen who were present with M'r Sayles at that time, the two gentlemen, M'r Wendell and M'r Hubbard, who are now present?

Answer. M'r Wendell was present; I don't remember M'r Hubbard

Cross-examined:

1. Cross-question. Is what you first testified to in New York about this brake true?

(Objected to.)

1190 Answer. It is, to the best of my knowledge.

Redirect:

5. Question. Do you still say that the answers 11, 12, and 13, which have been referred to, are true?

Answer. They are, to the best of my knowledge.

Recross:

2. Cross-question. Is it true that there was a connected double-acting brake in use on the Camden and Amboy road in 1845?

(Objected to.)

Answer. I can't say the year; it was in 1845, to the best of my knowledge.

Redirect:

6. Question. In what year was the McLaughlin brake first put on the Camden and Amboy road?

Answer. I can't say; from 1848 to 1851. I can find out exactly by looking at the books at Bordentown.

7. Question. You have stated here to-day, though it does not appear upon the record, that the first connected double brake on the Tyler car was put on before the McLaughlin brake was used on the Camden and Amboy road. How long before was it?

Answer. I can't tell exactly. They were some time getting the McLaughlin brake on, and after they had had that on a while they put it off, and then they put on all the passenger-cars a brake like the one on the Tyler car.

3. Cross-question. Was the brake on the Tyler car a double-acting brake?

Answer. It was.

1191 4. Cross-question. And was this brake on the Tyler car in 1845 or 1846?

(Objected to.)

Answer. Yes, sir; to the best of my knowledge.

5. Cross-question. Did this brake operate on both trucks at the same time?

(Objected to.)

Answer. I think it did, to the best of my knowledge.

CHARLES YUNDT.

Subscribed to before me this 6th day of March, 1869.

W. GRIER HIBLER,
United States Commissioner.

Isaac P. Wendell, being duly affirmed, testifies as follows:

1. Question. Were you present with Thomas Sayles, the complainant in this case, at an interview in Philadelphia on the twenty-second day of February last, between him and Charles Yundt, the witness who has just testified?

Answer. I was.

2. Question. Who else was present there?

Answer. Mark C. Hubbard, the gentleman who is now here.

3. Question. Did M'r Sayles at that interview read any questions and answers to Yundt from the printed record in this case; and if so, what questions, and what did Yundt say to M'r Sayles in your hearing at that interview?

Answer. He did. He read the 11th, 12th, and 13th questions and answers. M'r Yundt replied, "That is right;" "That is true;" "That is what I testified to." He afterwards said that the double-connecting brake was put on the Camden and Amboy road about the time the McLaughlin brake was put on the road. He said, I think, that the first double-acting brake that was put on the Tyler car was 1192 put on about this time. He said that the brake put on the Tyler car in 1843 was not a connecting brake, but a brake on each end of the car, and that it was called a double brake, but that it was not connected. He said that M'r Thompson called to see him, and had told him that the testimony he had given was going to make him and Lockwood liars. That was the substance of what he said. That he asked Thompson what he knew about it; that he, Thompson, was only a boy when this took place.

(All of the answer objected to by M'r Whipple.)

Cross-examined by M'r Whipple:

1. Cross-question. How did it happen that you were present at this interview between Sayles and Yundt?

Answer. M'r Sayles asked me to go with him to find the place where Yundt was.

2. Cross-question. Did M'r Sayles tell you he did not know where to find Yundt?

Answer. No.

3. Cross-question. Had you any other object in view than to show M'r Sayles where M'r Yundt was?

Answer. Yes. M'r Sayles requested me to be present at the interview.

4. Cross question. Why did he wish you to be present at the interview after you had shown him where Yundt could be seen?

Answer. He simply requested me to be present—that he would like me to be present.

1193 5. Cross-question. Did you thereafter expect to be called as a witness as to what was said at the interview?

Answer. He said that I might be called; he did not think I would, but that I might be called.

6. Cross-question. How many times have you been called to testify in this case of conversations or interviews at which you were present at the request of M'r Sayles?

Answer. This is the third time I have been called, but I have testified in reference to interviews of only two persons, Cudlipp and Yundt.

7. Cross-question. Haven't you testified in reference to two interviews at different times between Sayles and Cudlipp?

Answer. No.

ISAAC P. WENDELL.

Affirmed to and subscribed before me this 6th day of March, A. D. 1869.

W. GRIER HIBLER,
U. S. Commissioner.

MARK C. HUBBARD, being duly affirmed, testifies as follows:

1. Question. Were you present at an interview in Philadelphia on the 22d February last, between the complainant Sayles and Charles Yundt, the witness who has testified here to-day?

Answer. I was.

2. Question. Who else was present at the interview?

Answer. M'r Wendell.

3. Question. Did M'r Sayles read anything to Yundt at that interview; if so, what, and what did Yundt say to M'r Sayles? Answer fully.

Answer. M'r Sayles read to him, from a printed circular or pamphlet,
questions and answers numbered 11, 12, and 13, and M'r Yundt
1194 replied, "That is just what I swore to." M'r Sayles then asked
M'r Yundt if what he swore to at that time was true. M'r Yundt

replied, "Of course it was true, or I should not have sworn to it." Then M'r Sayles asked him in regard to the time when this double-connecting brake was put on the cars, or his brake, as he called it. M'r Yundt replied that it was put on the Tyler car about the time the McLaughlin brake was put on the Camden and Amboy road. Then there was some conversation in relation to M'r Thompson, and M'r Yundt replied that Thompson was there to see him, and said that what he (Yundt) swore to last made him and Lockwood liars. Yundt said that he said to Thompson, "What in hell do you know about it? You was nothing but a boy then, anyway." M'r Sayles then asked him in regard to the brake that was on the cars then that they called a double brake, and Yundt said they certainly did have what they called a double brake, but it was one that broke from each end of the car, and had no connection (this time they were speaking of was 1843). He also said that was the only double brake that they ever had on the road before the McLaughlin brake. M'r Yundt reiterated several times during the interview that what he swore to in October was true.

Cross-examined by M'r Whipple:

1. Cross-question. How happened you to be present at this interview?

Answer. At the request of M'r Sayles.

2. Cross-question. Did he inform you that he would call you as a witness as to what was said at the interview?

Answer. He said that he might and he might not, but hardly thought that they would examine M'r Yundt again.

MARK C. HUBBARD.

Affirmed to and subscribed before me this 6th day of March, A. D. 1869.

W. GRIER HIBLER,
U. S. Commissioner.

1195 Counsel for complainant puts in evidence duly authenticated copies of the clerk's minutes of trial in the case of Henry Tanner vs. The New York and Erie Railroad Company, tried in October, 1854, and the case of Nehemiah Hodge vs. The New York Central Railroad Company, tried in 1859, and they are marked respectively, "Complainant's Exhibit 2, New Proofs," and "Complainant's Exhibit 3, New Proofs."

At a stated term of the circuit court of the United States of America, for the northern district of New York, in the second circuit, held at the city hall, in the city of Albany, on Tuesday the 24th day of October, in the year of our Lord one thousand eight hundred and fifty-four.

Present, the honorable Nathan K. Hall, judge; M'r C. M. Keller & S. Blatchford appear as plaintiff's counsel; M'r C. Daniels & T. P. Grosvenor appear as defendant's counsel.

HENRY TANNER
vs.
THE NEW YORK AND ERIE RAILROAD Company. }

Ordered:

On motion M'r S. Blatchford, of counsel for plaintiffs, that a 1196 jury be empannelled and that the trial of this cause do now proceed. Whereupon the following-named jurors were duly called and sworn, viz: John Artcher, Peter Marker, Abram Buzzer, William Boardman, David McCarty, Henry Rector, Garrett Warren, Patrick Cullen, Henry Swan, Alfred Southwick, William P. Davis, John M. Bussing.

The four last named jurors are talismen here summoned and returned by marshal, as per order of court now entered.

Plaintiff's counsel opens and reads documentary evidence.

Plaintiff's witnesses, Harvey Waters, James J. Mapes.

Court here took a recess to 3½ p. m.

3½ P. M.

Court met. Present, Judge Hall.

HENRY TANNER
vs.
THE NEW YORK AND ERIE RAILROAD COMPANY. } Trial continued.

Plaintiff's witnesses: Mapes, ex'd; John Clark. Plaintiffs rest. Damages stp'd at $75.

M'r Daniels here opens for the defence. Defendants read documentary evidence and depositions.

Defendant's witnesses: Henry Gray, Samuel E. Dennis, Joseph F. Talson, Moses Parsells, Bernard Hughes, Frederick Boyce, Nehemiah Hodge.

Court adjourned to 9 o'clock to-morrow morning.

1197 WEDNESDAY, *October* 25*th*—9 a. m.

Court met. Present, Judge Hall.

HENRY TANNER
vs.
THE NEW YORK AND ERIE RAILROAD COMPANY. } Trial continued.

Defendant's witnesses: Dennis, re-ex'd; Wilson Eddy, Sarah A. Nicholas, Ferdinand Le Pennes. Defendants rest. Plaintiffs reads depositions.

Plaintiff's witnesses: Lafayette Thompson, Asahel G. Bachelder. Waters re-ex'd.

Court here took a recess to 3½ p. m.

3½ P. M.

Court met. Present, Judge Hall.

HENRY TANNER
vs.
THE NEW YORK AND ERIE RAILROAD COMPANY. } Trial continued.

Plaintiff's witnesses: Mapes, re-ex'd. Depositions read.

1198 Defendant's witnesses: Hodge, re-ex'd.
Testimony here closed.

M'r Daniels then summed up for the defendants.

Court adjourned to 9 o'clock to-morrow morning.

THURSDAY, *October 26th*—9 o'clock a. m.

Court met. Present, Judge Hall.

HENRY TANNER
vs.
THE NEW YORK AND ERIE RAILROAD COMPANY. } Trial continued.

M'r Kellar summed up for plaintiff.

Judge Hall here charged the jury. Bailiff sworn and jury retire to consider verdict. (1 more bailiff sworn.)

Court took a recess to 3½ p. m.

3½ P. M.

Court met. Present, Judge Hall.

HENRY TANNER
vs.
THE NEW YORK AND ERIE RAILROAD COMPANY. }

Ordered: Marshal furnish jury out in this case with refreshments.

1199 The jury here came into court, and being called, answer and say that they find for the plaintiff a verdict of seventy-five dollars,* and that the Stevens brake and the Hodge brake used by the defendants are infringements of the plaintiff's patent.*

(*Amendment to verdict added on motion of S. Blatchford for plaintiff, C. Daniels, for defendants, consenting thereto.)

Ordered, on motion of defendant's counsel, that jury be polled. Whereupon each juror answers and says "This is my verdict."

On motion of M'r Farrington, defendant's counsel, that defendants have 40 days within which to make a case, or bill of exceptions or both, and that in the meantime all proceedings on the verdict be stayed, Ordered, that the plaintiff have also 40 days within which to serve amendments after service of a copy of said bill or case or both.

UNITED STATES CIRCUIT COURT,
Northern District of N. Y., ss:

I, Augustus A. Boyce, clerk of said court, do hereby certify the preceding to be a true and correct copy of the minutes as entered in the book of minutes of this court, in a case where Henry Tanner is plaintiff, and the New York and Erie Railroad Company is defendant.

In witness whereof, I have hereunto subscribed my name and have hereunto affixed the seal of the said court, at my office, in the city of Utica, in the said district, this 20th day of February, A. D. 1869.

[L. S.] A. A. BOYCE, *Clerk.*

At a stated term of the circuit court of the United States of
1200 America, for the northern district of New York, in the second
circuit, held at the village of Canandaigua, on Thursday, the 30th day of June, in the year of our Lord one thousand eight hundred and fifty-nine.

Present, the honorable Nathan K. Hall, judge. Mess'rs Keller and Seymour appear for pl'ff. Mess'rs Gifford & Davis appear for def't.

NEHEMIAH HODGE
vs.
THE NEW YORK CENTRAL RAILROAD
Company. }

On motion of M'r D. L. Seymour, pliff's att'y, ordered that a jury be empannelled, and that the trial of this cause do now proceed. Whereupon the following named jurors were duly drawn, called, and sworn, viz: Cyrus Woodruff, Henry A. Metcalf, Andrew J. Hanna, Franklin Beebe, Elisha M. Bradley, Isaac Stoutenburg, James Beattie, Morgan Doty, Seth Gates, George Mathew, Benj. D. Eckler, Charles L. Curtis.

M'r Keller opens the case for plaintiff.

Witnesses for plaintiff: Nehemiah Hodge, David Upton, George Page.

Recess to 2 o'clock p. m.

2 O'CLOCK P. M.

Court met. Present, Judge Hall.

THE SAME
vs. } Trial continued.
THE SAME.

Plaintiff's witnesses: Page (re-ex'd), Henry Waters, Samuel Cooper.

1201 M'r Davis here opens for the defence.
Defendant's counsel reads depositions.

Defendant's witness: Wilson Eddy.

Court took recess to 7½ p. m.

7½ P. M.

Court met. Present, Judge Hall.

THE SAME
vs. } Trial continued.
THE SAME.

Defendant's witnesses: Benjamin F. Smith, Henry Waterman, Eddy (re-ex'd), Hadley P. Fairfield, Nathan Randall.

Court adjourned to 8 o'clock 5 minutes to-morrow morning.

FRIDAY, *July* 1*st*—8 o'clock 5 minutes a. m.

Court met. Present, Judge Hall.

NEHEMIAH HODGE
vs. } Trial continued.
THE NEW YORK CENTRAL RAILROAD
Company.

Defendant's : Page (re-ex'd).
Plaintiff reads depositions.
Hodge and Waters (re-ex'd).
M'r Gifford here sums up for the defendants.
M'r Keller then sums up for plaintiff.
Court here takes recess to 2 o'clock p. m.

1202 2 O'CLOCK P. M.

Court met. Present, Judge Hall.

NEHEMIAH HODGE
vs. } Trial continued.
THE NEW YORK CENTRAL RAILROAD COMPANY.

M'r Keller concludes the summing up for plaintiff.

Judge Hall charges jury; bailiff sworn, and jury retire. Afterwards jury come in and, being called, answer and say they find a verdict in favor of plaintiff for $1,500, damages.

Ordered, defendants have 60 days to make a case, or bill of exceptions, or both, and in the meanwhile the plaintiff's proceedings be stayed.

UNITED STATES CIRCUIT COURT,
Northern District of New York, ss :

I, Augustus A. Boyce, clerk of the said court, do hereby certify that the preceding is a true and correct copy of the minutes of trial in the cause named in the beginning thereof, as entered in the book of minutes of this court.

In witness whereof I have hereunto subscribed my name and have hereunto affixed the seal of said court at my office in Utica, in said district, this 3d day of June, A. D. 1868.

[L. S.] AUG'S A. BOYCE, *Clerk.*

1202½ THOMAS SAYLES
vs.
THE CHICAGO AND NORTHWESTERN RAILWAY Company. } In chancery.

Exhibit No. 7 in Supreme Court record.

W'M. H. BRADLEY, *Clerk.*

1203 *Rebutting testimony on behalf of the complainant.*

Testimony taken at Providence, Rhode Island, in the circuit court of the United States for the northern district of Illinois.

THOMAS SAYLES
vs.
THE CHICAGO & NORTHWESTERN RAILWAY Company. } In equity.

Examination of witnesses on behalf of the complainant before Francis A. Daniels, commissioner of the circuit court of the United States for the district of Rhode Island, at his office, No. 29 Weybosset street, in the city of Providence, in said district, on the tenth day of September, A. D. 1872.

1204 Olney L. Smith, of Providence, in said district, having been duly sworn according to law, testifies and says as follows :

Direct examination by M'r Cozzens :

Int. 1. Are you the same Olney L. Smith who was examined in this case for the defence on the fifth of August, 1872, at Springfield, Massachusetts ?

Ans. Yes.

Int. 2. Will you please state whether you have recently made any test upon the Providence and Worcester railroad of the brake known in this case as the Springfield brake; and, if so, please state when you made such test.

Ans. I have. I made the test a few days since—one day last week.

Int. 3. Will you please look at the drawing now shown you, and state what that drawing represents ?

Ans. This drawing represents the Springfield brake as we put it on last week, on a platform-car, No. 1504 or 1505, weighing, I should judge, seven to eight tons.

Int. 4. Then, as I understand it, the truck at the right hand of the figure had two chains?

Ans. Yes, sir.

Int. 5. And the truck at the left hand of the figure had one chain?

Ans. Yes, sir.

(The drawing referred to is put in evidence, and marked "Complainant's Accounting Exhibit Second Providence and Worcester Springfield Brake, F. A. D.")

Int. 6. Please state about what was the length of the body of this car upon which this test was made one day last week?

1205 Ans. About thirty feet long. I didn't measure the car body. We build these cars, and calculate to make them thirty feet over all.

Int. 7. Please state what was the length of the short chain—from the centre of the windlass-staff to the centre of the hole in the top of the truck-lever—in the case of right-hand truck you have mentioned?

Ans. The short chain was 19½ inches.

Int. 8. The truck-levers were on the outsides of the brake-bars, as in this exhibit, were they?

Ans. Yes, sir.

Int. 9. Will you please state what was the test to which you put that car?

Ans. We put the car on a straight track—or where the track was straight—and set the brakes as hard as an ordinary man could set them, and coupled on a locomotive to the car and pulled it on to a curve. The result was, the brakes became very tight on one truck and slacked up on the other one.

Int. 10. In which direction did you draw the car with the locomotive at this time?

Ans. We coupled on to the short-chain end of the car, and pulled this truck on to the curve—drew it forward on to the curve. This curve was what I call a reverse curve. That let the brake up, and we pulled this truck out into a straight line—or both of them—pulled them both from a reverse curve on to a straight line, and set the brakes by the same power while on the straight track, and backed the other truck—the left-hand one—on to the curve. The result appeared to be about the same. It would slack up on one and tighten on the other. It was a wooden brake-shoe, and I bored a hole in the centre of it so that I put in an iron rod to try this brake, to see where there was the greatest power—bored a hole in the centre of the brake-shoes of the car. I did this in order to make it as sensitive as possible in trying the power on the brakes. I bored the hole right through the centre of the
1206 bearing of the brake-shoes, for the object of testing the power on the four wheels on the same side of the car.

Int. 11. In the case of the truck upon the wheels of which you say the brake was tightened when it passed from a straight track on to a curve, and vice versa, what effect did this tightness produce on those wheels?

Ans. It would slide. In one trial it slid one pair of wheels, and in another it slid both pairs. And then the other truck would operate about the same. Sometimes one pair would slide, and sometimes the other pair would.

Int. 12. And on the left-hand truck, where the brakes were loose when those on the right-hand truck were tight, how loose were they?

Ans. So that you could put in this rod and very easily move the brake-shoe. A child could do it. I should say there would not be more than one-half the power on the truck, where the brakes were loose as I have stated, of that on the other truck.

Int. 13. You stated what occurred as between the right-hand truck and the left-hand truck, the wheels of one sliding and the brakes on the other being loose when the engine was hitched to the short-chain end of the car, and the car was driven forward from a straight track on to a curve. Now, will you also please state what effect was produced as between the wheels of the left-hand truck and those of the right-hand truck when the car was backed by the engine from a straight track on to the curve, and a reverse curve, and the brakes applied ?

Ans. I am not prepared to say exactly what the result was different. I tried those trucks or wheels as I found them, without taking much notice whether the left-hand brake was set up or the right hand. I couldn't say here how many times we applied that or how many this, or how many more times we set that up than we did this. There 1207 was nothing particular said about that having any different effect.

Int. 14. I don't think you understand my question. What was the effect upon the left-hand truck and the right-hand truck when the car, after having been drawn forward from a straight track, through a curve, on to another piece of straight track, with the brakes applied on this last piece of straight track, was backed from this last piece of straight track through the curve and reverse curve again ? and if there was any difference in the operation of the brake when this was done from what it was before, please state it.

Ans. It seems to me that we didn't have much to do with that brake. Still, I couldn't say.

Int. 15. I am still inquiring about the short-chain brake, and wish to know what was the effect upon the trucks of the car when the car, with that brake applied, was backed from a straight track through a curve.

Ans. I can't state any different result from that when the car was drawn forward. Place the right-hand truck in the same position, and the result, so far as I could say, was the same, whether the car was backed or drawn forward.

Int. 16. Please state what was the effect when the brake was applied and one of the trucks was on the straight track and the other truck was on the curve; and then what was the effect when the truck which had been on the straight track went on to the curve, and the truck which had been on the curve went on to the straight track ?

Ans. As I said before, place those trucks, one on the straight track and the other on the curve, and I could see no difference in the trucks.

Int. 17. You say you could see no difference. What took place as to the brakes at these times in the one truck as compared with the other ?

1208 Ans. I don't know as anything more would take place than what I stated.

Int. 18. State again what took place.

Ans. The wheels of one truck would slide—sometimes one pair, and then two pair—and the brakes of the other truck slack.

Int. 19. Which truck would it be in which the wheels would slide—the truck which was on the curve, or the truck which was on the straight track ?

Ans. The one on the curve.

Int. 20. In all cases, whether the car was drawn forward or backward, was this so?

Ans. I can't state as for forward and backward. We had considerable of it, and I didn't notice very much about that. I wanted to know whether the bearing and the brakes were working when on the curve and on the straight line, and that was what I looked for, and I think I got it. The rest of it wasn't of much consequence to me, whether it was backing on the curve, or pulling, or drawing, or any other way. I didn't try to keep the record of anything.

Int. 21. You didn't observe any difference either way?

Ans. No; I didn't go into all those. I hadn't but a little time.

Int. 22. Please state whether you measured any or all of the curves on which you tested this car, as described; and, if so, will you please state what measurements you made?

Ans. We had a tape-line, and took the ring and thirty-five feet on the line, and went right across wherever it would strike the rail in the curve, and then measured from the rail to the tape-line in the centre, between the extremes of the thirty-five feet, and the curve that that ran round, I think, was ten inches in the thirty-five feet; in the centre, between the tape-line and the rail, equidistant from the two extremities, was ten inches.

1209 Int. 23. You say that the shortest curve was ten inches. What were the measurements of the other curves?

Ans. I think that one other curve was about six inches. I won't say whether it was five and a half or six. There were other curves varying from two and a half to five inches, measured in the same way. In each case the chord of the circle, as before stated, was thirty-five feet.

Int. 24. In your testimony for the defence, in Springfield, August 5, 1872, you testified about the Springfield brake having been put upon car No. 24, on the Providence and Worcester Railroad, and having been complained of that it would not hold the train, and being taken off. Will you please look at the drawing now shown you, and state whether or not it correctly represents the manner in which said brake was applied on said car? Take the drawing on the assumption that the red lines upon it indicate that the parts upon which the red marks are placed are understood to be erased.

(The drawing shown to the witness is put in evidence, and marked "Complainant's Accounting Exhibit First Providence and Worcester Springfield Brake, F. A. D.")

Ans. It is correct in every way, except that the short balance-lever was so short that the middle hole for the chain to hook into was not placed between the other two holes, as it is shown to be in the drawing. It might have been, but I thought in drilling it between the other two, it would be drilling pretty close to the other; and so, in drilling it, I drilled it just a little out of the line of the other two holes.

Int. 25. Please state whether, after the tests made last week, as just described—with the short chain nineteen and a half inches long—you made any tests on the same car with any chain longer than this nineteen and a half inches one; if so, at which end of the car was it, and state whether there was any platform at the end of the car, and, if so, about what the length of the chain at that end of the car was? 1210

Ans. I have no recollection of noticing any particular test. On one trial I was on the car myself, and turned up the brakes myself, and didn't get off to see the difference of these two brakes. At the left-hand end of the car shown in Complainant's Accounting Exhibit Second

Providence and Worcester Springfield Brake there was a temporary platform, which made the distance from the hole in the truck-lever to centre of the windlass three feet five and a half inches, which was the length of the chain.

Int. 26. How many chains were there at that end of the car?

Ans. One long chain.

Int. 27. The brake of which truck did this chain operate?

Ans. It was attached the same as it is in the exhibit. It operated the left-hand truck—the one nearest that windlass, and from that windlass the brake at that end of the car was operated by a rod hooked into the top of the same lever into which this three and a half feet chain hooked, and there was only one chain round the windlass at this end of the car.

Int. 28. You have stated that you did not notice any particular test; please state what you mean by that.

Ans. With the long chain. I didn't notice the different effect the brakes had when that long chain end was applied. I don't know as I thought of it.

Int. 29. I don't understand whether you mean that you didn't notice whether there was any difference in the effect as between this end of the car and the other end, or that you didn't notice any difference in the effect. State which you mean.

1211 Ans. When I tried these brakes, I didn't look to see which brake was set up. I don't recollect now at which end the power was applied, whether it was the short end or the long end. I went right here to those wheels and tried the brakes. They had an engine, and they placed this car backwards and forwards, and I was there part of the time. I didn't go through all these little things; didn't think of it; didn't want to. I just went out there for satisfying myself whether that brake would hold on the curve and on a straight track at the same time with the same power; and when I got that done I had done all that I supposed would ever interest me at all. That was all I wanted of it. I had been told that it would and that it wouldn't.

Int. 30. Then state whether or not you did notice any difference in the effect of the brakes on the wheels at any time during the tests which you have described, whether the brakes were applied at one end of the car or the other.

Ans. I say I have no recollection of making a special test of the long chain and then the short one; I didn't notice any difference. I have no recollection.

(Question repeated.)

Ans. I didn't notice any difference in the effect of one windlass or the other.

Int. 31. State whether, when these tests were made, you saw the brakeman apply the brakes to this car.

Ans. I did. I saw him set them up on each end. I had a man on the car on purpose to do it.

Int. 32. Now, will you please describe once more the way you tried the brake shoes to see how they were bearing upon the wheels when the brakeman had so set up the brakes?

Ans. I took an iron bar about three feet long, seven eighths or three-quarters round, and placed it in this hole in the brake-shoes, and worked the brakes off from the wheels. There was no other correct way
1212 of doing it, from the fact that the brake was jointed, and you could tip one end more or less if you worked right from either end. And if you came in the centre, where the bearing came on the

wheel, and where the hole was (that was a patent idea of mine, you know, to do that), it was very easy in that way to see the difference in the bearing. I did this on these four wheels on one side of the car, in the different positions of the car, sometimes on the straight track and sometimes on the curve. We set them on the straight track and tried them first on that, to see that they were both equal on both trucks, and then went on to the curve and tried them on the curve. I found the brakes slack on one truck and very tight on the other.

Int. 33. You have said that the brakeman applied the brakes, in these tests, at each end of the car?

Ans. Yes, sir.

Int. 34. State whether you made the trials with the iron bar, as just stated, both when the brake had been applied from the right-hand end of the car, and also when it had been applied from the left-hand end of the car.

Ans. Yes, sir.

Int. 35. Now state whether there was any difference in the results as to the brake-shoes bearing upon the wheels, whether the brakeman applied the brake at the right-hand end of the car, or whether he applied it at the left-hand end of the car?

Ans. I didn't notice any.

Int. 36. In the form of the Springfield brake, as you tested it last week, as described here to-day, would you consider it safe to run on a car upon a railroad?

Ans. That is a hard matter to decide. I could, perhaps, say it would be to a certain extent. What I mean should be understood by that is, that I shouldn't consider it safe to change from the main track on to turnouts with a brake like that set up. I think the car, if empty, 1213 would be liable—if we went out on a side track and should find a rail that had slipped a quarter of an inch out of line at a joint—the flange would be very likely to jump off the track—would be liable to leave the track on the short-chain end.

Int. 37. How frequent an occurrence is it that a rail is out of line a quarter of an inch?

Ans. I don't think it occurs very frequently on the main line; but sometimes turn-outs are not taken care of, and running heavy engines upon them throws the joint out of line; and in those cases it would not be safe.

Int. 38. As the car-master of a railroad, would you use the Springfield brake in any form in which you have ever seen it upon the cars of a railroad?

Ans. I think not.

Int. 39. You testified for the defence at Springfield, August 5, 1872, in relation to a test made a little while ago on the Providence and Worcester Railroad in reference to seeing whether the Tanner brake or the Hodge brake would best hold a car when the engine was pulling it.

Ans. Yes, sir.

Int. 40. Will you please state at about what part of the centre lever—in the case of the Tanner brake in that test—the rods which ran to the truck-levers were hooked in?

Ans. At nine inches from the hole in the ends of the centre lever.

Int. 41. And what was the length of the centre lever?

Ans. I think that was about four feet.

Int. 42. Will you state more fully than you did in August what was done in this test?

Ans. I put the Tanner brake on to car No. 26, and coupled it on to a car that had the Hodge brake. I took a locomotive and coupled on. We stood on a straight line with that car No. 26. I set the brake 1214 with all my power on car No. 26, while standing on the straight line—the brake on the car having the Hodge brake not being applied—and hauled it on to the curve, and stopped. I got off of the car, stepped off of the platform by the side, and gave a motion to the engineer to go ahead. In starting he slipped the driving-wheels a little—just slipped and caught. He hauled the car ahead the length of it and stopped. I let the brake off of this car No. 26, and backed up the length of it, set the Hodge brake on the other car—the Tanner brake on car No. 26 not being applied—and drew the other car to the same point where we stopped with No. 26; and it was my opinion that the Tanner-brake car took much more power from the engine to pull it than did the other car with the Hodge brake. There were quite a number of our men present, and that was the general opinion of all that stood by—that it took more power to pull the Tanner-brake car than it did the Hodge.

Int. 43. What kind of a car was the car in this test which had the Hodge brake upon it?

Ans. A first-class passenger-car. They were both first-class passenger-cars.

Int. 44. Was the Hodge brake in good order, properly adjusted?

Ans. I don't know anything to the contrary. The car was running regularly in the train—had come in that morning. The two cars were made at Springfield, when we had six cars to be made—all one pattern. There was no difference in the weight of the cars, to my knowledge—cars of the same pattern, length, width, and every way.

Int. 45. Will you please state about how much play you allow upon your road between the swing-beam of the cars and the truck-timbers between which the swing-beam hangs?

Ans. Laterally?

Int. 46. No; how much longitudinally?

Ans. We do not make any. Of course they will get a little 1215 by time—by wear; but when we put them in, we put them in just so they will move—as tight as we can and have them move.

Int. 47. When they get worn by time what do you do with them?

Ans. We commence with a half-inch plate when new—what we call friction-plates. Sometimes it is chilled-iron, and sometimes it is not. I have put in both. We take out the thin plate, and if we can get in one an eighth of an inch—if that will fill up the space—we put in a five-eighths; and if it requires three-fourths, we have all different thicknesses to take up what swinging motion there is. That is the manner that I follow in all my trucks, and watch it close. If we find a quarter of an inch, I wouldn't take a car off for the sake of putting in those plates; but I wouldn't allow a car to go out of the shop that had an eighth of an inch play. I would change it for an eighth.

Int. 48. Will you state whether, within a few days, you have made upon the Providence and Worcester Railroad any test for the purpose of ascertaining what was the effect upon the operation of the brake on the wheels at one end of the car or the other when the swing-beam was worn sufficiently to allow of play between it and the truck-timbers in which it hangs? and, if so, please state when you made the test, what brake or brakes you made it with, how much play there was for the swing-beam, and what was the result.

Ans. We made tests yesterday with a car that had three-quarters of an inch play between the swing-beam and the cross-timbers of the truck.

We took the plates out in order to give it play. The first test we made was with a bar—the car standing still. We found we couldn't move the truck but half an inch towards the centre of the car. We took a locomotive and drew the car—started it about as fast as a man would generally walk—and applied the brake while in motion. We 1216 found the truck to incline to the centre of the car—under the influence of the brake, so that this swing-beam had touched the timber.

Int. 49. Which truck was it?

Ans. The truck which had this play. The other truck didn't have any. It was the rear truck of the car. The brake we tried was the Tanner brake.

Int. 50. From your experience with car brakes, what would be the effect upon the trucks of the application of the brakes, supposing that there was play for the swing-beam?

Ans. It is my opinion that they would both travel, when the brakes were applied, towards the centre of the car until they brought up to the swing-beam—as far as they could go.

Int. 51. Please state whether you apply this answer to a car when it is in rest or to a car when it is in motion?

Ans. To a car in motion.

Int. 52. State how it would be when the car is at rest?

Ans. It is my opinion that you couldn't move those trucks, while at rest, far enough to take up that amount—say three-quarters of an inch. You might gain something, but you have got a great power there to move with your brakes—standing.

Int. 53. Would you move anything, do you think?

Ans. The trucks would incline one towards the other, because they are pulling right towards the centre. I never have noticed this point very particularly as to that point of inclining, but I have noticed the motion of a swinging bolster while a train was in motion—the operation of it—the working of it. But when trains have been running fast and the brake is applied, I never took an opportunity to examine for that point. That is simply my opinion from the power applied—that it naturally must follow that by applying these two brakes—being 1217 attached in the centre arbitrarily—they must pull toward that centre. I am speaking now of the Tanner brake.

Int. 54. You say "the two brakes." Please state what you mean?

Ans. It is a double brake, applied to the two trucks.

Int. 55. With these trucks pulling towards the centre when the brake is applied, as you say, state whether or not there would, with the Tanner brake, be any unequal effect upon one truck as compared with the other.

Ans. I don't think there would be. I don't believe there can be a difference there that could ever be figured up in the wearing of the shoes or anything of the kind.

Int. 56. What would be the effect of the Hodge brake in reference to drawing the trucks towards the centre of the car when the brake is applied, if there be play for the swing-beams?

Ans. The Hodge brake has a movable point—a movable swinging motion—which would overcome all the difference, if there would be any; this swinging motion would overcome it so that it would make the trucks all move equally.

(Question repeated.)

I can't see any difference as to that if you put the same power. It

has the same tendency to draw the trucks towards the centre of the car in the case of the Hodge brake as in the case of the Tanner brake.

Int. 57. Has the Tanner brake been in general use upon the cars of the Providence and Worcester Railroad since you have been car-master of that road?

Ans. Yes, sir.

Int. 58. For about how long a time was it in general use there?

Ans. I cannot state. We might have used it three years and might have used it five. But we used it till we bought the Hodge. The
1218 **connections to windlasses and trucks were made at the ends of the centre lever.**

Int. 59. State whether the Tanner brake was the first double-acting brake which was used on the Providence and Worcester road?

Ans. Yes, sir; it was.

Int. 60. Did it continue in use there until the road bought the Hodge brake?

Ans. Yes, sir.

Int. 61. State whether, while the Tanner brake was in use there, there was ever any difficulty in regard to the manner in which it applied the brakes to the wheels of the car?

Ans. No, sir; we had no trouble with it at all, to my knowledge.

Int. 62. It was a good and efficient brake, was it?

Ans. Yes, sir.

Int. 63. When M'r S. M. Whipple, now present, first came to the Providence and Worcester Railroad in regard to putting the Springfield brake upon that road, did he have any conversation with you in reference to having said brake put on said road? If so, what was the conversation?

Ans. We did have. Of course I knew nothing about what the object was. I never saw the brake before, and whether I inquired of him what his object was I can't say. But I will state that he said that (as near as I can recollect) he considered the Springfield brake just as good as the Tanner; and if it was, that the railroad companies could adopt it and wouldn't be obliged to resort to the single brake; damages would be much less, or something to that effect. That is as near as I can recollect.

Cross-examination waived.

OLNEY L. SMITH.

1219 **PELEG M. PECKHAM, of Providence in said district, having been duly sworn according to law, testifies and says, as follows:**

Direct examination by M'r Cozzens:

Int. 1. What is your name, age, residence, and occupation?

Ans. Peleg M. Peckham. I am forty-nine years old. I live in the city of Providence. I am first foreman of the Providence and Stonington Railroad Company's car-shop at Providence.

Int. 2. Are you familiar with the forms of brakes known as the Tanner brake and the Hodge brake?

Ans. I am.

Int. 3. How long have you been engaged in the car-shop of the Providence and Stonington Railroad?

Ans. Twenty-six years.

Int. 4. State, if you know, what was the first form of double-acting brake which went into use on said road?

Ans. The Tanner brake.

Int. 5. Who, if you know, first put the Tanner brake on the cars of that road?

Ans. M'r Rutter and myself.

Int. 6. For about how long a time did the Tanner brake continue in general use on said road?

Ans. We used it in general use probably about ten or fifteen years, and we are using it now on some cars.

Int. 7. You say you are using it now on some cars. Will you mention any trains in which any car having that brake on is run?

Ans. The steamboat train, carrying passengers between Providence and Stonington, on the line between Boston and New York.

Int. 8. What brake is at the present time in general use on said road?

Ans. The Hodge brake.

1220 Int. 9. State whether the Tanner brake continued to be in general use on said road down to the time the company bought the Hodge brake?

Ans. It did.

Int. 10. While the Tanner brake was used on said road, how well did it work?

Ans. It worked very well.

Int. 11. Did you ever have any trouble with it in any way?

Ans. No, sir.

Int. 12. Please state why you made the change from the Tanner brake to the Hodge?

Ans. The reason we made the change was to do away with the long rod that connected from the centre-lever to the levers on the trucks; to do away with the friction of those long rods.

Int. 13. About how much, if any, play between the swing-beam and the truck-timbers between which the swing-beam hangs, is there in the cars upon your road when they are in order?

Ans. There isn't any. We don't calculate to have any.

Int. 14. Suppose by wear there should come to be play, what, if anything, would be the effect of the application of the brakes upon the trucks of the car when the car was in motion?

Ans. It draws the two trucks towards the centre of the car as far as the swing-beams will let them go.

Int. 15. State whether or not in this respect there is any difference between the effect of the Tanner brake and the effect of the Hodge brake?

Ans. I can't see any difference.

Int. 16. When you used the Tanner brake on your road, was there ever any difficulty in the application of the brakes upon one truck as compared with the other by reason of any play in the swing-beams?

Ans. No; I couldn't see any in that. But I think that the ap-
1221 plication of the brake on one end of the car, drawing from a
straight rod to the lever on the rear truck—of course the lever on the other side springs a little, which would make a little difference in the application.

Int. 17. State whether you ever found this difference to be of much importance when you used the Tanner brake.

Ans. No; I don't think it makes any material difference.

Cross-examination waived.

PELEG M. PECKHAM.

Examination taken, reduced to writing, and by the witness sworn to before me this ninth day of September, A. D. 1872.

FRANCIS A. DANIELS,
U. S. Commissioner.

CHARLES H. SMITH, of the city of Providence, in said district of Rhode Island, having been duly sworn according to law, testifies and says as follows:

Direct examination by M r Cozzens:

Int. 1. What is your name, age, residence, and occupation?

Ans. My name is Charles H. Smith. I am the master car-builder's clerk on the Providence and Worcester Railroad; age, twenty-eight; residence, city of Providence.

Int. 2. Please state how long you have been master car-builder's clerk.

Ans. About two years.

Int. 3. Please state whether you were present last week at a test made on the Providence and Worcester Railroad with a car having the Springfield brake upon it; and, if so, whether you noticed the action 1222 of the brake-shoes upon the wheels of that car when the brake was applied on a straight track, and the car was then drawn onto a curve, and then onto a reverse curve; if so, please state what those results were.

Ans. I was there nearly all the time they made the test, with the exception of the afternoon. I saw the car move on the single curve, on the reverse curve, and on the straight track. I watched the operation of the wheels, and saw, as the brake was applied to one end—the car standing on the straight part of the track, as it did every time when the brakes were applied—the wheels would slide on one truck and would turn on the other. When they stopped the car they pulled the car back, and we would take an iron bar—I did myself—to start the brake-shoes from the wheels. I took my hands and moved the brake-beam away from the wheels. I wouldn't pull it away, I would start it. That was at that end of the car where the wheels were turning; on the end of the car opposite to that on which the brake was set up. The wheels at the other end of the car were sliding. As they struck the sharpest part of the curve all four of them would slide. Immediately upon striking the curve only one pair would slide. This took place on a short curve with a versed sine of six inches with a chord of thirty-five feet. When the car was placed on the reverse curve they alternated; one end would slide and the other would turn, and vice versa as the trucks changed places on the reverse curve. And at one part of the curve the brakes would be so tight that the engine could not move the car. You pushed the car a little further on and struck a straight line; the wheels on one truck would turn, and then the engine could move the car very easily.

Int. 4. Please state whether, some time last spring, you saw M'r Whipple, now present, at Providence, and had a conversation with 1223 him; if so, please state about when it was, and what the substance of the conversation was.

Ans. I did see him. I can't give the dates exactly, but I think it was some time last spring, say March or April, 1872. M'r Whipple came up into the office of the car-shop of the Providence and Worcester Railroad, and inquired if M'r Olney L. Smith was there. I told him he was away. He then asked by what authority, or who authorized that Springfield brake to be taken off the car on the Providence and Worcester road, which was put on. I looked up and hesitated a moment about answering, because I wanted to know who he was. He stated his name was Whipple, and he was attorney for the Eastern Railroad Association. I went to a drawer in the desk and produced a letter from M'r Hilton, the superintendent of the Providence and Worcester Railroad. He read the letter, and immediately exclaimed that that had undone or defeated (I have forgotten; words to that effect) what he had been trying to accomplish for the last six months, and it would cost this or some other road (I have forgotten the exact expression) a hundred thousand dollars. I don't know what road he stated. That is all.

Int. 5. Cost the road a hundred thousand dollars, for what?

Ans. I didn't have the means of knowing what. I supposed for some suit they had got into.

Int. 6. I mean was any patent mentioned?

Ans. No patent at all.

Int. 7. Or any brake mentioned?

Ans. This Springfield brake was mentioned.

Cross-examination waived.

CHARLES H. SMITH.

Examination taken, reduced to writing, and by the witness sworn to before me this ninth day of September, A. D. 1872.

FRANCIS A. DANIELS,
U. S. Commissioner.

1224 George L. Gates, of Uxbridge, in the State of Massachusetts, having been duly sworn according to law, testifies and says as follows:

Direct examination by M'r Cozzens:

Int. 1. What is your name, age, residence, and occupation?

Ans. My name is George L. Gates; I am a brakeman on the Providence and Worcester Railroad; age, thirty-nine; residence, Uxbridge, Massachusetts.

Int. 2. How long have you been a brakeman on that road, and what kind of trains have you been accustomed to brake there?

Ans. Been on there three and a half years, on passenger-trains.

Int. 3. Do you recollect there being a brake called the Springfield brake, and also the Tanner brake, put upon passenger-cars and run in passenger-trains on the Providence and Worcester Railroad?

Ans. I do, sir.

Int. 4. What trains were those, and between what points did they run?

Ans. They ran clear through to Worcester; left here at seven o'clock at night and went as far as Uxbridge; lay over night there and went to Worcester the next morning, and came back from Worcester the next day at night.

Int. 5. State, if you know, what were the numbers of the cars upon which this Springfield and this Tanner brake were put.

Ans. Twenty-four and twenty-six.

Int. 6. State who were the brakemen on that train.

Ans. Myself and a fellow called Allen Sweeting were the first two that used them.

Int. 7. And what two afterwards?

Ans. Leslie Crocker and myself.

1225 Int. 8. While those brakes were on that train, state who applied them.

Ans. I applied them myself when they were first put on.

Int. 9. State how the Springfield brake on that train worked as to holding the train.

Ans. I couldn't do anything at all with it—couldn't hold the cars with it—nor train at all.

Int. 10. Was it afterwards taken off of that car?

Ans. It was.

Int. 11. State what, if any thing, you know about how it came to be taken off?

Ans. Well, sir, I used the brake until I complained to M'r Olney L. Smith, master car builder, and to M'r Hilton, the superintendent of the road. M'r Hilton took the car from my train and put it on another train —the accommodation train for Worcester that goes up at noon and back at night. It ran there until the brakeman on that train complained of it, and wouldn't use it. It was taken off and put back onto my train, and this young man here, M'r Crocker, was put on to brake behind, and I was put in the baggage-room. I went to M'r Olney L. Smith and asked him if he wouldn't take that brake off. I told him that as long as the old men on the road couldn't use it I didn't think that a boy could, and the boy complained about it. M'r Smith said to me he couldn't do it without orders from M'r Hilton. I went to M'r Hilton. I met him in the depot there and told him about their changing this brake and putting it onto my train, and I couldn't do anything with it; that I had asked M'r Smith to take it off and he says to me he couldn't do it without your order. He wrote a note and sent it to M'r Smith, and the brake was taken off.

Int. 12. Please state who operated the Tanner brake that was on that train as you have stated.

1226 Ans. I did some of the time,, and Leslie Crocker did; and it was there on one of the other trains. I don't know on which of the other trains.

Int. 13. While you operated it on that train, how well did it work?

Ans. It worked very well. It worked a little harder than the Hodge brake.

Int. 14. As to holding the train, how did it work?

Ans. Well, I think it works the best of any brake I ever used in holding a train of cars.

Int. 15. State whether, after the Tanner brake was first put upon that train, it was again put upon it.

Ans. It was used afterwards.

Int. 16. How did it work the second time?

Ans. It worked better, if anything, than it did the first. It worked well both times.

Cross-examination by M'r Whipple:

Cr. int. 1. Then in your judgment the Tanner brake is a great deal better than the Hodge brake?

Ans. To have my choice about it, sir, I would rather have the Tanner brake than any brake I have ever used.

GEORGE L. GATES.

Examination taken, reduced to writing, and by the witness sworn to, this ninth day of September, A. D. 1872, before me.

FRANCIS A. DANIELS,
U. S. Commissioner.

LESLIE CROCKER, of Providence, in said district, having been duly sworn according to law, testifies and says as follows:

Direct examination by M'r Cozzens:

Int. 1. What is your name, age, residence, and occupation?

1227 Ans. Leslie Crocker; age, eighteen; residence, city of Providence; I am brakeman on the Providence and Worcester Railroad.

Int. 2. How long have you been brakeman on that road?

Ans. Ever since a year ago last Thanksgiving.

Int. 3. What kind of trains have you been brakeman upon?

Ans. All the passenger trains.

Int. 4. Do you recollect that last winter there was a brake called the Springfield brake, and also one called the Tanner brake, put upon the a ins on that road?

Ans. Yes, sir.

Int. 5. Who braked those cars in those trains, if you know?

Ans. When they were first put on, George Gates and Al. Sweeting; and then I went on.

Int. 6. Is George Gates the witness who has just been sworn?

Ans. Yes, sir.

Int. 7. After you went onto the train, who braked on the cars with those brakes on?

Ans. George Gates and myself.

Int. 8. Upon which one of the cars did you brake yourself?

Ans. The Springfield brake and the Tanner brake.

Int. 9. How well did the Springfield brake work as to holding the train?

Ans. I didn't see that it held the car itself; I used it about a week and I told the conductor I wouldn't use it any more.

Int. 10. How well did the Tanner brake work?

Ans. That worked well.

Int. 11. After the Tanner brake was put onto the train at that time, was it again put on afterwards?

Ans. It was.

Int. 12. Who braked on it when it was put on afterwards?

1228 Ans. I did.

Int. 13. How well did it work this last time?

Ans. Tip-top.

Int. 14. How well did it work the last time, as compared with when it was put on the first time as you have stated?

Ans. I thought it worked easier.

Cross-examination by M'r Whipple:

Cr. int. 1. How do you like the Tanner brake compared with the Hodge brake?

Ans. I like it better, if anything.

LESLIE CROCKER.

Examination taken, reduced to writing, and by the witness sworn to, this ninth day of September, A. D. 1872, before me.

FRANCIS A. DANIELS,
U. S. Commissioner.

MARCUS L. BRAMAN, of Providence, in said district, having been duly sworn according to law, testifies and says as follows:

Direct examination by M'r Cozzens:

Int. 1. What is your name, age, residence, and occupation?

Ans. Marcus L. Braman; age, thirty-one; residence, city of Providence. I am night watchman in the barn of Albert Weaver, who draws all the Providence and Worcester cars to and from the wharves and freight station in Providence.

Int. 2. Were you a little while ago employed as a brakeman on the Boston and Albany Railroad?

1229 Ans. Yes, sir.

Int. 3. What trains did you brake on on that road?

Ans. I first braked on the Merchants' Union Express, leaving Boston at 7.20 p. m. and arriving at Worcester at 8.45. That is not a passenger, but a freight train. After that I went on Conductor Jennings' train, leaving Boston at 5 a. m.; arrives at Springfield at 8.50; leaves there at 11.30, and arrives at Boston at 3.30 p. m.

Int. 4. About how long did you brake on Conductor Jennings' train?

Ans. I braked on that between thirteen and fourteen months.

Int. 5. When did you leave the employ of the Boston and Albany Railroad?

Ans. Either the last days of May or the first of June, 1872.

Int. 6. At the time you left the said road, do you recollect the name of the brakes that were used on the cars of Conductor Jennings' train on alternate days?

Ans. Yes, sir; there was the Springfield brake and there was the Hodge brake.

Int. 7. State whether you yourself braked on the cars having the Springfield brake in that train.

Ans. Yes, sir; I did.

Int. 8. For about how long a time did you brake on those Springfield-brake cars in that train?

Ans. Somewhere in the neighborhood of three or four months. They put them on in the first of February, and I left the last of May or the first of June.

Int. 9. How did those Springfield brakes work as to holding the train?

Ans. Worked very poorly.

Int. 10. State what difficulty you found with them while you braked on them.

1230 Ans. The most difficulty I found I couldn't hold the train with them. They didn't work—didn't do the work.

Int. 11. State whether you ever noticed with those Springfield brakes about the chain winding unequally on the windlass staff.

Ans. Yes, sir; I have noticed very often. There is a ring-bolt attached to the end of it that goes through the shaft, and one chain or the other was almost sure to catch on the point of the bolt or the eye where it goes through the windlass shaft.

Int. 12. When the chain did so catch on the eye-bolt, how would it wind then?

Ans. One chain would wind tight, and the other chain would be perfectly slack—hang right down.

Int. 13. When the chains wound in that way unequally, what was the effect of the brake in regard to holding the car?

Ans. You couldn't discover that there was any brake on the car at all—couldn't discover that it held the car a mite.

Int. 14. At any time while you were breaking on Conductor Jennings' train, do you recollect a car being in it with the Tanner brake on it?

Ans. Yes, sir.

Int. 15. State who braked that car with the Tanner brake.

Ans. I braked it sometimes, and sometimes I didn't. It was shifted in the train; but I braked it the biggest part of the time.

Int. 16. When you braked it, how did the Tanner brake work in respect to holding the train?

Ans. It worked very well. The most trouble I found with it it worked a little hard—stiff. It didn't work as easy; you had to use more muscle. I don't know but it would work nearly as well as the Hodge if you put as much muscle in it. But it wasn't as pretty a working brake.

1231 Int. 17. In the case of this Tanner brake on this car, do you recollect how the centre lever lay across the car when the brakes were loose?

Ans. Yes, sir; it lay directly across crossways under the car.

Int. 18. At about a right angle?

Ans. Yes. sir.

Int. 19. When the Tanner brake car was first put into that train, how many cars were there in the same train with the Springfield brake on?

Ans. I think there was one when it was put in. I know there was one.

Int. 20. At this time, at what portion of the train was this car with the Springfield brake on placed?

Ans. At the rear end of the train. It made a round trip at the rear end of the train, and then the Tanner brake made a round trip afterwards. They ran out of Boston to Albany and back again, so that they alternated—shifted them every round trip.

Int. 21. Have you any knowledge of an accident happening in shifting those cars with the Springfield brakes on them? If so, please state what you know about it.

Ans. Yes, sir; I was running on the train, and was taken sick in the morning. I came in at night. I had a brother running on the Newton Lower Falls train. When we came in at night I asked Mr. Hobert, the depot master. Told him I was sick, and asked him to let my brother do my switching. So he did, and I went home. The first thing I heard in the morning was that the bunter post in the depot was all smashed off, and the rear platform of the rear car and the platform of the second car.

Int. 22. Do you recollect the number of that car?

Ans. No, sir; it was 123 or 124. I don't know which car was behind.

Int. 23. How badly smashed were the platforms of either of these cars?

1232 Ans. The rear platform of the rear car the bed-pieces were broken off. That was the car that struck the post. And the rear platform of the second car was injured. It wasn't smashed off entirely, but it was so that it had to be sent to the shop to be repaired.

Int. 24, Who was doing the switching at this time?

Ans. My brother, Thomas Braman.

Int. 25. When the Springfield brake and Tanner brake were first run in this train and operated by you, what, if anything, was said to you about the Springfield brake?

Ans. At the first time that ever I braked on these cars we started out of Boston and came to the Know Nothing station, where the road crosses the Boston and Providence track, and we ran the train right on to the crossing instead of stopping where we wished it. There was nothing said then; and we got as far as Framingham, and the train ran by the station. I got off the train and began to look under the train. The conductor came back and wanted to know what the devil the matter was. Said I, "I don't know; that is what I am trying to find out." Said he, "If you can't hold the train with that brake, you can't with any brake, for that is the best brake that was ever put on a car." And I was discouraged. And that's the way it was all the way through.

Int. 26. What brake was Jennings referring to?

Ans. The Springfield brake.

Int. 27. At said time when the one car with the Springfield brake on and the car with the Tanner brake on were in Jennings' train, where was the rear brakeman stationed?

Ans. On the rear car always.

Int. 28. Who was that rear brakeman?

Ans. I was the man.

Int. 29. How well, if at all, were you able to take up the slack of the train when the Springfield brake car was the rear car of the train?

Ans. It was impossible to do it.

1233 Int. 30. How well were you able to do it when the Tanner brake car was the rear car?

Ans. With the Tanner brake I never had any trouble in taking up the train, or in holding the train at any place.

Int. 31. How long, in all, were you engaged as brakeman on various railroads?

Ans. Between eight and nine years.

Int. 32. And how much of this time on the Boston and Albany Railroad?

Ans. About two years and a half altogether.

Int. 33. Are you quite a strong, powerful man?

Ans. Yes, sir; I consider I am a strong man.

Int. 34. State—from your experience as a brakeman—what is your opinion, and how did you feel while on the Boston and Albany road in regard to riding on this train that had the Springfield brakes on it.

Ans. I never considered it was safe to ride on the train. I never felt myself safe while they were in use.

Int. 35. State why you left the Boston and Albany Railroad in May or June, 1872.

Ans. When they put these Springfield brakes on there was nothing but a jaw and quarrel all the time with Jennings. Always gave perfect satisfaction before; never had a word with him until this time. And I made up my mind that if they wouldn't put on a brake that I could hold the train with, I would leave the road. I made them a bill of my time and left it.

Cross-examination by M'r Whipple:

Cr. int. 1. Did you, or not, state to M'r Whipple, who is now present,
that you wanted no better brake than the old Springfield brake
1234 on car No. 124, and that you could snap the train right in two, if
it was necessary, in taking the slack?

Ans. No, sir; I never did.

Cr. int. 2. Did cars 123 and 124 have to go into the shop for repairs in consequence of the platforms being smashed off?

Ans. Yes, sir.

Direct examination resumed:

Int. 36. Did you tell M'r Whipple, or anybody else, what has been inquired of about the brakes in respect to the Tanner brake on 123—that you could snap the train in two, if necessary?

Ans. I believe I did—yes, sir. Yes, sir; that Tanner brake is a very good brake. There is no trouble but what you can snap a train, if they want it done. But as I told you before, it wanted a little more muscle. It is a very good brake.

Int. 37. To whom was it that you said this?

Ans. I couldn't tell the gentleman's name. There is the gentleman. (Pointing to M'r Whipple.) I don't know that the platforms were all smashed off; but they were injured so that they had to go into the shop for repairs.

Int. 38. Please state what makes you think the cars were sent into the shop for repairs.

Ans. I know they were left out of the train as unfit for use. I don't know that they were taken into the shop or whether they were left in the depot. That is more than I can tell. But I know that they were repaired somewhere.

Int. 39. After the platforms of the cars were injured in this way, who switched the cars out of your train?

Ans. I did myself.

1235 Cross-examination resumed:

Cr. int. 3. Were the platforms so damaged that the brake could not be used on them?

Ans. Yes, sir.

Cr. int. 4. Did this accident happen to the platforms of the cars 124 having the Springfield brake, and 123 having the Tanner brake?

Ans. No, sir.

Cr. int. 5. How long after the brake was changed from Tanner brake on 123 to the Springfield brake did this happen?

Ans. I couldn't tell exactly to a day. It wasn't a great while. I know we had used them some little time.

Cr. int. 6. You operated the 123 when it had the Tanner brake on, and 124 when it had the Springfield on, coupled together, didn't you?

Ans. Yes, sir; I operated the brakes on the two cars.

Cr. int. 7. In operating the brakes upon the two cars respectively, you had to step from one platform to the other?

Ans. No, sir. It was a five-car train. I had nothing to do with only the rear car. I had one one day, and the other the next. I was at the front end of the rear car.

Cr. int. 8. Then, if I understand you, when you operated 124 with the Springfield brake, you couldn't carry power enough to the wheels to take the slack?

Ans. No, sir.

Cr. int. 9. But when you operated the Tanner brake you had no difficulty in taking the slack and holding the train?

Ans. No, sir.

Cr. int. 10. Then, if I understand you, the Springfield brake communicated little or no power to the wheels of the trucks?

1236 Ans. Very little indeed. It worked better at some times than it did at others. But, as a general thing, it was very poor indeed.

MARCUS L. BRAMAN.

Examination taken, reduced to writing, and by the witness sworn to, this ninth day of September, A. D. 1872, before me.

FRANCIS A. DANIELS,
U. S. Commissioner.

SEPTEMBER 19TH, 1872.

RICHARD LYNCH, of the city and county of Providence, in the State of Rhode Island, having been duly sworn according to law, testifies and says as follows:

Direct examination by M'r Cozzens:

Int. 1. What is your name, age, residence, and occupation?

Ans. Richard Lynch; age, twenty-two; live in the city of Providence; I am a brakeman on the Providence and Worcester Railroad.

Int. 2. How long have you been brakeman on that road?

Ans. I have been on there since last February, 1872.

Int. 3. During that time what kind of trains have you braked on?

Ans. I have braked all on passenger trains.

Int. 4. Do you remember recently braking on a train on the Providence and Worcester road, in which was run car No. 26, having upon it a brake called the Tanner brake?

Ans. Yes, sir.

1237 Int. 5. State whether you yourself braked on said car No. 26?

Ans. Yes, sir, I did.

Int. 6. For about how long a time did you brake on that car?

Ans. As long as the brake was left on there—till the car was left off that train. They took the Tanner brake off before they took the car off.

Int. 7. Do you recollect about how long the Tanner brake was on that car?

Ans. I should judge that we had it on my train a little over a week. I couldn't say how much over.

Int. 8. How much of that time did you brake on it yourself?

Ans. Every other night in the week we went out of here at seven o'clock at night, and the next night I had it. I had it out of Worcester going to Providence every other night for a week—leaving Worcester at 6.30. I didn't use it at all going out of Providence.

Int. 9. Who braked on that train going out of Providence while that car was on it?

Ans. Leslie Crocker.

Int. 10. While you braked on said car No. 26, how did the Tanner brake on it work?

Ans. It worked splendid. When you came to set the brake up, there was no trouble whatever. The shoes were right to the wheels and stopped the car. There was no trouble whatever in braking a train with it.

Int. 11. How did its working compare with other double brakes that you have used?

Ans. Well, it worked a great deal different altogether; much easier and much better; didn't have so much hard twisting to do.

Int. 12. Have you, at any time recently, used somewhat a brake on car No. 24, on the Providence and Worcester road, called the Springfield brake?

1238 Ans. I have used it, but I couldn't really remember much about it.

Int. 13. If you remember anything about how it worked, please state it.

Ans. I didn't like it so well. I remember that it didn't take hold so well. There was more slack chain to take up before you got the brake where it ought to be.

Int. 14. How well did it seem to hold the car?

Ans. It didn't hold the car so well as the Tanner brake. We very often used to get talking about brakes on the road, and we would call 26 the "boss" brake. That is what we used to call it on our road.

Cross-examination by M'r Whipple:

Cr.-int. 1. Who put on to the car the brake you called the "boss" brake?

Ans. I don't know who it was put it on. I believe it was the gentleman here, M'r Sayles.

Cr.-int. 2. Do you recollect operating the Tanner brake on the same car?

Ans. Yes, sir.

Cr.-int. 3. At a time previous to the application of it by M'r Sayles?

Ans. I couldn't really say about the application of it from him. But I remember using it just as quick as it came out.

Cr.-int. 4. How did the operation of it, when it first came out, compare with it when the same car came out with the brake on as applied by M'r Sayles?

Ans. It didn't work so well at first. When it came out the second time it worked splendid.

Direct examination resumed:

Int. 15. This first time the Tanner brake was put on, how well did it work?

Ans. Well, it didn't work so well as some brakes on the road.
1239 I preferred the brake that came out the second time—the Tanner brake—to the one that came out first.

RICHARD LYNCH.

Examination taken, reduced to writing, and by the witness sworn to this 19th day of September, A. D. 1872, before me.

FRANCIS A. DANIELS,
U. S. Commissioner.

EDWIN A. THOMAS, of North Kingstown, county of Washington and State of Rhode Island, having been duly sworn according to law, testifies and says as follows:

Direct examination by M'r Cozzens:

Int. 1. What is your name, age, residence, and occupation?

Ans. Edwin A. Thomas; age, twenty-two; residence, Wickford, North Kingstown; occupation, brakeman on the Providence and Worcester Railroad.

Int. 2. How long have you been brakeman on that road?

Ans. Three years the first of next November.

Int. 3. What kind of cars have you braked on there?

Ans. Freight and passenger both. I braked freight trains seven months, and the balance of the time on passenger-trains—something over two years.

Int. 4. Have you recently braked on a passenger-train on that road having in it car No. 26 with what is called the Tanner brake on it?

1240 Ans. I have, sir.

Int. 5. About how much have you braked on that car?

Ans. I couldn't state the amount I braked there. All the way I happened to use it was being changed off from my own trains on to other trains on account of somebody's being sick, or off, or something of that kind—as we call it, an extra trip—some part of the time the 6.30 out of Worcester, and some part of it the 7 p. m. train from Providence.

Int. 6. Did you brake on it a good many times in this way?

Ans. No, sir; but a very few times. Probably I might a half a dozen trips. I might have gone to Worcester on it, and then I didn't have anything to do with it for a time. I don't say as I have a half a dozen trips, but I should think somewhere in that neighborhood.

Int. 7. About how often did the train stop at stations during these trips?

Ans. We make twenty stops between Providence and Worcester on an accommodation train.

Int. 8. And the same returning?

Ans. Yes, sir.

Int. 9. In making these twenty stops or so, about how much of the time did you apply the Tanner brake?

Ans. I applied the Tanner brake at every station. We run two cars and a "jim" car—as we call it—a baggage-car. The rear brakeman has charge of both cars either way. He has the same two brakes either way he is going; 26 and whatever other car we have on—21 and different numbers.

Int. 10. While you so braked with this Tanner brake, how did it work?

1241 Ans. I called it a very good brake; what we called the best brake we had on the road. That is, at the time it was on, the car was considered to be the best car to hold; that is, the best brake on the road at the time.

Int. 11. When you so used the Tanner brake on these trains, were you rear brakeman?

Ans. Yes, sir.

Int. 12. And took the slack of the train?

Ans. Yes, sir. The baggage-master used the two on the two passenger cars.

Cross-examination by M'r Whipple:

Cr.-int. 1. What is the name of the brake in general use on the passenger cars of the Providence and Worcester road?

Ans. I couldn't say, sir. It was something I didn't pay much attention to. All the way I happened to notice this was on account of its being a new brake, just put on, and was spoken about more than any other. It was something I never bothered about.

Cr.-int. 2. Do you consider the brake in general use on the passenger cars of that road a good brake?

Ans. Yes, sir. We call them very good brakes. But No. 26 hasn't the reputation of being so good to brake since that was taken off as it was at that time, although there is a very good brake on there now.

Cr.-int. 3. This Tanner brake you speak of—was it put on by M'r Sayles?
